Of prayers evincing a more individualized religious consciousness examples are not wanting, especially among the more cultured tribes. The lengthy Aztec supplications which have been preserved for us in what must be an approximately trustworthy form have been termed 'penitential psalms.' They are certainly replete with poetic imagery, though their perusal is likely to leave one with the feeling that the Aztecs were more keenly impressed with the smart and dolour of the general context of life than with any individual conviction of sin. Fine types of devotion are, nevertheless, not wanting. Father de Smet (*op. cit.* p. 326) records the supplication of an Indian who had lost three calumets (than which no greater loss could readily befall):

'O Great Spirit, you who see all things and undo all things; grant, I entreat you, that I may find what I am looking for; and yet let thy will be done.'

5. But we have yet to reach the most characteristic and heartfelt type of Indian religious experience—religious values as they strike home in the individual life. There can be no question that, as a race, the Indians are born mystics, and it is the mystic consciousness—in trance and vision—that is the most impressive factor of their religious life. The mysticism is begun already in the Indian's special view of Nature. For Nature is to him endowed with an inner, hidden life, having passions and volitions analogous to man's, so that her whole external form is but the curtaining outer flesh of this inner light. An animist is an incipient pantheist, and a pantheist is but a sophisticated, ratiocinating mystic. Reliance upon dreams, the visions brought on by fasting, the trance and mediumship of shamans and prophets, soul-journeys to the spirit-world—all these are phases of the underlying belief that man may find within himself revelation of a higher life, that the veil which parts the seen from the unseen is of the flimsiest. Possession by a higher power, *enthusiasm*, is also a tenet of Indian mysticism, taking form, amongst those peoples who had invented intoxicants, in the induced inspiration of drunkenness. Again, there was belief in the familiar, the *daemon*. A Pend d'Oreille prophet had foretold precisely a Blackfoot attack upon his people. When about to be baptized, he explained his gift:

'I am called the great doctor, yet never have I given myself up to the practices of juggling, nor condescended to exercise its deceptions. I derive all my strength from prayer; when in a hostile country, I address myself to the Master of Life and offer him my heart and soul, entreating him to protect us against our enemies. A voice had already warned me of coming danger; I then recommend prudence and vigilance throughout the camp; for the monitory voice has never deceived me. I have now a favour to request: the mysterious voice calls me by the name of Chalax, and if you will permit, I desire to bear that name until my death' (de Smet, *op. cit.* p. 475).

Black Coyote, an Arapaho marked by seventy patterned scars where strips of skin had been removed, explained them to Mooney. Several

of his children had died in rapid succession. In expiation, to save his family, he undertook a four days' fast. During the fast he heard a voice, 'somewhat resembling the cry of an owl or the subdued bark of a dog,' telling him that he must cut out seventy pieces of skin and offer them to the Sun. He immediately cut out seven pieces, held them out to the sun, prayed, and buried them. But the sun was not satisfied, and he was warned in a vision that the full number must be sacrificed.

Black Coyote was a leader of the 'Ghost dance' in his tribe, and it was through him that Mooney gained his first insight into the Indian understanding of this mystical religion. The 'Ghost dance' religion is the latest of a long series of Messianic religious movements, whereby the Indians have looked for an eventual release from white domination and the eventual restoration of their primitive state. Doubtless Christian doctrines have had an influence in giving form to the idea, and its recurrence and spread are to be largely accounted for by the fact of Indian contact with a strange and troubling race—a contact which has tended to awaken a sense of closer relationship and ethnic solidarity among the native tribes, and to stimulate the Indian mind to many unwonted ways of thought. But in their inception these religions, none the less, bear a thoroughly aboriginal cast. They come as revelations to the prophets who are their founders, come in trance and dream, and in large part their *modus operandi* is to induce trance and dream in their adherents—usually in the dances and fastings, perhaps hypnotisms, which dominate the ceremonial.

Wovoka, the prophet of the 'Ghost dance' religion, received his revelation at about the age of eighteen.

'On this occasion the "sun died" (was eclipsed), and he fell asleep in the daytime and was taken up to the other world. Here he saw God, with all the people who had died long ago engaged in their oldtime sports and occupations, all happy and for ever young. It was a pleasant land and full of game. After showing him all, God told him he must go back and tell his people they must be good and love one another, have no quarrelling, and live in peace with the whites; that they must work, and not lie or steal; that they must put away all the old practices that savoured of war; that if they faithfully obeyed his instructions they would at last be reunited with their friends in this other world, where there would be no more death or sickness or old age. He was then given the dance which he was commanded to bring back to his people. By performing this dance at intervals, for five consecutive days each time, they would secure this happiness to themselves and hasten the event' (Mooney, in 14 *RBEW*, p. 771 f.).

It is little wonder that, as this revelation passed from tribe to tribe, it came to mean a promise of restoration, here on this earth, of the old life the Indian still holds dear. The whites were to be forced back by the hand of God, the Indian dead were to come to life and re-people the land, the herds of buffalo were to be restored, plenty was to prevail for ever. And the dance became the occasion of vision of this blessed state, a ghostly realization of the hope deferred, sent for the comfort of those wearied in waiting.

How closely the utterances of the Indian may approach to those of the white mystic is shown in the account given by a Puget Sound prophet, 'John Slocum,' of his revelation.

'At night my breath was out, and I died. All at once I saw a shining light—great light—trying my soul. I looked and saw my body had no soul—looked at my own body—it was dead. . . . My soul left body and went up to judgment place of God. . . . I have seen a great light in my soul from that good land; I have understand all Christ wants us to do. Before I came alive I saw I was a sinner. Angel in heaven said to me, "You must go back and turn alive again on earth." . . . When I came back, I told my friends, "There is a God, there is a Christian people. My good friends, be Christian." When I came alive, I tell my friends, "Good thing in heaven. God is kind to us. If you all try hard and help me we will be better men on earth." And now we all feel that it is so' (14 *RBEW*, p. 762).

The ideas here are derived from the teachings of

the whites, but the mystical experience which gives them their force and vividness belongs to no particular race, or, if it belongs to any one more than another, it is surely the Indian whose claim to it is best.

6. In conclusion, a word must be said regarding the reflective aspect of the Indian's thought, his philosophy, and the devotional spirit responding to it. There is, of course, among the Indians, a gradation of conception as great as their gradation in culture, which ranges from the utter savagery of the naked cannibals of Brazil to the grave and refined decorum of men like the Aymara and Maya; but it may be questioned whether the intellectual advancement of the Indian at his best is not greater than that accompanying a like stage of material knowledge elsewhere in the world. The American continents appear not to have furnished the natural facilities for material conquests to be found in Mediterranean and some Asiatic regions; there were not equally ready natural alloys of metal, for example, and no animals comparable with the horse and ox capable of domestication.

Certainly the mental attainment of the Indian, at its climax, may be fairly compared with early Greek and Hindu thought. While Indian speculation had nowhere passed beyond the stage of mythologizing thought, it had, in its mythologies, frequently attained a henotheistic and approached a monotheistic or even a pantheistic conception of the Divine nature. The attainment of such conceptions is, in fact, almost implicit in the evolution of speech, as evidenced by the peculiar sanctity which attaches to a name in primitive thought, and its irresistible tendency to hypostatization. This is curiously illustrated by the Indian notion of an archetypal chief (a veritable Platonic idea) of every animal species, from which each individual of the species draws its life. The myth of such universals—*universalis ante res*, in the true Scholastic sense—is a plain consequence of the primitive inability to think an abstraction other than concretely; every idea corresponds to a reality because every idea is a present vision of its object. With man's growing consciousness of his superiority to the rest of the animal kingdom, it is inevitable that the archetype of his own species, the anthropomorphic god, should assume the leadership of the whole pantheon of animal deities.

Eventually, too, the Indian conception of the natural world as made up of congeries of active, volitional powers, of *makers* and *doers*, must result in the notion of a Supreme maker, controller of all lesser destinies. The Supreme Being will, to be sure, be concretely represented (that is always a necessity of primitive thinking), but the dominant idea is sure to be betrayed in his names and attributes. The Mexican Tezcatlipoca was represented under the form of a young man, but he was regarded as 'invisible and impalpable,' penetrating all places in heaven, in earth, and in hell. The very names of certain Peruvian deities prove their abstractness: Pachaychacher, 'he who instructs the world'; Chinchacamac, 'the creator and protector of the Chinchas'; Pachacamac, 'he who animates the world,' 'soul of the universe.' Possibly some of these names were originally epithets, but this does not detract from the fact that they came to be considered the proper description of the deity. Pachacamac was originally the god of the Yuncas, by whom he was worshipped under the form of an idol. It is an interesting commentary on the mental pre-eminence of the Incas that, when they had conquered the Yuncas, they assimilated Pachacamac to their own Sun-worship. The Sun was worshipped by the Incas as their ancestor, and, if not as a purely mono-

theistic god, at least as one infinitely superior to all others. But the god of the civilized Yuncas was not to be disregarded, and from the recorded remarks of some of the Inca emperors it is plain that sun-worship was not wholly satisfying to Inca intelligence. Hence it was that they adopted the belief in Pachacamac, regarding him as the sustainer of life; but they decreed that, because he was invisible, there should be no temples built to him and no sacrifices offered; they were to content themselves with adoring him, says Garcilasso, 'in their souls, with great veneration, as sufficiently appears from the external demonstrations which they made with the head, the eyes, the arms, with the whole attitude of body, whenever his name was mentioned' (*op. cit.* VI. xxx. cf. II. ii.).

In North America the more enlightened tribes seem all to have recognized a 'Great Spirit' or 'Master of Life,' a supreme power to whom was due an especial devotion, as the ultimate giver of all good. And it is curious to note how this belief constantly tends to elevate the Supreme Deity to a sphere remote from human interest; he becomes an impassive spectator of the world he has created, to whom it is useless to address prayers and sacrifices save through mediators.

Thus, the Ojibwas place at the head of their pantheon a Great Spirit or Manitou, whose name is mentioned only with reverence, but who plays no great part in worship. Beneath him is the good Manitou, from whom men receive the mysteries, and between whom and men Manabozho, the 'Great Rabbit,' acts as mediator and intercessor. A similar belief in a Supreme God and demiurgic beings appears among the Pawnees. 'All the powers that are in the heavens and all those that are upon the earth are derived from the mighty power, Tira'wa atius. He is the father of all things visible and invisible' (22 *BBEW*, pt. 2, p. 107). But, 'at the creation of the world it was arranged that there should be lesser powers. Tira'wa atius, the mighty power, could not come near to man, could not be seen or felt by him, therefore the lesser powers were permitted. They were to mediate between man and Tira'wa' (*ib.* p. 27). The following verses, translated by Miss Fletcher from a Pawnee ritual, show how nearly this conception approaches the monotheistic ideal:

'Each god in his place
Speaks out his thought, grants or rejects
Man's suppliant cry, asking for help;
But none can act until the Council grand
Comes to accord, thinks as one mind,
Has but one will, all must obey.
Hearken! The Council gave consent—
Hearken! And great Tira'wa, mightier than all' (*ib.* p. 367).

The name of the Supreme Being is never uttered by the Indian save with devout reverence. Indeed, one missionary, in commenting upon the lack of oaths in Indian tongues, states that the Indians are not merely shocked but terribly frightened at the white man's swearing. This points in the direction of name-magic, but that name-magic can be no full account of the Indian's attitude, that this attitude is indeed one of intense and earnest reverence, the barest acquaintance with Indian psychology makes sure.

But the Indian is not entirely free from that scepticism which advance in reflective thinking must always entail. It is recorded of the Inca Tupac Yupanqui that he questioned the divinity of the Sun on the ground that in following always the same course through the heavens it was acting the part of a slave rather than a free and regnant being. And there are certain utterances of the Aztec (such as that in which Tezcatlipoca is addressed: 'We men, we are but a pageant before

you, a spectacle for your sport and diversion') which imply an unlooked-for maturity of reflexion, and give promise of philosophic developments which we can scarce but regret the history of the world should not have made possible.

LITERATURE.—The literature of American Indian religious life is the literature of American Indian life in general, which is at once extensive and widely distributed. For North America the *Publications of the Bureau of American Ethnology* (Washington, 1879 to date), together with the *Contributions to North American Ethnology*, previously published in part under the auspices of the Department of the Interior, are of first importance; and among these publications special mention should be made of the *Handbook of American Indians North of Mexico*, pt. 1 [1907], in which extensive bibliographies are given, and also of 14 *BBEW*, pt. 2 [1896], embodying 'The Ghost-Dance Religion and the Sioux Outbreak of 1890,' by James Mooney, perhaps the most valuable single contribution to the study of the religious psychology of the Indian. Only second in value are the 78 vols. of *Thwaites'* ed. of *The Jesuit Relations and Allied Documents* (Cincinnati, 1896-1901), with which should be mentioned the 4 vols. of the *Life, Letters, and Travels of Father Pierre-Jean de Smet, S.J.* (New York, 1905). The works of George Catlin, H. R. Schoolcraft (especially *Algic Researches*, New York, 1829, and *Information respecting the History, Condition, and Prospects of the Indians of the United States*, Philadelphia, 1855), and Daniel G. Brinton (especially *Myths of the New World*, Philadelphia, 1868), deserve particular mention among earlier writings. The principal earlier works regarding the Indians of both Americas are given in the bibliography annexed to the article, 'Indians, American' in *EBR*.⁹ For the religions of Mexico and Peru the best general summaries are still those of Prescott (in his *Conquest of Mexico*, 1874, and *Conquest of Peru*, 1874), where bibliographical references will be found. For Peruvian religion no single work is so valuable as Garcilasso de la Vega's *History of the Incas*—in Spanish, French, and English editions (the latter by the Hakluyt Society, London, 1869); and for the religion of the Aztecs the most notable work is that of Bernardino de Sahagun, especially in the scholarly edition of Jourdanet and Siméon, *Histoire générale des choses de la Nouvelle-Espagne* (Paris, 1880). The *Maya Chronicles* (tr. Brinton, Philadelphia, 1882), and the *Quiché Popol Vuh*, a native work written down after the conquest (Fr. tr. by the Abbé Brasseur de Bourbourg, Paris, 1861), are Central American documents of the first value.

H. B. ALEXANDER.

COMMUNION WITH DEITY (Babylonian).

—The supreme concern of all religions, as is maintained by Kant in his *Religion innerhalb der Grenzen der blossen Vernunft* (1793), is redemption. Religion is a striving after communion with Deity by a process of deliverance from the evil inherent in man and in his environment. In the religion of Babylonia, so far as it is historically known to us, the essential element manifests itself in the investigation of the 'mystery of heaven and earth' (*nisirtu samti u iršitini*), which 'the knower (*mudû*) guards and hands down to his son.' As in all mystery-religions, the interest centres in (1) the mystery of the cosmos, which alike in its totality and in its isolated phenomena is regarded as the revelation of a single undivided Divine power; and (2) the mystery of life—that life which in the cycle of phenomena arises out of death.

The inscriptions supply no direct evidence bearing upon the Bab. mysteries. These were concerned with things 'which fear of the Deity prohibits from being communicated to others.' Our knowledge of them must therefore be gathered from the mythology. The myths of the Babylonians are the materializing expression of a monistic cosmic doctrine, the leading axioms of which are (1) that the world is an embodiment of Deity; and (2) that the terrestrial structure corresponds to the celestial, every phenomenon in Nature being a revelation of the Divine.

To look for traces of a primitive religion in the Bab. records is a bootless task. In the historical period known to us religions thought rests upon a monistic conception of the Universe, while the mythology, which expresses this monistic conception in the language of symbol, provides in turn a basis for the cultus and the festive drama. The cultus, whether national or local, was designed to utilize the cosmic mystery for the benefit of the people at large and of the individual; the festive

drama represented the warfare of cyclic phenomena—the victory of light over darkness, and of life over death. Here we come upon the sources of religious deterioration. At the very heart of the cultus lay the art of the *astrologers and the cult of the magicians* (even hepatoscopy, according to which the structure of the cosmos was to be traced in the liver of the sheep, was neither more nor less than the practice of astrology transferred to the shambles of the priest, and its object was to apply the cosmic doctrine to the history of the individual), based upon the belief in demons, and this belief, again, was likewise a creation of mythology.

Alike in the mysteries and in the public religion of the Babylonians the motive power was the *aspiration after communion with Deity*, and the cult of magic which was based upon demonology had a similar object in view. In 1 Co 10²⁰ St. Paul, the greatest of religious philosophers, speaks thus of the heathen: *ἡ θύουσιν . . . δαίμονιαι καὶ οὐ θεοὶ θύουσιν* (cf. v.¹⁵ *κοινωνία*, in the Lord's Supper; and v.¹⁸ *κοινωνοί*, of the Israelites in their sacrifices).

The mystery of communion with Deity may assume either of two forms: the ascent of man to the Divine sphere, or the incarnation of the Deity in a human person. Traces of both are found in the Bab. records, and, if we possessed literary evidence regarding the religious mysteries, we should more clearly identify the two categories. In several important features the mysteries of Mithra may be adduced by way of illustration, as the religion of Mithra is simply a Persian reproduction of that of Babylonia. In the original Bab. sources we note the following phases of our subject:—

1. The ascent of the cosmic tower as a religious ceremony.—In the centre of every Bab. city stood a storeyed tower. 'Its pinnacle shall reach to heaven': so runs the regular formula in the later inscriptions upon buildings. This tower was regarded as the earthly replica of the heavenly sanctuary, whose storeys (the three regions of the Universe, or the seven spheres of the planets, rising to the highest heaven, the seat of the *summus deus*) lead to the *summus deus* (cf. the symbolical language in 1 Ti 3¹³ *βαθμὸν ἐαυτοῖς καλὸν περιποιούμεναι*; 2 Co 12² *ἕως τρίτου οὐρανοῦ*). Gudea (c. 2600 B.C.) says: 'Ningirsu ordains a good destiny for him who ascends to the top of the temple with the seven *tupkat*.' In the mysteries of Osiris and Mithra the place of the tower is taken by the ladder (in the Mithra cult, the ladder of the seven metals, corresponding to the seven planets; in the Manichaean *bimā*, five steps, to correspond with the number of the planets less the unpropitious two) which is ascended by the devotee. It is possible to regard the climbing of this *scala santa* as a mere *opus operatum*—an act to which as such the gods assign a reward. But we hold it to be by no means impossible that even in ancient Babylonia the physical mystery was associated with ethical conceptions, precisely as we find in the mysteries of a later date ('the soul's ascent to heaven'). Babylonian mythology, as, e.g., in the solar hymns, presents features of such moral intensity that we may venture to assume the presence of ethical ideas even in the beliefs that underlie the myths.

2. The religious festival of the death and restoration of Tammūz.—The community celebrated this festival by wailing and rejoicing, and by the performance of appropriate symbolic ceremonies. The observance is attested by numerous hymns in praise of Tammūz, and by the conclusion of 'Istar's Descent into Hell,' in which he is honoured as the resuscitated deity. The celebration was meant to express the longing of the individual to link his own destiny with the mystery of life. The same motive shows itself quite un-

mistakably in the Osiris mysteries of the Egyptians (cf. 'Egyptian' section of this article).

The identical conception is found in the Attis-Adonis-Dionysos-Mithra cults. As a matter of fact, all these are, so to speak, but dialects of the same spiritual tongue. Nor can there be any doubt that a similar idea lies at the basis of the myth and cult of Tammûz. Although our available material relating to the cult of Tammûz has not as yet supplied any direct evidence regarding the mysteries of that god, the epic of Gilgamesh shows indirectly that the idea of such mysteries was current in Babylonia. In this epic the myths which originally represented the doings of the gods are applied to heroes; to derive the mystery from the hero legend is to reverse the actual process of development. Gilgamesh is the Dr. Faustus of the Babylonians. He goes forth to seek his ancestor, who had at one time been received into 'the fellowship of the gods,' and who therefore bore the name *Uš-napištim* ('he saw life'). On an island beyond the river of death, moreover, Gilgamesh finds the herb that endows him with life. The story of his passing through suffering and death to life is then transferred to historical kings, and the king receives 'the food of life' from the gods, though other mortal beings reach the same goal, as may be gathered from the use of certain metaphorical expressions. Thus, an officer of the court, who has been emancipated by the king, gives thanks that the latter 'has held the herb of life to his nostrils.' The penitential psalms of the Babylonians likewise give expression to the idea that he who has suffered and gone down to death receives liberty and 'life.' Precisely as in the mysteries of Osiris, his destiny is compared with what happens to the moon, which proceeds through death to new life, i.e. through the three days of invisibility to the new moon which is welcomed with rejoicing.

3. The idea of a Divine incarnation in the person of the king.—The underlying principle of this has already been explained. The king, as man *kar' êšoxîr* (cf. the ideogram which indicates him as the 'great man'), is a microcosm. The Deity becomes incarnate in him. In the Etana myth, Bel and Enlil make search for a shepherd who shall govern the world. Sceptre, band, cap, and staff all lie ready before Anu. In a certain hymn Gilgamesh, who seeks and finds 'life,' is worshipped 'as the deity; he surveys the regions of the world; he rules the earth; and kings, governors, princes kneel before him.' Ninib, in a heroic poem, utters the wish 'that his royal dominion may extend to the confines of heaven and earth.' In the inscriptions the determinative of deity is affixed to the names of Sargon and Naram-sin, the founders of the first world-empire of history, as also to those of other Bab. kings. Naram-sin is 'the mighty god of Agade.' Esarhaddon, who sought to restore the ancient Bab. world-empire, 'ascends the throne of the deity.' Nor does the absence of the symbol of deity in any particular case imply that the king in question did not rank as Divine. The idea of the divinity of kings was always present, though it was not applied in every case. But the attribute of deity belonged in the ultimate to every individual. According to the regular form of expression, man is 'created in the image of the Deity'; he is 'the child of his god.' The hymns and prayers of the Babylonians are all founded upon this conception of communion with Deity.

4. The penitential psalms.—These are called 'threnodies for calming the heart,' and in the form in which they now appear in the library of Ashurbanipal they are part of the system of magic ceremonies. The psalms themselves, however, are of remote age, being products of the ancient Bab.

period. A transcript of one of them, together with a linguistic commentary, has been discovered at Sippar. The moral and religious intensity of the psalms would favour the theory that several of them at least were originally independent poetical compositions. Their impressive sense of guilt, the agony of being forsaken by the gods, and the pathetic cry for deliverance from deep distress remind us of the view expressed by Kant in his *Religion innerhalb der Grenzen der blossen Vernunft*, viz. that morality, i.e. the tragic struggle against the principle of evil waged by a man intensely conscious of his need of redemption, is the root of all religion. It is true that the psalms were supposed to be spoken by the king, or by one of his high officials. But the suppliant was regarded as the representative of the people; the monarch suffered vicariously—as the shepherd of men; and the more strenuously he applied himself to good works—principally of a ceremonial kind, it is true—the more acutely did he suffer, and the more earnestly did he sigh for salvation. The suppliant of the psalms speaks in the main with the Deity. He laments that the inner bond of communion which unites him as 'the child of his god' with 'his god' is broken. The sufferings which he describes are not merely those of the body, but also those of the soul. The psalms conclude with the utterance of joy as the speaker sees that his deliverance is at hand, and that he is to be brought back again 'to life.'

We give here a version of the most profound of these penitential psalms from the library of Ashurbanipal. This is the psalm of which a duplicate fragment and a philological commentary were found at Sippar.

'I attained to (long) life, it exceeded the term of life;
Whithersoever I turn, there it stands ill—ill indeed;
My affliction increases; my prosperity I see not.

If I cried to my god, he did not vouchsafe his countenance to me;

If I entreated my goddess, her head was not vouchsafed;
The soothsayer did not read the future by soothsaying;
By means of a libation the seer did not restore my right;
If I went to the necromancer, he let me understand nothing;

The magician did not unloose by a charm the curse upon me.

What confusion of things (is there) in the world!

If I looked behind me, trouble pursued me,
As if I had not offered a libation to my god,
Or at my meal my goddess had not been invoked,
My countenance not cast down, my act of prostration not seen.

(As one) on whose lips had ceased prayer and supplication;
(With whom) the day of God had been discontinued, the feast-day disregarded;

Who was remiss, did not give heed to the utterance (?) (of the gods),

Fear and worship (of God) did not teach his people,
Who did not invoke his god, ate of his food;
Forsook his goddess, brought no petition (?) before her.
Who him that was worshipped—his lord—forgot;
The name of his mighty god uttered contemptuously—
so did I appear.

But I myself thought only of prayer and supplication.

Prayer was my custom, sacrifice my rule.
The day of divine worship was the pleasure of my heart;
The day of the procession of the goddess was gain and riches (to me).

To do homage to the king, that was my delight;
Likewise to play for him, that was pleasant to me.
I taught my country to respect the name of God;
To revere the name of the goddess I instructed my people.
The adoration of the king I made giant(?) like;
Also in the veneration of the palace did I instruct my nation.
Did I but know that before God false things are acceptable!
But what seems good to oneself that is evil with God;
What is vile to one's mind that is good with his god.
Who could understand the counsel of the gods in heaven?
The purpose of a god—full of darkness (?)—who could fathom it?

How shall frail men comprehend the way of a god?
He who still lived in the evening was dead in the morning.
Suddenly was he distressed; swiftly was he crushed.
At one moment he still sings and plays;
In an instant he shrieks like a mourner.

Day and night their thought changes.
If they hunger, they are like a corpse;
If they are full, they think to equal their god.
If it be well with them, they talk of mounting to heaven.
If they are full of pains, they speak of going down to hell.
(Here a considerable fragment is missing.)¹

The house has become a prison unto me.
In the shackles of my flesh my arms are set;
My feet have been thrown into my own fetters.
(Here a line is missing.)

With a whip he has scourged me, full of . . .
With his rod he has pierced me—the thrust was violent.
All the day the pursuer pursues me;
During the night he does not let me breathe for a moment.

By rending (?) my joints are severed;
My limbs are dissolved, are . . .
In my ordure did I roll (?) like an ox;
Was bemired like a sheep with my own excrement.
My symptoms of fever remained obscure (?) to the magicians;
And the soothsayer has left my prognostications in darkness.
The exorcist has not handled my illness successfully;
Nor has the diviner set a termination to my malady.
My god did not help me, did not grasp me by the hand;
My goddess did not pity me, did not go by my side.

My coffin was (already) opened; they were preparing for my burial (?).
Though not yet dead, the dirge was performed for me;
My whole country cried: 'How he has been evil-treated!'
When my enemy heard this, his countenance shone;
It was told to my enemy (t.) (?)—her (?) spirit waxed cheerful.

But I know of a time for my whole family,
When amidst the shades their divinity shall receive honour'(?).

In the tablets of the library of Ashurbanipal this psalm was followed by a song of thanksgiving for Divinely wrought deliverance, but as yet the linguistic commentary to it contains all that has been discovered. According to the commentary, the conclusion of this thanksgiving gave expression to the following thoughts:

'He made my power equal to (that of) one who is perfect in power.

He wiped the rust from off me; he made me to shine like red gold;

My troubled course of life became serene.

By the divine stream, where the judgment of men is held,
The stain of slavery was cleansed away from me, the chain unbound;

In the mouth of the lion which would have devoured me,
Marduk has put a curb.'

The counterpart to these penitential psalms appears in the ethical counsels which are spoken of as being inscribed upon tablets setting forth the conditions of communion with Deity. In the text given below we see the mythopoetic process being applied to the Deity—more particularly in the case of Samsāš (the sun), and there is other evidence to show that moral ideas were in a special manner associated with the Samsāš myths. In a certain long hymn to Samsāš we find the constantly recurring refrain: 'That is acceptable to Samsāš—his life is prolonged.' The most important portion of the ethical text referred to runs as follows:

'Before thy god shalt thou have a heart of purity (?).

It is that which is due to the Deity.

Prayer, supplication, and casting down of the face
Shalt thou render to him early in the morning, then he shall send plenty.

In thy learning (?) look at the tablet:

Fear of God brings forth grace;

Sacrifice gives increase of life;

And prayer cancels sin.

He who fears the gods will not call in vain (?);

He who fears Anunnaki prolongs his life.

With friend and companion thou shalt not speak (evil);

Base things shalt thou not utter, kindness . . .

If thou dost promise, give . . .

If thou dost encourage, . . .

Thou shalt not rule tyrannically;

He who does so—his god is offended with him.

He is not acceptable to Samsāš: he (Samsāš) will recompense him with evil.

Offer food, give wine to drink;

Seek (?) truth, provide, and . . .

One who does this—his god has delight in him.

He is acceptable to Samsāš: he (Samsāš) will recompense him with good.'

These texts likewise, with all their profoundly religious spirit, are polytheistic in form. But it must be remembered that to the enlightened mind the various phenomena of Nature were not gods, but rather the manifestations of a single Divine power; and it was with this power that the man who felt his need of redemption sought to establish communion. The Babylonian religion, as is well known, developed a doctrine of redemption, specially associated with the figure of Marduk. The conception of redemption tends to embody itself in history; the representative of each new age is invested with the mythical elements of the conception. It became at length actual fact of history in Him who—*teste David cum Sibylla*—came to offer to mankind the gift of perfect communion with God.

LITERATURE.—H. Zimmern, in *KAT³*, 1903, p. 609f., also *Der alte Orient*, vii. 3 (1905), p. 27f. (containing the above interpretation of the penitential psalms); A. Religion*, Leipzig, 1904, also *Das AT im Lichte des alten Orients*², Leipzig, 1906, p. 205 ff., and (for the Osiris mystery) *Im Kampf um den alten Orient*, Leipzig, 1903, p. 62 ff.

A. JEREMIAS.

COMMUNION WITH DEITY (Celtic).¹

Among the Celts the methods of communion with Deity appear to have varied with the level reached in the process of religious development (and here, as elsewhere, we find a certain correlation between the means employed and the stage to which the evolution had attained), as well as with the nature of the deities themselves. In the main centres of Gallo-Roman civilization, for example, under the Empire, the methods of religious worship and communion with Deity were practically assimilated to those of the Græco-Roman pagan world, with its temples, altars, images, votive tablets, prayers, and the like (Greg. *Tur. Hist. Franc.* viii. 15, i. 29 (32); *de Virt. S. Jul.* 5). The remains of the Celto-Roman world, as well as the testimony of early post-Roman Christian writers, make this abundantly clear. At the same time, glimpses are visible in the classical writers, as well as in later folk-lore, of more primitive conditions, which present points of analogy with the methods of communion with Deity known to us from religions of a less advanced type.

1. Communion with Nature-deities.—A very large number of Celtic deities were the gods and goddesses of particular localities. These were, doubtless, closely associated with certain local natural phenomena, such as wells, rivers, caves, islands, arms of the sea, and the like. The practical part which these deities were thought to play in the life of their particular district was, no doubt, connected with the growth of crops; the continuance of sentient life (both animal and human); the restoration of man and beast to health; and the defence, both of the individual and of the community, from all enemies, visible and invisible. The methods employed for coming into communion with these purely local Divine beings were of various kinds, based upon the idea of contact; but little direct evidence is extant as to their character. The Celtic root *tong* ('to swear') probably meant 'to touch' (Lat. *tango*). The various charms and incantations (see CHARMS AND AMULETS [Celtic]) of Celtic countries (founded largely on the principles of sympathetic magic) doubtless represent some of the methods employed; but it is not certain that the use of magic implies a steady and unwavering belief in the existence of Divine beings; and, at certain levels of thought, even in Christian

¹ Some lines can be restored from the commentary already mentioned, and from a duplicate in Constantinople. These cover a description of the speaker's afflicted state, this description having been introduced by the words: 'An evil spirit of death has come forth from his cavern.'

² Cf., throughout, art. *Osiris*.

countries, unscientific attempts of a magical type to influence Nature may have sprung into being.

In the case of pagan Gaul, we are fortunate in having some ancient evidence as to the methods of communicating with the deities of springs in the eight leaden tablets, found in June 1845 in the principal spring of Amélie-les-Bains, in the Pyrénées Orientales, which appear to contain an invocation to the spring-goddesses (Niskai), asking for restoration to health. These tablets have, unfortunately, been lost since 1849; but their finder, Col. A. Puigari, had made a copy of them, which was published in *RA* iv. pl. 71. (This has been (imperfectly) transcribed in *CIL* xii. 5387, and, with greater care, by Nicholson, *Celtic Researches*, London, 1904, p. 154 ff.) The address of Ausonius to the spring of Bordeaux as 'Divona, Celtarum lingua, fons addite divi' is of interest in this connexion.

Part of the value of the above tablets consists in the light which they throw on certain practices familiar to students of Celtic folk-lore (see Rhys, *Celtic Folklore*, pp. 354-395), such as the throwing of pins, buttons, rags, or other small objects into wells in order to obtain restoration to health; or the affixing of some fragment of a garment to a tree near a well. In all these and similar methods an attempt is made to link the person who requires the boon with the local supernatural being that can bestow it, through some object that has been in contact with the former, and that can be brought into contact with the latter, thus serving as a kind of channel of benefaction from one to the other. When, as occasionally happened, the assistance of the well-spirit was invoked against an evil-doer or an enemy, the well-spirit was brought into hostile knowledge of the enemy in question by the action of the seeker of Divine assistance in uttering the name of the enemy or evil-doer against whom the help was needed (Rhys, *op. cit.* i. 364). The devices adopted would vary according to localities, or according to the kind of natural object which the deity or spirit haunted, when it was sought to establish communication therewith.

Celtic folk-lore also appears to point to occasions when the local deity was not merely passive and invisible in the act of communion, but active; and there are suggestions that the being that was normally hidden from view might at times reveal himself in visible form. Sometimes the form which the manifestation takes is animal, as in the case of the water-bull, the water-horse, sacred fish, and other creatures; but sometimes it is human, as in the case of the Welsh *Afanc* (= Irish *abacc*, 'a dwarf'), the *Fenodyree*, or brownie, the Welsh *Cyhirraeth*, the lake-maiden, and the water-hag (see Rhys, *op. cit.* i. 32). These manifestations were, in the eyes of the pagan Celts, probably as varied in their motives as those of man to man, and comprised manifestations of vengeance or hostility (as in the production of floods), as well as of benefice.¹ It is easy to see how many stories imaginative races might weave out of the accounts of these manifestations; and many of the legends, both past and present, of Celtic countries show unmistakable traces of derivation from this source (Rhys, *op. cit. passim*).

2. *Communion with tribal deities.*—Side by side with local Nature-deities we have the deities of human racial communities. These were probably, in many cases, identical in practice with the deities of the soil, when a community had been long settled; but they are clearly distinguishable from them in idea, and, owing to tribal wanderings, they were doubtless, in many cases, distinguishable from them in fact. As for the forms under which the deities of this type were conceived, it was as natural for early man to picture them, like the local Nature-deities, in animal or plant as in human form—perhaps at one time it was even more natural. The animal-deities of the Celts may have been, in origin, partly local gods, partly communal gods, varying in character with the form

which the community took. The worship of the *Matres* and the *Matronæ* among the Celts probably reflects, for example, a stage of society in which the human counterparts of these goddesses were the most conspicuous social elements in the community. In this stage the Divine father of the community may have been conceived sometimes as a tree or a plant, sometimes as an animal, and sometimes, not impossibly, as a man. In the idea of communion with Deity in this connexion, the bond emphasized would be that of identity with the Divine nature rather than local contact. This would be attained partly by lineage, and partly by periodical consumption of the flesh of the Divine being.¹

In Dio, lxi. 7, the Britons are represented as 'sacrificing and feasting' (*θύομεν τε ἅμα καὶ ἐσθίουμεν*), and there is a passage of Arrian (*Cyneg.* xxxiv. 1) which suggests a certain tribal co-operation in a sacrificial worship of a goddess, whom he identifies with Artemis. For each animal taken by the hunter a certain sum was paid into the tribal treasury, and once a year, on the birthday of Artemis (*τῇ γενέθλῳ τῆς Ἀρτέμιδος*), the treasury was opened, and from the joint fund animals for sacrifice, such as a sheep, a goat, or a calf, were bought. After sacrificing, first of all, to the 'Savage Goddess' (*τῇ Ἀγροτέρῃ*), the worshippers and their dogs feasted, and on that day, Arrian adds, they adorned their dogs with garlands. It is not impossible that we have here an account of an ancient communal feast, where the older participation in the flesh of certain hunted totems was later commuted into that of feasting upon other animals. The reference of Caesar, too (*de Bell. Gall.* vi. 13. 4), to excommunication by the Druids among the Gauls ('*si qui aut privatus aut populus eorum decreto non stetit, sacrificiis interdicunt*') implies that communion in sacrifice was a vital social bond, and, originally, it may well be that its essence was communion of substance with the tribal deity.

There is a suggestion also of a communal sacrifice in a passage of Diodorus (v. 284), where he says that, on certain religious occasions, there were, close to the worshippers, 'hearths laden with fire, and having upon them cauldrons and spits full of the carcasses of whole animals' (*πλήρεις κρέων δαμομένων*). In later times there may be an echo of these ceremonies in Magnobodus (*Vita Maurilii*, 19 [*AS*, 13 Sept., vol. iv. p. 74 DD], where reference is made to an ancient pagan feast which was conducted with much hilarity and some disorder ('*tanta stultorum hominum singulis animis turba conveniebat, ut diebus septem solemnia ibi sacriliga exsolverent bacchando, et choros gentiles ducendo; sed et frequenter post vina et epulas insurgentes in se multorum caede mutus sanguinem effundebant*').

In those harvest customs where the last sheaf cut is called the Maiden, and a feast is held in its presence, it is not impossible that the festival was originally a communal sacrifice. Such a feast is annually held, according to Frazer (*GB*² ii. 184), in the district of Lochaber, while there is a Devonshire practice called 'Crying the neck' (*ib.* 258 f.), which may originally have been the killing of the corn-spirit for the purpose of a sacrificial meal. The way in which the corn-spirit is conceived in certain districts of Scotland, for example (*ib.* 269), as a cock, a hare, or a goat, points clearly in the same direction.² Apparently, in some districts each farm has its own embodiment of it. There are traces of a period of similar communion with Deity among the Welsh, Scots, and Bretons in the respect paid to the wren, and the solemnity with which it was periodically slain (Frazer, *op. cit.* 442 f.).

Another method of communion with animal tribal deities was by imitation, as when men clad themselves in the skins of animals of the same kind as the deity. There was, for example, a

¹ On traces of totemism among the Celts, see art. *Celts*, above, p. 297 f.

² The significance of the names 'the Maiden' and 'the Hag' for the corn-spirit is discussed by Frazer (*op. cit.*) at length.

¹ The 'baucei' (Cassian, *Collat.* vii. 32. 2) and the 'dusi' (Aug. *de Civ. Dei*, xv. 28) were probably hostile divinities of this type.

Highland custom, whereby, on a certain day of the year, a man (doubtless as a representative of his tribe) clad himself in a cow-skin (see John Ramsay, *Scotland and Scotsmen in the 18th Cent.*, ed. 1888, ii. 438). Nor does this reference stand alone, for in Elton (*Origins of English Hist.*, 1890, p. 411) there is quoted an old injunction prohibiting any masquerading in animals' skins ('si quis in Kal. Jan. in cervulo vel vitula vadit, id est, in ferarum habitus se communicant, et vestiuntur pelibus pecudum, et assumunt capita bestiarum,' etc.).

3. **Communion with Deity strengthened or renewed.**—It is impossible to read the accounts of the classical writers as to Celtic religion without observing the prominent place given therein to the idea of propitiatory sacrifice—a sacrifice which, at one time, appears to have meant the offering of human victims. It is by no means easy to discover the precise history of the ideas which led to these human sacrifices; but they appear to be based on the conceptions (a) that there could be no true communion with an angry deity if the worshipper was empty-handed; and (b) that the occurrence of calamities and catastrophes suggested that the gods had been treated with neglect, and so the deficiency of attention to them had to be made up by means of special offerings. With these ideas there was also associated that of the necessity of purging society, as well as the land, from undesirable elements; and, in some cases, there may have survived a reminiscence of the practice discussed in *GB* of slaying the human representative of a god before his vigour had begun to decay, in order to preserve the tribe. Of the latter practice, however, the writer has been able to discover no trace on Celtic soil, in spite of the fact that the tabus (*gessa*) laid upon the Irish kings of Tara suggest that they bore a certain sacred character (*The Book of Rights*, ed. J. O'Donovan, Dublin, 1847, pp. 3-8). Caesar (*de Bell. Gall.* vi. 16. 1-3) says distinctly that men who were seriously ill, or who were in the midst of war or great peril, would sacrifice, or vow to sacrifice, human victims, their theory being that the Divine majesty could be appeased only when a life was given for a life. Tacitus (*Ann.* xiv. 30) refers to the Britons as thinking it right to offer up the blood of captives, and Lucan (*Pharsal.* i. 444-446) speaks of such sacrifices as offered to the gods Esus, Taranis, and Teutates. This passage is also quoted by Lactantius (*Divin. Institut.* i. 21. 3, 'Esuam atque Teutatem humano cruore placabant'). Diodorus (v. 32. 6) says that every five years the Celts offer up their evil-doers (*κακοῦργοις*) by impalement (*ἀνακοντισμοῖς*) to the gods, and consecrate them with other sacrificial rites—notably by the construction of huge funeral piles. He says, too, that captives of war were also offered up, and that along with them certain animals taken in war were sacrificed, by burning or otherwise, among some tribes. In another passage (v. 31. 13) he speaks of a certain general as having sacrificed to the gods the youths that were most handsome, and who were in the flower of their age. Plutarch (*de Superstit.* 13, p. 171 B) also refers to the human sacrifices of the Gauls, which, he says, they considered the most perfect form of sacrifice (*θειωτάτην θυσίαν*). Athenæus (ii. 51, p. 160^e-f) refers to the Gaulish sacrifice of prisoners of war in the case of a defeat; and, in view of the statement of Caesar (vi. 16), it is difficult not to accept this as true. As for human sacrifices on other occasions, it is probable that Caesar (*loc. cit.*) gives the correct account of them, as being rewards to the gods for deliverance, and as being, in the case of certain tribes, a purification of society for the purpose of re-establishing more harmonious relations with a deity. Caesar alludes to the burning of certain huge images (*simulacra*),

whose limbs were made of wicker-work. In these, men were enclosed and burnt. In selecting men as victims, he states that criminals, such as brigands and thieves, were chosen by preference; but if the number of these was insufficient, then innocent victims were sacrificed. In Roman times, Gaulish human sacrifices were suppressed by Tiberius (according to Pliny); but a trace remained in the practice, which Mela (iii. 2. 18) mentions, of cutting off a portion of the flesh of those condemned to death, after bringing them to the altars. The commentator on Lucan, i. 445, speaks of human sacrifice to Teutates (whom he identifies with Mercury) in one sentence as a thing of the past ('qui humano apud eos sanguine colebatur'), while, in another sentence, he speaks in the present tense of a mode of appeasing the same god by thrusting a man head foremost into a full vat ('plenum semicupium'), and keeping him in this position till he is dead. Of Taranis (identified by him with Juppiter), the commentator says that he used to be appeased with human victims, but that he was now fully satisfied with cattle. Of Esus (whom he identifies with Mars), the commentator speaks in the present tense, and says that a man is hanged on a tree until his limbs waste away ('usque donec per cruorem membra digesserit'). In his note on Vergil, *Æn.* iii. 57 ('Auri sacra fames,' etc.), Servius says that there is a reference to a practice of the Gauls whereby, in Marseilles, a poor man volunteered to accept hospitality for a year at the public expense, and then, taking upon himself the sins of the whole community, to be thrown from a height as a propitiatory sacrifice.

The passage is a striking one, and is in keeping with usages known to exist elsewhere: 'Nam Massilienses quotiens pestilentia laborabant, unus ex pauperibus offerebat alendus anno integro publicis <sumptibus> et purioribus cibis. Hic postea ornatus verbenis et vestibus sacris circumducebatur per totam civitatem cum exsecrationibus, ut in ipsum reciderent mala totius civitatis, et sic prociiebatur.'

In his account of the inhabitants of Thule, Procopius (*de Bell. Goth.* ii. 15) speaks of them as regarding the sacrifice of their first prisoner of war as the best; and the victim in this case, he says, was not merely slaughtered, but was hanged from a tree, thrown amid thorns, or put to death in some other horrible fashion. There are features of these sacrifices, in the accounts of the commentators in question on Lucan and on Vergil, as well as in that of Procopius, which forcibly suggest some connexion between them and the promotion of tree or plant life. That the religion of Gaul, in some districts at any rate, concerned itself with agricultural life is clear from the reference of Gregory of Tours (*de Glor. Conf.* lxxvii.), taken from the account of the Passion of St. Symphorian, that an image of the goddess Berecynthia used to be carried out on a waggon, for the protection of the fields and vineyards. Similarly the reference in Strabo (iv. 4. 6, p. 198), taken from Artemidorus, as to the worship of Demeter and Persephone in an island near Britain, points in the same direction, and likewise Pliny's account (*HN* xvi. 251) of the gathering of the mistletoe. The oak was, undoubtedly, sacred among the Celts (Pliny, *op. cit.* xvi. 249, etc.; Maximus Tyrius, *Diss.* viii. 8). The various customs described by Frazer, which are connected with the growth of vegetation, the harvesting of corn, the death of the Carnival, and the like, have been exemplified by him and others from the usages of Celtic countries (see esp. *GB* i. 200, 223, ii. 78, 79, 176, 177, 184, 185, 236, 258, 259, 269, 317). How far these deities of vegetation are to be regarded as local or tribal, or a fusion of both, is a matter which cannot be determined with certainty.

One remarkable instance of tribal totemistic communion in the North of Ireland is given in Giraldus Cambrensis (*Topogr. Hib.* dist. iii. c. 25), but the story is indignantly denied by Keating, the Irish historian. According to this account, on the

accession of the king of Tyrconnell, a horse was slain and boiled, and the future king bathed in the broth. Then he and his people ate the flesh of the animal, and he drank of the broth in which he had bathed. The story, as given, indicated that the king was obliged to do everything that he could to identify himself with the nature of the animal that was killed; and this certainly suggests some form of totemism. E. Spenser's reference (*View of the State of Ireland*, ed. 1809, p. 101, in Morley's *Ireland under Elizabeth* and *James I.*, 1900) to cases in which he knew of the drinking of friends' blood deserves consideration in this connexion.

4. **Vestiges of Celtic sacrificial communion.**—There appear to be in Celtic folk-lore various vestiges of the ancient practice of sacrifice, whether communal or propitiatory. The Welsh MS of poetry called the *Book of Aneirin* contains an allusion to this practice, while Rhys, in his *Celtic Folklore* (i. 305, etc.), mentions a few instances from the Isle of Man. Traces of the practice, too, are to be found in Devonshire (Worth, *Hist. of Devonshire*, London, 1886) and in Scotland (J. Sinclair, *Statistical Account of Scotland*, 1791-99, xi. 620; Pennant, *Tour in Scotland*³, Warrington, 1774). In Brittany, too, similar survivals exist (Sébillot, *Coutumes populaires de la Haute-Bretagne*, 1886, p. 227 f.), and the periodical bonfires of Celtic countries (e.g. the Beltane fires of the Central Highlands) all point in the same direction. One of the aims of these bonfires—notably in winter, as Frazer points out—may have been to help the sun in his course by the communion of co-operation (*GB*² iii. 253, 259, 261, 280, 281, 284, 289, 290, 291, 293, 320, 321, 323, 325).

5. **Communion for revelation.**—One of the leading aims of communion with Deity is the acquisition of information as to the unknown, especially the future. In Celtic countries, practices of divination and the like were prevalent, and substantially the same methods were employed in them as in other lands. Aelian (*Var. Hist.* ii. 31) tells us that the Celts believed that the gods gave indications of the future through birds and signs, as well as by means of entrails and in other ways. The picture that Lucian (*Herakles*, i.) gives of the Celtic 'Ogmios' is that of a god who had pre-eminently the gift of speech. Diodorus (v. 31. 4) mentions the Celtic seers as foretelling the future through the observation of birds and the sacrifice of victims. Further, he says that it was their custom, in any matter of supreme importance, to offer up a human victim, 'to strike him over the diaphragm with a sword, and, on the fall of the person struck, to derive omens from his manner of falling and the writhings of his limbs, as well as from the flow of the blood.' Caesar (*de Bell. Gall.* vi. 13. 4) speaks of interpretation being given by Celtic seers in matters of religion. There is a reference to Celtic augury in a passage of pseudo-Plutarch (*de Fluviiis*, vi. 4) which seeks to give an explanation of the name *Lugdunum*. In the practices of later folk-lore in Celtic countries there are numerous survivals of divination and prognostication through omens, dreams, and otherwise (Rhys, *Celtic Folklore*, i. 318, 319, 325, 330). In a Welsh MS of the early 16th cent. (Peniarth MS, 163) there is a statement that, in the Isle of Man, men could see in full daylight those who had died. If strangers wished to see them, they had only to tread on the feet of the natives, and they, too, could see what the natives saw. The Welsh 12th cent. *Black Book of Carmarthen* refers to omens taken from sneezing (*trew*), and the Welsh word for 'a bonfire,' *coelcerth*, means literally 'a sure omen.' The practice of divination in connexion with bonfires is widely attested for Celtic countries.

6. **Ministers of communion with Deity.**—Aristotle (*frag.* 30, p. 1479^a, 32) says that there were Druids among the 'Celti' and 'Galatæ,' and the connexion in which the words are used shows that the office was viewed as a sacred one. Diodorus (v. 31. 4) speaks of the Druids as philosophers and divines, and says that the Celts had also prophets,

whose special function it was to foretell the future. In all sacrifices, however, he says that a philosopher (i.e. a Druid) was present. According to Caesar (*op. cit.* vi. 13. 4), the Druids were also teachers, and were exempt from military service and from taxation. Strabo (iv. 4. 4, p. 197) refers to the existence among the Celts of *oðdres* (Lat. pl. *vates*, 'prophets'). In Tacitus (*Ann.* xiv. 30) the Druids are represented as praying with hands upraised to heaven, while Dio Chrysostom (*Orat.* 49) says that they were concerned with soothsaying (*μαντική*). In Hirtius (*de Bell. Gall.* viii. 38. 3) there is a reference to a certain type of priest (of Mars), called a 'gutuator,' Pliny (*HN* xxx. 13) tells us that Tiberius abolished the Druids by a decree of the Senate ('namque Tiberii Cæsaris principatus sustulit Druidas eorum et hoc genus vatium medicorumque per senatusconsultum'). In Ireland, the term 'Druid' for a seer is frequently found in the literature, and a hymn of St. Patrick in the *Liber Hymnorum* (a MS of the 11th or 12th cent.) asks for protection from the charms of Druids as well as of women. The term 'derwydd,' sometimes found in Welsh medieval literature, was especially associated with the composition of Welsh metrical vaticinations (see BARDS [Welsh], vol. ii. p. 417^b). For later survivals of sorcerers in Celtic countries, see Rhys, *Celtic Folklore*, ch. xi. The existence of women who acted as intermediaries with Deity among the Celts has been much debated; but the probability is that here, as elsewhere, women played a part in religious ritual. Plutarch (*Mul. Virt.* p. 257; *Amator.* 22) mentions a certain Camma, who was hereditary priestess of Artemis, but it is only in late writers that reference is made to *Dryades*, 'Druidesses' (e.g. in Lampridius, *Alex. Severus*, 60. 6; Vopiscus, quoted in Numerianus, 14; and Aurelian, 44. 4). These 'Druidesses' appear to have been only sorceresses.

Much discussion has arisen concerning the statement of Posidonius (quoted by Strabo, iv. 6, p. 193 f.) and that of Mela (ii. 6. 48) referring to certain propheticesses on an island opposite the mouth of the Loire and the shores of the Ouessini (Mela). In spite of the ingenious attempt of S. Reinach (*Cultes, mythes, et religions*, p. 186) to explain the origin and growth of Mela's account, the survival, in certain Celtic countries, of witchcraft and wind-making (Rhys, *op. cit.* i. 830; Frazer, *GB*² i. 121) makes it not impossible that the passages in question are based on some measure of fact; and the references to female well-attendants among the Celts seem unmistakable.

7. **Places of communion.**—In addition to wells and caves, those mysterious sacred spots of Celtic nature-religion, groves and clearings in groves, appear to have been held by the Celts in special regard. Diodorus (v. 27. 4) speaks of temples and sacred precincts; and there is abundant evidence that the Gauls had temples and, in Roman times, images. Diodorus (*loc. cit.*) mentions the sanctity, in the eyes of the Gauls, of sacred places, and the safety of the gold stored therein, in spite of Gaulish cupidity. The Celtic term for a sacred place was *nemeton* (Ir. *nemed*; Welsh, *nyfed*), a term which probably meant originally 'a clearing in a wood.' The name of the Galatian temple was *Drunemeton* ('the sacred place of the oak'). Even in Christian times, springs and groves continued to be held in respect, as may be seen from the *Indiculus superstitionum et paganiarum* (c. 8th cent. A.D.), vi. 223: 'de sacris silvarum qua nimidas (= nemeta) vocant.' There is a similar explanation in the *Cartulaire de Quimperlé* (A.D. 1031): 'silva quae vocatur Nemet.' For an account of later survivals of sacred groves Celtic lands, see Frazer, *op. cit.* i. 187).

8. **Attitude of communion.**—On this head little information is obtainable, but Dio (lxii. 6) says that in prayer Boudicca (Boadicea) held up her hand to heaven (*τὴν χεῖρα ἐς τὸν οὐρανὸν ἀνέτελασσαν εἶπε*). Athenæus (iv. 36, pp. 151^a-152^a) quotes from Posidonius a statement to the effect that the Celts turned to the right in worshipping the gods

(*τοὺς θεοὺς προσκυνοῦν ἐπὶ τὰ δεξιὰ στρεφόμενοι*). Tacitus (*Ann.* xiv. 30) speaks of women with hair loose, holding torches before them, and of Druids praying with hands upraised to heaven. Both Tacitus and Strabo (iv. 198 f.) instance the Bacchic frenzy of the women who took part in Celtic rites, and Dionys. (*Perieg.* 570-574) speaks of them as garlanded with ivy. There is no reference to kneeling or the closing of the eyes. It is remarkable that Celtic philology throws very little light either on the attitude of Celtic communion with Deity or on its characteristics generally.

COMMUNION WITH DEITY (Chinese).—

The early settlers in what we now call 'China,' seem to have carried with them, into the land of their adoption, certain well-defined religious ideas, amongst which the recognition of a Supreme Being and the possibility and duty of entering into relations with Him were prominent and pre-eminent. The term by which the Deity is described is *Shang-ti*, composed of two Chinese ideograms: *shang*, meaning 'that which is above,' 'the top,' and hence 'supreme'; and *ti*, said to consist of an ancient form of the same character *shang*, and the word 'to pierce,' and hence meaning 'an autocrat,' 'one who stands alone, whose authority is unequalled and unparalleled.' Thus *Shang-ti* is interpreted as the one supreme and unchallenged 'Sovereign on High,' or 'Supreme Ruler.' By some Chinese commentators *Shang-ti* is described as the 'Lord of Living Creatures,' and by others as being synonymous with 'Heaven.' The character employed to denote 'Heaven' is also deserving of notice; in its earliest forms it seems to present a rude picture of a human being, and thus, as it were, to invest with personality the mysterious and unknowable *Shang-ti*; but in the present mode of writing it is the character for 'one' over that for 'great'; and thus seems to stand for 'the Great One Above,' though it is generally used in an impersonal sense, as 'Providence,' contrasted with the more personal God, *Shang-ti*.

The name *Shang-ti* is introduced in the earliest recorded history without preface or apology, as requiring no explanation and admitting of no misunderstanding—in much the same way as 'Elohim' appears in the first chapter of Genesis, without any attempt at definition or prologue. His worship appears to go back to the very earliest ages of the Chinese people. Of *Hwang-ti*, one of the five sovereigns who bore rule at the dawn of Chinese history (2697 B.C.), we read that he sacrificed to *Shang-ti*, wearing his royal robes, and presenting a whole burnt-offering upon a round hillock, the latter representing the conventional shape of Heaven. The Emperor Shun (2255 B.C.), on his accession to the throne, sacrificed to *Shang-ti*; and from that time, in an almost unbroken line, the rulers of China have maintained their worship, with little change, down to the present moment. In the annual sacrifices, offered at the Altar of Heaven in Peking to-day, an almost exact parallel with the earliest recorded sacrifice to God is presented, *mutatis mutandis*, unaffected by the later developments of Confucianism in the 6th cent. B.C., or the materialistic school of the 12th cent. A.D., uncontaminated by the advent of Buddhism, or by the various religious systems which have become so firmly established in Chinese society, and undisturbed by the floods of invasion which have swept over China from time to time, or by the fact that the present rulers represent an alien race.

1. Object of communion with *Shang-ti*.—It was because *Shang-ti* was regarded as 'Lord of the Azure Heavens,' the 'Disposer Supreme' of thrones and dynasties, the 'Restorer of torpid life to Nature,' and the 'Giver of every good and perfect gift,' that he was approached by kings like T'ang the Completer (1766 B.C.), who initiated his attempt to overthrow the Hia dynasty by reverent sacrifice and fervent prayer; and Wu, the founder of

the Chow dynasty (1122 B.C.), who acknowledged his indebtedness to the Supreme Ruler, for the gift of the throne, by appropriate sacrifices, attributing the failure of his predecessor of the former dynasty to the fact that 'he did not reverence God above.' Throughout the Chinese classics the 'Divine right of kings' is everywhere regarded as depending upon the 'appointment' or decree of Heaven; and even as early as 2356 B.C. we find a hint of this fact in the adoption of the title 'Son of Heaven' by Shun, the king at that period, in acknowledgment of the decree of Heaven to which he traced his appointment. The same truth is referred to in the 'Doctrine of the Mean,' quoted from the Odes:

'He received from Heaven the emoluments of dignity. It protected him, assisted him, decreed him the throne,' etc., to which the compiler adds the inference, 'We may say, therefore, that he who is greatly virtuous will be sure to receive the appointment of Heaven.'

The Duke of Chow (12th cent. B.C.), in his proclamation to the people of Yin, speaks in unmistakable terms on the subject:

'From T'ang the Successful down to the Emperor Yi, every sovereign sought to make his virtue illustrious, and duly attended to the sacrifices; and thus it was that, while Heaven exercised a great establishing influence, preserving and regulating the house of Yin, its sovereigns, on their part, were humbly careful not to lose the favour of God, and strove to manifest a good-doing corresponding to that of Heaven.'

Such being the relations between the Ruler on earth and the 'Ruler on High,' it was essential that the vicergerent of Heaven should be prepared to acknowledge the high, over-ruling power which was the ultimate source of his authority, and to offer that highest expression of filial submission and devotion which was implied by the sacrificial ritual; for only so long as the sovereign acted in accordance with the dictates of Heaven could he expect to maintain his high estate; and the fall of kings and dynasties is always attributed to the neglect of this supreme duty.

The ever-presence of the Deity is assumed in many passages of the Chinese canonical books, as, for example, the Odes:

'Say not Heaven is so far, so high,
Its servants; it is ever nigh;
And daily are we here within its sight.'

The most intimate relations are recorded as existing between the Supreme and His earthly representative, as, for example, in the case of King Wen (1231-1135 B.C.), of whom it is repeatedly said, 'God spake to Wen.' Not only so, but, since the king was regarded as the father of his people, and, under the patriarchal system, as the high priest of the great family represented by the nation, it was fitting that he should present on its behalf the common wants and cravings of the myriad people, in connexion with the recurring seasons and the 'kindly fruits of the earth.' Thus we find numerous instances of prayer being offered in case of drought; for example, King T'ang (1766 B.C.) is represented by Mencius as praying:

'I, the child Li, presume to use a dark-coloured victim, and announce to Thee, O Supreme Heavenly Sovereign, now there is a great drought,' etc.

Again, in the Odes, we read King Suan's appeal to Heaven in similar circumstances:

'For good years full soon I prayed, nor was late at any shrine with my first-fruits. God in Heaven, heedst Thou never prayer of mine. . . . To High Heaven I look and cry, O the endless agony.'

The institution of the first 'Harvest Festival' is attributed to How-tsi (2255 B.C.), lord of T'ai; and in the Odes a vivid picture is presented of the ceremonies which marked the offering of first-fruits in acknowledgment of the gifts of Heaven. The infliction of plague, pestilence, and famine is also traced to Heaven's displeasure in consequence of national disobedience.

Thus the operations of Heaven are recognized as extending to all departments of national and domestic life; but since, by the fiat of Chwan-hü (2513 B.C.), formal approach to the Deity was limited to the sovereign, while the people were forbidden under severe penalties to offer sacrifices to Shang-ti, they have been compelled to direct their prayers and express their thanks to the host of subordinate deities, such as How-tsi, patron of agriculture, the spirits representing the various forces of Nature, the spirits of the soil and grain, and the local and domestic deities—these being regarded as mediators between man and the Supreme Being, much in the same way as the provincial officials act as the 'middlemen' between the people and the sovereign. It thus happens that, though the Emperor alone, as the federal head of the race, approaches directly and immediately the presence of Shang-ti, the people in their family capacity are also permitted access to Him, though only by means of intermediaries, viz. the spirits and deities above mentioned; and thus, though the method of approach may vary in the degree of intimacy which obtains in the several cases, no one is altogether debarred from communion, direct or indirect, with the Deity.

2. Methods of communion.—

(1) *Sacrifices*.—See art. CONFUCIAN RELIGION.

(2) *Dreams*.—Another method of communion with the Deity is by dreams, of which we find instances as early as 1323 B.C., when Wu-ting, who had lately ascended the throne, had a revelation, in a dream, of the features of the man whom he was seeking for promotion to the office of chief minister. King Wu also (1122 B.C.) found corroboration, in his dreams, for the schemes which he was adopting, and which he believed to be dictated by Heaven. It is a common practice, nowadays, for people to repair to certain temples and spend the night there, in the hope that dreams will be given them, whereby the will of the Deity may be indicated to them.

(3) *Divination*.—Divination in various forms is also resorted to, with a view to discovering the intentions of Heaven, as is expressly stated in the case of King Wu. (For the special methods, cf. art. COMMUNION WITH THE DEAD [Chinese].) One form of divining which is very common is that of spirit-writing, a form of 'planchette,' the 'properties' consisting of a table covered with fine sand, and a peach stick, bent at one end and fastened to a cross-piece which rests upon the open palms of the medium. Sacrifices are first presented, and a prayer is offered to the Deity, requesting that a spirit-messenger may be dispatched to the house where the séance is to take place. When the spirit is believed to have arrived, he is invited to occupy a chair at the table, and another chair is placed for the use of the Deity who is supposed to have commissioned him. The fact of his arrival is announced by the peach stick tracing on the sand the character for 'arrived.' Worship is now offered, and libations are poured out. Questions are addressed to the spirit in due course, and answers are written upon the sandy surface. The questions must be written, and burnt, together with some gold tinsel, before the spirit-answer can be given.

Another method of inquiry is that of the *chiao*, generally made of a short piece of the root of the bamboo, split in halves, each piece presenting a concave and a convex side. These are thrown into the air, after an invocation of the Deity, and the positions which the *chiao* assumes on reaching the ground are supposed to indicate the nature of the response. If the convex side of one piece and the concave of the other are uppermost, the answer is supposed to be favourable; if two con-

vexes are exposed, the answer is negative; if two concaves turn up, the answer is indifferent.

COMMUNION WITH DEITY (Christian).

—Communion with God is that close intimacy between man and God which had long been sought for in many ways, and reached its climax in Him who is truly God and perfectly man, Jesus of Nazareth. As Himself uniting God and man in His own Person, and as the means of union between men and God, He is at once the Example and the Giver of communion. One form of communion, seen both in Him and in the earliest exponents of Christianity, is Prayer. The first motion of the individual soul towards invisible realities, however elementary the environment of religion and culture may be, should find its expression in prayer, which, however, is not only a starting-point but also an invariable concomitant, and so far as the present life is concerned, a climax, of the soul's progress towards deity.

The acts and words of our Lord, and the practice and teaching of the earliest Christians, carry on and develop the characteristics of prayer which accompany the earlier searchings after God within the sphere of revealed religion in the OT, which, as the Christian era is approached, appear to grow in intensity, notwithstanding their insufficient solution of the problem of communion with God. Our Lord Himself prayed at the time of His baptism (Lk 3²¹), before the Transfiguration (9^{28L}), before choosing the Twelve (6^{12L}), before raising Lazarus (Jn 11^{41L}), on the way to Gethsemane (17), in the Agony (Mk 14³⁶⁻³⁹, Mt 26³⁹⁻⁴⁴, Lk 22⁴¹⁻⁴⁵), and on the cross (23^{34, 46}). In these events His abiding communion with the Father¹ takes the form of prayer, as prayer is made a means of (1) request, (2) union, or (3) intercession. The same aspects of prayer are in His teaching, as, e.g., in (1) Mt 7⁷⁻¹¹, Mk 11²⁴, Lk 11⁹⁻¹³ 18¹⁻⁸; (2) Jn 16^{26, 27}; (3) Mk 9²⁹. These three aspects of prayer are summed up in the Lord's Prayer. The first two words raise the concise clauses which follow into the sphere of the most spiritual communion, teaching that the Absolute is a Father listening to His children as they bring to Him their temporal wants, their spiritual cares, and their intercessions for the world around them. Prayer, again, as a means of communion was used by the earliest Christians, influenced in part, perhaps, by their traditional Jewish beliefs, and certainly largely by the example and precept of their Master. Prayer led to the outpouring of the Spirit (Ac 1¹⁴), the choice of St. Matthias (vv. 24-26), the journey of Ananias to St. Paul (9¹¹), the raising of Dorcas by St. Peter (9⁴⁰), the release from prison of St. Peter (12⁵), and of St. Paul and Silas (16²⁵). Prayer so efficacious suggests that those using it were through it in close communion with God; and in the case of St. Stephen, prayer and the vision of the unseen together mark the supreme dedication of his life (7⁵⁵⁻⁶⁰). Thus by means of prayer the earliest Christians continued not only in the Apostolic fellowship (2²), but also in union with God. How actual Christian communion in prayer linked on to the ways of preparation may be illustrated by observing that the meditation which rested on the habitual prayers

¹ It is worth while to notice the use of the word 'Father' in Lk 10²¹ 22⁴⁸ 23^{34, 46}.

of Cornelius, before he was a Christian, was an instrument for his conversion no less than the devotion of the Apostle who was to bring him to Christ (Ac 10). So also in the Epistles, prayer has the same aspects, and is similarly a means of communion. As in the Acts (9¹⁴ 22¹⁶), calling on the name of the Lord Jesus Christ is spoken of by St. Paul as a mark of a Christian (1 Co 1²). Elsewhere St. Paul refers to intercessory prayer—his own for his converts and theirs for him, and that of Christians in general for all men and for special classes and persons; to the help afforded to Christians in prayer by the Holy Spirit; and to constant prayer in the Spirit as accompanying the use of the 'armour of God' (e.g. Ro 8²⁶, Eph 6¹⁸, Col 4²⁻⁴, 1 Th 5¹⁷, 1 Ti 2¹⁵). Thus, in the mind of St. Paul, prayer necessitates and expresses the closest possible relation on the part of Christians with the Holy Trinity. In the rest of the NT the very incidental character of the references to prayer shows the extent to which it had become an ordinary and regular mode of communion between Christians and the Holy Trinity. St. James briefly alludes to 'the supplication of a righteous man' which 'availeth much in its working' (Ja 5¹⁶), and, in commanding the prayer of the presbyters of the Church, says that 'the prayer of faith shall save him that is sick' (v. 14⁶).

These dogmatically worded statements as to the efficacy of prayer necessarily imply that it establishes and maintains most intimate relations of fellowship between man and God. St. Peter gives as a reason for the observance of practical advice, 'that your prayers be not hindered' (1 P 3⁷); urges sound mind and sobriety 'unto prayer' (4⁷); and repeats the teaching of the Psalmist (Ps 34¹⁵), that the ears of God are ready to hear the supplication of man (1 P 3¹²). The brief statements in 1 Jn 3²¹, 5¹⁴ show the confidence in prayer which is a sign that the heart is with God; and 3 Jn 1⁴ indicates prayer as the means of converse with God concerning the prosperity and health of an earthly friend. St. Jude connects prayer with abiding in the love of God, when he exhorts those to whom he writes: 'building up yourselves on your most holy faith, praying in the Holy Spirit, keep yourselves in the love of God' (Jude 30¹). In the Epistle to the Hebrews, and in the Apocalypse, there are crowning statements as to the value of intercessory prayer, not only in regard to its efficacy as intercession, but also as illustrating the close access to God which it affords. Of Christ Himself it is said that He 'ever liveth to make intercession' (He 7²⁵), and that He so intercedes 'at the right hand of the throne of God' (12²); and His presence in the Heavens affords to Christians boldness and security in approaching the throne of grace (4¹⁶ 10²²). In the Apocalypse the nearness of prayer to the central presence of God is strikingly depicted. Before the Lamb are presented by the four and twenty elders 'golden bowls full of incense which are the prayers of the saints' (Rev 5⁸). 'Underneath the altar the souls of them which had been slain for the Word of God, and for the testimony which they held,' cried out to their 'Master, the Holy and True' (6¹⁰). To 'the prayers of all the saints' is incense added, which with them goes 'up before God' (8³). Those who have the special inspiration of the Holy Spirit join with the whole Church in praying for the coming of the Lord; and their prayer has such impetratory power in effecting His presence, that all who are athirst are able to draw near and take freely the water of life (22¹⁷).

Teaching of specific books of NT on communion with God.—(1) *The Synoptic Gospels*.—In the life and death of Christ the principle of sin, which lay between man and communion with God,

is done away. Christ's life on earth was the answer to the fact and presence of human sin. As the goal of the life of man is the full and complete realization of his Divine sonship, so sin in its deepest reality includes all that lies between the human will and the Divine will as a barrier and separation. The gospel of Jesus Christ is, above all, the gospel of human salvation. But the salvation is more than salvation from guilt and the present power of sin; it includes the reception of strength for righteousness and of union with God. As a step towards realizing this, it is important to grasp the idea of the final conquest of sin in the life of Christ. At the beginning of His ministry our Lord's exhortation was to repentance (Mt 4⁷, Mk 1⁴). His ministry itself included works of forgiveness. During it He claimed to forgive sin (Mt 9²⁻⁶, Mk 2⁵⁻¹¹, Lk 5²⁰⁻²⁴). At the Last Supper He connected the pouring out of His life-blood with the remission of sin (Mt 26²⁸). His death was a sacrifice for sin. The sacrificial aspect is expressed in the words, 'the Son of Man came not to be ministered unto, but to minister, and to give his life a ransom for many' (Mt 20²⁸, Mk 10⁴⁵). In the words from Heaven at the Baptism and the Transfiguration (Mt 3¹⁷, Mk 1¹¹, Lk 3²²; Mt 17², Mk 9⁷, Lk 9³⁵) the description of the Suffering Servant of Isaiah (Is 42¹) is applied to our Lord. At the institution of the Eucharist the words of Christ recall the Covenant Sacrifice of Ex 24⁸⁻⁹, and the promise of a New Covenant in Jer 31. Not only these references, but also the time, place, and Paschal festivities all combine to suggest that the death of Christ preserved an especial sacrificial significance. And, further, they indicate that the efficacy of this sacrifice consisted in the power to annul the principle of sin which lay between man and communion with the Father of all spirits. Our Lord's own words, Apostolic interpretation, and our own experience prove the power of the death of Christ to do away with sin. But when we ask how or why, in the immutable counsel of God, the death of His Son availed to abolish sin and death, that question is not explicitly raised or answered in the Synoptic Gospels. Incarnate love could be revealed only in this world of perishing souls; in all its beauty and grandeur it was conditioned by the facts of human sin and suffering. The life of Christ on earth was a long, slow process of a translation of pain and suffering into the terms of penitence. The sacrifice of the sinless Christ had part of its atoning value because, in His death, suffering and temptation were conquered and transmuted into the consummation of penitence. By the power of His offering of a perfect and vicarious sacrifice in the hour of death, He has abolished for ever all sin which lies between the heart of man and the mind of God. In the Synoptic Gospels the negative aspect of Christ's work precedes the inauguration of the Kingdom of God. In so far as we may speak of a conquest or forgiveness of sin in His days on earth, we may speak of the Kingdom as a present reality. Again, in so far as we see in His death the final conquest of sin, so far we may speak of His Kingdom as inaugurated and consummated in idea by His death. Christ then has overthrown the barrier of sin which lay between man and communion with God.

It may now be asked, What has Christ done positively and constructively to make possible the life of communion between God and man? (2) His unique teaching sums up all that was full of promise in the search for God recorded in the OT. The manner and method of it are more unique than its contents. Many of the ideas, e.g. the Fatherhood of God, the high destiny of man, the

value of the human soul, had been stated before in OT literature. What is new is the deep spiritual insight which sees into the very centre of truth. Not less noteworthy are the sureness and authoritativeness of His teaching. He spoke 'as having authority, and not as the scribes' (Mk 12²⁸, cf. Mt 7²⁹). He dealt mainly with the Kingdom of God, its nearness, the conditions for entrance into it, its nature as heavenly and eternal, not as a political world power; and with the life in the Kingdom, its approaching and epoch-making consummation. In His wonderful portrayal of life under the reign of God's will, our Lord showed what the life of communion with God essentially is. It is the life of love and humility, outwardly a continuous act of obedience to God, inwardly a life of spiritual prayer and utter self-surrender and dependence upon God. Careful study of the Divine meaning of His words, meditation and contemplation upon them, love for the life portrayed in the Gospel, are steps towards likeness to God. But purely subjective efforts alone cannot bring man into essential harmony with God. (b) Beyond the teaching about God, man, and the Kingdom, Jesus in His own life upon earth is an example of the most perfect communion with God. His mind is in such essential harmony with the Divine mind that He can say in the Agony, 'Not what I will, but what thou wilt' (Mt 26³⁹⁻⁴², Mk 14³⁶, Lk 22⁴²). By efforts on the part of Christians, the purity and love of Jesus may be partially apprehended and assimilated into their lives. But this is but man's unaided effort after righteousness, not the righteousness of God. The Christian life must be more than a shadow of the reality. (c) Through the institution of the Eucharist is given the means whereby Christians may make the mind and heart and will of God their own. Our Lord describes it as the gift of His manhood (Mt 26²⁶⁻²⁸, Mk 14²²⁻²⁴, Lk 22^{19f.}). Hence it affords the possibility of union with His human life; and, since He is God as well as man, with the Divine life itself.

(2) *St. Paul.*—Much has been written on the relations of the teaching of St. Paul to our Lord—how far Christianity would have succeeded in becoming the world-religion but for St. Paul, how much of the Gospel teaching is genuinely Christ's teaching and not due to Pauline influence. The present writers are not here concerned with these questions. They believe that our Lord was conscious of the establishment of communion between God and man through Himself; and that this was apprehended by St. Paul. The present question is simply how St. Paul assists in interpreting this stupendous fact. To St. Paul, God is endowed with all the essentials of the absolute, eternal, transcendent, yet immanent, Godhead. But, first and foremost, St. Paul presupposes the Fatherhood of God, the fundamental article of our Lord's teaching, without which communion between God and man would have been impossible. This Fatherhood is characterized by (a) righteousness, (b) wrath. Righteousness is the ethical ground of God's dealings with His children, the norm of their admission to communion with Him. Wrath is called forth by their refusal or failure to make the best use of pre-Christian means of communion. It was the righteous curse of God under which they lay when Christ 'in the fulness of the time' (Gal 4⁴) manifested God. But, as righteousness is of the essence of the Father who reveals Himself to man, so righteousness is the *sine qua non*, the presupposition and postulate, of the possibility that man should come into communion with God. Here it is that St. Paul sees the necessity for Christ, even on the negative side. Man had been created in the image and glory of God (1 Co 11⁷),

but the guilt of the Fall became hereditary in man (Ro 5¹²), and so man was dominated, not by righteousness, but by sin in his flesh. Man's vision of God and his sense of communion with Him were dimmed. He was in a state of unrighteousness (Ro 1¹⁸). How was this unrighteousness to be done away? How was the possibility of communion (righteousness) to be re-established? St. Paul answers—through Christ Jesus, and through Him alone. He emphasizes this point by contrasting Christ's removal of the obstacles with (not, be it noted, by deriding) two earlier attempts to restore man's righteousness—two attempts which, in the long run, had only led man to wallow still deeper in the mire of sin, and to wander still further from communion with God.

(a) The first attempt had been in the possibilities of partial communion held out to the Gentiles by the fatherly and forbearing Providence which gave them the bounties of Nature and sought to direct their gaze to heaven through the work of creation, and by means of the conscience and intelligence implanted in them individually. The result had been, not a heightening of the possibilities of communion with the all-loving Father, but—strangely paradoxical as it may seem—the increasing of their unrighteousness, by their communion with the god of this world, Satan, so that they sacrificed to demons, not to God (Ro 12¹⁻², 1 Co 10²⁰). (b) The other attempt to do away with the law of sin and death which made communion with the righteous Father impossible had been equally a failure. The Jewish Law had been far from providing a perfect means of access to God. St. Paul, looking back, saw in it only a more thorough obscuring of the path which leads to the presence of God. It had increased, not decreased, transgression. It had set man further from, not nearer to, righteousness (Ro 1-6, 9-11).

Man, therefore, still stood in need of the removal of the disabilities to communion, and it was, in part, to remove these that Christ came. With this removal, as a means to make communion with God once more possible for man, St. Paul deals exhaustively in metaphors, some drawn from the forensic terminology, and others from the ceremonial of the Great Day of Atonement. The act of Christ, His death on the cross, on which is based the justification or acquittal in the court of the Divine justice, is vicarious and representative in character, universal in its scope, a legal expiation, a justifying act, an obedience even unto death, annulling the condemnation resultant from the disobedience of the one man. The shedding of Christ's blood was, on the one hand, a propitiation set forth by God, who commended His own love toward us sinners and delivered Him up for us all; on the other hand, a sacrifice made by man, effecting redemption, resulting in reconciliation. Only one subjective act on man's part avails—the act of faith; and even this comes of, and has as its objective, the grace and power of God working through Christ. It is preceded or accompanied, indeed, by repentance, as man turns to God from idols, or comes to know God, or dies to sin, or crucifies the flesh, or puts off the old man; but it is itself the simple, childlike, submissive, enthusiastic, unconditional self-surrender of the man's whole being—intellect, affections, and purpose—to the will of God revealed in Christ Jesus.

Such in general terms is the Pauline teaching concerning the precedent and accompaniment of the Christian's initial justification, or restoration to a position of righteousness before God, the condition of fellowship with Him. And the power for this great movement of the whole being of man is derived from the death and resurrection of Christ (Romans, *passim*; cf. e.g. 1 Th 5⁹, 1 Co 15¹²⁻¹⁹, Eph 2, Col 1^{18f.}, 1 Ti 2^{3f.}, Tit 2^{13f.}). On the positive side, the writings of St. Paul, to whom sin was a deadly reality and the righteousness of God was the goal of human life, contain a wealth of ideas relating to communion with God. In the risen and exalted and glorified Christ there are possibilities surpassing even those in the crucifixion and death of the Messiah. In the Pauline speeches

in Acts, our Lord is still pre-eminently the Jewish Messiah who has come, and is, moreover, about to judge the world. Through this Jesus are remission of sins and justification for every one that believeth. If the Christ is not accepted, a day of judgment is at hand for those who reject Him (Ac 13⁴⁰⁻⁴¹). To take the speech at Pisidian Antioch as illustrative of the Apostle's ideas at this period, the life of righteousness and communion with God depends directly upon the acceptance of the crucified Jesus as the promised Messiah. The life of communion with God means life in the new era, which will soon be ushered in when Jesus shall reign in the Kingdom of the Blessed. The choice between life and death depends upon the acceptance or rejection of Christ Himself, not of His moral or social teaching. The language of Thessalonians yields us evidence for the same period. In 1 Th 4¹³⁻¹⁸ and in the so-called Apocalypse of 2 Th 2, the Apostle not only insists upon the resurrection of Christ, but also on the resurrection of others, of the faithful, with Him. 'For if we believe that Jesus died and rose again, even so them also that are fallen asleep in Jesus will God bring with him.' The fact of the resurrection does not in itself secure the life of communion with the Father. The resurrection is with Christ. At this period St. Paul appears to have been looking for the return of the Lord from heaven in the near future. The expectation of His hourly coming was so strong at Thessalonica that all work was being suspended in view of it. In this case his eschatological belief gave, at least, form to the thought of St. Paul. The heavenly Christ was soon to appear, and the saints, both the living and those asleep, were to reign with Him in the heavenly kingdom (1 Th 4¹⁶).

Some of the deepest and most mystical of St. Paul's teaching is in the second group of Epistles—1 and 2 Cor., Gal., and Romans. For convenience' sake it will be well to consider Romans as illustrative of St. Paul's mind at this period. In Ro 3²⁵ the negative aspect of this subject is well stated in the words, 'whom God set forth to be a propitiation, through faith, by his blood, to show his righteousness, because of the passing over of the sins done aforetime, in the forbearance of God.' In some sense the righteousness of God has been expressed in the death of His Son. On whatever grounds the death of the Eternal Son may be said to have possessed expiatory power, the fact of that power is unquestioned. Again, the 'gospel is the power of God unto salvation to every one that believeth' (1⁶). There is in the gospel not only that which is able to cleanse from past sin and guilt, but also a positive power for our salvation. Here salvation is made to depend directly upon faith—'to every one that believeth.' The same fundamental idea occurs again, expressed in the words, 'the righteous shall live by faith' (1¹⁷); 'we reckon, therefore, that a man is justified by faith apart from the works of the law' (3²⁸). It has been claimed that there are in this Epistle two fundamentally opposing conceptions of salvation: (a) the juridical, expressed in the forensic language of the OT, which St. Paul inherited from Judaism; and (b) the Christian or mystical conception, based on a faith which means union with Christ. It is impossible to deny an element of truth to this theory, inasmuch as the Apostle describes the process of human salvation in two sets of terms and images. But more than this it is difficult to admit. The ultimate ground of our acceptance in either case is not the work or merit of man, but the gracious mercy of God. We have access to this grace only by our faith in the Lord Jesus Christ. 'Being therefore justified by faith, let us have peace with God through our Lord Jesus Christ: through whom also we have had our access by

faith into this grace wherein we stand' (5¹¹). While we were still in a state of sin and alienated from God, we were reconciled to Him by the death of Christ. But, beyond reconciliation through death, we have life, we are saved by the life of the Son (5⁹⁻¹¹). The positive aspect of the subject is stated very clearly in 5^{12, 21}. As death and sin entered the world through one man, Adam, so grace and eternal life come through Jesus Christ. The gift of grace from the loving Father through the Son is the guarantee for the eternal life of communion with God. When the question is raised how this gift of life is infused into us, the answer is—through baptism. In that sacrament we are baptized into Christ's death, that is to say, into death as a victory over sin. But, as we have died with Him, so also we shall be raised in the general resurrection with Him and reign eternally. 'Even so reckon ye also yourselves to be dead unto sin, but alive unto God in Christ Jesus' (6¹¹). In ch. 7 the conflict of the good and evil in the human soul is graphically presented. As this passage forces on the mind the horror and reality of sin, it also emphasizes the necessity of a positive aid and power coming from without to our help. This power which enters within us, enabling us not only 'to will' but also 'to do' the right, is none other than the Spirit of Christ. It would be difficult to overestimate the importance of this Pauline idea of the indwelling of the Spirit of Jesus or of God in man. Apart from this indwelling and union with Christ, man is impotent. He is dead in sin and without hope.

It has been seen that in the earlier group of Epistles the Lord Jesus is conceived essentially as the Messiah now in heaven, but who is shortly to return and bring the Kingdom of Heaven into actuality. In this second group He is essentially the Second Adam 'who to the rescue came.' As the first Adam brought sin and death on humanity, so the second and heavenly Man brings life eternal. As the power of sin and death which created and maintained the barrier between God and man was due to an act of disobedience, so the positive power which gives life and communion with God is infused into humanity through a life of active obedience.

It has been pointed out how the guilt and power of sin have been removed and the principle of life and grace infused into humanity. These two necessary aspects in the work of salvation involve certain fundamental ideas as to the Person of the Mediator. Further, when it is asked how this life is infused and assimilated into the individual believer, the answer depends upon mystical views of Christ's Person and work. Through prayer, through the sacraments, through the Church, man may attain that oneness with God which the work of the Son has made possible. The effect or result of prayer is the rest in the presence of God which is essentially communion with Him (15²⁰⁻²³). Again, prayer is salvation. 'Whosoever shall call upon the Name of the Lord shall be saved' (10¹³). Christians are to continue steadfastly in prayer, which is not fitful or irregular, since it means the realized presence of God (12¹³). In 1 Co. 11²⁰⁻²⁸ St. Paul gives an account of the institution of the Eucharist, which he claims to have received directly from the Lord (v. 23). That which is given in this rite is the body and blood of the Lord Jesus Himself (vv. 24, 25). The service has a memorial significance (vv. 24, 25). It proclaims the 'Lord's death till he come' (v. 26). Thus this passage contains explicit teaching that in the sacrament we feed on the body and blood of our Lord, that here we partake of and assimilate Him. In the most literal and real sense we may speak in this connexion of union with Christ. Thus we gain the

benefits which by His precious blood-shedding He hath procured for us, the life of communion with God.

Lastly, as a member of a society—the Christian Church—the Christian has his fellowship with Christ and God. The Church is the body of Christ of which we are the several members (12¹²). At Baptism the believer is baptized into His death, and becomes a mystical member of His body. In the later Epistles, Christ is the Head, and the Church is the body. These metaphors of body and members have a deep and spiritual meaning which only the use of metaphor could illustrate. If this language means anything, it means the real, full, and complete union of the believer with Christ in the sacraments of the Christian Church. Here lies the centre of gravity in the Christian religion. It is the sense of a union and communion with God realized and actualized in the life and death of His Blessed Son. It is only the sacramental system of the Christian society that makes possible the fullness of spiritual life in communion with the Father.

In the later Epistles there is drawn out more fully the cosmic significance of the Incarnation. But, as in 2 Co 5¹⁹ there is the idea of 'God in Christ reconciling the world to himself,' so in Ephesians the idea of reconciliation is prominent: 'But now in Christ Jesus ye who were in time past far off were made nigh by the blood of Christ. For he is our peace, who made both one, and brake down the middle wall of the partition' (Eph 2¹³⁻¹⁴). Not only has Christ broken down the barrier which lay between Jew and Gentile, but He has also removed all hindrances between these, when united to one another, and the presence of the Father. Again, 'He has raised us up with Him and made us to sit with Him in the heavenly places' (v. 9). The final result of the work and teaching of our Lord is that 'through him we both (Jew and Gentile) have our access in one Spirit unto the Father' (v. 18). Again, in 3¹² we have not only access to the throne and presence of God, but access with confidence, and this through the power of our faith in Christ. In this Epistle, St. Paul is dealing with universals and absolutes. The finality and absolute character of Christ's work (1) in the removal of sin, and (2) in the securing of our access to God, i.e. communion with Him, are marked. Lastly, the motive of all this is the love of Christ which passeth all knowledge.

(3) *St. James*.—This Epistle emphasizes that aspect of communion with God whereby man's part here and now, rather than what God has done in Christ, is considered (Ja 1⁷). The state of being in perfect communion with God, which is expressed by pure and undefiled religion, must be grounded, and find outward expression, in the doing of good work. The writer is conscious of man's ultimate high destiny as made in the image and likeness of God. But there have been many who have chosen the friendship of the world instead of the friendship of God, and so have given themselves over to do the work of Satan. Thus the idea of communion with God, or with the devil, is made to depend fundamentally on man's choice of the Father's friendship, or on his rejecting and vexing the Holy Spirit. In times past, and at present, man has been ruled by lust and evil desire, which have borne sin and death. If the writer's argument be dissected, it will be seen that this falling away from God's holy presence was due not so much to man's inherent depravity and utter sinfulness as to the imperfection of the Law. The life of communion with the Father is represented as a life in obedience to the perfect, royal law of liberty. This life with God was not possible under the OT dispensation, because the law of the OT was

external and compelling. The new law is inner and impelling, and is therefore the law of liberty.

It is not necessary here to make a detailed examination of the relation of 'faith' and 'works' in this Epistle to the same terms in St. Paul's letters. To St. Paul, as has been seen, faith was a real condition of communion with God. This St. James would not deny. For to him the term 'faith' conveyed the idea of a purely intellectual apprehension, not an assimilation and enthusiastic self-surrender to Christ as in Romans. 'Works' are not the legal works enjoined by the law, but deeds of mercy and kindness prompted by spontaneous self-imparting love for God and man. Hence salvation is based upon works, the works of man. God has in Christ removed sin, in that He has removed sin's power to keep man from God. The Father has accomplished this by a revelation of Himself in a perfect law of liberty, a royal law where obedience means life with Him (1²⁵).

The contrast between the life with God and existence apart from Him may be illustrated by the distinctions between the two wisdoms. There is one wisdom 'earthly, sensual, devilish,' which involves jealousy, faction, confusion, and every vile deed; 'the wisdom that is from above is first pure, then peaceable, gentle, easy to be entreated, full of mercy and good fruits, without variance, without hypocrisy' (3¹⁵⁻¹⁷). Man must not neglect his part in the conquest of the devil (4⁷). The Christian's duty of prayer is inculcated (5¹⁵⁻²⁰). Man has been freed from sins by the gift of a perfect revelation of the will and mind of God in a perfect law. Man's final attainment of the righteousness of God, which means eternal communion with Him, will depend upon his obedience to God's Law. How far, then, does God give grace and strength to actualize this perfect obedience which is essentially communion with Him? God has planted in our hearts a 'word' which, unless rejected, is able to save souls (1²¹). This salvation is the consummation of right relations with God. The 'word' is a free gift from the Father. It is, or gives, the strength and grace necessary to obey the royal law of liberty. All things are from Him, life itself included (1¹⁷). The wisdom which is opposed to earthly wisdom is not man's own but God's; it is from above. All that Christians do, or are, depends on the free gift of God.

This Epistle contains the gospel of piety and good works, rather than that of faith. But the good works do not depend on initiative and power. The process of salvation must be expressed in good works. But they bring no merit. It is not through man's merit that he is enabled to obey the law. This royal law is fundamentally the law of love (2⁸). The life of obedience to the ideal law revealed through Jesus Christ, the Lord of glory, is a process of drawing nigh unto God (4⁸). The power of prayer is mighty in its working. It is a source of comfort and strength to man in the life of obedience. The prayer of faith shall save him that is sick (5¹⁵⁻¹⁶). Through the manifold gifts of God the grace necessary for obedience is vouchsafed. This obedience in outward action is fundamentally the law of love, implanted by the Father in the heart. This is the ground and guarantee of communion with Him.

(4) *Hebrews*.—In this Epistle, Jesus Christ is presented as a supernatural, eternal, and uncreated Person. He is the Son in an absolute sense, superior to a long and illustrious line of prophets and servants of God. He is 'the effulgence of' the Divine 'glory,' 'the express image of the essence' of God. He was the Agent in creation, and is the Principle lying behind the moral order of the universe. The OT terms used to designate Jahweh are applied to the Person of the Son. On the other hand, he was man, tempted in all points like as we are, yet without sin. Because of His sufferings and death, He is crowned with glory and honour. He learned obedience by the things which He suffered. He is not ashamed to call men brethren (chs. 1-4). Thus there are expressed the two dominant factors in the Incarnation—Jesus presented as the Eternal

and Uncreated Son; and Jesus, the Captain of our Salvation, who underwent a perfect human experience. These thoughts underlie the development of the argument, and determine the result of His work. The results of the work of Jesus are absolute in their efficacy, universal in their application, and the expression in the world of time and sense of spiritual realities and eternal laws.

To grasp the significance of the writer's thought on the negative aspect of Christ's work as destroying or annulling that which lay between the consciousness of man and the realization of communion with God, it is necessary to bear three things in mind: (a) He conceives religion as essentially a covenant relation between God and man. Communion is a relation which entails responsibilities and confers privileges. Many of the distinctions turn upon the essential differences between the covenant inaugurated by Moses and the New Covenant promised by Jeremiah and sealed by the death of Christ. (b) As the destiny of man, according to the Synoptic Gospels, is life in the Kingdom of God, and in the Fourth Gospel is eternal life, so in this Epistle the end of man's existence is eternal rest in the peace of God. This heavenly rest is contrasted with the rest which Israel in older times sought in the promised land, on the other side of Jordan. (c) The distinction between this world of sense and the unseen world of reality is evidence of the writer's dependence upon Alexandrian thought.

The death of Christ is compared with the covenant offerings of Ex 24²⁻³, with the burnt-offerings of the Law, and with the sin-offerings of the Day of Atonement (Lv 16). The efficacy of His death considered as a sacrifice is asserted in 9¹². On the problem of the remission of sins, the cancelling of guilt, the writer repeats the OT idea that apart from the shedding of blood there is no remission. But, in view of the majesty and eternity of His Person, the Blood of Christ avails to atone for all past sin. In virtue of the power of His blood He has entered within the veil, into the very presence of God. This is the end of all religions—to secure perfect and uninterrupted communion with God. Sin has always acted as a barrier. Hence in the OT dispensation ordinary Israelites could not enter into the Holy of Holies at all, nor could the high priest, except once a year, to offer burnt- and sin-offerings for himself and the people. But now, by His own offering of Himself, Christ has perfected for ever them that are sanctified. Whither He has gone before, Christians may follow with boldness, and draw near to the throne of grace. Offering Himself as a sacrifice for sin, Christ has destroyed every barrier of sin which formerly lay between man and God. The sacrifice in which He is both High Priest and Victim secures this result in the world of spirit, whereas the Levitical worship had availed only to the cleansing of the flesh.

Although the efficacy of Christ's sacrifice rests fundamentally upon the majesty of His Person, His sacrificial death may be contrasted with the Levitical bloody sacrifices in the following points: (a) they are many and repeated: His is once for all; (b) they are of dumb animals: His is the voluntary act of the human will; (c) they are offered by sinful priests who do not fully represent the people: His is offered by a sinless Offerer who is perfectly at one with His brethren; (d) they as sacrificial acts are transactions in the world of time and sense: His High Priestly act is an expression of the Eternal Spirit of the Divine Love; (e) they avail to cleanse the flesh from physical impurities: He cleanses the conscience from guilt, to serve the living God.

In this interpretation of the meaning of Christ's work we are in the realm of the Eternal Spirit. Christ as the sin-offering for humanity has freed all men potentially from the guilty consciousness of sin, and brings Christians to the heavenly rest of God. Yet in this Epistle the emphasis is not so much on the surrender of Christ's life as on the presentation of that life within the veil. Christ, our High Priest and the Author of our salvation, is the Perfecter and Finisher of our faith. (a) He is our Example, being tempted in all points like as we are, yet without sin. In the light and strength of His victory we are to run the race set before us with confidence. (b) He is the Object and Ground of our faith. Faith is defined as 'that which gives reality to things hoped for, the proving

of things not seen' (11¹). In the Person of Jesus, in the Incarnation of the Eternal Son, the spiritual world of abiding reality is brought into the world of human ken. To those who hold fast with confidence to this faith, victory is assured in the end. (c) In the heavenly ministry of Christ He ever 'liveth to make intercession for us.' Our High Priest, because of His sufferings and death, is crowned with glory and honour. He has passed through the heavens, and now sits at the Father's right hand to plead the merits of His eternal sacrifice. The love and merciful kindness of God which were manifested in time and in the earthly ministry of Jesus are eternal and changeless principles, perpetually operative in our behalf. This must ultimately be the ground of our acceptance and the assurance of our life in communion with Him.

In this Epistle the thought of the perfection of Christ's sacrifice is parallel with St. Paul's doctrine of justification by faith. The benefits and efficacy of His perfect sacrifice are conditioned by our attitude of faith and trust. This is a necessary and fundamental element in the process of salvation. But behind and above all the perfection of Christ's sacrifice and His eternal ministry of love in heaven are the assurance and guarantee of the life of communion with God.

(5) *1 Peter*.—In the Petrine speeches in the Acts our Lord is the great Prophet whose mission is attested by His mighty works. He is identified with the Suffering Servant of Jahweh (Ac 3¹²⁻²⁶, cf. 4²⁷⁻³⁰; see Is 42¹ 52¹³ 53¹¹). He has suffered death by the foreknowledge and counsel of God. God has highly exalted Him and made Him to be both Lord and Christ. The allusions to the Servant of Jahweh suggest the atoning and saving significance of our Lord's sufferings and death. The prophets of old have spoken explicitly of the sufferings of Christ. Repentance and forgiveness of sins are brought into close connexion with these sufferings and His death (Ac 3¹²). In those speeches our Lord is the suffering Messiah. In His name repentance and remission of sins are preached. His death has wrought such a change in the status of man before God that he is in a position by a deliberate act of his own choice to attain forgiveness of sins and the life of communion and peace with God. With the growth of St. Peter's thought in the course of years, the process of salvation is more explicitly stated by him. The sufferings of Christ are followed by 'the glories' (1 P 1¹²). From past sins and corruptible life, Christians have been redeemed by the blood of Christ (v. 1⁹). 'He bare our sins in his body upon the tree, that we having died unto sins might live unto righteousness; by whose stripes ye were healed' (2²⁴). The writer is not here dealing with the principle of sin as St. Paul did, but with individual sins. The thought is that we have been freed from the dominion and power of sin through a literal transfer of our sins to Him, and a literal substitution of the sinless Person of the Redeemer for the persons of us sinners. He was sinless, but in His own body He suffered the consequences and results of our sins. The avenging holiness and righteousness of God find expression in the vicarious sufferings and death of the Christ of God. It is far from the writer's intention to ascribe to Christ's sufferings as such the moral quality or value of punishment. The sufferings and death are ours because the sins which He bore are ours. There is a clear statement on salvation in the words, 'Because Christ also suffered for sins once, the righteous for the unrighteous, that he might bring us to God; being put to death in the flesh but quickened in the Spirit' (3¹⁸). Our Lord suffered for sins which were not His own. He the righteous was offered in sacrifice for the unrighteous. Two

main ideas seem to be contained here: (a) that sin deserved punishment; and the wrath of God must be expressed, if not on the person of a sinner, on that of a vicarious sufferer; (b) that the righteous may by God's gracious provision suffer for the unrighteous. Further, 'He went and preached to the spirits in prison' (3¹⁹). Our Lord's saving work is not limited to this world, but extends into all spheres. There is no realm in which His saving activities do not reign. By the sufferings and death of Christ, which came to pass in the eternal counsels of God, man has been freed from the guilt and power of sin. He is sprinkled and glorified by the blood of Christ. Only on this condition is communion with God the Father made possible. Thus the death and sufferings of Christ have availed to secure the negative element in the process of human salvation—forgiveness of sins. How then is the necessary power and strength given to man whereby he may continue in the state of communion and fellowship with God? This question is evidently prominent in St. Peter's mind: 'Concerning which salvation the prophets sought and searched diligently, who prophesied of the grace that should come to you' (1¹⁰). There is in salvation a positive aspect which means the infusion of grace. This gift of God has been the subject of the revelation of God to man through the prophets in the OT. It is now given through Christ, and is most intimately connected with His sufferings and death. He 'was manifested at the end of the times for your sake, who through him are believers in God, which raised him from the dead, and gave him glory: so that your faith and hope might be in God' (1^{20L}). The faith and hope of man which make possible communion with the Father are here associated with the resurrection of Christ from the dead. His glorious resurrection as a spiritual fact was the symbol and emblem of His final and absolute victory over the forces of sin and death. The resurrection is the ground and guarantee of a new life, and gift of strength to man to overcome the power of Satan and to enter God's presence. As the soul of man has been purified through the blood of Christ, the life of the purified soul is the life of love (1^{22L}). The life of communion with God which has been ensured by Christ's death and the coming of grace into the heart finds its necessary complement in the life of love for the brethren (cf. the Johannine statement in 1 Jn 3¹⁴). The Jewish figure of Divine election is used to describe the life of the Church redeemed from sin (1 P 2⁵; cf. St. Paul in Romans). The process of salvation of individual souls has for its end the creation of a redeemed community, a holy Church, a spiritual house. The function of the redeemed is to be a priesthood offering spiritual sacrifices (1 P 2⁵⁻¹⁰, cf. Ex 19^{6L}). The idea of the priesthood of all believers is here stated explicitly. All Christians are sacrificing priests, elect of God; the life of communion with the Father is essentially a life of the offering of a sacrifice. The ultimate basis of the Christian's union with God is God's holiness (1¹⁸). The saving work involved in the life and death of Christ expresses in the world of time and sense the eternal laws of that redeeming holiness. In the death, and more especially in the resurrection, of His Son, are given grace and strength to abide in the life of love and sacrifice with God the Father.

(6) *St. John's Gospel¹ and Epistles*.—The ideas of Christ's Person enunciated in the Prologue lie behind the work as a whole. The distinctions between light and darkness, the world and the

heavenly sphere, God and man, time and eternity, are repeatedly insisted on by the Evangelist. Christ as the Eternal Logos of the Father, incarnate and dwelling among men, is a perfect revelation of the being and will and character of God. He who has seen Jesus the Son has seen the Father (Jn 14⁹). Christ, the incarnate Logos, is the Way, the Truth, and the Life (14⁶). Only through a knowledge of His Person and through faith in Him can man pass out of death into life. In 1²⁰ John the Baptist hails Him as 'the Lamb of God that taketh away the sin of the world.' Whether this is a reference to the Suffering Servant of Isaiah or to the lamb of the sin-offering, it certainly involves the sacrificial significance of Christ's death as availing to remove sin. But this idea is not completely worked out in the Gospel. God the Father is essentially love; the Son is love incarnate. To gain eternal life, which is a spiritual state of communion with God, man must know God, and Jesus Christ whom He has sent. By appearing as Light in the midst of darkness, the Eternal Son offers to every man the opportunity of seeing and joining himself to that light. Acceptance or rejection of this choice is left with man himself. The Son judges no man; the judgment or acceptance is automatic. The world in which men lie cut off from communion with God is represented as the abode of death or destruction; but the effect of Christ's mission is to implant in all who 'will to believe' in Him the principles of eternal life. As the Son is in virtue of His Divine power victorious over sin, hatred, and darkness, so man, by knowledge and faith in Him, may in the end achieve the same victory. As communion with God is expressed in the Synoptic Gospels as the reign of holiness in the Kingdom of God, so in the Fourth Gospel the same idea is represented by the phrase 'eternal life.' Eternal life is essentially the knowledge of God and His incarnate Son. Hence in the work of making possible a perfect communion with God, the negative aspect of Christ's work was to overcome and vanquish the ignorance and darkness in which the mind of man lay. The revelation of the love and light of God in the life and death of the Eternal Son is, on this side, a conquest of the realm of darkness and sin. On the positive side, the thought of an eternal life which begins now, overleaps death, and endures unto the ages of the ages, means an existence in communion with the Father. Christ is to prepare in the heavenly sphere a place for His disciples also. As He rests eternally in the bosom of the Father, so they in the end are to come whither He has gone. In this Gospel the doctrine of the Person of Christ is the fullest and richest in the NT literature. And as to the motive of the Incarnation, there is the sublime statement: 'God so loved the world, that he gave his only-begotten Son, that whosoever believeth on him should not perish, but have eternal life' (3¹⁶). The facts of the Incarnation, the life and death of Christ, were prior neither in time nor in principle to the merciful love of God. The love of God is not powerless till justice is satisfied. Rather, the Incarnation with all its attendant circumstances is an expression of the love of God which has existed from eternity. God is love, and love implies the revelation and gift of self. In the Fourth Gospel the Incarnation is God's gift to man of a perfect revelation of Himself. An acceptance of this supreme gift by knowledge of and faith in His Son means the closest communion with God and life eternal. 'If a man love me, he will keep my word; and my Father will love him, and we will come unto him, and make our abode with him' (14²³); 'I am the resurrection and the life: he that believeth on me, though he die, yet shall he live:

¹ Notwithstanding much recent criticism which tends to minimize the historical value of this Gospel, it is here regarded as containing, upon the lowest estimate, a very large substratum of genuine discourses of our Lord.

and whosoever liveth and believeth on me shall never die' (11^{22c}). In the Eucharistic discourses in ch. 6, our Lord speaks of Himself as 'the bread of life.' By feeding on the flesh and drinking the blood of the Son of man, men have life in themselves. By unaided efforts they cannot attain life eternal. Life and communion with God are essentially gifts from a merciful Father through the Son. Though there is no account of the institution of the Eucharist in the Fourth Gospel, the necessity and fundamental importance of the sacramental life are repeatedly dwelt upon. The Son is the Bread which cometh down out of heaven and giveth life to the world. Life means an apprehension and assimilation of the flesh and blood of the Son which are food and drink indeed. It might almost be said that the final purpose of His Incarnation is stated in these terms: 'I am the living bread which came down out of heaven: if any man eat of this bread, he shall live for ever.'¹

Finally, in this Gospel we are moving in the world not of time and sense, but of abiding spiritual realities. Death is more than the physical fact of fleshly dissolution. Life does not mean mere animate existence. Death is the spiritual and moral fact of a separation from, and incompatibility with, the Divine love. It is not an event in a moment of time, but an eternal loss. So life is more than existence; based on knowledge and faith, it means existence in the holy presence of God, in accordance with His will—in the last resort, communion with Him. This life is the gift of God to man through the Eternal Son of His love. As the Son in His human life possesses the most perfect achievement of communion with the Most High, so He is Himself the most perfect means whereby there is communion between men and God.

The mystical idealism of the Johannine Gospel is maintained in the First Epistle. But in the latter the Gospel message finds its actual realization in the ordinary practical life of the 1st cent. Christian community. The author reiterates Christ's negative work of removing the barrier—an act made possible by His Divine Sonship (3⁹⁻¹⁶ 4¹⁰). On this Divine Sonship is based also the positive aspect of communion. That which has been seen and heard in His manifestation is declared as a means towards the fellowship of Christians with one another and 'with the Father, and with his Son Jesus Christ' (1¹⁻³). By means of this union Christians are made children of God (3¹), and they continue to possess the actual indwelling of God if (a) they acknowledge Jesus as come in the flesh and as the Son of God (4²⁻¹⁵), and (b) prove their acknowledgment by the love for one another (4¹³) which shows that they have passed out of death into life (3¹⁴).

(7) *2 Peter and Jude*.—Through the work of our Lord the cleansing of sins has been effected (2 P 1³). This cleansing is from sins, not the principle of sin.² It is an act or transaction in past time which the writer's contemporaries were in danger of forgetting. Yet it also demands some appropriation of its effects on the part of the individual searcher after union with God. The Christian's righteousness and faith in God are determined by the Person and work of the Lord Jesus Christ. Both freedom from sins and power to work the righteousness of God at the present time depend directly upon faith and knowledge of Him (2 P 1⁵⁻⁹). Salvation is a

personal and moral apprehension of, and adhesion to, Him. He is the unique figure who Himself bridges the chasm between God and man. The long categories of sins show that the presence and power of sin in the world as the negation of communion with God are very real to the writer's consciousness. Not only man, but the angels also are involved, or have been involved, in this apostasy (2 P 2⁴, Jude 6¹).

A distinction is made between the objective and subjective elements in the work of salvation. The cleansing of sins, regarded as in some sense completed in past time (2 P 1³), may be called the objective element in the Atonement. Throughout 2 Peter strong emphasis is laid on knowledge, and in 2²⁰ the knowledge of Christ is said to have enabled man to be free from sin. This may be called the subjective element in the Atonement. In the world of time and sense, atonement was wrought in the life and death of the Son of God. But this transaction can have no meaning or saving value without knowledge of Jesus Christ. Such knowledge means an inner and spiritual apprehension and assimilation of His work and Himself with the very inmost being. By the knowledge of Christ and His death which has cleansed from sins there is approach through Him to God the Father. Thus, all the Christian's relations to God are conditioned by the Person and saving work of the Son; through Him cleansing has been wrought; through a knowledge of Him there is approach to the Father. For the present and future life of communion with God is expressed by the OT imagery of Divine election (2 P 1¹⁰); and entrance into the eternal Kingdom of Christ is attained by virtue of faith and knowledge and apprehension of the cleansing from sins (v.¹¹). There is here a link with the teaching of the Synoptic Gospels. Here, as there, the life of communion with God is represented by the idea of entrance into and life in the Kingdom of God and Christ. As members of that Kingdom, Christians abide in His presence and love, in communion with Him. Man has not yet fully entered into the Kingdom, and the process of salvation will not be complete 'until the day dawn and the day-star arise in your hearts' (v.¹⁸) at the consummation of the Kingdom (cf. Mt 25). The great day of judgment and separation, and of the reign of Christ with His saints in glory, was coming as a thief in the night, and was to mean a changing of all things and a new heaven and earth (3¹⁰⁻¹³). For the present the life of man must be in peace, and blameless. As the long-suffering of the Lord has wrought salvation (3¹⁸), the lives of Christians here must be of the same kind. The life of communion with the Father is to find its consummation in the new heaven and earth wherein dwelleth righteousness. When, through the knowledge of Christ, the righteousness and peace of God are attained, there will be the new heaven and earth. Hence for the man who has attained the righteousness of God there is no death. He passes from this world order into the eternal and heavenly kingdom (Jude 24^c).

(8) *The Apocalypse*.—The language of this book points to a period of severe and prolonged persecution. A mighty war is being waged on earth between the Church of God and the powers of evil. There is a clear grasp and apprehension of the difficulties which lie before the Church and her consummation in the Kingdom of God. The Roman Empire, and the city of Rome in particular, are the incarnation of the spirit of evil (Rev 17⁴⁻⁶). The account of the war in heaven in 12⁷⁻⁹ suggests the mighty conflict fought out on earth between the

¹ There can be no doubt that in these passages there is a reference to the Eucharist, since the writer of the Gospel is looking back on some seventy years of Christian practice. To characterize the language as mere metaphor and symbol, without any corresponding reality, is to do violence to every accepted canon of criticism or exposition.

² A link with the Petrine rather than with the Pauline soteriology.

¹ With this thought of the alienation of all created beings from God's presence, compare the idea of the absolute and universal range of our Lord's saving work in 1 P 2¹⁹.

powers of light and darkness. Man's final victory over the forces of sin which separate him from God has been gained through the death of Christ as the Lamb of God (1⁸). The soteriology of this book, with which its relation is concerned, depends directly on the Christology. Our Lord is 'the Son of God' in the highest sense (2⁸), that is, the author insists on the same exalted dignity of our Lord's Person as in the Fourth Gospel. The favourite designation for Him is 'the Lamb,' this title being applied to Him twenty-nine times in the book. He is not only the Lamb, but the Lamb who has been slain; and the effect of His death has been the purchase and redemption of mankind (5⁹). All mankind were in bondage under the dominion of sin and death. By the death of the Lamb the purchase price has been paid. Man has been bought for God's own possession. His true life and destiny—communion with the Father—have thus been made possible. This power of the Lamb slain is due to His being the Eternal and Divine Son. Salvation is from God the Father and God the Son (5¹² 7¹⁰). The ultimate motive is to be found in the love of God; the immediate agency is through the death of the Lamb, the Eternal Son made man. The final effects of the death of the Lamb as an act which has purified all men from sin depend on the choice and action of the redeemed. Salvation includes a human as well as a Divine element. Man must make use of, and appropriate, those saving powers which the love of the Son, as expressed in His death, has provided (7¹⁴). Like St. Paul, the writer insists on the importance of Christ's resurrection in this connexion (1¹⁶). The resurrection of Christ as a spiritual fact expresses His final victory over the power of sin and death. Though the Lamb has been slain, yet there is victory in His death. He 'is alive for evermore.' He has the keys which open the way to life, that is, to a life of communion with the Father. By the death of the Lamb, the whole community has been purchased to be a kingdom of priests (1⁶). The Christian is set free from all that had hindered the offering of a perfect sacrifice to God. The death of Christ (the Lamb) as a sacrifice has freed man from sin. The life of communion with God thus gained is a life of uninterrupted sacrifice. This being so, how is power given to individual Christians whereby they are strengthened for this perfect ministry? How is there such a relation as is expressed in the phrase 'the patience and faith of the saints' (13¹⁰)? The writer interprets this relation in (a) the language of metaphor taken from the Jewish ceremonial (19⁸), (b) the language of the works of the Law (2³⁶), and (c) the description of keeping the commandments of God and holding the testimony of Jesus (12¹⁴). Thus, the idea of man's right relation to God and of communion with Him is expressed in a variety of images. Similarly, image after image—mostly taken from the OT, but not uncoloured by the Jewish apocalyptic writings—is used to denote the communion with God in which the true Christian abides, and the prayer and dedication by means of which it is gained and realized (2⁷, 10, 17, 28, 35, 12, 20, 21, 5⁸, 7¹³⁻¹⁷, 8⁴, 14-15, 20-6, 21, 22). At the centre of all is the stream of life which proceeds from the being of God, mediated through the manhood of the Son (22¹). Through all the stages of communion, the Church in the power of the Holy Spirit reaches that perfect attainment in which the Divine life is fully received (22¹⁷).

CONCLUSION.—Christian life is thus the highest form of communion with God which is attainable in the present stage of being, and the closest means of approach to that complete communion which is the true destiny of the human race. Led up to

by divers methods of preparation, Christianity supplies the individual Christian with a definite gift, which is made possible through the union of God and man in Jesus Christ. That definite gift is in the soul of the individual as his personal possession; but he has it through his place in the society which the incarnate Son of God constituted (see CHURCH). Intellectual powers are used in the reception of truth and grace; but they are assisted by Divine revelation. The communion of the spirit of man with the spiritual God fails in its purpose except so far as it is a means towards bringing the human life into conformity with the Divine life. All through the history of such communion there are the two sides—the inner and the outward. The Christian life will be well proportioned which makes due allowance for them both. The communion will be expressed by, and will find its realization in, such different means as the study of the Biblical records, the life of the Church in past times, and the histories of the saints; the use of public worship; the observance of sacred days and seasons; the intimate relation between the soul and God which is found in private and personal acts of prayer; the expression of a philosophy of religion which has as its aims both the further progress of believers and the conversion of unbelievers; the reception of the indwelling of the Holy Spirit; the partaking, with the knowledge and faith and right intention which the Holy Spirit makes possible, of the life of Christ communicated in the Sacraments, as the Christian is spiritually uplifted to be with Christ in heaven, and as Christ by the power of the Holy Spirit, acting on His sacred Manhood, and on the gifts offered by the Church, is present on earth. Employing such means, it moves on towards the consummation which has its mark in limitless perfection (1 Co 13¹², 1 Jn 3²).

COMMUNION WITH DEITY (Egyptian).

—It is difficult to define this subject, as it will naturally appear under many different forms in other articles. The subjects of (1) offering, (2) theophagy, (3) covenant, (4) symbiosis, (5) magic, (6) oracle, (7) prayer, (8) adoration, (9) inspiration, (10) dream, (11) mysticism, and (12) trance, all

comprise communion with Deity, and it is not possible to deal with the latter except under some form of these various headings. All we can do here is to illustrate these different modes of communion as seen in Egyptian remains.

1. **Offering.**—The Egyptian idea was not that of burning a sacrifice in order that the smell of it might ascend to heaven, but that of setting out a table of food for the god, especially at the times when all his worshippers were assembled at a feast. Then the god and his adherents feasted together, with portions assigned to each (XXth dyn., Harris papyrus). The same is seen in the feasts held in the temples in later times, as illustrated by the well-known invitation 'to dine at the table of the Lord Serapis in the Serapeum' in the 2nd cent. A.D. (*Oxyrh. Papyri*, i. 177). Thus the essence of the offering was co-mensalism with the god.

2. **Theophagy.**—From a very early stratum of the religion comes the idea of feeding on the god. The animal-gods were so used in a communion feast, as seen at Memphis, where the sacred bulls were eaten, only the heads being preserved with the fragments of bone after the sacramental feast (XIXth dyn.). The same is implied at Thebes, where the sacred ram was killed each year. In pre-historic times the flesh was removed from the dead, and the bones were broken to extract the marrow, probably showing the practice of anthropophagy with a view to transmitting the virtues of the deceased. In the future life the dead fed on the gods; cf. the pyramid of King Unas (Vth dyn.):

'It is Unas who eats men, who nourishes himself on the gods. . . . It is Unas who devours their magic virtues and who eats their souls; the great ones are a repast for Unas in the morning, the middling ones at noon, and the little ones are the food of Unas for the evening. The old ones, male and female, are burnt up in the oven.'

3. **Covenant.**—The greater offerings and endowments for the gods were one side of a business contract or covenant.

'I give to thee wine,' or other offerings, says the king. The god replies, 'I give to thee health and strength.' 'I give thee joy and life for millions of years.' In his battle-prayer Ramses II. appeals to Amen on the ground of his great offerings to the god, and therefore demands his help in distress.

4. **Symbiosis.**—In the future life the dead were thought to go and live with the gods, generally in the boat of the sun-god Ra, with whom the dead performed the daily journey through the under world. In the Book of the Dead (ch. 178) the gods are besought thus: 'Feed N. with you; let him eat what you eat, drink as you drink, sit as you sit, be mighty as you are mighty, navigate as you navigate.'

5. **Magic.**—The essential idea is to compel the gods by magic formulæ (Wiedemann, *The Religion of the Ancient Egyptians*, London, 1897, p. 269). In the early tales of magic the gods are not prominent; it is rather the course of Nature that is compelled, as in the vivification of a wax crocodile, or the joining of the head and body of a decapitated bird (Petrie, *Egypt. Tales*, i. [1895] p. 11). But the later magic formulæ are addressed to the gods and spirits, and threaten dire results if the magician is not obeyed. They are not unnatural for their time, as the little Greek boys threatened terrible results to their fathers if they could not have their own way (Papyri letters in *Oxyrh. Papyri*, i. 186).

Another part of magic in communion was the Divine marriage of Amen with the queen, resulting in the supernatural conception of the heir, as is recited of Hatshepsut and Amenhotep III. Here the community with the Deity in procreation is similar to the Bab. priestess being a spouse of the god in his shrine. The king also was in communion with the Deity, as he dressed and acted in the marriage as the incarnation of the Deity. The frequent use of little images of the gods, often

protected in miniature shrines, hung round the neck, suggests a magic communion, like that of Louis XI. with the leaden images in his hat-band.

6. **Oracle.**—Oracular responses were given by the nodding of a statue of the god in reply to questions. In the XXist dynasty Men-kheper-ra, the pontiff, went to visit Amen, 'saying, "O my good lord, there is a matter, shall one recount it?" Then the great god nodded exceedingly, exceedingly. Then he went again to the great god, saying, "O my good lord, it is the matter of these servants against whom thou art wroth, who are in the Oasis, whither they are banished." Then the great god nodded exceedingly, while this commander of the army with his hands uplifted was praising his lord' (Breasted, *Anc. Records of Egypt*, 1906-7, iv. 318).

Again, in an inquiry about accusations in the XXist dynasty, the pontiff Painozem

'came before this great god. This great god saluted violently. He placed two tablets of writing before the great god: one writing said . . . there are matters which should be investigated . . . the other writing . . . there are no matters which should be investigated. These two tablets of writing were placed before the great god. The great god took the writing which said . . . there are no matters which should be investigated' (*ib.* 323).

In a religious fiction of later date the chief of Bekhten, in Asia, desires that the image of the god Khonsu be sent to Bekhten to perform the cure of his daughter. The king of Egypt

'repeated before Khonsu in Thebes, saying, "O my good lord, I repeat before thee concerning the daughter of the chief of Bekhten." Then led they Khonsu of Thebes to Khonsu the Plan Maker. . . . Then said his majesty before Khonsu of Thebes, "O thou good lord, if thou inclinest thy face to Khonsu the Plan Maker . . . he shall be conveyed to Bekhten." There was violent nodding. Then his majesty, "Send thy protection with him, that I may cause his majesty to go to Bekhten to save the daughter of the chief of Bekhten." Khonsu of Thebes nodded the head violently. Then he wrought the protection of Khonsu the Plan Maker four times.' At Bekhten 'then this god went to the place where Bentresh was. Then he wrought the protection of the daughter of the chief of Bekhten. She became well immediately' (*ib.* iii. 193). The phrase 'wrought the protection' here is literally 'did [or made] the *sa*'. The *sa* was a Divine emanation which was conferred from the gods by the laying on of hands.

7. **Prayer.**—An example of direct appeal—beyond all the usual formulæ—is that of the battle-prayer of Ramses II.:

"What is in thy heart, my father Amen, does a father ignore the face of a son? I have made petitions, and hast thou forgotten me? Even in my going stood I not on thy word? . . . What is thy will concerning these Anu [Syrians]? Amen shall bring to nought the ignorers of God. Made I never for thee great multitude of monuments? . . . Amen! behold this has been done to thee out of love, I call on thee, my father Amen, for I am in the midst of many nations whom I know not, the whole of every land is against me. . . . I end this waiting on the decrees of thy mouth, Amen! never overstepping thy decrees, even making to thee invocations from the ends of the earth." 'Amen came because I cried to him, he gave me his hand and I rejoiced: He cried out to me, "My protection is with thee, my face is with thee, Ramessu, loved of Amen, I am with thee, I am thy Father, my hand is with thee" (Petrie, *History of Egypt*, iii. [1905] 56 f.).

8. **Adoration.**—The Egyptian always stood with his hands raised, and the palms turned forward, when in adoration. Of the mental attitude there are many examples in the hymns of adoration to the gods, expatiating on the glory and power of the deity; but there is little trace of a personal expression. One remarkable maxim is: 'When thou worshippest him, do it quietly and without ostentation in the sanctuary of God, to whom clamour is abhorrent. Pray to him with a longing heart, in which all thy words are hidden, so will he grant thy request, and hear that which thou sayest, and accept thy offering' (Erman, *Egypt. Rel.*, Eng. tr., 1907, p. 84). A striking instance of official adoration is when Pankhy the Ethiopian (XXIIIrd dyn.) went to perform the royal ceremonies at Heliopolis. He ascended the steps to the shrine of Ra, he drew back the bolts, and, opening the ark, he looked on Ra in his shrine, and performed adoration before the two boats of Ra. Then he shut and sealed the doors. The address of Lucius to Isis (*Golden Ass*) is one of the finest passages of adoration in late times; but it is Greek rather than Egyptian.

9. **Inspiration.**—The impulse to perform great works was ascribed to the inspiration of the gods. Hatshepsut (XVIIIth dyn.) relates at the base of her great obelisk at Karnak:

'I sat in the palace, I remembered him who fashioned me (Amen, the divine parent of the miraculous birth of the queen), my heart led me to make for him two obelisks' (Breasted, II. 132). 'I have done this from a loving heart for my father Amen; I have entered upon his project of the first occurrence, I was wise by his excellent spirit, I did not forget anything of that which he executed. My majesty knoweth that he is divine. I did it under his command, he it was who led me; I conceived not any works without his doing, he it was who gave me directions. I slept not because of his temple, I erred not from that which he commanded, my heart was wise before my Father, I entered upon the affairs of his heart' (p. 131).

Direct inspiration of words was also accepted, as when Un-amen was detained at the court of Byblos (XXIth dyn.):

'Now, when he (the king of Byblos) sacrificed to his gods, the god seized one of his noble youths, making him frenzied, so that he said, "Bring up the god (the image of Amen owned by Un-amen), bring the messenger of Amen who hath him, send him and let him go." Now, while the frenzied youth continued in frenzy during the night, I found a ship bound for Egypt' (ib. iv. 280).

10. **Dream.**—The belief in dreams as communications from a deity is seldom mentioned. The main instance is the dream of Tahutmes IV. (XVIIIth dyn.); when he

'rested in the shadow of this great god (the Sphinx), a vision of sleep seized him at the hour when the sun was in the zenith, and he found the majesty of this revered god speaking with his own mouth, as a father speaks with his son, saying, "Behold thou me I see thou me! my son Tahutmes, I am thy father Har-emakhti-Khepra-Ra-Atum, who will give to thee thy kingdom."

The sand of this desert upon which I am has reached me; turn to me to have that done which I have desired, knowing that thou art my son, my protector; come hither; behold, I am with thee, I am thy leader." When he had finished this speech, this king's son awoke' (ib. II. 323).

A stone head-rest or pillow, of the usual form, was found at Memphis having a small shrine hollowed in the side of it, evidently to contain an image of a god close beneath the sleeper's head. This was probably to favour communications in dreams. The Egyptians adopted the Semitic idea of dreaming in a temple, or in front of a sacred shrine, when seeking guidance in a Semitic land, as seen in Sinai (Petrie, *Researches in Sinai*, 1906, p. 67). The Greeks in Egypt had the custom of dreaming in the temples at Memphis, Kanobos, and Abydos (see, further, art. INCUBATION).

11. **Mysticism.**—The absence of documents relating to personal religion during the Egyptian monarchy prevents our finding mysticism, which is absent from the official religion. But in the later age we have the Hermetic books of about 500-200 B.C., and the accounts of the Ascetics of the 1st cent. A.D. In these we meet with the various emblems of Conversion—the Ray of Light, Baptism, and Re-birth.

'Good is holy silence, and a giving of a holiday to every sense.' 'Pray to catch a single ray of thought of the Unmanifest (God) by contemplating the ordering of Nature, inanimate and animate.' 'To reach re-birth throw out of work the bodily senses, and withdraw into thyself; will it, and the Deity shall come to birth.'

Of the Ascetics it is said (A.D. 10) that 'they are carried away with heavenly love, like those initiated in the practice of Corybantic Mysteries; they are a-fire with God until they behold the object of their love. After dancing and singing all night, thus drunken unto morning light with this fair drunkenness, with no head-heaviness or drowsiness, but with eyes and body even fresher than when they came to the banquet, they take their stand at dawn, when, catching sight of the rising sun, they raise their hands to heaven praying' (Petrie, *Personal Religion in Egypt*, 1909, pp. 92-93, 77).

Probably much of this mysticism was due to the influence of Indian thought from the Buddhist mission.

12. **Trance** seems to have been outside of the very practical and material ideas of the Egyptians, but it probably entered into the Ascetic system of later times. The devotees lived in solitary dwellings, each of which contained a shrine or *monastery* into which no other person ever entered. Here, in solitude, they performed the mysteries of the holy

life. No food or drink was ever used in it, but there the devotees rested for even a whole week at a time, without food or any external impression. Such a condition would certainly lead to trance and visions, like those of the later hermits.

In each of these modes of communion we have only samples, which do not give any complete view of the subject, but which illustrate its nature at one or two periods. These samples must not be thought to be general in their application; there must have been various views current together in the very mixed condition of Egyptian religion. As a modern parallel, we have simultaneously every shade of belief about Divine communion in the Eucharist, from the full theophagy of the Roman Church to the purely spiritual contemplation of the Plymouth Brethren. An extract from any religious work of the present day touching this subject would as little represent the variety of present thought as an extract from ancient writings can show us the extent of ancient thought.

LITERATURE.—This is given in the article.

W. M. FLINDERS PETRIE.

COMMUNION WITH DEITY (Fijian).—A Fijian took no important step without the support of his god, conveyed to him by the priest in the frenzy of inspiration. Among the tribes under Polynesian influence in the Eastern islands he presented a whale's tooth to the priest of the tribal deity; among the Melanesian tribes of the interior he made his offering at the grave of the late chief, the last representative of the ancestor-god. Thus, in the revolt at Seangangga in 1895, the first act of the rebels, after throwing off Christianity, was to weed the grave of their late chief and present a root of *kava* to his *manes*.

The priesthood was generally hereditary, but outside the precincts of the temple it enjoyed no social consideration. There was no access to the god save through the priest, and, except on rare occasions, such as a campaign in a distant island, the priest could be inspired only in the temple. When the oracle was to be consulted, a message was sent to the priest; and the envoys, dressed and oiled, found him lying near the sacred corner of the temple-hut. He rose and sat down with his back against the white cloth by which the god visited him, the others sitting opposite. The chief envoy presented a whale's tooth, and explained the project for which Divine favour was sought. The priest took the tooth and gazed at it, absorbed in thought. All watched him attentively. Presently he began to tremble. Slight spasms distorted his features, his limbs twitched, and gradually the whole body was convulsed with violent muscular action; the veins swelled, the lips grew livid, the sweat poured down, and the eyes protruded unnaturally. The man was now possessed, and every word he uttered was that of the god. He began to cry in a shrill voice: '*Koi au! Koi au!*' ('It is I! It is I!'). The answer, generally couched in figurative and ambiguous terms, was screamed in falsetto, and the violent symptoms then began to abate. The priest looked about him, and, as the god screamed '*Au sa lako!*' ('I depart'), collapsed prone on the mat, or struck the ground with a club. At the same moment some one outside the temple announced by a blast on the conch, or a shot from a musket, that the god had returned to the spirit world. The convulsive twitchings continued for some time, even though the priest had so far recovered as to eat a meal or to smoke.¹

Williams gives the following example of the pronouncements of an oracle. Ndenge's priest cried, 'Great Fiji is my small club; Muamabila is the head; Kanaba is the handle. If I step

¹ There are several words to denote possession; *sika* means 'to appear,' *kundru*, 'to grumble'; the one refers to the appearance, the other to the sound, of possession by a god.

on Muaimbilla, I shall sink it into the sea, whilst Kamba shall rise to the sky; if I step on Kamba, it will be lost in the sea, whilst Muaimbilla could rise into the skies. Yes, Viti Levu is my small war-club; I can turn it as I please; I can turn it upside down' (*Fiji and the Fijians*, 225).

The propitiatory offering was invariably food, of which part, called the *singana*, was set aside for the god, and was eaten by his priest and a few privileged old men, for it was tabu to youths and women; the remainder of the feast was divided among the people.

The inspired paroxysm is something more than conscious deception. Williams heard a famous priest of Lakemba declare: 'I do not know what I say. My own mind departs from me, and then, when it is truly gone, my god speaks by me.' No doubt this man was absolutely sincere. Williams says that he 'had the most stubborn confidence in his deity, although his mistakes were such as to shake any ordinary trust. His inspired tremblings were of the most violent kind, bordering on frenzy' (*ib.* p. 228).

Christianity did not put an end to this kind of seizure, for in the first heat of conversion it was not uncommon in the mission services for a man to be inspired (by the Holy Spirit, as he said) and to interrupt the service with a torrent of gibberish, accompanied by all the contortions that seized the heathen priest. His companions would pat him gently on the shoulder with soothing exclamations. The missionaries, who had told them the story of Pentecost, could not well condemn the practice. The 'revival' at Viwa in 1845 was an extreme instance of this kind of possession. To judge from John Hunt's account (*ib.* p. 269), the whole island was seized with a kind of religious hysteria, and 'business, sleep, and food were entirely laid aside' for several days.

Another form of communion was confined to young men only; there was no recognized priesthood. The object of the rites, called *kalou-reve* or *ndomindomi*, according to the part of the group where they were practised, was to allure the 'little gods'—*luve-ni-vai* ('children of the water'), a timid race of immortals—to leave the sea and visit their votaries. It is not clear that the 'little gods' conferred any boon upon their worshippers, except to make them invulnerable in battle, and to afford them such amusement as may be enjoyed by amateur spiritualists who keep secret from their elders their dabbling in the black art. In a retired place near the sea a small house was built and enclosed by a rustic trellis-fence, tied at the crossings with a small-leaved vine, and interrupted at intervals by long poles decorated with streamers. No effort was spared to make the place attractive to the shy 'little gods'; the roof of the miniature temple was draped with bark cloth, the walls were studded with crab claws, and giant yams and painted coco-nuts were disposed about the foundation for their food and drink; within was a consecrated coco-nut or some other trifle. A party of twenty or thirty youths would spend weeks in this enclosure, drumming on the ground with hollow bamboos every morning and evening to attract the sea-gods. They observed certain tabus, but otherwise spent their days in idleness. In one case, cited by Williams (*op. cit.* p. 237), a jetty of loose stones was built into the sea to make the landing easier. When the gods were believed to be ascending, flags were set up to turn back any who might be disposed to make for the inland forests. On the great day another enclosure was made with long poles covered with green boughs, pennanted spears being set up at the four angles. Within this sat the lads, gaily draped, with their votive offerings before them, thumping on the earth with their bamboo drums. Presently the officers of the lodge were seen approaching, headed

by the *vininduvu*, a sort of past-master, capering wildly with a brandished axe; the *lingaviu* (fan-holder) circling round the drummers, waving an enormous fan; the *mbovororo*, dancing with the coco-nut which he was about to break on his bent knee; and the *lingavatu*, pounding a coco-nut with a stone. Amid a terrific din of shrieks and cat-calls the gods entered into the *raisevu*, who thereafter became a privileged person. Then all went mad; the *vakathambe* (landing-herald) shouted his challenge; the *matavitu* shot an arrow at him or at a coco-nut held under his arm; and all were possessed with the same frenzy as the inspired priests. One after another they ran to the *vininduvu* to be struck on the belly with a club, believing themselves then to be invulnerable, and sometimes he did them mortal injury. On the west coast of Vitilevu, the favourite landing-place of the *luve-ni-vai* is marked with a cairn of stones to which each worshipper and passer-by adds as he goes. In the more republican tribes of the west, commoners have risen to great influence through their adventures as *raisevu*.

The *mbaki* or *nanga* rites were peculiar to the western and inland tribes of Vitilevu. They were held in a sort of open-air temple—a parallelogram of flat stones set up on edge, with two rude altars dividing the enclosure. As a rule they were built not far from a chief's grave. Tradition ascribes the origin of the rites to two castaways, called Veisina and Rukuruku, who drifted to Fiji in a canoe from the westward, and at once began to teach Fijians their mysteries. The *nanga* was the 'bed' of the ancestors, that is, the spot where their descendants might hold communion with them, and the rites were four in number, according to the season: (1) the initiation of the youths; (2) the presentation of the first-fruits with prayers for increase; (3) the recovery of the sick; and (4) making warriors invulnerable. The votaries formed a secret society to which only the initiated in each village belonged; and so strict was the bond that, when votaries of the same *nanga* were at war, they could attend the annual rites in an enemy's country without fear of molestation, provided they could make their way thither unobserved. Each lodge comprised three degrees: (1) the *vere matua*, old men who acted as priests of the Order; (2) the *vinilolo*, the grown men; and (3) the *vilavou*, (lit. 'new year's men'), the novices. The great annual festival was the initiation of these youths, who were thus admitted to man's estate and brought into communion with the ancestors. During the ceremony the votaries lived upon food that had been consecrated months before—yams, and pigs which had been turned loose in the vicinity of the *nanga* after their tails had been cut off. The rites were designed to frighten the novices into respect for their elders and into secrecy. The *vere* became inspired like the priests, and, while in that state, they admonished the novices upon the virtues of valour and generosity, and announced to them the penalty of insanity and death to him who betrayed the mysteries to the uninitiated.

BASIL H. THOMSON.

COMMUNION WITH DEITY (Greek and Roman).—The scheme proposed in this article is to avoid attempting any full survey of the widest sense of 'communion' through religious rites and practices in general, and to direct attention to

communion through special forms of ecstasy, such as resulted from orgiastic worship, or initiatory rites, or philosophic exaltation, and to indicate traces of communion, whether in the Mysteries or in sacrificial feasts. It will be serviceable to consider Greek religion, as a whole, before Roman.

I. GREEK.—1. Certain aspects of communion in early Greek religion.—A chronological consideration of communion at succeeding epochs of Greek history is not a completely suitable mode of treatment in view of the fact that almost all the degrees of 'communion' are either explicitly or implicitly present at most of the historical stages. Without, however, attempting a chronological résumé, one may take a preliminary glance at some aspects of communion in early Greece. The article on *ÆGEAN RELIGION* (vol. i. p. 141) will serve to illustrate the presence of what we might term the more ordinary phases of communion in the religious observances of that brilliant civilization which included among its epochs the 'Minoan' and 'Mycenæan' ages, and which started as a true primitive religion from a Nature-faith without images. In its more developed worship of a Great Goddess with a Divine Son (resembling the cult of Ashtaroth with Tammuz or Cybele with Attis), this early age presents easily recognizable parallels with the ritual of later times, under such aspects of ritual as adoration, libation, and sacrifice (though apparently not burnt sacrifice). There are also, as in a seal-design from the palace at Knossos, indications of the sacred dance by women in 'Minoan' Crete, suggesting the aim at an intimate approach to the Divine through religious excitement. In this connexion it is an interesting probability that the religion of the Cretan Great Mother of the gods developed certain ideas of mystic communion with the divinity which were dominant in the Sabazian Cybele-ritual of Phrygia (Farnell, *CGS* iii. 297).

With the Homeric poems we reach a stage in Greek religion where the primitive is already largely obscured by the artistic, and where the discerning mind will feel the want, in religious inquiry, of something more than purely literary evidence. For in Homer religious usage itself is not always consistent, while the anthropomorphism of the gods and the forms already assumed by many of the legends indicate considerable changes upon the original religious conceptions, though at the same time they naturally do not indicate the survival of such original conceptions in actual contemporary belief or practice. At first sight, the anthropomorphic conception of Deity evident in Homer might seem to allow small possibility of any mystic communion between gods and men, for the gods may appear in the flesh (*ἐνσώφεις*, *Il.* xx. 131) and play their part as warriors. Yet, in the thought reflected in the *Odyssey*, at any rate, they have become more remote; for there 'the gods in no wise appear visibly to all' (*Od.* xvi. 161, *οὐ γὰρ πῶ πάντεσσι θεοὶ φαίνονται ἐνσώφεις*). It is also in the *Odyssey* that the highly spiritual pronouncement is made touching the yearning of man for God. Often, doubtless, the yearning might be for help viewed externally—for the practical assistance lent by a heavenly ally; but often, too, for some more internal support, a mysterious but confident sharing in Divine quality which approximates to our notion of communion. The context in the *Odyssey* is significant. It is the reason given by Nestor's son to Athene, disguised as Mentor, to explain why prayer should be made by guests who have chanced to arrive during a festival of Poseidon; after drink-offering and prayer, Mentor is bidden hand to his fellow-guest the cup of honeyed wine for the purposes of a similar ritual, 'inasmuch as he too, methinks, prayeth to the deathless gods—for all

men have need of the gods' (*Od.* iii. 48, *πάντες δὲ θεῶν χάρουσι ἄνθρωποι*). Further, it is in sacrifice that Homeric religion best illustrates communion—not so much in the gift of a holocaust to be completely consumed by the deity as in the more prevalent conception of the sacred feast common to both deity and worshipper.

2. Communion through ecstasy.—It is worth while, as it is certainly convenient, to examine ecstasy separately, although logically it may accompany any feature of religious life or practice, and although the illustrations of it must perforce trench on the subject of mysteries and sacraments. The phenomenon of ecstasy—a familiar accompaniment of both barbaric and developed religions—consists in a transcending of the bounds of ordinary consciousness and a resultant feeling of communion with a Divine nature (see the analysis in Rohde, *Psyche*, ii. 14–22). The stirring of unrestrained *ἐκστασις* lifts the spirit of the human votary completely out of workaday surroundings and beyond ordinary laws. The Greek notion of this process is observable in the terms *ἐκστασθαί* and *ἐκστασις*, and in the conception that the ecstatic condition is attended by the entrance of a Divine element; the devotee is *ἐνθεός*, 'filled with the god,' Divinely maddened. The Mænad feels herself to be, and names herself, Divine; and it is significant that Plato refers to the Bacchanals as drawing Divine inspiration like that of his enthusiastic lovers (*ἐκθουσιώντες*), who by contemplation and memory acquire something of the Divine nature, 'so far as it is possible for man to partake of God' (*Phædr.* 253A, *καθ' ὅσον δυνατὸν θεοῦ ἀνθρώπῳ μετασχεῖν*). The extreme forms of ecstasy are connected with 'the old and savage doctrine that morbid phantasy is supernatural experience' (Tylor, *Prim. Cult.* ii. 415), and may be compared with the 'ivresse spirituelle' of Ruysbroeck, which is discussed by M. Hébert in *Le Divin*, ch. ii., while a more intellectual type of communion may be compared with the 'degré suprême de l'union extatique' attainable through meditation, and discussed by Hébert in ch. iii.

Among the most usual means whereby the abnormal state of mind under examination may be induced are self-abandonment to emotion, frenzied outcries, unrestrained gestures, giddy dervish-like dancing, outlandish music, brandishing of torches, and the use of drink or drugs. An ecstatic mental condition or morbid exaltation may be the product of rigorous fasting observed with a view to attain, through dreams or visions, relationship with, and revelation from, spiritual beings. This is well illustrated by the 'incubation' (*q.v.*) of patients within the precincts of Asklepios at Epidaurus. Somewhat analogous was the belief in delirium, trance, or fainting fits as promising direct spiritual intercourse with a deity. The Pythonean was supposed to obtain a communication of the Divine will in her ecstatic trance, and she made herself ready for the afflatus by the ritual acts of chewing sacred laurel and drinking water possessing a miraculous virtue. Farnell proposes to define such ritual as 'a mantic sacrament,' declaring that 'the chewing the laurel may be regarded as a simple act of sacrament, whereby through contact with a sacred object she established communion between herself and the deity' (*CGS* iv. 188). The worship of Cybele exemplifies other modes of ecstatic communion. In the priest-king at Pessinos—himself identified with Attis, and possessed of mighty secular as well as sacred power through his credited union with the godhead—we have the finished pattern on which the catechumen might model his aspirations; and in this worship not only was there ecstasy through the orgiastic dance, and regeneration through food

and the blood baptism of the *taurobolium*, but, as Farnell points out (*CGS* iii. 300), 'the process of regeneration might be effected by a different kind of corporeal union with the divinity, the semblance of a mystic marriage.' Even self-mutilation implied an ecstatic craving for assimilation to the goddess, so that in the Cybele-service Farnell finds 'a ritual of communion that used a sexual symbolism.'

The 'ecstatic ritual' of communion is examined by Farnell (*op. cit.* v. 151-181), and the evidence disposes him to believe that orgiastic ritual was not confined to the private *thiasoi* of Greece, but that the State-cults were less tempered by the Hellenic spirit than has been imagined (*ib.* 159). Ecstatic ritual persisted down to a late period at Thebes and Delphi at least; and among the island communities the primitive tradition of Bacchic enthusiasm was nowhere maintained with such fidelity as in Crete (*ib.* v. 157; cf. iii. 297). There, at an early date—probably before Homer, in Farnell's opinion—the Thracio-Phrygian Dionysos cult was engrafted on the pre-Hellenic orgies which celebrated a Mother-goddess.

The tasting of the blood or the devouring of the raw flesh of an animal regarded as incarnating the god is also a common way of arousing similar excitement. This potent method of charging oneself with the personality or force of divinity by the drinking of blood will be more fully considered as an aspect of sacramental communion. At this point it may be enough to say that it played a part in native Hellenic ritual (*CGS* v. 164), was prominent in certain imported rites, and lasted until the later days of paganism, when the Cretans, for instance, at a Divine funeral-feast still rent a living bull with their teeth (Firmicus Maternus, p. 84, cited in *CGS* v. 303). It is a salient characteristic of the ecstasy of the Mænads; and it is about their frantic omophagy, their devouring of raw flesh and hot blood in haste lest the spirit might escape, that Arnobius writes: 'in order that you may exhibit yourselves filled with the majesty of godhead (*ut uos plenos numine ac maiestate doceatis*), you mangle with gory lips the flesh of bleating goats' (*adv. Gent.* v. 19. Farnell (*CGS* v. 166) cites in further illustration Clem. Alex., *Protrept.* 11 p. ἀνοφαγία τῆν ἱερομανίαν ἀγορεύς καὶ ρελακωνίη τὰς κρανομίας τῶν φόνων). The scathing words of Arnobius unwittingly contain the original secret of these savage and hurried dismemberments of bull, goat, or fawn. The votaries, aiming at the mystic relation between god, victim, and themselves, believed, indeed, that the banquet of raw flesh filled them with 'the majesty of the divinity.'

A reasonable question arises regarding the object aimed at in the ecstasy of frenzy described. Bohde inclines to hold that an adequate motive is found in the consciousness of communing with Deity and of absorption into the Infinite. And this heaven-sent possession may have been the end in itself in historic Greece. It is, however, fair, as it is scientific, to point out, with Farnell, that among primitive peoples such religious ecstasy is not generally an end but a means. Though doubtless regarded as a strangely pleasurable sensation, it is excited for some practical object, such as prophecy or exorcism. In the early stages of religious ecstasy there is much of what is termed vegetation-magic, the desire in some way to influence Nature, control the weather, and secure good harvests. And from such germs may be evolved in time the more spiritual aspirations after communion with Deity.

Yet, by way of contrast, it must not be forgotten that there was a very different avenue towards ecstasy, and one, curiously enough, associated with the same wild Dionysiac worship, where the rapturous communion with Deity was achieved through orgiastic rites and a savage sacramental act. As Farnell asks (*ib.* 162), 'what are we to say of the "silence of the Bakhche," alluded to in the strangest of Greek proverbs' (*Paroemiog. Graec. Diogen.* [Gött. 1851] 8. 43, Βάκχης τῖπόν; ἐπὶ τῶν σιωπηλῶν, παρ' ὅσων αἱ Βάκχαι σιωποῦν)? Was this simply physical exhaustion—a merely natural reaction—or was it the 'zenith reached by the flight of the spirit, when voices and sounds are hushed, and in the rapt silence the soul feels closest to God?' Farnell cites in illustration the similar method for attaining the highest and deepest communion known to the ancient theosophists (cf. v. 162; with references to Sudhata, 'Leises und lautes Beten,' in *ARW*, 1906, p. 200; Dieterich, *Mithrasliturgie*, p. 42). But perhaps one of the most interesting illustrations lies in the fact that Euripides, in the very play which so power-

fully dramatizes the excesses of half-religious hysteria associated with the Dionysiac orgies, also shows his appreciation of the spiritual good and inward joy to be drawn from a tranquil life of holiness (e.g. *Bacch.* 385-391, 1002-1012; cf. G. Norwood, *The Riddle of the Bacchae*, 1908, pp. 114-117).

3. Philosophical communion: Neo-Platonism.—

This is an appropriate point at which to glance at the idea of communion with Deity which culminated in Neo-Platonism (*q.v.*). In much philosophy there was an absolute negation of communion with Deity. The Epicurean system furnishes an obvious example: and Aristotle's Deity, which κινεῖ ὡς ἐρῶμενον, admits but little possibility of mystic and spiritual communion. The Platonic theory of *δημιουργία*, however, in its doctrine of an elevation of the human spirit into the realm of a Divine *νοῦς*, through a ratiocination which should transcend the particulars of sense and time, was open to mystic refinement. For the extreme development of the idea of Divine transcendence we have to pass to the first half of of view, important, not merely for the philosophical the 3rd cent. A.D. Plotinus, the greatest representative of Neo-Platonism, is, from our point lineage of his system, but for its relation to his times. In its yearning after Divine illumination it is typical of its age; for it was a period whose natural precursor might be found in the 1st cent., when Philo Judæus represented an Alexandrian endeavour to Platonize historical Judaism, and, through a theistic treatment of the Platonic 'ideas,' to reach a consummation of unequivocal surrender to the Divine influence. It was a period, too, foreshadowed some generations earlier than itself, when Apollonius of Tyana (*q.v.*) and the 'Neo-Pythagoreans' based their idea of attaining relationship with Deity upon their eclectic Platonism; while a more vulgar mode of communion with Deity was illustrated in the thaumaturgic feats of Alexander of Abonoteichos (*q.v.*). Neo-Platonic mysticism itself is the best type of ecstatic philosophic communion. According to Plotinus, the One which transcends existence (*ἐπέκεινα τῆς οὐσίας*) is not directly cognizable by reason; and the coveted identification with transcendent Deity comes not so much through knowledge as through ecstasy, coalescence, contact (*ἔκστασις*, ἀπλωσις, ἀφή). Much of the doctrine in his *Enneads* bears a resemblance to Oriental Mysticism, but—though this has not always been admitted—it appears to have been purely Hellenic (Zeller, *Phil. d. Griech.* iii. b. 69 ff., 419 ff.; Bann, *Gr. Philos.* ii. 341; Whittaker, *The Neo-Platonists*, p. 106). It was lineally from Plato that Plotinus developed the doctrine of that ecstasy which supervenes upon the contemplation of intellectual beauty, and through which a supreme union with the Divine and Absolute One may be achieved. This subjective intensity of the mystic, as a kind of individual communion, forms a strong contrast to the more usual religious desire for some common act of impressive ritual. There is, further, no excitement in the preparation for the mystical attainment, as in many worships. A long process of internal quietude, of abstraction from sense, and of absorption in reason must attune the soul (*Enn.* vi. ix. 3); and Plotinus's religious position is that the soul, thus worthily prepared by active contemplation, must then passively wait, in a kind of hypnotic trance, for the manifestation of the Divinity. The Divine 'intoxication' of passion comes with that beatific vision which rises beyond beauty to the One Cause (*Enn.* vi. vii. 35). This climax of full communion with God was reached by Plotinus four times within the knowledge of Porphyry, who himself reached the consummation only once, namely in his sixty-eighth year (Porph. *Vit. Plot.* 23).

4. Deterioration of Neo-Platonism.—The system, then, culminated in a mystical act; and, as a matter of history, mystical observances tended to obscure

the theoretical basis. Iamblichus, for example, the Syrian pupil of Porphyry, influenced by Eastern superstitions, claimed that absorption into the Deity was dependent upon the use of divination and magic. A striking phenomenon is presented in this degeneration of the pure Mysticism of Plotinus into the superstition of the Neo-Platonists of the 4th and 5th centuries, who defended or adopted heathen sacrifices, divination, and wonder-working. But it is logically incontrovertible that the germs of superstition were inherent in the Neo-Platonic system, which postulated an unapproachable One and emanations involving secret affinities throughout the universe of Being.

'If man by almost superhuman effort, transcending any effort of the reason, can rise in ecstasy to an immediate vision of the inscrutable One, he can also communicate with lower powers. He finds allies in the invisible world in the demons who mediate between the world of pure intelligence and the world of reason. Thus the Neo-Platonists of the 4th century found place in their system for the ancient gods, and found no difficulty in communicating with them by prayer, oracle, or oration (S. Dill, *Rom. Soc. in last Cent. of Western Empire*, 104).

5. **Communion with Deity through initiation in Mysteries.**—As opinions are divided on the question whether initiation culminated in a sacramental ritual, certain aspects of the Mysteries may be discussed independently of the subject of the sacrificial meal. Anrich, as a preliminary to his discussion of ancient Mysteries, emphasizes the deeper yearnings after fellowship with the Divine ('Gemeinschaft mit Gott,' 'Teilnahme am göttlichen Leben,' 'Genuss des Göttlichen' [*Das antike Mysterienwesen*, 37]), which account for much of the Greek attitude towards Mystic religion, and for the acceptance of Oriental cults. The various secret worshipers classed as 'Mysteries' subserved the feeling that, besides the commoner modes of drawing near to a god, there were others revealed only to a select number of initiated. The most famous of the Mysteries were those whose names Lobeck used as titles for the three books of his famous *Aglaophamus, sive de theologia mystica Græcorum causis*, 1829—namely Eleusinia (the most holy of all), Orphica (the expiatory lore of which affected the Mysteries of Eleusis), and Samothracica (the venerated Pelasgian, rather than Phœnician, cult of the *Κάβειροι*). [See MYSTERIES.] There were also—under the titles of *θαλασσι*, *ἐραροι*, and *ὄρυγες*—numerous religious associations which charged themselves with the celebration of private Mysteries—frequently of barbarous origin (F. B. Jevons, *Intro. to the Hist. of Relig.* 334–348; Foucart, *Des Associations religieuses chez les Grecs*). That the Eleusinian Mysteries persisted, as proved by literature and inscriptions, down to the close of paganism (Anrich, *op. cit.* 40), is not surprising, in view of the power of their esoteric symbolism to minister to the desire for a Divine communion more intimate than was possible for perfunctory worshipers. Certainly the Eleusinian Mysteries reached a considerable degree of spirituality, and made far deeper demands than simple ceremonial purity. The nine days' fast, the long procession from Athens to Eleusis, the play of mysterious illuminations in the Great Hall, the sacred drama, the reverent exhibition of holy symbols, the homilies addressed to the initiated, the drinking of the sacred draught even as once the goddess had refreshed herself, and the handling of the sacred things were all methods of bringing the reverent worshiper into closer communion with Deity (see the well-known formula recorded by Clem. Alex. *Protrept.* ii. 18, 'I have fasted and I have drunk the *κυκεὼν*,' etc.). From ancient times initiation at Eleusis was believed to secure a happier lot in the other world ('*Homeric Hymn to Demeter*, 480–482; Pindar, *frag.* 102; Soph. *frag.* 719 [Dind.]; Isoc. *Paneg.*

28; Cic. *Legg.* ii. xiv.), and the balance of ancient authority suggests that communion in the Eleusinian Mysteries was considered to exercise effects permanent enough to mould for better the life of the initiated in this world. This is supported by the evidence of Diodorus and of Andocides.

'According to Sopater, initiation establishes a kinship of the soul with the divine nature; and Theon Smyrnenus says that the final stage of initiation is the state of bliss and divine favour which results from it' (W. M. Ramsay, art. 'Mysteries,' in *EBR*, with reference to Diod. Sic. *Hist.* v. 48; Andoc. *de Myst.* 31; Sopat. *Dier. Zetem.* p. 120, in Walz, *Rhet. Græc.* 1832–36; Theon Smyrn. *Mathem.* i. 18; cf. Lobeck, *Aglaoph.* 39, 188–189; Ramsay's art. 'Mysteries' gives the chief authorities on the subject between 1829 (the date of *Aglaophamus*) and 1884, and includes references to inscriptions).

One highly important feature of the Eleusinian Mysteries was their ultimate admission of the alien. As early as the time of Herodotus (viii. 65), they were open to any Hellene who might choose to go through the prescribed ritual; and, after the condition of membership came to be initiation (*μύησις*) instead of citizenship, they could so appeal to mankind that Ælius Aristides in the 2nd cent. A.D. might fairly eulogize Eleusis as 'a common sanctuary for the world' (*καὶὸν τὴ τῆς γῆς ῥέπουσ, Eleus.* *Orat.* i. 256 [Jebb]).

Jevons has contended (*op. cit.* ch. xxiv. 'The Eleusinian Mysteries') that the start of the broader appeal made by Eleusis coincided with fresh stirrings in religion which spread from Semitic lands to Greece in the 6th cent. a.c. So it was that the opening of the Eleusinian sanctuary to the Athenians was the first step in the expansion of the cult of Demeter from a merely local agricultural worship into an element of national and afterwards of cosmopolitan religion. The belief grew stronger, he maintains, that more intimate communion with Deity was attainable than that secured by the gift-sacrifice. Hence a resuscitation of the old sacramental theory of sacrifice, along with an ancient ritual wherein that theory was bodied forth. Holy places like Eleusis, which had conserved archaic Hellenic rites, became popular with worshippers bent upon such communion. At the same time came an influx of Oriental worshipers—some of them readily identified or associated with existing native cults. Wandering *aprytes* introduced 'Mysteries,' and founded religious communities for the worship of alien deities—Iachos, Zagreus, Sabazios, Cybele—who were now rapidly acclimatized in Greece. The new cults thrived, fostered by their likeness to the cult of Dionysos, and by the Orphic myths which suggested that Iachos, Zagreus, and Sabazios were one and the same with Dionysos. The association of Iachos with the Eleusinia added a dramatic element, but did not change the central portion of the ritual—which, in Jevons's view, consisted in the administration of the sacrament of the *κυκεὼν* and the solemn exhibition of the ear or sheaf of corn to represent the Corn-Mother.

'As the worshippers of animal totems at their annual sacrifice consumed the flesh of their god and thus partook of his divine life, so the worshippers of the Corn-Goddess annually partook of the body of their deity, i.e. of a cake or paste or posset made of the meal of wheat and water' (Jevons, *op. cit.* p. 365f.; *Hymn to Dem.* 208, *ἀπὸ καὶ ὕδατος*. Wine, being 'the surrogate of blood, was excluded from the non-animal sacrifices offered to cereal deities' (Jevons, *op. cit.* 380)).

This theory is attractive and thoroughly consistent with practices wide-spread among mankind. It has the difficulty of being necessarily in part conjectural because of the absence of evidence regarding a secret ritual which it was impetuous to divulge; and it has been opposed by Farnell, who does not accept its totemic basis, and who submits that, for all we know, the sacred *κυκεὼν* might have been drunk by individuals apart, and not in communion. In a field so obscure, it is not surprising that interpretations should be numerous and varied. The recent theory of Lawson (*Modern Gr. Folklore and anc. Gr. Rel.* 572) may be mentioned, that 'the doctrine of the [mystic] marriage of men with their gods was the cardinal doctrine of the mysteries (for the other doctrine of bodily survival is merely preliminary and subordinate to this), and that "some dramatic representation was given as a means of instilling into men's minds the hope of attaining to that summit of bliss" (cf. Farnell's footnote, *CGS* iii. 198, referring to the evidence collected by Dieterich in *Eine Mithrasliturgie*, 'proving in much ancient ritual the prevalence of the belief that mystic communion with the deity could be obtained through the semblance of sexual intercourse: it is found in the Attic-Cybele worship, and in the Isis-ritual (Joseph, *Ant.* xviii. iii.), and it probably explains the myth of Pasiphaë.'

6. **Communion through a sacrificial meal or theophagist ritual.**—The subject of the Mysteries obviously shades into that of the sacramental feast, which probably accompanied many of them. It will be seen that this portion of the subject is bound up with the ritual meaning of eating, sacrifice, and blood (see art. BLOOD, SACRIFICE). The

examination of rival theories concerning sacrifice does not fall within the purview of this article, but passing allusion to them is unavoidable. Certainly, on any basis, it is clear that, in sacrifice and usages attendant upon it, we have what worshippers have historically regarded as one of the most potent means of intimate relation with Deity. 'Toutes les religions,' says A. Réville, 'considèrent le sacrifice, plus ou moins transformé, comme le moyen par excellence de réaliser l'union de l'homme avec la divinité' (*Prolegomènes de l'histoire des religions*, 1886, p. 179).

Though Frazer, (*GB*² ii. 293) has maintained that the evidence is not yet convincing in favour of totemism among Aryan tribes, there are noted authorities on Comparative Religion who feel that, according to the analogy of usages and beliefs widespread over the globe, many features in Greek mythology and Greek ritual can find their ultimate explanation only as sacramental feasts on a totemic basis. This is a contention in A. Lang's *Custom and Myth* (1884). So, too, Reinach, building upon Mannhardt's demonstration of the wide prevalence of totemic rites in Europe, and supported by comparison with Robertson Smith's exposition of the theory of Semitic sacrifice, claims that, when the ancestors of the Greeks became agriculturists, the totemic rites of the nomads and shepherds, instead of completely vanishing, received a new interpretation in myth and rite. And similarly, although Farnell objects (*CGS* iii. 194-197), Jevons, as already indicated, has propounded the hypothesis of a corn-totem eaten sacramentally at Eleusis.

Some of Reinach's examples may be given. Aklalon is a typical one with which to start. The Aklalon myth, according to Reinach (*Cultes, mythes, et religions*, iii.), arose from a sacramental rite (*σacpavoc*) of the stag by women-worshippers masquerading as 'hinds,' in honour of Artemis, the hind-goddess of a totemistic clan. The traditional legend would arise from a semi-rationalistic interpretation of an old communion sacrifice; the devotees who tore the sacred stag to pieces became, euphemistically, the hunter's 'dogs.' Such sacramental *σacpavoc* was, as we have seen, a feature of Dionysiac ritual wherein the Menads aimed at securing communion with their deity so as to increase their influence upon the fertility of vegetation. (It may be noted in passing that Farnell, in *Feast's Work in Classical Studies*, 1908, suspects that 'the Boeotian Aklalon story was originally Bacchic, and that Artemis came only accidentally into it.') Such elucidation is to be contrasted with the older meteorological explanation, whereby the hunter torn by his hounds is viewed as an image of the fair verdure of earth scorched by the sun in the dog-days ('ein Bild des durch die Hitze der Hundstage zerstörten schönen Erdenlebens' [Roscher, s.v. 'Aklalon']). Reinach holds Aklalon, Hippolytos, Dionysos Zagreus, and Orpheus to be, like Adonis and Osiris, suffering heroes who are lamented as slain, but in the end resuscitated. In all such cases, he thinks, the myth implies an ancient sacrificial ritual, in which a sacred totem was slain and eaten in communion by the faithful. Frazer's view differs in so far as he would refer the origin of the death and resurrection of Adonis, Attis, Osiris, and Dionysos to simple rustic rites of harvest and vintage. But, while he regards them as vegetation-spirits rather than as totems, he admits the sacramental character in the harvest supper, when the divine animal is killed and devoured by the harvesters as an embodiment of the corn-spirit. On this theory, as much as on the totemic theory, we find communion with Deity through corn and wine. And it is a communion on the basis of the logic of primeval religion. By eating the body of the god the worshipper shares in the god's attributes and powers; for corn, it is argued, is the true body of a corn-god; and analogously, drinking the wine in the rites of a vine-god is a solemn and significant sacrament instead of mere revelry, for the juice of the grape is the god's blood (see Frazer, *GB*² i. 358 ff.).

Such beliefs are, in the ultimate resort, consonant with the savage psychology which argues the possibility of the acquisition of Divine properties by eating, and of which a simple instance is the ancient Maori practice whereby a warrior swallowed the eyes of his slain enemy on the ground that the *atua tonga*, or divinity, was supposed to reside in them (R. Taylor, *Te Ika a Maui, or New Zealand and its Inhabitants*², 1870, quoted by Frazer, *Psyche's Task*, 1900, p. 6; cf. 'Eating the God,' in Frazer, *GB*² ii. 318-336). Further, it is a fair induction from a mass of anthropological evidence that no more sacred and intimate bond of union could be secured in a primitive community than the sharing in the periodic sacrifice of a god viewed under the aspect of, or as incarnate in, an animal. It is a necessary inference, as many hold, following Robertson Smith, that the idea of communion, so far from being a later development, plays a great part in primitive sacrifice, and

precedes the gift-sacrifice (Tylor, *Primitive Culture*⁴, vol. II, ch. xviii., upholds gift-sacrifice as the most primitive, on the analogy of man's dealings with his fellow-man, and argues that the savage treats a god as he would a chief. Tylor assigns to sacrifice three stages, viz. (1) gift, (2) homage, and (3) abnegation).

After this brief glance at fundamental theories, it may be interesting to add certain examples given by Farnell from cults observed in Greece which illustrate ideas of communion. In the case of the mysterious *Βουφώνια* at the Diipolia on the Acropolis, he inclines (*CGS*, vol. i. p. 88 ff.) to favour Robertson Smith's explanation regarding the ox which was slain as victim, and whose slaying brought guilt upon the slayer; for here the sacrificer was subjected to a mock trial, and the instrument of slaughter was alone declared guilty and thrown into the sea. This suggests a Divine animal akin to the clan, and recalls the familiar feature of totemism whereby the clansmen claim kindred with an animal-god or sacrosanct animal, from whose flesh they as a rule abstain, but which, on solemn occasions, they eat sacramentally in order to strengthen the tie of kinship between them and the Divine life. This seems more satisfactory than Frazer's view (*GB*² ii. 38-41), that the ox represents the corn-spirit sacramentally devoured at the close of harvest in order that he may rise with fresher powers of production. So, in the worship of the originally Oriental goddess, Aphrodite, the mourning for Adonis (who is fundamentally the same as Attis) is probably not a lament over decaying Nature, but 'official mourning over the slaughter of the theanthropic victim in whose death the god died'; and the most ancient Adonis sacrifice would be the offering of a sacred swine to the swine-god—a sacramental Mystery wherein participants attested their kinship with the animal-god by immolating an animal which, save in such ritual, it would be *tabu* to slay (cf. Robertson Smith, *Rel. Sem.*² 290). Farnell recognizes the same mysterious idea in the ceremonial sacrifice of a bear at Brauron by bear-maidens in honour of Artemis as a bear-goddess (*CGS* ii. 435); in the sacrifice of the bull-calf to Dionysos at Tenedos (ib. v. 166); and in the sheep-offering to Aphrodite in Cyprus, if we accept a very plausible emendation made by Robertson Smith on a passage in Joannes Lydus (*CGS* ii. 645; Lydus, *de Mensibus*, 4, p. 80, Bonn ed., *πρόβατον καὶ οὐλοῦ ἑκαταμένου* [for *ἑκαταμένου*] *οὐλοῦν τῇ Ἀφροδίτῃ*).

Equally mysterious are traces in ritual which point back to the sacrifice of a human victim. Abundant proof has been forthcoming from modern anthropological research to confirm the world-wide association of human sacrifice with harvest ritual and the cults of vegetation-spirits (Mannhardt, *Baumkultus*, 358-361; Frazer, *GB*² ii. 238 ff.). There are such traces of an original human victim in the cult of Ge (*CGS* iii. 19-21) and in the legends concerning Orpheus. Farnell accepts the dismemberment of Orpheus by furious Thracian votaries as typical of that form of ritual whereby worshippers slay the priest who temporarily incarnates the god. Parallels are familiar from Frazer's *Lectures on the Early History of the Kingship*. Sacramental cannibalism on occasions of extreme religious excitement is discoverable at a fairly high level of culture, and is credible in the Thracians (Reinach's theory, in *Cultes*, etc., ii. 107-110, of Orpheus as a fox-totem rests on the rather slender evidence for taking *βαρβαρὸς* or *βαρβάρα* as a Thracian word for fox [Farnell, *CGS* v. 106 n.]).

In some ceremonies at the altar the difficulty is to decide whether any clear sacramental concept was involved. There are signs of it at Argos in a peculiar cathartic communion, and there is reason

to suppose that the victim at Delphi called *δωστήρ*, 'giver of holiness,' which was slain when the *δοιοί* were elected, was considered a temporary incarnation of deity, so that contact with flesh, blood, or skin, could communicate holiness. There is also likelihood in the view that the goat sacrifice in the Laconian *Koribides* was a genuine sacrament, where worshippers presumably believed they entered into communion with Apollo by devouring sacred flesh in which his spirit was (Farnell, *CGS* iv. 257-258). We know too little to affirm any sacramental idea in the local Attic cult of Apollo Agyieus at Acharnæ, whose worship was administered by *παρόνται* (*ib.* iv. 158). Something, however, more suggestive appears in Arcadia, a fit abode for primeval worships, where the sacrifice to Apollo Parrhasios had to be consumed in the sanctuary (*ἀναλίσκουσιν αὐτόθι τὸν ἱερὸν τὰ κρέα*, Paus. viii. 38, cited by Jevons, *op. cit.* 146); and similarly with another instance which Jevons gives:

'The festival at which the Athenians made sacrifice to Zeus Melichios, the Diasia, was one of the most ancient of their institutions; but . . . the Locrians of Myonia were still more faithful to the ritual which they had received from the common ancestors of Locrians and Athenians alike, for, like the Saracens and the Prussians, they offered the sacrifice by night, and consumed the victim before the rising of the sun' (*ἀναλίσκωσι τὰ κρέα αὐτόθι πρὶν ἢ ἡλίου ἐπιερχεῖν νομίζουσι*, Paus. x. 38).

In a less mystic sense the term 'sacrament' or 'communion' might be applied to the feast shared by deity and worshippers which is familiar from the earliest Greek literature. And there are many other cases of ritual where we cannot safely pronounce how far the idea of communion extended. Evidently the existence of *παρόνται* of Apollo at Acharnæ and at Delos is no proof that in the rites concerned the worshippers supposed Apollo to be dying a sacrificial death (Farnell, *CGS* iv. 258). In some cases a social, tribal, or political element has prevailed over the religious idea of communion with which it was originally bound up. For instance, primeval notions, only partially understood, survived at Athens in feasts at which the *hestiator* entertained his tribe (Jevons, *op. cit.* 159; *CIA* ii. 163, 578, 582, 602, 603, 631; cf. *Jul. Pollux, Onom.* iii. 67, *φυλῆς ἐστίασμα, τὴν φυλὴν ἐστίαω, κραναορίας ἐπινεῖωσι*). One could, of course, always describe a non-tribesman, in terms of religion, as one who was not in communion with the god of the tribe.

The evidence here collected shows that the idea of sacrificial communion certainly persisted in Greece among worships both indigenous and imported. But its persistence, apart from the Mysteries and private Orphic societies, was presumably sporadic. It is reasonable, therefore, to agree with Farnell in doubting whether the ritual and doctrine of communion sacrifice 'exercised a vital influence upon religious thought in the older Hellenism.' Certainly, although in this of all matters the argument from silence can count but little, it is a striking omission that Iamblichus, while analyzing other phenomena of relationship with the Divine in the *de Mysteriis*, betrays no knowledge of sacramental communion (*CGS* iii. 196). And yet history shows that this idea had a great career before it; and, if in the older Hellenism it remained largely occult, in later Greek times and in the later Roman world, as we shall see, it counted as a vital religious force.

II. ROMAN.—I. The practical nature of a Roman's relationship with the gods in ordinary ritual.—Boissier (*La Religion rom. d'Auguste aux Antonins*², i. 19), has an instructive sentence:

'Les Romains ont une façon particulière de comprendre les rapports de l'homme avec la Divinité: quand quel'un a des raisons de croire qu'un dieu est irrité contre lui, il lui demande humblement la paix, c'est le terme consacré (*pacem deorum exorare*), et l'on suppose qu'il se conclut alors entre eux une sorte de traité ou de contrat qui les lie tous deux.'

In short, this implies a kind of traffic rather

than communion with Deity—man must buy protection by prayers and offerings, and the Deity who has received a sacrifice is expected to respond by conferring favours. If this is broadly true of the practical Roman worshipper, it may further be said that neither the Roman as statesman nor the thinker reflecting upon Roman religion was inclined to view it much in the light of an avenue of spiritual communion with Deity. Polybius (vi. 56) thinks of the salutary effect of keeping the multitude in check by 'mystic terrors and solemn acting of the sort' (*τοῖς ἀδήλοις φόβους καὶ τῇ τοιαύτῃ τραγῳδίᾳ*), and in the same chapter refers to the scrupulous fear of the gods as the very thing which kept the Roman commonwealth together. Varro, cited by Augustine, held it to be the interest of the community to be deceived in religion ('expedire igitur existimat falli in religione ciuitates,' *de Civ. Dei*, iv. xxvii. cf. vi. v.). Livy (i. xix.) credited Numa with putting the fear of the gods upon his folk as the most effective deterrent for an ignorant populace. Many such pronouncements—erroneous enough as explanations of the rise and strength of religion—taken along with the actual policy of rulers like Augustus, serve to show that much of the Roman State-religion was imposed, as it were, from without upon the worshipper for the good of the community. There was little, therefore, in all this which tended towards the spiritual. Yet in the primitive religion—in the ritual which had grown up out of aboriginal needs and had not been imposed—just as in primitive religions generally, there had been the genuine sense of dependence upon Deity and some recognition of the value of communion with Deity.

2. Comparative absence of ecstasy in Roman religion.—In comparison with the Greek, there was in the Roman decidedly less religious ecstasy or enthusiasm. Roman religion, when not domestic, was mainly political; and the whole was regulated by law and custom. Religious emotion was distrusted by the authorities, and the stern suppression of the Bacchanalia in 186 B.C., even if in part due to political motives, was typical of the strong objections felt to a ritual of excited transports, the nature of which has been made evident in earlier portions of this article. The cult of the Phrygian goddess Cybele and of Attis, though received in Rome from the times of Scipio Nasica, as is well known, was characteristically placed under restrictions; and the frenzy of this worship was almost as abnormal in Roman religion as the tumultuous Gallianisms of the *Attis* of Catullus are in Roman literature. Such alien religions only gradually increased their hold upon Rome; they did so as the desire for religious excitement became stronger; and hence it may be said that among the reasons for the attraction which the African and Oriental cults exercised upon many Romans of the Empire, and especially upon women; were, first, their more powerful and rapturous excitation of the emotions, and, secondly, their promise of a closer *rapprochement* to Deity than was proffered in the grave and calm State-religion. Some notable access of spiritual aspiration at Rome seems a necessary presupposition of many religious phenomena of the Imperial epoch. It is probably the real explanation of the extent to which such alien cults as that of Isis (*q.v.*) gained a footing. (A good picture of Isis worship is given in Apuleius, *Metam.* bk. xi., in connexion with the threefold initiation of Lucius into the Isis mysteries.) But it is right in this connexion to note the caveat which Boissier enters against overstating the theory. He points out (*op. cit.* ii. 211-212) that the welcome offered to foreign cults by Romans of the Empire, and especially by women, did not imply a protest against the national religion, but

was rather a consequence of the religious sentiments developed in the heart by the old worship. There was, it was recognized, a communion with Deity more intimate and mystical to be attained in the more emotional Eastern rites. In Boissier's view, then, this is more logical than to consider the acceptance of Eastern cults as a revulsion from national cults to something entirely novel. Certain it is that Rome, as it became a world-power, grew cosmopolitan in religion, and found room for votaries of Attis, Isis, Osiris, Serapis, Sabazios, and other deities, so that outlandish rituals, often coloured with mysticism, competed with the grave and restrained usages of Roman antiquity.

3. Ideas of sacramental communion in native Roman religion.—Accumulating evidence tends to show that, even if relatively deficient in imagination, the indigenous Roman religion exhibited from the earliest times, like so many early religions, clear traces of the common sacrificial feast partaken of for the purpose of uniting a deity more closely with his worshippers. Throughout Roman history there persisted a prominent illustration of the ancient theory that all meals were capable of being hallowed as sacred feasts common to both deity and worshipper (e.g. Athenæus, v. 19). This was the offering to the twin Lares observed by the Roman family at meals (Serv. ad *Æn.* i. 730; Ov. *Fast.* ii. 633). In the marriage ceremony, too, of *confarreatio* there probably was a similar implication (cf. C. Bailey, *Relig. of Anc. Rome*, 1907, p. 47). Broadly speaking, as Glover says (*Conflict of Religions in Early Roman Empire*, 1909, p. 15), 'the worship of all or most of these spirits of the country and of the home was joyful, an affair of meat and drink. The primitive sacrifice brought man and god near one another in the blood and flesh of the victim, which was of one race with them both' (cf. Robertson Smith, *Rel. Sem.*² Lect. xi.). Now, this domestic communion with Deity—a communion doubtless varying enormously in greater or less spirituality—possesses the special interest that it is the portion of Roman religion least tinctured with Orientalism or scepticism. Despite wide-spread secular opinion in the Augustan era, there was yet much sincere, even if vague, religious feeling among the less cultured ranks of society. The home-religion was a powerful early association in many minds, and Horace's tasteful ode on rustic piety to Phidyle (*III. xxiii.*) touches the spiritual value of the simplest sacrifice (*farre pio*) to the gods of home and hearth, in a manner that suggests something deeper than a literary exercise.

A few prominent instances may be given, where, either in the victim or in the substituted sacrifice, primitive Italian ideas of communion are suggested. At the *Parilia* in April, the shepherd, after purifying his sheep, brought offerings to the god (or goddess) Pales—including cakes of millet and pails of milk. 'The meal which followed, the shepherd himself appears to have shared with Pales' (W. Warde Fowler, *Rom. Festivals*, p. 81; cf. Ov. *Fast.* iv. 743-746, esp. 'dapibus resectis'). The deity was then entreated to avert evil from the flocks and to overlook unwitting trespass.

'We can hardly escape the conclusion,' says Warde Fowler (*ib. footnote*), 'that the idea of the common meal shared with the gods was a genuine Italian one; it is found here, in the *Terminalia* (Ov. *Fast.* ii. 655 ['spargitur et caso communis Terminis agno']), and in the worship of Jupiter.'

Let us turn to the *Feræ Latine* in honour of Jupiter Latiaris held on the Alban Mount under the presidency of Rome (Warde Fowler, *op. cit.* 95-97). This festival—older than historic Rome itself—was a common festival of the most ancient Latin communities. In the presence of representatives from the different members of the league, the Roman consul offered a libation of milk; other

cities sent sheep and cheeses. But the central rite was the slaughter of a pure white heifer that had never felt the yoke. The flesh of this victim, sacrificed by the consul, was distributed amongst the deputies and consumed by them. Herein, certainly, there were political implications and obligations, but the religious element was most powerful; for it was felt that to be left out of this common meal or sacrament would be equivalent to being excluded from communion with the god of the Latin league. Indeed, the anxiety displayed to secure the allotted flesh, which emerges in cases where some one city had not received its portion (Livy, xxxii. i., xxxvii. iii.), exhibits a primitive trait recalling a well-known barbaric alacrity for communion, which may be illustrated in Hellenic omophagic rites, or in the frenzied hacking and devouring of the victim-camel sacrificed by Arabs, as described by Robertson Smith, *Rel. Sem.*² 338. Warde Fowler (p. 97) deduces from the ritual that

'we are here in the presence of the oldest and finest religious conception of the Latin race, which yearly acknowledges its common kinship of blood and seals it by partaking in the common meal of a sacred victim, thus entering into communion with the god, the victim, and each other.'

Of the offerings it may be observed that they are characteristic of a pastoral rather than of an agricultural age. Helbig has commented on the absence of any mention of wine as proof that the origin of the festival must precede the introduction of the grape into Italy; and he holds its antiquity to be confirmed by the character of the ancient utensils dug up on the Alban Mount (*Die Italiker in der Poebene*, 1879, p. 71). In the white victim may be seen a reminiscence of a pre-historic breed of sacred cattle, which it was forbidden to slay, except at the annual renewal of kinship among the clansmen in their sacrament. This festival lasted for centuries after Jupiter Optimus Maximus of the Capitol had overshadowed the Latin Jupiter, and after some communities had so dwindled as scarcely to be able to find a representative to receive their portion of the victim (Cic. *pro Planc.* ix. 23, 'quibus e municipiis vix iam, qui carnem Latinis petant, reperiuntur'). Its antiquity and its duration are noteworthy.

'Perhaps no festival,' says Warde Fowler (*op. cit.* 96), 'Greek or Roman, carries us over such a vast period of time as this; its features betray its origin in the pastoral age, and it continued in almost uninterrupted grandeur till the end of the third century A.D., or even later' (*CIL* vi. 2021).

Briefer notice will serve for the remaining examples. A sacrificial meal was part of the August observances in honour of Hercules (Warde Fowler, *op. cit.* 194). It is among the usages prescribed by Cato for the invocation of Mars Silvanus on behalf of the cattle (*de Re Rust.* 83, 'Ubi res diuina facta erit, statim ibidem consumito'). The eating of the victim with the blood so as to participate thereby in the common Divine life—a primitive usage found among the heathen Semites—has its parallel at Rome in the peculiar swine-offerings of the *Frates Arvales* (cf. above, vol. ii. p. 10^b). Again, the eating by worshippers of loaves at Aricia, perhaps baked in the image of the slain king of the grove, has parallels all over the world, among which may be mentioned the dough images of gods eaten sacramentally by Mexicans (Frazer, *GB*² ii. 337-342). The suggestion is that these loaves in human form were sacramental bread, and that, in the old times when the Divine priest-king of the grove was annually slain, the loaves were made in his image, to be eaten by worshippers.

'A dim recollection of the original connexion of these loaves with human sacrifices may perhaps be traced in the story that the effigies dedicated to Mania at the Compitalia were substitutes for human victims' (*ib. ii.* 344).

4. Certain ideas in Roman literature and philosophy regarding relationship with Deity.—In

many such feasts at Rome, as elsewhere, the original sacramental ideas were in time weakened and rationalized. By the period of the later Republic there were thinkers who found it hard to understand how any worshipper could suppose that by eating bread or drinking wine he thereby consumed the body and blood of a deity.

'When we call corn Ceres, and wine Bacchus,' says Cotta in Cicero's *de Nat. Deor.* (iii. xvi. 41), 'we use a common mode of speaking, but do you imagine anybody insane enough to believe that the thing on which he feeds is a god?'

It is no part of the scheme of this article to trace ideas of communion as they may be represented or criticized in Latin literature as a whole; for attention has rather been directed to the practice and meanings of actual ceremonial. Yet it may be legitimate to allude to certain representative authors. Unfortunately, the *de Nat. Deor.* labours from inconclusiveness, because Cicero prefers refuting the opinions of others to stating his own; and so from his indeterminate Academicism, whether here or in the *de Divinatione*, we reap little or nothing to our purpose. In the very next generation Virgil furnishes us, in the *Aeneid*, with one of the greatest artistic treatments of human dependence upon Deity, and of the realized need for close communing with the Divine. The variety of religious attitude in intellectual Rome is proved by the fact that while, on the one hand, we have Sceptic and Epicurean denials of all possibility of communion with Deity, we have, on the other hand, lofty utterances indicating appreciation of the doctrine that full communion with God may be independent of sacrifice, and that the primitive potencies of blood are needless where there is a true spiritual oblation of the worshipper's will and heart. To some such aspiration the great pronouncement of Persius marks an approach: 'Duty to God and man blended in the mind, purity in the depths of the heart, and high-souled nobleness—grant me to present these at the shrine, and a handful of meal shall win me acceptance' (*Sat.* ii. 73-75). In a similar spirit Seneca writes that God has no delight in the blood of bulls (*Ep.* 116, 'Colitur Deus non tauris, sed pia et recta uoluntate'); and true communion or true worship is defined by him in almost the same words elsewhere, as consisting 'in pia ac recta uoluntate uenerantium' (*de Ben.* i. vi. 3). The Deity is to reside in the heart (*Ep.* 46, 'Sacer intra nos spiritus sedet'), and for all men there is open a communion in that one body which is, according to Seneca's view, God or Nature (*Ep.* 93, 'membrarum sumus magni corporis'). This is stated from his cosmic standpoint—his pantheism; and on the moral side the doctrine becomes one of communion through assimilation or imitation: 'Vis deos propitiare? Bonus esto. Satis illos coluit quisquis imitatus est' (*Ep.* 95). And so we come round to the Stoic notion of partial elevation towards the Divine essence through the perfect self-possession of a sage. Perhaps we may take Quintilian's remarks on the praises of the gods as representative of the attitude of educated Romans at the close of the 1st cent. A.D. In iii. vii. he mentions the topics suitable for employment in eulogies upon the gods—namely, their greatness, power, and bounties; but a typical aloofness in his treatment indicates that Quintilian at least felt little need for close communion with a Higher Power.

5. Attraction to alien worshipers under the Empire.—How far, however, did Quintilian's contemporaries strain after closer relationship to the Divine? There is evidence that, though many thinkers adopted a similar attitude of aloofness, there was a wide-spread recognition that a more intimate relationship was a needful solace for the human soul. This is not the place to examine that evidence; but broadly it may be said that the

religious conditions of the Roman world during the early centuries of the Empire were such as to favour the triumph of Eastern cults (see S. Dill, *Rom. Soc. from Nero to M. Aurelius*, esp. chapters on 'Magna Mater,' 'Isis and Serapis,' 'The Religion of Mithra'; cf. T. R. Glover, *Conflict of Religions*, 1909, p. 260). The comparative inability of the ancient religion of Latium to satisfy any deep desire for moral regeneration or communion with Deity accounts for the ready welcome extended to alien worshipers, and even to many gross superstitions. Regeneration was the promise held out in the *taurobolium* (see the description in Prudentius, *peri Srephdron*, x. 1006-1050), or ceremony of the cleansing blood, which formed part of the worship of Cybele, though apparently so far not proved to have been included in that worship in the West until Hadrian's time. Inscriptions prove the belief in the renewal of life conferred through the Attis ritual: 'taurobolio criobolique in aeternum renatus' (Orelli, 2352, 6041), and a mystic sacramental communion was the central charm in the religion of Mithra.

6. Mithraism.—Of this religion a full account will appear under the article MITHRAISM, but it comes partially within the scope of our present inquiry, as the cult which in the Roman Empire—quite apart from such other analogies as its doctrines on morality, celibacy, fasting, mediation, salvation, and bliss—presented the closest resemblances to the sacramental ideas of Christianity, and as a cult which in some parts of the world bade fair to prove a successful rival (Cumont, *Textes et monuments*, i. 344; Renan, *Marc-Aurèle*, 1893, xxxi. 579). Although, in general, it remained alien to the Greek world (art. 'Mithras' in Roscher, tr. from Cumont), and, although only by degrees had it by Trajan's time gained some footing in the West, since the Romans first came into momentary contact with Mithraists through the Cilician pirates in 67 B.C. (Plut. *Vit. Pomp.* 24), yet Mithraism spread mainly, but not exclusively, as a soldier's worship, and won adherents in the capital, and especially on the frontiers; e.g. along the Danube, in Germany, and in Britain at military stations facing Wales or on Hadrian's Wall. [For conflicting views on the classes from which Mithraists were drawn in the Roman Empire, see de Jong (*Das antike Mysterienwesen*, p. 59), who favours Gasquet's opinion (*Essai sur le culte et les mystères de Mithra*, 1899, p. 140) that Mithraism did not penetrate the population outside the cantonnements. C. H. Moore, in a paper on the distribution of Oriental cults in Gaul and Germany (*Trans. of Amer. Philolog. Assoc.*, 1908), argues that Mithraism had even less exclusive connexion with the army than Cumont claims.] After enjoying the favour of some emperors, including Julian, Mithraism gradually lost ground; and the holy caves were destroyed in A.D. 378.

Mithra, the Persian god of light, in the perpetual sacrifice which he was conceived as offering, presented a type of the struggle after a higher and better life. The human soul, parted from the Divine, might, it was held, regain communion with Deity through fasting, penance, initiation, and a series of probationary in ascending grades which finally should lead the victorious devotee—the faithful soldier of Mithra—into unimpeded alliance with the Divine nature. The sacrifice of the bull, so prominent in the worship, seems to indicate that in remoter times a sacred bull, assimilated to the Sun, was immolated as Divine, its flesh and blood being consumed in a communion meal (S. Reinach, *Orpheus*, Eng. tr., 1909, p. 69). The victory-meal of the true Mithraic soldier consisted of water (or sometimes wine) and bread; and was denounced by early Christian writers as

a demoniac parody of the Holy Sacrament (e.g. Justin Martyr, *Apol.* i. 66; Tert. de *Præscr.* 40 [ii. 38, Oehl.]). In contrast thereto, much modern feeling regards it as a historical phenomenon, to be accepted without repugnance, 'that both the idea of sacramental worship and the forms under which it is performed by the Christian Church are the almost universal heritage of mankind.' (W. R. Inge, in *Contentio Veritatis*, 1902, p. 279).

LITERATURE.—I. GENERAL.—J. G. Frazer, *GPB*, 1900; M. Hébert, *Le Divin: Expériences et hypothèses*, 1907; W. Mannhardt, *Antike Wald- u. Feldkulte*, 1877, *Mythol. Forschungen*, 1884; A. COMMUNION WITH DEITY (Hebrew).—Communion with God, broadly speaking, means sharing in the thought or the spirit or the life of God. Any way in which men can be thought to share in the life or vitality of God, or in which it is believed that God's thought can be communicated to them, is a means of communion. Since the OT represents several centuries of history—centuries during which the Hebrews passed from barbarism to a high type of civilization—several conceptions of the nature and the means of communion with God are recorded in it, corresponding

with the different stages of development through which the people passed.

1. At feasts.—To begin with the oldest of these, we must consider communion at feasts. W. R. Smith has shown¹ that at least one important feature of Semitic sacrifice—he thought it the all-important feature—was the sacrificial meal, at which, in early times, the god was supposed to be present and to partake of the viands. This was believed to be real communion; for, as the god and the worshipper partook of the same sacred flesh, they were thought to share in a common life. In our oldest OT source—the J document—there is a trace of this form of communion, with a slight modification of its crassest features. In Ex 24¹¹ Moses and the seventy elders of Israel behold God, and eat and drink, i.e. they eat and drink in His presence. This is but a slight modification of an older view that God ate and drank with them. According to J, this commensal communion sealed the covenant between Jahweh and Israel. A kindred instance, though still somewhat further removed from the crassest primitive ideas, is found in 1 S 1. The feast which the parents of Samuel attended was a feast of commensal communion, for Hannah believed it to be the most favourable time to make her request to God. Communion was no longer confined to the physical side alone; it embraced also the interchange of ideas, and yet it hovered about the old commensal meal, for it was thought that God was then more easily approached than at other times.

Closely akin to the commensal conception of Ex 24¹¹ is that of Gn 15^{7, 8}, where the pieces of the sacrifice are piled in two heaps, and God comes in the form of a smoking furnace and a flaming torch, and walks between them. This confirms the covenant with Abraham. It is not stated that Abraham did the same, but the writer apparently meant to imply it. God and Abraham, by coming mutually under the influence of the sacrificial flesh, entered into a communion of mutual obligation.

Closely connected with the commensal idea of communion are the passages in which Jahweh or His angel appears to a man and speaks with him, imparting some specially important information; the man offers Him the hospitality of some refreshments, of which the Divine being partakes, and then vanishes. The instances of this all occur in the J document (Gn 18, Jg 6 and 13). Those to whom Jahweh is said to have appeared were Abraham, Gideon, and Manoah's wife. In all these cases the communion was partly oral and partly commensal, i.e. God ate or consumed the food which a human being had prepared for Him. To the same stratum of thought belong a number of instances where God appeared to men in human form and talked with them, without any connexion with sacrifice. For example, in Gn 38²⁷ God came down and walked in the garden in the cool of the day and talked with Adam and Eve and the serpent. In Gn 32^{24ff.} God came to Jacob near the Jabbok, and wrestled with him nearly the whole night. That this was regarded as real communion is shown by the fact that a later age looked back upon it as the turning-point in Jacob's character. In that night they believed he ceased to be a supplanter and became a prince of God. Another instance, taken, like the two preceding, from the J document, is found in Ex 4^{24ff.}, where Jahweh met Moses and his family and sought to kill Moses, and was deterred only by the circumcision of his son. According to this passage, it was thus that God communicated to Moses that circumcision was necessary.

In the period presented by the J document, then, communion with God was thought to be half

¹ *Rel. Sem.* 2, Lectures vii.-ix.

commensal and half conversational. In either case God was anthropomorphically conceived, although the crassest phases of anthropomorphism were passing away.

In this same early period of thought the manifestation of Jahweh for the deliverance of His people from oppression was regarded as a theophany. Perhaps this could not properly be called communion, and yet it borders closely upon it. The conception of the worshipping unit was the nation, and Jahweh's manifestation of power for the deliverance of the nation was a communication of His will which thrilled the worshipping unit with joy, and revived its enthusiasm for the service of Jahweh. Such a manifestation of Jahweh is commemorated in the Song of Deborah, Jg 5⁴⁻⁸, where Jahweh is pictured as coming in a thunderstorm for the deliverance of His people. In Ps 18 this theophanic manifestation of God is revived (vv. 7-16). If the 'I' of the Psalm represents the nation, the worshipping unit here is identical with that of Jg 5, and the Psalm represents a sort of national communion with God arising out of deliverance in the hard experiences of life. Again, in Hab 3¹⁴ this form of theophany is poetically reproduced. Probably the experience of deliverance here commemorated is national also, since the poem once stood in a psalter, but the chapter is open also to a personal interpretation, and it may be that, when it was written, the older view that God thus revealed Himself to the nation in time of stress was passing over to the conception of an individual revelation and an individual deliverance. At all events, in the book of Ezekiel the theophany by means of the lightning playing in a cloud has become a means of individual revelation (cf. Ezk 1^{13, 14, 27b}).

2. Through dreams.—When we pass from the J to the E document, i.e. from the 9th cent. to about 750 B.C., we come to a more exalted conception of communion. God no longer appears in human form, freely to converse with men; it is in dreams and visions of the night that He appears to impart His will and to give inspiration. Thus in Gn 20^{3ff} God appeared to Abimelech in a dream. In Gn 28^{12ff} Jacob in a dream had a sacramental vision which moved him to make a new covenant with God. The dreams of Joseph in Gn 37, of the chief butler and chief baker in ch. 40, and of Pharaoh in ch. 41, though at first sight they appear to belong to a different class, because God does not directly appear in them, are in reality instances of the same thing, for by means of the dream God is represented as imparting knowledge concerning His will for the future. The same may be said of Jg 7^{13ff}, where we are told that one of the Midianite invaders of Palestine dreamed a dream. In 1 S 28^{6, 15} it appears that dreams were recognized as one of the channels through which God gave His answers. In 1 K 3^{4, 15} the Lord appeared to Solomon in a dream and made a sacramental revelation, which, according to the narrative, influenced all the king's future. Dt 13¹⁻⁵ classifies the dreamer of dreams with the prophet, and Jer 23^{25ff} recognizes the dream as one of the ways in which the prophet ascertains the Divine will. That this means of communion long survived among the Hebrews, is shown by the fact that Eliphaz is represented in Job 4^{12ff} as telling impressively of a Divine confirmation of his theology which came to him in a vision of the night; and in Dn 2^{1ff} revelations are made to Nebuchadnezzar in dreams.

3. In ecstasy and visions.—Another way in which God was thought to come especially near to men was in ecstatic frenzy. In such frenzy the nervous or emotional excitement inhibits the ordinary control of the brain, and the actions of the subject are controlled by the reflex working of lower nervous centres. In all parts of the world

people have been thought, when in such paroxysms, to be under the control of a supernatural being.¹ The subject speaks incoherently, laughs, rolls on the ground, exhibits various bodily contortions, and often in the end becomes unconscious. Among the Phœnicians at Gebal there was, about 1100 B.C., as an Egyptian record shows,² such a prophet who exerted great influence. That the earliest form of prophecy in Israel was of this character is clear from a number of passages. For example, in 1 S 19^{23, 24} one of the signs of the coming of the Spirit of God upon Saul for the prophetic anointing was that 'he also stripped off his clothes, and he also prophesied before Samuel, and lay down naked all that day and all that night.' That this kind of frenzy was regarded as of Divine origin is further shown by the fact that the word *nābhî* means in Hebrew both 'prophet' and 'lunatic.' A trace of this ecstatic conception of communion with God is found in the history of the prophet Elisha. We are told in 2 K 3¹⁵ that, when on a certain occasion an oracle was requested of him, he caused a minstrel to play to him till the necessary prophetic ecstasy was excited. Such frenzy was accordingly for a long period of Israel's history regarded as an extraordinarily good means of communing with God.

Midway between the dreams and visions of the earlier time and the more spiritual insight of the prophets to be treated below, stand the inaugural visions of such prophets as Isaiah and Ezekiel. The vision of Isaiah described in Is 6 was apparently not a dream (at least he does not speak of it as such), and yet in the vividness of its details it recalls the dream. This vision had also the strongest kind of sacramental significance for the prophet. He felt that in it his lips were cleansed, his grasp of the work God would do for His people was enlarged, God's need of him as a helper was brought home to his conscience, his will was moved so that self-consecration to the Divinely appointed task followed, and he was convinced that God had communicated to him what His future message was to be. The vision of Ezekiel (Ezk 1-3¹⁵) is narrated with less literary simplicity, and exhibits fewer elements of the full sacramental value of it to the prophet; but it is clear that by it he received his commission and his message. The more personal elements may be lacking only because the book of Ezekiel is throughout written in a less personal way than the book of Isaiah.

4. Spiritual insight of prophets.—The word *hāzōn* (חֲזוֹן) survived from the early and crude conceptions of the means of discerning the Divine will which have been described above, and was applied in later times to the utterances of all the literary prophets. Jastrow³ has made it probable that it may have originated in an inspection of the entrails of animals. However that may be, it lost that significance in later times, and stood for all prophetic visions. Some of these were undoubtedly visions of the night, akin to the dreams of an earlier time, such as the visions attributed to Daniel (Dn 8^{1ff}); but the term, when it stands in the title of a prophetic book, is, at least by implication, made to cover the results of the enlightened thinking of the prophet, which were commended by his judgment and conscience. Jeremiah, for example, tells us of no inaugural vision similar to those experienced by Isaiah and Ezekiel. He simply tells how the word of Jahweh came to him, how he naturally shrank, on account of his youth, from public service, and how he was assured that Jahweh's power would sustain him and carry him through. No mention is made of external access-

³ *JBL* xxviii. [1909] 60 ff.

sories to the vision. The impression is left that the Divine Spirit was working directly upon the mind and heart of the man, quickening his intelligence and his conscience. That the prophet who could conceive the covenant of Jahweh with His people as a matter of the inner spirit, the laws of which were inscribed on the heart, should be able to lift prophetic vision, and with it the conception of communion with God, out of all the objective accessories which cling to it with greater or less persistence from the cruder conceptions of earlier days, need not surprise us.

Having discerned this view of communion with God thus set forth in Jeremiah, we find, in turning back to the literary prophets who preceded him, that it was not new. Amos gives us no hint that his philippics against the sins of the nations had their birth in anything less spiritual than his intellectual and spiritual insight quickened by the Spirit of God. Hosea makes it clear that he was made a prophet by a flash of Divine illumination which enabled him to see the yearning love and sorrow of God for Israel, as well as his Divine patience and redemptive nature, all reflected, as in a mirror, in the tragic experiences which had darkened the prophet's home and broken his heart. His messages to Israel are not paraded as the thoughts of an unsubstantial dream, but are given forth as the ripe utterances of an illumined mind, a loving heart, a tender conscience, a chastened spirit. The great messages, too, of Isaiah, such as the beautiful Song of the Vineyard in ch. 5, are clearly the vigorous expressions of a new conception of duty and religion, born of a newly awakened ethical and spiritual insight.

In the great prophets, then, from the beginning of the prophetic writing, we have a spiritual conception of communion with God taken for granted. Visions and dreams are still at times spoken of, as in Is 29⁷ and Jer 14¹⁴ 23¹⁶. The prophet's career sometimes began with a vision akin in its form to the dreams of an earlier time, as we have seen to be the case with Isaiah and Ezekiel; but in reality each of these prophets was a spiritual leader in his time, and remains to our day an inspiring guide because he recognized in fact, if he did not clearly express, the truth that those great moments when the mind grasps new and larger truth, and the depths of being throb in consequence with new emotions, so that the will is moved to make the endeavour to realize in one's self or in one's nation a higher ideal of life, are moments of the highest sacramental significance, moments of most real communion, moments when God's thought is communicated to His servant, and God's purposes and life are shared by him.

With Jeremiah and Ezekiel the conceptions of communion with God entered upon a new stage. This resulted from the doctrine of the individual nature of religion taught by these prophets (see Jer 31²⁹, 30 and Ezk 18). Down to this time the prevailing notions of religion had been national. Religion was a relation between Jahweh and His people, the Israelitish nation, rather than a relation between Jahweh and individuals; and this had profoundly affected the conceptions of communion. Of course, a nation is made up of individuals, and the personal element in religion had never been wholly lacking. Even when the earliest and crassest conceptions prevailed, there must have been many examples of individual piety, of individual prayer which received an individual answer, of which the case of Hannah (1 S I. 2) is but one instance. Nevertheless, when it was thought that Jahweh looked upon the nation as a nation, that He visited the sins of the fathers upon the children even to the third and fourth generation, this fact must have tended to obliterate moral distinctions

in the individual, and to cast a blight over the highest type of personal communion and piety. It is not an accident, therefore, that in the poetry of the time after the Babylonian exile we find many expressions of personal communion of a spiritual character.

5. Expressions of personal communion.—One of the earliest of these is in the book of Job. This poem depicts the inward struggles of one who, overtaken by misfortunes, found the traditional theology in which he was reared out of accord with the facts of experience, and in his despair nearly made shipwreck of faith. With the energy of a hunted animal he demands a solution for a hundred puzzling problems. At last God answers him out of the whirlwind. In this answer no solution to one of Job's problems is offered. On the contrary, he is made to feel his littleness in contrast with God. And yet the Divine vision is portrayed by the poet as sacramental. Job declares (42⁴⁻⁶):

'I had heard of thee by the hearing of the ear;
But now mine eye seeth thee,
Wherefore I abhor myself,
And repent in dust and ashes.'

The problems are not solved, but in the sacrament of the Divine vision the heart has learned to trust One who knows the solution.¹ Modern exegetes agree that Job does not represent the nation; he is thoroughly individual. His sufferings, agony, doubts, and vision are epochs in the growth of an individual soul. That the poet should find his solution in a sacramental vision in which, in self-aborrence, the soul enters into communion with God, is a striking testimony to the place that real spiritual communion with God had come to hold in the minds of Israel's greatest thinkers.

This conception of the spiritual nature of communion finds frequent expression in the Psalter, which was the hymn-book of post-exilic times. In their original form some of the Psalms may be of pre-exilic origin, but hymn-books are from time to time re-edited; sentiments which are no longer congruous with the religious feeling of the age, though owing to religious conservatism they may for a while be sung, are at last dropped, and language capable of expressing adequately the devotional life of the time is substituted for them. The Psalter no doubt underwent such revision, so that, even if the torso of a few psalms be pre-exilic, in the main it reflects the sentiments of the post-exilic time. In many passages in the Psalter the older forms of expression with reference to religion are maintained, and it is difficult to tell to what extent the psalmist had made his religion a matter of the spirit, but in others this difficulty vanishes. For example, Ps 63⁸,² was written by a man whose religion was inward, and whose life drew its strength from spiritual communion with God. Briggs translates these verses as follows:³

'When on my couch I remembered thee,
In the night watches was musing on thee,
My soul did cleave after thee;
On me did take hold thy right hand.'

These words depict an experience of the sacramental consciousness of God's presence as the author had known it in his night-meditations. Religion was to him no longer conformity to a set of rules, or mere participation in a gorgeous ritual; it was to have his spirit re-vivified and invigorated by real communion with the living God. The author of Ps 61 held similar views and knew of similar experiences. He says⁴ (vv. 10-11):

'In me, O God, create a clean heart,
And a spirit that is steadfast renew in my breast.'

¹ See Peake, 'Job,' in the *Century Bible*, p. 19, *Problem of Suffering in the OT*, p. 100 ff.

² 'The Psalms,' in *ICC* ii. (1906-1907) 72.

³ So rendered by Wellhausen-Furness in *Hantz's PB* (1906).

Cast me not off from thy presence,
And thy holy spirit, do not take from me.
Give me once more the glad sense of thy help,
And strengthen thou me with a spirit that is joyous.'

The man who could write thus knew of Divine disclosures such as come in real communion with God, not simply in an initial experience which should change the whole life, like that described in Job 42^{5, 6}, but, like the author of Ps 63, he had known it as the sustaining bread of each prosaic day—the vitalizing experience which gave him strength to live.

The Psalms, however, reflect a great variety of points of view. Ps 42, 43, and 84 move, so far as outward expression goes, in the realm of ceremonial religion; but, in the intensity of the feeling expressed and as regards the quality of that feeling, their authors are in accord with the writers of Ps 51 and 63. The writer of Ps 42, 43 was a Levite who had been torn from the temple and its service, and who accordingly felt that he had been torn from God. Nevertheless, as he sings (Ps 42^{1, 5}):

'As the hart pants for the water brooks,
So pants my soul for thee, O God.

Why art thou cast down, O my soul . . . ?
Wait thou on God, for even yet shall I praise him.'

he convinces us that under the outward form of temple festivities, processions, and ceremonial his soul had known the mystic touch of the Divine Spirit, and that it was longing for the renewal of that mystic touch to which he was giving expression. So the writer of Ps 84 speaks of the outward temple, when he says (v. 10):

'I choose to stand at the threshold of the house of my God,
Rather than dwell in tents of wickedness.'

Yet no one can doubt that v. 4, 'My heart and my flesh cry out for the living God,' is the cry of his personality, not for a sacred building, but for God Himself.

In this post-exilic period there was great variety. To some, like the author of Ps 50, ritual was foolishness, and religion consisted not in offering bullocks, but in righteousness and thanksgiving. To others, as the prophet Malachi, those who did not offer the bullocks were robbers of God (Mal 3⁹). The author of Ps 119 exhausts language in his effort to praise the Law. He loves the Law because it guides him into a pure life and directs his way to God. Of inward communion he clearly was not ignorant, but his communion is cold and formal in comparison with that of the authors of Ps 42, 51, 63, and 84. The author of Ps 73, like the author of the book of Job, had wrestled with doubts which threatened his sanity. He had found peace, as Job did, in a moment of sacramental illumination.

The second Isaiah and a number of psalmists regarded the contemplation of Nature as a means of communion with God. In Is 40^{12a} the prophet calls to mind the work of God in creation, and takes his hearers out into a Babylonian night to behold the marvels of God in the starry heavens, in order to beget in them the sacramental mood. Similarly in 41²⁶ 43^{14a} 44²⁶ 45^{12a} he points to the unusual events of current history for the same purpose. Psalmists also tell us that the contemplation of Nature is a means of communion with God. Thus in Ps 8^{3a} we read:

'When I consider thy heavens, the work of thy fingers,
The moon and the stars, which thou hast ordained;
What is man, that thou art mindful of him?
And the son of man, that thou visitest him?
For thou hast made him but little lower than God,
And crownest him with glory and honour.'

The contemplation of Nature made the Psalmist conscious of his exalted religious privileges. Similarly the author of Ps 19¹⁻³ found the heavens a means of creating the sacramental temper:

The heavens declare the glory of God;
And the firmament sheweth his handywork.

The author of Ps 107, after passing in review the wonders of Nature, declares:

'Whoso is wise and will understand these things,
Even they shall understand the loving-kindness of Jahweh.'

Upon the same theme the writers of Ps 146, 147, and 148 speak with persuasive beauty. One theme runs through all. The stars, the growing grass, the care bestowed on dumb animals by God, the creation of the marvellous snow, the hoar frost, ice crystals, and the silent destruction of these, sea-monsters, fire, hail, stormy wind, and many other wonders—all are grounds for praise, and helps in apprehending God.

Side by side with this variety of personal experience, the Levitical ceremonial continued. The loaves of shewbread continued to be piled on the table in the sanctuary; they were a symbol of that old physical communion with God in which the primitive Israelite had believed. Perhaps the more superstitious still thought that God ate of this bread, and that thus in a sense the priests sat at God's table. Year by year the high priest entered the Holy of Holies with the sacrificial blood—a symbol of the way in which it had been in the olden time supposed that communion with God was restored. It may well have been that, as some witnessed this ceremonial, their hearts were stirred to realize more clearly their own union with God. Other ceremonies, such as the morning and evening sacrifice, probably acted on many in a similar way. Many there must have been who gave little attention to personal religion, but rested content in the performance of the ceremonies. And so it came about that in the last pre-Christian centuries Judaism presented as great a variety of types as does modern Christendom. There were the careless, there were the formalists, there were those who combined with formalism a mild type of spiritual religion, but there were also the passionate mystics, who rested not till their hearts were made alive by sacramental union with God, and their daily bread supplied through communion continually renewed.

GEORGE A. BARTON.

COMMUNION WITH DEITY (Japanese).—

Like all other races, the Japanese have naturally experienced the desire to bring themselves into communication with their gods in order to obtain from them solutions of the various questions which perplex them. For this purpose, in the first place they had recourse to divination (*ouranahi*), either to the official 'greater divination,' by omoplatoscopy, or to other secondary processes. This important part of Shintoism will be treated in art. DIVINATION (Japanese). Secondly, and subsidiarily to those fixed consultations, we find the Japanese entering into contact with the Deity by means of inspiration (*kanyakari*), a kind of possession, in which hypnotism seems to play the chief part, and which will be discussed in art. INSPIRATION (Japanese). In the present article we shall content ourselves with the inquiry whether, in Japan, these relations with the Deity took the special form of a communion properly so called, in the sense in which the theologians understand it.

In this connexion we find the custom of 'eating the god' on Japanese soil among the Ainu (*q. v.*), who ceremonially consume the bear brought up by them as a deity, and who also, when eating their rice, address a prayer to it as if to a god. But, it

may be asked, did such a belief exist among their conquerors, i.e. among the Japanese themselves? A curious text in the *Nihongi* reads as follows:

'The Emperor (Jimmu) commanded Michi no Omi no-Mikoto [a 'minister of the way'], saying: "We are now in person about to celebrate a festival to Taka-mi-musubi-no-Mikoto ('High-august-Producer,' one of the foremost primitive gods; see COSMOGONY AND COSMOLOGY (Japanese)); I appoint thee Ruler of the festival, and grant thee the title of Idzu-hime ['Sacred princess,' this office, in ordinary circumstances, being held by women]. The earthen jars which are set up shall be called the Idzube, or sacred jars; the fire shall be called Idzu no Kagu-tsuchi, or sacred-fire-father; the water shall be called Idzu no Midzu-ha no me, or sacred-water-female; the food shall be called Idzu-uka no me, or sacred-food-female; the firewood shall be called Idzu no Yama-tsuchi, or sacred-mountain-father; and the grass shall be called Idzu no No-tsuchi, or sacred-moor-father." Winter, 10th month, 1st day: The Emperor tasted the food of the Idzube, etc. (*Nihongi*, III. 191, tr. Aston, London, 1896, I. 122).

What are we to conclude from this document? Must we see in it an act by which the first legendary Emperor desired to assimilate the body of a deity, who, in this case, would be the famous 'goddess of Food' (Uke-mochi, for whom Idzu-uka no me is simply another name)? By no means. True, the food-offering is divinized, but the fact of participating in it does not imply any mystic idea. At the festival of first-fruits (*Nihiname*), which took place exactly at the time of year mentioned in this text, the Emperors are always seen to taste the food offered to the gods, but simply as a guest takes part in a banquet, and not as a worshipper communicating. Besides, it was quite natural that the Mikado, who himself was regarded as a living god (*iki-gami*), should thus associate himself with the feast of the celestial gods. But, after having offered the sacrifice of food to the gods, the worshippers also, in their turn, might eat of it. This is done even at the present day by the pilgrims to the temples of the goddess of the Sun and the goddess of Food at Ise. Further, even a stranger may be admitted to this rite; e.g., about a dozen years ago, the writer was present at a sacred dance of priestesses in an old temple in Nara, and was politely invited to eat a cake of sacred rice; and one morning, at a service held in the great temple of Nikkō to celebrate the peace after the Chino-Japanese war, the priests offered him the divine *sake* in a red earthenware cup of antique form.

Hence our conclusion is that, among this simple and matter-of-fact race, communion with the Deity has never been imagined in the highly mystical form which it has assumed among other races. In the sphere of religion proper, it does not exist at all, and in fact it appears only in the form of divination and inspiration, i.e. in processes which, especially in Japan, belong peculiarly to the sphere of magic.

M. REYON.

COMMUNION WITH DEITY (Muslim).—

In many passages of the Qur'ān, Allāh is represented as an absolute sovereign, working His arbitrary will in solitary grandeur as though there were no possible relation between Him and His creatures except that of master and slave. This aspect of the Supreme Being was perhaps the dominant one in Muhammad's mind, but, inasmuch as he was guided by feeling rather than logic, it did not exclude the very different notion of a God near to men's hearts, who is the light of the heavens and the earth, and whose face is visible everywhere. Thus direct access to the Unseen is open not only to prophets and saints, but to all Muslims; inspiration, ecstasy, and dreams are phenomena of the same kind, however unlike in degree; hence it is said in a well-known tradition: 'Vision is a forty-sixth part of prophecy'; and dreams in which God Himself is seen are often recorded as matters of ordinary experience. As regards the prophets, Ibn Khaldūn (*Muqaddima*, Beyroun, 1900, p. 98)

says that they 'are created with the power of passing over from humanity, its flesh and its spirit, to the angels of the upper region, so that for a moment they become angels actually, and behold the heavenly host, and hear spiritual speech and the Divine allocation.' This is the state of prophetic inspiration (*wahy*).

But among Muslims the idea of communion is best exemplified, as it was most fruitfully developed, by those who lived the mystical life (see SŪFISM). The aim of the Sūfis is the attainment of union with God. Such union is a Divine gift, and cannot be acquired by study or effort; it is bestowed only on those who purify their hearts, banish all worldly thoughts and ambitions, and devote themselves entirely to God. Although the Sūfis have no term precisely corresponding to *κοινωνία*,¹ their technical vocabulary comprises a large number of words which express the notion of more or less complete communion with the Deity: e.g. *qurb* ('nearness'), *uns* ('intimacy'), *mushāhadat* ('contemplation'), *muhādathat*, *musāmarat*, *munājāt* ('spiritual conversation'), *hudūr* and *muhādarat* ('presence'), *sukr* ('intoxication'), *waṣūl* and *jam* ('union'), *fanā* ('annihilation'), and *baqā* ('subsistence'). A few extracts from Sūfi writers will show, as clearly as is possible, what meaning these terms are intended to convey. Abū Naṣr al-Sarrāj († A.D. 987) says in his *Kitāb al-Luma'* (MS, private collection):

'The state of nearness (*qurb*) belongs to one who beholds with his heart the nearness of God to him, and seeks to draw nigh unto Him by his piety, and concentrates his mind on God's presence by thinking of Him continually. There are three classes of them: (1) those who seek to draw nigh by divers acts of devotion, because they know that God hath knowledge of them and that He is near to them and hath power over them; (2) those who realize this profoundly, like 'Amir Ibn 'Abd al-Qais, who said, "I never looked at anything without regarding God as nearer to it than I was." And the poet says: "I realized Thee in my heart, and my tongue conversed with Thee secretly, and we were united in some ways but separated in others. If awe has hidden Thee from the sight of mine eyes, yet ecstasy has made Thee near to mine inmost parts"; (3) the spiritual adepts who lose consciousness of their nearness, and in this state God draws near to them.'

Hārith al-Muḥāsibī († A.D. 857) was asked, 'What is the sign of true intimacy (*uns*) with God?' He replied:

'To be grieved by associating with His creatures, and to be distressed by them, and to choose with the heart the sweetness of remembering Him.' He was asked, 'And what are the outward signs of one who is intimate with God?' He answered: 'He is isolated in company, but concentrated in solitude; a stranger at home, at home when he is abroad; present in absence, and absent in presence.' On being requested to explain the meaning of 'isolated in company, but concentrated in solitude,' he said: 'He is isolated in remembrance of God, engrossed in reflecting upon that which has taken possession of his heart, pleased with the sweetness of remembrance; and he is isolated from others by his own state, although he is present with them in body.' He then said, in answer to a further question: 'He who is concentrated in solitude is one who is concentrated by his thoughts and has made them all into a single thought in his heart, since all that he knows is concentrated in heedful contemplation and seemly reflexion upon the Divine omnipotence, so that he belongs entirely to God in his understanding and heart and thought and imagination' (*Ḥilyat al-Auliya'*, Leyden MS, II. 241).

Contemplation (*mushāhadat*) is defined as spiritual vision of God, which is produced either by soundness of intuition or by the power of love, according to the tradition that God said: 'My servant seeks to draw nigh unto Me by pious works until I love him, and when I love him I am his ear and his eye.' It is a state that cannot be described in words. The earliest definition of *fanā* ('annihilation') seems to be due to Abū Sa'īd al-Kharraz, who died towards the end of the 9th cent. A.D. He defined it as 'dying to the sight of human abasement (*ubūdiyyat*), and living in the contemplation of Divine omnipotence (*rubūdiyyat*); i.e. the true servant of God is so lost in contemplation that he

¹ The Arab. root meaning 'to participate' (*sharaka*) could not be used in this sense, as it had already been appropriated by Muhammad to signify the attribution of partners to God, i.e. polytheism.

no longer attributes his actions to himself, but refers them all to God.

Some account of the theories concerning union with the Deity which are held by Šūfis of the pantheistic school will be given in art. ŠŪFISM. Without entering into psychological or metaphysical subtleties, we may quote the following passage from the *Ḥilyat al-Awliyā*, ii. 194, as a characteristic illustration of Muslim views on the nature of the mystical life:

'Some one said to Dhu 'l-Nūn of Egypt († A.D. 859): "The Šūfis know that God sees them in every circumstance, and they guard themselves by Him against every one besides." Another companion of Dhu 'l-Nūn, an ascetic, Ṭāhir by name, who was present among the audience, cried: "Nay, Abu 'l-Faiḍ,¹ they behold the Beloved of their hearts with the eyes of certainty, and see that He is existent in every case and near at every moment, and that He knows all that is wet and dry and foul and fair. . . . And through His government and providence and strengthening they become independent of their own providence, and plunge into seas and cross mountains through the joy of beholding His regard for them, and cleave the darkness asunder by the light of His contemplation. They are inspired by the sweetness of His being to drink deep of bitterness; and through His nearness and His standing over them they support adversities and endure afflictions; their confidence in His choice causes them to hazard their lives in what they do and suffer; their love of His will and their obedience to His pleasure make them well-pleased with the states in which He places them; and they are angry with themselves because they know what is due to Him, and because, on account of His justice towards them, they are ready to undergo punishment. This leads them to be filled with Him, so that in their veins and joints there is no room for love of aught except Him, and not even the weight of a mustard-seed in them remains empty of Him, and nothing is left in them save Him. They are His entirely, and He is their portion in this world and in the next. They are content with Him and He with them; He loves them and they love Him; they are His and He is theirs; He prefers them and they prefer Him; they remember Him and He remembers them. Those are the party of God (Qur. viii. 22), and the party of God are the prosperous."'

Other matters bearing on this subject, such as the methods by which the state of 'union' may be induced, and the miraculous powers vouchsafed to those who have attained or are capable of attaining it, will be discussed under ŠŪFISM.

LITERATURE.—Most works on Šūfism contain relevant matter. See D. B. Macdonald, *The Religious Attitude and Life in Islam* (Chicago, 1909); and R. A. Nicholson, Translation of the *Kashf al-mahjūb* (London, 1910).

REYNOLD A. NICHOLSON.

COMMUNION WITH DEITY (Parsi).—

1. The Avestan religion contains only one instance of a real, well-defined mysticism, viz. the glimpses from the Prophet's inner life, still extant in the Gathic literature. The most important indications of Zarathushtra's mystical vision of Ahura Mazda and of his intimate intercourse with the Heavenly Powers are to be found in *Yasna* xliii. 5-13 (see Jackson, *Zoroaster*, 1899, pp. 40, 46). The obscurity of *Yas.* xxx. 3 makes it uncertain whether we have to do with a revelation of the two spiritual antagonists to the Prophet in a dream or not. In an inferior order of civilization, Zarathushtra is one of the classical instances of a mysticism applied to the will rather than to the feelings.

2. Zarathushtrianism having produced no second prophetic mind of original power, communion with God has found scope—without such personal mysticism—chiefly in the religious and moral practice, i.e. in the life-programme devised (at least partly) by Zarathushtra, and in rites, originating in the ethnic and naturalistic religion before him or outside his influence. Communion with God and the Heavenly Beings is sought for and exercised through strenuous obedience to religious and moral duties (consisting in the struggle against the demons), through attention to the fields and the cattle, and through strict observation of the rules of worship and of purity. The characteristics of this godly life are the absence of any ascetic means of bringing the soul into mystical communion with God (see ASCETICISM [Persian]), and the legalistic spirit that pervades it.

¹ Abu 'l-Faiḍ is the name of honour (*kunya*) of Dhu 'l-Nūn.

3. A survival of (or a borrowing from) a lower, naturalistic kind of communion with Deity is preserved in the Avestan worship—the holy intoxicating drink, the *haoma*. But its effect of bringing the priest into immediate communion with God, so strongly expressed in the Vedic hymns about *soma*, is obsolete in the Avesta. The intoxication by *haoma* is alluded to in *Yasna* x. 13 ff., but already in the Avesta its use has become a mere rule of the ritual, without any effect on body or mind. Later, and especially modern, Parsism has developed the moral side of that behaviour which constitutes communion with God. NATHAN SÖDERBLOM.

COMMUNISM.—

'The most useful way in which we can employ the terms Communism and Communistic . . . is to restrict them to those schemes or measures of governmental interference for equalizing distribution which discard or override the principle that a labourer's remuneration should be proportioned to the value of his labour.'

This statement of Sidgwick (*Principles of Pol. Econ.* bk. iii. ch. vii. § 3) brings to the front the difference between Collectivism or Socialism (*q.v.*) and Communism. Socialism aims at putting the instruments of production into the hands of the State, so that all the product may be available for division among the various factors of production. At present, Socialism alleges that an altogether undue proportion of the product is captured by the capitalist, the employer, and the middleman. But Socialism does not, except in the views of some unrepresentative extremists, intend to divide this product without regard to the efficiency and the productive capacity of the worker. Communism, on the other hand, thinks rather of distribution than of production. It would be tolerant as to the methods of production if only the product were divided, not on the basis of absolute merit, but on that of the need of the consumer. A man should receive his share, not on the ground that he is a competent producer, but simply on the ground that he exists. Thus Socialism and Communism both start from the brotherhood of man. But Socialism deals with production, Communism with consumption; Socialism claims to be economic, Communism rests itself upon sentiment; Socialism would try to make work efficient by letting each man feel that the results of his labour were to accrue to him and to his fellow-workmen instead of becoming the perquisite of the capitalist employer; Communism would consider that the claim came not so much from the fact that the man had created something, as from the stern necessity of his having to subsist.

These differences are represented in two broad ways—intellectual and historical. The feature of Socialism, since the days of Karl Marx, has been its desire to establish itself on some unassailable economic position, on some labour theory of value, or some testimony of the wastefulness of competition. It quite realizes that if it is ever to command assent it must create intellectual conviction, not only among the masses, whose thinking is biased by their hard conditions of life, but also among the thinking classes, whose mental processes are carried on under a white light. But Communism has no economic literature. It has appealed to religion—most communistic attempts have been religious in their initiation; it has appealed to the brotherhood of man; it has adduced the undoubted anomalies of the present condition of things. But it has produced nothing in its justification that has had the same economic grip as Marx's *Capitalism*. Communistic literature has been the product of the dreamers. That is not to say that it has been without its far-reaching influence. The dreamers, after all, have been behind most of the great events of human history. But it is proof

that Communism as a theory is not to be criticized only from the economic standpoint. It has made its appeal to that in human life which goes deeper than even the postulates of economics. If, intellectually, Socialism and Communism have thus been severed, a historical difference is also apparent. That Socialism is spreading rapidly is not a matter requiring proof. Communism, however, is distinctly losing ground. It held a more prominent place in men's thoughts half a century ago than it does to-day. It is impossible to imagine a group of thinkers now being captured by a system of Communism as the intellectuals of Paris were held by the views of Saint-Simon. The conception of the possible in human society has dwindled with the extension of the possible in physical science. We are more certain of progress in the mastery of Nature than we are of progress in the mastery of human conditions. The history of the various communistic efforts, even carried out as they have been upon a scale small enough to allow of adequate superintendence, has been lamentable. The conviction has grown that the solution of the social problem is not to be found in those large schemes of human amelioration in which a man's need constitutes his primary claim for assistance. Optimism has waned as humanity has grown older.

Of all the attempts that have been made to constitute on paper an ideal Commonwealth, Plato's *Republic* remains the most noteworthy, because in it the problems that have manifested themselves in the practical effort to realize a communistic society have been clearly foreshadowed. Economics, as we understand the term, scarcely presented itself to the Greek thinkers; but it is just because Plato was concerned with the whole of human life, rather than with any particular theory of value, that his picture of a communistic society possesses such value. He is, of course, limited by the conditions of his time: he cannot think of a society that does not have the assistance of slave labour. But he sees that in a communism the position of women and the regulation of the family are all-important. If all things are to be held in common, is this principle to extend to the position of women? Are they individuals, regulative parts of the society, and capable of making a contract? Or are they things, part of the common stock of property? His view is that there must be a community of wives. To leave untouched the institution of the family is to perpetuate individualism. But then there will arise the danger that in a society where all the obligations are shared the sense of responsibility will suffer, and children will be brought into the world so recklessly that the permanence of the new society will be endangered. Hence arises the second change in the family condition. Children are to be begotten only under the control of the State, which is to regulate not merely their number, but also their parentage, and the age at which marriage may be entered on. The children are to be brought up together, ignorant of their parentage, in institutions where privilege will have no place, inheritance no influence. The preparation of the child for the purposes of the State will be all-important. The surplus population, which is anticipated, will be dealt with by migration, emigration, and colonization.

In Sir Thomas More's *Utopia* (1516), on the other hand, there is no attempt made to alter the institution of the family; but, just because of this, the *Utopia* fails to grapple with the special problem that all communistic efforts have had to face. Sir Thomas More thinks of a community of about four million souls living without private property, and having their labour superintended

by elected officers. People are not always to be kept at one task; they are to be moved about from one labour to another; and, as agricultural labour is the hardest of all, every one has to take his turn at it. The population question is dealt with by a levelling process. The surplus children of large families are to be adopted by those who have few or no children; and, if this will not meet the need, the excess of population is to emigrate. The native greed of mankind will disappear before the fact that, as all are delivered from the fear of want, no one will wish to take more than his share, while, as each man works in full view of the community, there will be no sluggards; the popular judgment will be a sufficient stimulus to industry.

Before we come to consider the conceptions of Communism, and the attempts at their realization which may have been supposed to spring from the views of the perfectibility of man current from the middle of the 18th cent. onwards, it would be well to go back and consider what was the relation of primitive Christianity to Communism. One great argument adduced in favour of Communism is that it is the system which has Biblical and Christian sanction. The assumption is that the Jerusalem Church was communistic. Of this there is no proof. We are told that 'as many as were possessors of lands or houses sold them, and brought the prices of the things that were sold . . . and distribution was made unto every man according as he had need' (Ac 4³⁴). But this communism was no essential part of the polity of the primitive Church. If a man cared thus to give his wealth, it was counted as a good deed; but the special mention of 'Joseph surnamed Barnabas' (v.³⁶) in this connexion shows that the practice was by no means universal. The sin of Ananias and Sapphira was not that, having sold their land, they gave only a part of the price, but that they represented that part of the price to be the whole. Their sin was not refusal to surrender property, but lying. There was no obligation on them to give anything. As St. Peter said, 'Whiles it remained, did it not remain thine own? And after it was sold was it not in thy power?' (Ac 5⁴). At the same time, it is probable that the Jerusalem Church was largely communistic, and its subsequent history affords but a sorry argument in favour of Communism. That Church existed in a state of chronic poverty, and had to be supported by those young Churches that the Apostle Paul founded in Asia Minor and elsewhere. But here, again, it would be rash to attribute the poverty solely to the communistic ideas. It is clear from St. Paul's letters that the conception of the imminence of the Second Advent of the Lord resulted in the abandonment by many of their labour, and in their throwing of themselves upon the charity of the Church for their sustenance in the days that were to elapse before the elements were melted with fervent heat.

But it is quite possible that the primitive Church, in any approach it made towards Communism, had before it the remarkable example of the Essenes (q.v.). Every one in Palestine must have been familiar with the practice of these enthusiasts, who lived mainly in the Wilderness of Judæa, although scattered colonies existed throughout the land. They probably derived their name from Syr. ܥܨܝܐ (pl. ܥܨܝܐ, emph. ܥܨܝܐ), 'pious' (see Schürer, *GGV* ii. 560), and numbered altogether about 5000 souls. The account of them written (c. A.D. 20) by Philo of Alexandria (*Quod om. prob. lib.* 12-13) shows that at the very time of our Lord's human life they were a subject of public interest:

'No one had his private house, but shared his dwelling with all; and, living as they did in colonies, they threw open their

doors to any of their sect who came their way. They had a storehouse, common expenditure, common garments, common food eaten in *syssitia* (or common meals). This was made possible by their practice of putting whatever they each earned day by day into a common fund, out of which also the sick were supported when they could not work. The aged among them were objects of reverence and honour, and treated by the rest as parents by real children.'

Eusebius, in the *Præp. Evang.* (viii. 11), preserves a fragment of Philo's *Apology for the Jews*, which repeats, but also supplements, the information already given:

'There are no children or youths among them, but only full-grown men, or men already in the decline of life. . . . They are very industrious, and work hard from early sunrise to sunset as tillers of the soil, or herdsmen, or bee-farmers, or as craftsmen. Whatever they earn they hand over to the elected steward, who at once buys victuals for the common repast.' No Essene, adds Philo, on this account, marries, but all practise continence. 'For women are selfish and jealous, and apt to pervert men's characters by ceaseless chicanery and wiles; while, if they have children, they are puffed up and bold in speech, driving their husbands to actions which are a bar to any real fellowship with other men.'

The sect, says Pliny († A.D. 79), was kept up by recruits who were filled with the sorrow of this world.

'The number of their fellows is kept up and day by day renewed: for there flock to them from afar many who, wearied of battling with the rough sea of life, drift into their system. Thus for thousands of ages, strange to tell, the race is perpetuated, and yet no one is born in it. So does the contrition felt by others for their past life enrich this sect of men' (H.N. v. 17).

This communism of the Essenes, however, differs from most of those modern communistic efforts which we are now to consider, in having as its basis a profound pessimism. It did not put itself forward as a solution of the world's problem, but only as an escape from it. It was, as Pliny says, contrition that made men Essenes, not the abounding hopefulness which characterized the dreamers of eighteen hundred years later. Over this whole gap we may now leap, and find the genesis of modern Communism in those ideas of man's natural perfectibility that were current in France before the Revolution. Rousseau, in the *Contrat Social* (1762) had given utterance to the feeling of oppressed men that the system under which they were living had nothing inevitable about it, and could be radically altered if the plain man, in whose interest any system of government should be rooted, cared to bring about an alteration. Morelly, in the *Code de la Nature* (1755), said the same thing, with a more limited application. Man's depravity, he declared, was due to bad institutions; naturally man was virtuous. Consequently, if the institutions under which he was living were improved, his natural virtue would reassert itself. As things were, no one could work well, because of the hopelessness of poverty, on the one hand, or because of the disinclination to work that riches bring, on the other. But under regenerated conditions every one, as he was able, would contribute to the upkeep of, and in return would be maintained by, the State. These views tried to express themselves in 1796 in the conspiracy of Babeuf and his associates, who called themselves the 'Secte des Égaux.' They met, to begin with, in the Pantheon as a club. When the meetings were stopped by Bonaparte, the members organized themselves into a secret society, and the extent of the appeal which their views made may be judged from the fact that they soon had 17,000 well-armed men in the membership, and had also the support of several quarters of Paris. A manifesto written by Sylvain Maréchal, one of their number, declared:

'We will have real equality, no matter what it costs. Woe to those who come between us and our wishes. . . . If it is needful, let all civilization perish provided that we obtain real equality. . . . No further private property in land; the land belongs to no private person. We claim, we require, the enjoyment of the fruits of the land for all.'

The 'Equals' had imbibed the views of the Physiocrats as to land being the real source of all wealth,

and in the pursuit of their plans were prepared to go to any lengths. But Paris was in strong hands in 1796. The conspiracy was discovered, and 'a whiff of grape shot,' or its equivalent in cold steel, put an end to Babeuf in February 1797.

The really important contribution of France to the history of Communism was that made by Saint-Simon and his followers, from 1820 to 1832. Almost every well-known thinker in the France of that time was a Saint-Simonist, and Saint-Simon stands behind Auguste Comte and Positivism. If we ask ourselves how it was that views which now seem so extreme, because so logical, ever found a footing in so learned a society as that in which Comte, Leroux, Lesseps, Hippolyte Carnot, and Augustine Thierry had their place, we have to remember the exhaustion that had followed upon the Revolution and the Napoleonic wars. The Saint-Simonists put forward their views in a time of reaction. Men were tired of the militarism and absolutism which had brought France to the dust. They were a little ashamed, too, of the brutality that had characterized the Revolution. They did not desire to go back upon what the Revolution had done, but they longed to see a government based upon the consent of the whole, in which the actual reins of power should be in the hands of the wisest. The Revolution had abolished privilege in official matters; the Saint-Simonists wished to abolish privilege altogether. But it would be impossible ever to secure equality, so long as the children of those who had wealth were to be granted special educational and social advantages. As things were, there was not only hereditary wealth, but hereditary poverty. Mental inefficiency perpetuated itself, because those who might have become efficient, had they had the opportunity, were left in the condition into which they had been born. Hence inheritance of all kinds was to be done away with. A man could have no more than a life interest in his property; and even then he was to use it to the utmost, not selfishly, but for the good of the community. Saint-Simon was himself an aristocrat, a scion of the same house as the famous Saint-Simon of the *Memoirs*, and the paradox that views such as these should have proceeded from him may have given them a wider hearing than they would otherwise have received. But he died, after a life passed mainly in great poverty, in 1825, and his views were elaborated specially by his followers Bazard and Enfantin. In a letter which they addressed to the President of the Chamber of Deputies on 1st Oct. 1830 they said:

'The followers of Saint-Simon believe in the natural inequality of men, and look on this inequality as the basis of association, as the indispensable condition of social order. All they desire is the abolition of every privilege of birth without exception, and, as a consequence, the destruction of the greatest of all these privileges, the power of bequest, the effect of which is to leave to chance the apportionment of social advantages, and to condemn the largest class in number to vice, ignorance, and poverty. They desire that all instruments of labour, land, and capital, which now form, subdivided, the inheritance of private means, should be united in one social fund, and that this fund should be operated on principles of association by a hierarchy, so that each one will have his task according to his capacity, and wealth according to his work.'

It was this 'hierarchy' that led very soon to difficulty. Saint-Simon had intended that the industrial chiefs should be men of science. On his death, Bazard and Enfantin, aided by a remarkable group, carried on the work largely through the *Globe* newspaper. But Bazard seceded, and Enfantin removed the community to Menilmontant. What happened there belongs rather to the domain of morals than of economics. The question of a Priestess emerged, and a doctrine of free-love was stated. In August 1832, Enfantin was condemned, in a none too squeamish France, for the promulgation of articles injurious to public

morality. Saint-Simonism was extinguished in a burst of popular laughter.

Charles Fourier (1772-1837) was another dreamer whose dreams had much less foundation in things as they are than had those of Saint-Simon. He had a curious apocalyptic conception of the world, and its duration in all for 80,000 years. In the State that he imagined, neither duty nor self-interest was to be the chief motive of man, but his passions. Every one was to work according as his inclinations dictated. He thought of the world as becoming gradually covered with a system of *phalanges* which were to take the place of municipalities. In the centre of each phalange there was to be a phalanstery where the members were to live a life in common. The division of the workers into various trades would be arranged by each man following his own fancy; and each group, when arranged, would go out to work as soldiers go out to drill. This working group was to be the unit. Nationality under such a system would disappear, for the phalanges were to cover the globe, and were to number 2,985,984! The ruler of the whole system was to be the *Omnarque*, who was to live at Constantinople. Each phalange was to use the product of its own work, and exchange its surplus with other phalanges; each phalange might own capital, and in the phalange capital was to receive four-twelfths of the profit, labour five-twelfths, and ability three-twelfths. The scheme, of course, was a pure phantasy, and under it the marriage relationship was to become a species of polyandry. But the interest of this scheme is that, just as Saint-Simon stood behind Comte, so Fourier stood behind Louis Blanc.

It may be worth while stating at this point that Communism has nothing to do with the Paris Commune of 1871. In France the 'commune' is the municipality or borough. The Paris communists felt that the national affairs had been so badly handled that they desired to secure the communal or corporate independence of Paris and a democratic Republic. The movement was political, not economic.

While Europe may have supplied most of the communistic theory, the actual attempts at Communism in Europe are hardly worth considering. Robert Owen's 'Queenwood Community' at Tytherley in Hampshire (1839-1844) belonged to his old age, when the intellectual balance of his early and middle years had been largely lost. The United States have supplied almost numberless object-lessons, and several of these experiments are so significant—rather for the direction they have felt compelled to take than for any real success they have achieved—that they will be dealt with in a separate article (COMMUNISTIC SOCIETIES OF AMERICA; cf. also art. AMANA SOCIETY). Those efforts have resulted in almost uniform failure. Any material success that one or two of them have achieved has been gained at the cost of almost all the variety and the gladness of life.

Some of the reasons for the failure of these communistic efforts are the following:

(1) *The question of the family* has been found to be insoluble in Communism. The danger in a society in which all are supported by all is that the individual may lose the sense of responsibility, and propagate his kind beyond the power of the community to maintain the increase of population. This difficulty has been met in various ways: by the insistence on celibacy—an unnatural and unhealthy state of things; by the attempt to regulate the sex relationship within the home—an interference that independent spirits will not tolerate; and, lastly, by a variety of experiments in free-love, in which the fact that the community carries the burden has been made the excuse for practices that would mean the death of society. The Saint-Simonists got themselves laughed out of existence, but there was something in their contention that the prime

necessity of Communism is the abolition of all inheritance; and, if inheritance is to be abolished, individual parentage must no longer be recognized. The children must belong to, and be nurtured by, the community, not by the parents.

(2) Any communistic success is conceivable only at the price of the *absolute surrender of liberty*. It is not unthinkable that a strong character might create a rich and powerful society, but he could do so only by acting as the autocrat, and by resolutely putting down all opposition. He would have to control everything absolutely—the family life, even in its most intimate aspect, as well as the commercial undertakings. But to live under such a tyranny is too great a price even for the meanest spirited to pay for an assurance of a mere subsistence. Unless some are to do more than their share of production, a watch has to be kept over the labours of all. The hours of rising are fixed for every one, the clothes they must wear, the food they must eat—all these things have to be ordered in the interests of the diligent as well as of the lazy, and the result is a perpetuation through a man's lifetime of the condition of the child at school.

(3) The various communistic attempts *have never been able to keep the best of their young people*, and so there are left only the dull and the unenterprising. The life within the commune itself is devoid of variety. The best wish to succeed, but they cannot find the conditions under which success is possible, when all their labour goes into one common stock, and where, as in almost all the communistic efforts, education is discouraged. Some of the keenest criticisms of Communism have come from members of a Society. Zoar was an attempt that died only lately. The blacksmith's comment was: 'Think how much I would have now, had I worked and saved for myself. Some in the Society have done hardly any work, but will get the same that I do. This way of doing business is not natural nor right.' See, further, p. 784^b.

(4) None of the communistic societies has been able to give any play to *man's desire for culture*. They have been founded with the highest aims, and yet have been compelled by the general inefficiency of the labour to concern themselves solely with the problem of a bare existence. Few have been able to satisfy any other wants in their members than those of food and clothing. Not one of the attempts has made any contribution to the world's art or literature, or music or learning. In these respects they have been absolutely sterile. The Shakers preferred the absence of dust to the presence of art. This negative virtue is characteristic of Communism.

(5) *On its economic side*, Communism is just as open to attack. The chronic poverty in which these attempts have mostly existed has been due to elements that are inseparable from the system:—(a) *Increased idleness*. It is not possible, human nature being what it is, to induce the ordinary man to work as hard for the community at large as for himself. He may, indeed, be roused by patriotism or by pride in his work; he is not insensible to the power of an idea. But those who are attracted by Communism are not men of this sort. Religiously they are often Quietists; in the practical affairs of life they lack energy; and the fact that they share only to an infinitesimal extent in the product of their own labour gives no spur to exertion.—(b) *Lack of thrift*. One observer after another has remarked the extravagance of communistic societies, in spite of the rigidity with which they may adhere to a simple dress and a simple life. In domestic affairs there is not likely to be the same attention to thrift in food and firing when the community is responsible for all defici-

encies, nor will the workman be so anxious to get the most out of his piece of cloth or block of stone when he feels that one of the ideas on which the communistic society rests is that the efficient should bear the burden of the inefficient.—(c) Idleness and thriftlessness imply *small capital and small efficiency of capital*. The population question would not have pressed so seriously upon communistic societies if it had not been for the fact that their capital, owing to the inefficiency of labour and the small amount of saving, remained small, and the efficiency of that capital, owing to the lack of competent direction and individual initiative, was relatively unimportant. It is this that has put an end to all dreams of the eventual adoption of Communism as a mode of life. Communism has to compete with the marvellously efficient enterprises of our modern time, with great combinations of capital in which every unit is being pushed to its utmost limit in yielding a return. One can conceive that, under a system of Socialism where the instruments of production belong to the community but where the products are divided not merely according to the need of the producer but according to the value of the product, the efficiency of capital might be maintained; but to begin with the consumption end of this problem is to ignore the facts of life.

It is small wonder, then, that with those who are utterly dissatisfied with the present individualist conditions, Communism has given place to Socialism as a possible solution. The attractiveness of the communistic idea of self-contained communities, labouring without selfishness for their own support and suffering none to lack, has been shown by the number of attempts that have been made to realize what great thinkers have dreamed of. The result has been uniform failure. The history of modern philanthropy shows that the strong are not unwilling to carry the burden of the weak. They wish, however, to carry that burden while yet having the opportunity of exercising their strength. They also wish the weak to feel that, while they will be supported, their weakness is itself no virtue, but rather a condition to be removed, if possible, by all the resources of education and the hope of individual reward.

R. BRUCE TAYLOR.

COMMUNISTIC SOCIETIES OF AMERICA.—If the theories of modern Communism have been largely European in their origin, experiments in the communistic life have mostly found their seat in the United States. This has been due, partly to the willingness of a young people to make sociological ventures, and partly to the fact that unoccupied land has been easy to acquire. The number of experiments has been almost endless. J. H. Noyes in 1870 enumerated over one hundred such, but many ventures have been tried since that date, and we shall probably not err on the side of excess if we estimate that some two hundred communistic efforts have been made, be-

tween the Jamestown Colony of 1607 and Ruskin-Tennessee of 1894. Robert Owen, after his visit to America in 1824 and the institution of New Harmony, gave a great impetus to communistic effort, while the Chartist movement in England and the enthusiasm that led men to try to realize the dreams of Fourier had a similar effect. But the communistic trend of mind has always been at work, and the broad division that can readily be drawn in such movements is between those that were religious and those that were secular. Generally speaking, the religious efforts have succeeded best; but it would not be wise to conclude from this that a Communism with religion as its motive is ever likely to succeed. Too many questions are involved that are not religious but economic and social. Goldwin Smith's criticism is completely justified by events:

'A religious dictatorship seems essential to the unity and peace of these households, but when they have prospered economically the secret of their success has been the absence of children, which limited their expenses and enabled them to save money. Growing wealthy, they have ceased to proselytise, and if celibacy was kept up, have become tontines. They afford no proof whatever of the practicability of communism as a universal system' (*Questions of the Day*², 1894, p. 9).

One of the surprising things to those who know Nordhoff's book on *The Communistic Societies of the United States* is the rapidity with which some of the colonies, which seemed at that date (1875) to be prosperous, have collapsed. The study of those efforts—made, most of them, with such devotion and self-sacrifice, with picked settlers, under carefully chosen conditions that did much to ensure success if success could be ensured—shows clearly that Communism is not a practicable form of society, and explains how the interest, in our day, has passed from Communism to Socialism. It is possible only to select some of the more outstanding of those attempts. The Amana Society has already been treated in vol. i. p. 358 ff.

1. The Harmony Society (or Rappites, or Economists) was founded by George Rapp, son of a small farmer at Iptingen in Württemberg. Rapp was born in 1757, and received the usual sound, if somewhat scanty, education of the South Germany of those days. His reading consisted mainly of the German mystics; and this, with his own personal piety, made him profoundly discontented with the Christianity presented to him by the Lutheran Church. In 1787 he began to preach in his own house, and soon he gathered round him a very considerable congregation; in six years 300 families had associated themselves with him. Generally speaking, the teaching was Quietism—he taught obedience to the law, but, in the matter of worship, he claimed the liberty to act as he pleased. He was prosecuted, fined, and imprisoned, but, in spite of this, he prospered in worldly things. In 1803 he and his adherents determined to emigrate to the United States for the sake of liberty. With his son John and two trusted friends, Rapp went out first of all to prospect, and bought 5000 acres of wild land in the valley of the Conoquenessing, about 25 miles north of Pittsburg. Frederick, an adopted son of George Rapp, had been left behind in Germany to superintend the removal of the emigrants, and he turned out to be a man of rare business capacity. The subsequent success of the scheme must be ascribed, not only to George Rapp's genuine gift of spiritual leadership, but also to Frederick's organizing power.

The transference of so large a number of people was effected with apparent ease. On 4th July 1804, three hundred of the settlers landed at Baltimore, and, a few weeks later, another three hundred at Philadelphia. They were, almost all, either sons of the soil or artisans; and, during that

first winter, while Rapp and his best workmen were building houses on the newly acquired land, the emigrants scattered themselves throughout Maryland and Pennsylvania. On 15th February 1805 they gathered together and formally constituted themselves 'The Harmony Society.' They agreed to put all their possessions into a common fund; to adopt a uniform and simple style of dress and house; and in their labour to keep before them the welfare of the whole community. By summer they numbered 122 families, rather less than 750 persons in all. Their communism had not been in their minds when they left Germany; it had been forced upon them by facts. Some of the members were so poor that, but for the help of the community as a whole, they must have failed to make a beginning. But, from the first, the settlement was a success. The settlers were of the right kind: the men were all used to working with their hands, and the women were thrifty German housewives. Their management of the land was excellent, and, as they believed that the Second Coming of the Lord was imminent, their work was carried on in a faith which permitted no carelessness.

In 1807 a religious revival broke out amongst them, and, as they had been led to their communism by hard facts, so they seemed to be led to their next distinctive position by the revelation of God. They determined to refrain from marriage, and those that were already married lived as brother and sister. A few withdrew from the society as the result of this change of things, but they seem to have had no difficulty in maintaining this position once they had adopted it. No precautions were taken to separate men and women. The life was perfectly free and open; the exercise of discipline seems to have been almost unknown. The religious faith of the community was strong enough to support them even in so unnatural a conclusion. They interpreted Gn 1st literally, believing that Adam was a dual being combining both sexes in himself, and that, if he had remained in his original state, he would have brought forth new dual beings like himself to replenish this earth. The Fall consisted in Adam's yielding to impulse and demanding a mate for himself. In answer to his request God withdrew the female element from him and made it his counterpart. Jesus Christ was made in the image of Adam; i.e. He 'also was a dual being. Hence celibacy was the natural state of man, whereas marriage was the fallen state. Consequently the regenerate man would live a celibate life. In 1814 the Rappites moved from their first settlement, which had proved unsatisfactory in some respects. It had no water communication, and it did not grow vines; and the Rappites, while they abjured tobacco, loved sound drink. They bought 30,000 acres of land in the Wabash Valley in Indiana, and sold their old settlement with all that was on it for the very small sum of 100,000 dollars. In 'Harmony,' as the new settlement was called, they made rapid progress, all the more rapid because of the experience they had already gained. In 1817, one hundred and thirty new settlers joined them from Württemberg, and the best proof possible of the fact that they were satisfied with communism is to be found in the circumstance that in 1818, after seriously considering the matter, they burned the book in which were stated the amounts that each family had originally brought into the community. But in the second settlement they were troubled with malaria; accordingly, in 1824 'Harmony' was sold to Robert Owen for 105,000 dollars, and began afresh to make history under the name of 'New Harmony.' The Rappites removed to a new situation

on the Ohio, near Pittsburg, where they built 'Economy.' Again, as twice before, prosperity flowed in upon them. There was still sufficient youth among their members to let new efforts be undertaken. A woollen mill and a cotton mill, a saw mill, and a grist mill were built; a silk industry was established; and vineyards were planted. After six years of this life, they were greatly tested. An adventurer, Bernhardt Müller, who called himself the Count de Leon, was received into the settlement, and began to propound views that soon wrought dissension concerning marriage and the need of a more varied life. A vote was taken, and the new views were defeated. In 1832 the dissentients withdrew, and it is a proof of the prosperity of the colony that there was paid out to them in one year 105,000 dollars.

Up till this time the articles of association under which they had been living had been briefly these:

All the property of the individual members was conveyed absolutely to the association; obedience was promised to the superintendent, and each member undertook for himself and for his family to give hearty and willing labour; but, if any should withdraw from inability to conform to the wishes of the society, he renounced all claim for services rendered. In return, the association promised religious privileges and education; and also a sufficiency of food and clothing. Members falling into ill-health were to be maintained and nursed, and orphans were to be provided for by the community. After the de Leon episode a provision that any one withdrawing from the association should have refunded to him the value of all such property as he might have brought into it was repealed.

The life in 'Economy' seems to have been fuller than in most of the other communistic societies. Order was maintained without restraint; the members were not overworked; they lived well; they had the German love for, and proficiency in, music. Each family took what was required, and there was no stint; the tailor and the bootmaker, we are told, took a personal pride in seeing that the members were well-dressed and well-shod. But the inevitable came about—the members did not concern themselves regarding the future of their experiment because they believed the Second Advent to be so near. George Rapp, who died only in 1847, expressed this faith in a very touching way at the age of 90: 'If I did not know that the dear Lord meant I should present you all to Him, I should think my last moments come.' When members were asked as to the destination of the society, the only answer was, 'The Lord will show us a way.'

In 1874, at the time of Nordhoff's visit, there were living in this well-planned, well-built settlement only 110 persons, 'most of whom are aged, and none, I think, under 40' (*op. cit.* p. 68). The mills were closed, because there were no young people to work them; and yet, with their touching faith in the immediate end of all things mortal, no new members were sought. Rapp was succeeded by R. L. Bäker and Jacob Henrici. Bäker died in a short time, and on Henrici's death, in 1892, it was found that the affairs of the society were very involved, and that lawsuits were pending concerning the disposition of the property. John Duss was appointed by the courts as trustee; but, before this time, the Rappite organization had ceased to be a community, and had become a close corporation administered for the benefit of a dwindling membership. In 1903 the Liberty Land Company of Pittsburg purchased the entire Rappite estate of 2500 acres for 4,000,000 dollars, and this brave attempt that had lasted for a century came to an end. Celibacy had killed it.

2. The Shakers, or The United Society of Believers in Christ's Second Appearing, are the oldest communistic society in existence. The parent society was established at Mount Lebanon, in the United States, in 1787, and, although within the last thirty years they have greatly diminished in

numbers, they are still wealthy, and immovable in their views. In contrast to so many of the communistic efforts, they are English and not German in origin; but in religion, like the members of Amana, Zoar, and Economy, they are Quakerists. A Quaker revival in England in 1747 resulted in the formation of a small sect, headed by Jane and James Wardley. To this sect there were added in 1758 Ann Lee and her parents. Persecution and imprisonment soon fell upon the members; and in 1770, as Ann Lee lay in prison, she had a revelation of the nature of sin and the reality of eternal life. She believed that in her Jesus Christ had become incarnate for the second time; and she was from henceforth acknowledged by the society as mother in Christ, and called 'Mother Ann.' Ann Lee was a married woman, and had had four children, who all died in infancy; but she is said to have regarded the marriage state with great repugnance. This fact probably conditioned her view of sin and of the character of the regenerate life. She declared that sexual lust was the evil of evils, and that no soul could follow Christ in the regeneration while living in the works of natural generation or any of the gratifications of lust. It is interesting to notice that this view of the relationship of the sexes belonged to the Shaking Quakers before their communism had been thought of. In so many of those communistic efforts it was the necessity for the restriction of population that led to peculiar views of the married state. With the Shakers, however, celibacy was from the outset a cardinal matter. In 1774, local persecution drove them, six men and two women, to America, and they settled at first in the woods of Watervliet, about seven miles northwest of Albany. Their courage was sustained by Mother Ann's constant prediction that in a short time they would see a great increase to their number, and, after waiting for five years, they saw the prophecy fulfilled. In the spring of 1780 there had taken place in the neighbourhood of New Lebanon a religious revival, and some of the converts, dissatisfied with the instruction they were receiving, wandered off until they found in the little Quaker fellowship that which they required. Ann Lee's stern teaching of the repression of all passion met their new-found earnestness. After this, Mother Ann spent two years preaching from place to place, and acquiring the reputation of being a faith-healer. She died in 1784, without having attempted to gather into communities those who had accepted her view of truth. She remained to the end quite illiterate; but she must have possessed a great deal of spiritual power, together with much practical wisdom. She believed in the sanctifying influence of hard work.

'Put your hands to work and give your hearts to God,' was one of her sayings. In the springtime she said to some farmers: 'It is now spring of the year, and you have all had the privilege of being taught the way of God, and now you may all go home and be faithful with your hands. Every faithful man will go forth and put up his fences in season, and will plough his ground in season, and put his crops into the ground in season; and such a man may with confidence look for a blessing' (Nordhoff, *op. cit.*, p. 129).

She was succeeded in the leadership by Joseph Meacham and Lucy Wright. After twelve years Meacham died, and again, for the next twenty-five years, the sole rule devolved upon a woman. This is a fact of importance, when we consider that the society in all its formative years was shaped by women. A good many of its peculiarities, and perhaps its virtues, depend on this. As the society had originated in a Revival, and had been increased by a Revival, so now it was the great Kentucky Revival of the first year or two of the 19th cent. that gave the Shakers a footing that has become so permanent. Although Kentucky was a thousand miles from Mount Lebanon, the Shakers,

hearing of the wonderful things that had happened, sent three of their number to 'open the testimony of salvation to the people, provided they were in a situation to receive it.' These missionaries, on arriving at their destination, were violently opposed, with the result that, spiritually, they prospered. Attention was drawn to their teaching; they made many converts. They founded five societies—two in Ohio, two in Kentucky, and one in Indiana. In Ohio, two other societies were afterwards formed; in New York, one. The Indiana society removed to Ohio, and it was in those years that the Shakers exhibited themselves as an aggressive religious force. Since 1830 no new societies have been founded, and since Nordhoff's visit the numbers have rapidly diminished.

Their religious beliefs are briefly the following:

(1) They hold, with the Rappites, that God is a dual person, male and female; that Adam likewise had in himself both sexes, being created in the image of God; and that 'the distinction of sex is eternal, inheres in the soul itself, and that no angels or spirits exist that are not male and female.' (2) They believe that Christ, one of the highest of the spirits, appeared first in the person of Jesus, representing the male order, and then in that of Ann Lee, representing the female element. (3) They believe that the Day of Judgment, the beginning of Christ's Kingdom on earth, began with the establishment of their church, and will be completed by its development. (4) They say that the five most prominent practical principles of the Pentecostal Church were: common property, a life of celibacy, non-resistance, a separate and distinct government, and power over physical disease. All these, except the last, they claim to have, and this they confidently expect that they will have. They believe that disease is an offence to God, and that men may be healthy if they will. (5) They reject the doctrine of the Trinity, of the Bodily Resurrection, and of an Atonement for sin. They do not worship either Jesus or Ann Lee, holding both to be simply elders in the Church, to be honoured and loved. (6) They believe that it is possible to communicate with the spirit-world, and that the special gifts of the Spirit have not ceased. (7) They believe that sinlessness of life is not only a possibility, but an obligation. (8) They hold that the world will have the opportunity of salvation in the next life.

In the practical working out of their belief, three things are specially noticeable: their celibacy, their communism, and the stress they lay upon open confession of sins. Any one who desires to join the society has to undergo a novitiate of at least a year, during which time he does not live in one of the 'families,' but is admitted to all the religious meetings, and is thoroughly instructed in the doctrines of the sect. No pressure is put on any one to join the society. If, at the end of the year, the novice is of the same mind, he has to set all his worldly affairs in order, and make sure that he is indebted to none. Married couples are admitted, but, when admitted, must live as brother and sister, each in a separate division of the family house. A husband may join, but only with the free consent of his wife; a wife, but only with the free consent of her husband. It is not necessary that any one applying for membership should possess property; but, if he have any worldly wealth, it must be made over in irrevocable gift to the community. Great stress is laid on confession before admission; those who desire to become members are required to confess to two of their own sex everything in their life that has been wrong. Memory is prompted, that this confession may be complete. It constitutes the break with the old life; it is the cleansing of the temple in which the Holy Spirit is henceforth to dwell. In making over his property, the novice undertakes never, directly or indirectly, 'to make or require any account of any interest, property, labour, or service which has been or may be devoted by us or any of us to the purposes aforesaid; nor bring any charge of debt or damage, nor hold any demand whatever, against the Church, nor against any member or members thereof on account of any property or service given, rendered, devoted, or consecrated to the aforesaid sacred and charitable purpose.' No account is rendered to the members, or published to the world, of the temporal affairs of the society.

The government of the community is a close oligarchy, practically an autocracy. The Ministry, consisting of males and females, is composed of not fewer than three or more than four members. When there are four, two are of each sex. Out of this Ministry one is appointed as the head of the society. The Ministry appoints the ministers, elders, and deacons. It is taken for granted that these appointments will receive the approval of the society, which is not consulted directly in the matter.

The communal life is of a very plain but substantial character. The members live in 'families' consisting of from thirty to eighty or ninety individuals. Each 'family' lives in a large house, divided in the upper storeys between men and women, each dormitory containing about four beds. Scrupulous cleanliness reigns everywhere. There are no pictures on the walls, because pictures gather dust.

'The beautiful,' said Elder Evans, the head of the community at the time of Nordhoff's visit, 'as you call it, is absurd and abnormal. It has no business with us. The divine man has no right to waste money upon what you would call beauty, in his house or his daily life, while there are people living in misery' (Nordhoff, *op. cit.* p. 164).

It may be said that this distrust of the beautiful is shown in the clothing of the members. The clothing is all made by themselves, and formerly they used to manufacture their own cloth. The men wear a very broad, stiff-brimmed felt hat, and a long light-blue coat. The dress of the women is so contrived that female charms shall be obscured. The bodice is quite straight, and the many-pleated skirt hides the figure; even the hair is concealed beneath a bonnet which also shrouds the face.

'Each brother is assigned to a sister, who takes care of his clothing, mends when it is needed, looks after his washing, tells him when he requires a new garment, reproves him if he is not orderly, and keeps a general sisterly oversight over his habits and temporal needs' (*ib.* p. 140).

The family rises in summer at half-past four, and in winter at five. Breakfast is at six, dinner at twelve, supper at six, and by half-past nine all have retired to rest. Great stress is laid now, as it was by Mother Ann, upon the importance of manual labour. They believe, and their belief has been justified by the result, that agriculture must be the foundation of a communistic life. They say that their mistakes have been made when they have undertaken manufactures. In the industries, such as shoemaking, which they maintain, they aim only at supplying their own needs. If the women work in the fields, it is only at the very lightest labour; their sphere is the house. None are allowed to overwork; and their history shows that, in a community where there are no children to labour for, a large measure of material prosperity may be attained with comparative ease. Their amusements are of the simplest character. In the evenings they all meet together. On one night extracts may be read from the newspapers, on another new hymns may be practised, on another a prayer-meeting may be held.

The most characteristic thing about their worship is a peculiar religious dance to music, but they have no religious ceremonies. Those who are moved to do so may address the meeting. An elder may perhaps speak upon holiness of life and consecration; another will ask for prayer in some special difficulty. It need hardly be said that in such a community, pledged to celibacy, the intercourse of the brothers and sisters is very strictly guarded. They have indeed a good deal of social intercourse; geniality is by no means frowned upon; but the utmost care is taken that no scandal shall be brought upon the order. The workshops of the men and women are separate. At table and at worship the sexes are kept apart. Men and women never meet alone. The whole life is ordered and regulated with unceasing vigilance. Hervey

Elkins, who had spent fifteen years as a Shaker, wrote:

'Not a single action of life, whether spiritual or temporal, from the initiative of confession, or cleansing the habitation of Christ, to that of dressing the right side first, stepping first with the right foot as you ascend a flight of stairs, folding the hands with the right hand thumb and fingers above those of the left, kneeling and rising again with the right leg first, and harnessing first the right-hand beast, but has a rule for its perfect and strict performance' (quoted by Nordhoff, *op. cit.* p. 170 ff.).

Of all the communistic efforts this is the one that most resembles what we know of the Essenes.

The population difficulty the Shakers settle by condemning their followers to celibacy. It is a life passed in negatives. It is no solution of the problem of a distraught society; and it is not surprising that, in spite of its honourable history and comparative economic success, the attempt is failing. New members are not joining the society, and it bids fair to collapse as completely as the Rappites have done. In 1874 the Shakers had fifty-eight communities with 2415 souls, and owned 100,000 acres of land. In 1905 the number of members had dwindled to about 1000.

3. The Society of Separatists at Zoar ceased to exist in 1898 after a life of over 80 years, but its history is so illustrative of the causes of ultimate decay in a communistic group that it deserves mention here. The Separatists of Zoar originated, like the Rappites, in Württemberg, the home of so much of the Pietism of Germany. In the beginning of the 19th cent. these dissenters from Lutheranism refused to send their children to the clergy schools or to allow their young men to serve as soldiers. They were so harassed and persecuted in consequence that life became almost impossible for them. The men and women who afterwards settled at Zoar had in Germany, for some years, formed a little group apart. Their trials had come to the notice of some English Quakers, who aided the wealthier members of the little sect in supplying funds for their emigration to America. Their leader was Joseph Bäumeler, and, on the arrival of the party at Philadelphia in August 1817, Bäumeler and a few others went on in advance to take possession of a tract of 5,600 acres which they had bought in the wilderness of Ohio. For this land they paid 3 dollars an acre, with credit for 15 years, while no interest was charged on the debt for the first three years. Bäumeler and his pioneers built the first log hut on their property on 1st December 1817; but, as winter was on them, the emigrants had to take service wherever they could find it among the farmers of the neighbourhood. When they left Germany, communism had been no part of their plan, but the fact that there were a number of old people among them and also many who were too poor to pay for their land, brought the leaders to see that, if the experiment was to go on at all, it would have to be on a communistic basis. In April 1818 they agreed to this community of goods. The 225 persons who composed the colony were most of them agriculturists, but there were also a number of weavers and other artisans. Altogether, in character and by training, it was such a company as to give a communistic experiment a good chance.

For the first ten years they were extremely poor. They were in debt, of course, for their land, and debt to communisms has generally been fatal. But the making of a canal in their neighbourhood in 1827 supplied them with profitable work. They soon found themselves out of debt, and from that time began to prosper very considerably. Joseph Bäumeler continued to be their leader, but the spelling of his name was modified through local pronunciation into Bimmeler, and the society came sometimes to be known as the 'Bimmeliers.' Marriage was at first prohibited amongst them,

but between 1828 and 1830, Joseph Bimmeler himself married an inmate of his own household. He had several children; and marriage, though not encouraged, was permitted in the community. They tried as far as possible to be self-contained; agriculture was, of course, their mainstay, but gradually they built a woollen factory, two flour-mills, a saw-mill, a planing-mill, a machine-shop, and a tannery. By 1874 they owned 7000 acres of land, had 300 members, and were supposed to be worth more than 1,000,000 dollars.

In their religious faith, there were no such distinctive or peculiar doctrines as have marked out the Rappites and the Shakers. Their religious constitution bears evident marks of its having originated in Germany. They thus declare in their twelve articles of faith that they cannot send their children into the schools of Babylon, i.e. schools of the State Church in Germany, and that they 'cannot serve the State as soldiers, because a Christian cannot murder his enemy, much less his friend.' While they gave loyalty to constituted authorities, they refused to give mortal honour to any, either by uncovering the head or by bending the knee. All religious ceremonies they banished. In their services they read the Bible, sang hymns, and read one of Bimmeler's discourses, which they carefully avoided calling sermons. They had no preacher or minister, but they encouraged music. The church had an organ; many of the households, poor as they were, had pianos; the boys were taught to read music and to play in a band. Two of their twelve articles of faith concerned marriage. The first declares that marriages are contracted by mutual consent and before witnesses; that they are then notified to the political authority, and 'we reject all intervention of priests or preachers.' The next related to the marriage state itself: 'all intercourse of the sexes except what is necessary to the perpetuation of the species we hold to be sinful and contrary to the ordinance and command of God. Complete virginity or entire cessation of sexual commerce is more commendable than marriage.'

Those changes in the policy of the society led to alterations in the constitution, and it was not till 1832 that this was finally settled. Under it the members were divided into two classes—the novices and the full associates. The novices had to serve at least a year before they were admitted to the society. During this year they bound themselves to labour with all industry in return for their board, clothing, and medical attendance. The children even of members had to serve this novitiate year if, on reaching their majority, they wished to join the society. All disputes had to be settled by arbitration within the society. When a novice wished to become an associate, a month's notice was given to the members of the society, and, if no objection was taken to him and he had no debts, he then made over by an absolute disposition, not only all the property he then had, but also all that might afterwards come to him by inheritance. He also undertook to obey 'with the utmost zeal and diligence, without opposition or grumbling,' the commands of the trustees; and undertook also that his children, until they reached their majority, should be considered as indentured to the society.

The administration was in the hands of three trustees, whose term of office was three years, although they might be re-elected an indefinite number of times. But in Zoar there was no absolutism such as existed among the Shakers. These trustees were elected by a ballot of the whole membership, including the women; and, while on the one hand they were supposed to have complete control over the temporal affairs of the

society, on the other hand they required the general consent of the society. There was also a standing committee of five, the purpose of which was to settle difficulties that might arise between individuals of the society, or between the rank and file and the administration.

Bimmeler died in 1853, but at the time of Nordhoff's visit the society was still flourishing. Its rapid collapse was brought about by the intrusion of the individualist spirit, by the fretting of the younger people at what seemed to them to be arbitrary restrictions, and by a number of small causes which separately might have had no disintegrating effect, but taken altogether meant the wreck of the experiment. As the doctor of the community said to a trained inquirer, as the end loomed in view, 'the old ones are not so anxious to quit, but the young ones are bound to wind up. They go out and get a taste of the world and its opportunities and activities, and they become discontented and restless.'

As Zoar came to be in the midst of a population of increasing density, more opportunities offered themselves to the members of making a little private gain. Some thrifty housewife would rear poultry and sell the eggs; was she entitled to keep what she received, or had this pittance to go into the common stock? A man might build a boat and hire it out in the summer evenings on the river; was he to share the results of his industry with those who idled in their leisure time? In a hundred ways this difficulty arose—in the catching and selling of fish, in doing laundry-work for the neighbourhood, etc. When Randall visited the community, he found in it one bicycle. He asked the lad who was riding it if Zoar had paid for the bicycle. 'No,' said the lad, 'I earned money nights working for the railroad and bought the wheel.' Other sources of discontent were involved in the very being of a communism. There was trouble over the apportionment of the tasks—some were hard, others were easy; some were cleanly, others were dirty. And then there was the difference between the willingness with which the members did their work. One member roundly declared that this system of communism put a premium on indolence. Then one member might desire to go for a holiday, and, as he had no money of his own, the community had to pay his expenses. Was this benefit to be extended to all, and were all to have a change of air, necessarily at the expense of the society? When enthusiasm ran high, questions such as these would not be asked; but, when they did begin to be asked, the movement was nearing its end. The diminution in the membership was of itself altering the character of the community. At Bimmeler's death, in 1853, there were 500 individuals in the society, including children. In 1885 there were 390; in 1898 there were 222, of whom 136 were members. The result was that, for the working of their very considerable estate and industries, they had largely to depend upon hired labour. Thus insensibly the whole character of the experiment had changed. It was no longer a communism in the strict sense of the word, but rather a limited liability company, in which each member held an equal number of shares.

In March 1898 it was agreed that the society should be dissolved, and in May the apportionment began. The society had become a tontine; the representatives of those who were dead had lost their rights. The membership, such as it was, would have been still smaller if members had not held on in the hope of sharing in the inevitable division. To begin with, by the sale of timber, etc., each member received 200 dollars; the estate was then valued and apportioned, and it was sup-

posed that each member received property to the value of about 2500 dollars. The result of the break-up was rather interesting. Most of the membership remained upon the plots that had been assigned to them in the division. Some had become so accustomed to the paternal government of the community that they had lost their power of initiative. Others found that competition required more energy than communism. The blacksmith said, 'I'm my own boss now, but I've got to work harder.' But perhaps the most remarkable thing was the pleasure of the people in the fact that they had something they could call their own. Randall was talking to the baker's wife when a buggy drove up with a good horse between the shafts. It was genuine human nature when she said with pride, 'That is *ours*; we *bought* it. Isn't it nice to have your own horse?'

4. Icaria ceased to exist in 1895 after a desperate struggle of 40 years. Its significance lies, not in itself, but in the object lesson that it gives of the need of a strong and almost absolute leadership and a unifying religious faith if a communism is to have any chance of success. Étienne Cabet was a barrister by profession, but a revolutionary by instinct. He was born at Dijon, in France, in 1788; after the revolution of 1830 he obtained a small appointment in Corsica, but his criticism of Louis Philippe was so vigorous that he was prosecuted, and to evade punishment had to flee to England. On the amnesty of 1839 he returned to France, and next year he wrote a romance, *Voyage en Icarie*, in which he set forth his communistic views. Through a paper which he conducted he secured the means of making an effort to realize his dream. He announced the purchase of a considerable tract of land on the Red River in Texas. Early in 1848, 150 persons set out for this colony, but they were attacked by yellow fever, and sent back such a report of the place that Cabet's conduct in the matter was judicially investigated. He was exculpated, and next year set out himself for America. On his arrival, he found that the Mormons had been expelled from Nauvoo, their town in Illinois. Thither, in May 1850, Cabet transferred his followers.

This effort seemed to have in it the germs of success. To begin with, it had become very widely known, and at one time Cabet had gathered round him no fewer than 1500 people. But he seems to have lacked all gift of leadership, as he certainly lacked all business instinct. In 1856 he was expelled from his own society, and went with those who still believed in him to St. Louis, where he died the same year. Nauvoo was sold, and the membership was dispersed, a few joining an offshoot that was making its attempt at Icaria, near Corning in Iowa. Here for years they maintained a most precarious existence. They had 4000 acres of land, but they owed 20,000 dollars. The debt swamped them; they had to give up the land to their creditors, but with the condition that in a certain number of years they might redeem half of it. This, by the utmost economy, they managed to do. When Nordhoff visited them they owned 1900 acres, much of it covered with valuable timber; they numbered 65 persons divided among 11 families. Of those individuals 20 were children, and only 23 members were voters, as women had no share in the management of the community.

After the Paris Commune of 1871 and the break-up of the International Working Men's Association in Geneva, they had several additions to their membership. These members, together with the younger section of the community, thought that the older members had become lax in the practice of their communistic theory. In 1877 the dispute came to a head over the merest trifle. Attached

to three houses of the community were small strips of ground on which the members who lived in those houses spent their leisure time in growing flowers and some grapes. Communistic theory, it was declared, required that what was grown in 'les petits jardins' should be divided amongst all. Nineteen voted in favour of this vestige of private property, thirteen against. The matter was carried to the law courts, and in August 1878 the society was dissolved on the technical ground that it had gone beyond its charter as an agricultural society in putting up and working a mill. The two bodies began life again side by side—the younger members calling themselves the 'Icarian Community,' while the older ones, late in applying for registration, had to be content with the title of the 'New Icarian Community.' In 1883-84 the younger section moved to California, where it has established itself on a semi-proprietary basis, as 'Icaria-Speranza.' After having wrecked the society on the question of the grapes, it now allows its membership to hold its apparel, furniture, and household goods as private property. Icaria in Iowa ceased to exist in 1895.

5. The Perfectionist Community of Oneida is perhaps the most widely known of the communistic experiments of the United States. Its revolutionary treatment of the marriage state brought it prominently before the public, and in 1880 the pressure of opinion could no longer be resisted. The communal experiment was abandoned, and Oneida was turned into a limited liability company. John H. Noyes, the founder, was born in 1811, and graduated at Dartmouth College. His original intention was to become a lawyer, but he eventually studied for the ministry. He was a man of unquestioned ability. The Oneida publications are numerous, and his own writings have a great deal of vigour and some style. In 1834 he came through what he believed was a genuine religious experience, and adopted Perfectionist views. He returned to his father's house at Putney, in Vermont, and began to gather disciples about him. One of these converts, Harriet Holton, a woman of good birth and some wealth, became his wife in 1838. Noyes held that selfishness was the root evil of the world, and that, in order to be completely unselfish, it was necessary not only that property should be held in common, but that no man should count any woman as linked to him by some proprietary right. In the community of believers every man should be the husband of every woman, while every woman should be the wife of every man. This detestable doctrine was the very essence of Noyes's communism, and he and his followers made no secret of it. In pamphlet after pamphlet—the British Museum possesses a complete set—the whole matter was stated. At Putney, where the first experiment in this communal life was made, riots arose; Noyes and his associates found refuge with some who agreed with them at Oneida, in Madison County, New York; and this Oneida Colony, together with one at Wallingford, became the headquarters of the group. As the societies grew, a considerable amount of wealth was brought into them; the members were intelligent and thrifty. Agriculture, to which they added the production of garden seeds, was their mainstay; but one of their number who had been a trapper showed them how to make traps, and this rather curious industry, together with a saw-mill, a blacksmith's shop, and a fruit farm, began to put them beyond the reach of want. For the seven years 1860-1866 their annual profit averaged 23,300 dollars, while their farms, plants, and buildings were lavishly kept up. In February 1874 they numbered altogether 283 persons, of whom

64 were under 21 years of age. They published, two or three times a week, the *Oneida Circular*, a bright, well-written paper, and generally made great use of their printing press in keeping their views before the public. Those views, extraordinary though they may seem, were never concealed. The Oneida Community until its dissolution was always propagandist.

The distinctive religious doctrine of the community was Perfectionism. Noyes taught that salvation from sin could and ought to be reached, not by any following out of cold duty, but as the result of an experience of fellowship with God. He insisted that the tap-root of all sin was selfishness. When selfishness was destroyed, the soul was rid of sin. To forsake self was to forsake sin, and the deduction drawn was the system of polyandry, or 'complex marriage,' under which no man claimed special relationship with one woman more than with another. Within the community, as has been said, any man could cohabit with any woman, but in practice this liberty had several restraints. Anything of the nature of courtship was sternly disallowed as partaking of selfishness. All requests for cohabitation—and they could proceed either from men or women—had to be made through some third person, and no one was obliged to receive attentions that he or she did not welcome. On entering the community the more youthful of one sex were always paired with the more aged of the other. Children, after they had been weaned, were put into a general nursery; the parents lost all special rights to them, and were not supposed to show any special interest in them. To have done so would have been a sign of selfishness, a proof that all had not been forsaken.

The administration of the society was characterized by great flexibility and a large amount of worldly wisdom. New members were admitted sparingly, and only after a considerable probation. On entrance they signed the creed of the society, and also an agreement to claim no wages for their labour while in the community. Noyes was himself the government of the society, and apart from his peculiar views guided it with great ability and business capacity. But he himself claimed that its prosperity depended on the daily evening meeting in which all the affairs of the society were freely discussed, and especially on the institution of Criticism. Under this every member from time to time invited the criticism of his fellows, and this criticism was no matter of form. The person whose turn it was to meet the judgment of his fellows sat silent under the ordeal, while one member after another unfolded his most intimate faults or commended his struggles and attainments. Perhaps the theoretical severity of the exercise was a little mitigated by the consciousness that the critic would in turn be the criticized; but the testimony of eye-witnesses is that the experience was a real ordeal, although it was conducted in no spirit of mere bitterness, while Noyes, in his summing up, was able to soften asperities.

Naturally enough such a society, practising its peculiar beliefs, not only without concealment, but with the aggressiveness of a propaganda, aroused intense hostility. It was the subject of constant agitation, to which Noyes replied with the greatest readiness. But there was no gainsaying the force of public opinion, and in 1880 Oneida was turned into a company, and the communal experiment was given up. Its commercial success had been considerable: it counted itself as latterly worth 600,000 dollars. Liberal terms were granted to the members by the new company. Support was first offered to all elderly and infirm persons

in lieu of stock; a guarantee of support and education was given to all the young people of the society up to sixteen years of age; and members able to work were guaranteed employment in the new company.

6. The communistic schemes of Fourier were in the United States preached with all the vehemence of a crusade by Albert Brisbane in the *Social Destiny of Man* (Philadelphia, 1840); and by Horace Greeley in the *New York Tribune*. Presently a newspaper called *The Phalanx* was wholly devoted to the teaching of Fourierism, and in 1845 this was superseded by *The Harbinger*, published at the Brook Farm Society. This paper was conducted with rare power, for behind it there were Horace Greeley, George Ripley, William Henry Channing, C. A. Dana, Nathaniel Hawthorne, and Elizabeth Peabody. The result of this propaganda was the founding within two or three years of no fewer than twenty-nine Fourierist Communes or Phalanxes. Their history is a somewhat melancholy one; their average life was two and a half years. (Hinds [*Amer. Communities*, etc.] gives a complete list of these experiments.)

Brook Farm, near Boston, was founded in 1841 by George Ripley, who soon gathered round him a notable company of intellectual people. The effort had the cordial support of Emerson, but financially it was soon in difficulties. In 1844 it was swept into the Fourierist movement and lost the aid of Emerson and his coterie. Fourier's system was far too complicated for a little group of seventy people. The Phalanstery too, a building which had cost 7000 dollars and was capable of housing 150 people, was burned down. In 1845 the community ceased to exist.

The North American Phalanx was the longest lived of all the Fourier attempts. Its success, such as it was, was due to the fact that to it Horace Greeley devoted both his time and his means. The farm lay near Red Bank, New Jersey, about 40 miles from New York city, and consisted of 700 acres of good land. It was organized in August 1843, and soon there came into existence a mansion house accommodating one hundred persons (each family having a sitting-room and two bed-rooms), a saw-mill, a steam flour-mill, a packing house, etc. The community carried on a dried fruit business as well as agriculture generally. In 1854 there were 100 members, and the property was valued at 67,000 dollars. So far it might have been counted a success. It had paid its members wages, and an average of 5 per cent upon the capital invested. But all at once trouble arose. At a meeting which had been called to discuss the site of a new mill, larger questions were raised, and a vote was taken as to whether it was worth while continuing the experiment. A majority was in favour of giving it up; the property was realized, the shareholders receiving about 66 per cent of their holdings. The causes of this sudden break-up are difficult to state. There was certainly dissatisfaction with the wages paid, but that only shows that the enthusiasm was cooling. The manual workers could not understand that brain workers deserved a greater reward. Bucklin, who was chief of the agricultural department, received only ten cents a day more than the labourers. A school-teacher—and their school was famous—received nine cents an hour, but commanded easily in the competitive world five dollars for two hours. But the personal equation is also to be considered. Boredom is the shadow on most communes, and the settlers after thirteen years seem to have wearied of one another's society.

The Wisconsin Phalanx (1844-1850) seemed to have all the conditions of success. It possessed

1800 acres of fine land, situated near Ripon, Wisconsin. It had no debt, no religious difficulties, and no scandal amongst its membership. But the members got tired of it and dissensions broke out. Noyes said of it:

'Died, not by any of the common diseases of Associations, such as poverty, dissension, lack of wisdom, morality or religion, but by deliberate suicide, for reasons not fully disclosed.'

The Alphadelphia Phalanx was a similar effort.

The Altruist Community is a very small affair, led by Alcander Longley, one of the survivors of the North American Phalanx of more than half a century ago. They own 8½ acres at Sulphur Springs, 23 miles from St. Louis on the Mississippi.

The Bethel-Aurora Communities were founded by William Keil of Nordhausen in Germany. He emigrated to the United States in 1838, and worked as a tailor and as an agent for the German Tract Society, and then became an independent preacher. Bethel was begun on Government land in Shelby County, Missouri, in 1844. Keil had only two or three families to begin with, but the colony increased so rapidly that at one time it had 1000 members, almost all Germans. The settlers busied themselves in agriculture, tailoring, shoe-making, and machine work. As the community prospered, Keil's ideas grew, and in 1855 he set out for the Pacific coast with about eighty families, and founded Aurora, 30 miles from Portland. Soon Aurora owned 18,000 acres, and had between three and four hundred members. The characteristic of those two settlements was the wisdom of Keil's management and the fluidity of the organization. Keil was president, and had as his advisers four of the older members selected by himself. There were no set hours of work, no one was compelled to labour at a task he did not like, and the universal testimony is that the religious life of these communities was maintained at a very high level. But when Keil died in 1877 the guiding hand was withdrawn. Bethel dissolved in 1880 and Aurora in 1881.

The Brotherhood of the New Life was founded by Thomas Lake Harris, a spiritualist minister of English birth. It was not his first experiment in communism, as in 1851 he had founded the Mountain Cove Community of Spiritualists in the State of Virginia. He believed that he had found there the actual site of the Garden of Eden; but, if so, the serpent again entered in, and the Brotherhood was broken up. In 1866 he made his new venture at Salem-on-Erie, and the experiment has attracted more attention than it deserved, from the fact that with it Laurence Oliphant and his mother were connected. The system was patriarchal; all the members were counted as the guests or slaves of Harris, and had to do exactly as they were told. The picture in Mrs. Oliphant's *Life of her namesake* is not overdrawn. Laurence Oliphant put nearly £20,000 into the community, but in 1880 the breach took place with Harris, and the enterprise collapsed. Harris and his friends went to Santa Rosa in California, and began another community, which broke up in 1900.

The Ruskin Commonwealths were, as the name indicates, an outcome of the economic teaching of John Ruskin. J. A. Wayland, a newspaper proprietor, published at Greensburg, Indiana, a paper called *The Coming Nation*. He resolved to devote the profits of this paper to the establishment of a communistic society, and the ability of his management and the enthusiasm for the object were such that in August 1894 a beginning was made. A site was chosen that proved to be intractable land; so in 1895 the settlers moved to Cave Mills and began again. Wayland, at this stage, withdrew. Prosperity came to them at once. Printing

and agriculture were their mainstay, and soon 36 of the American labour papers were printed at Ruskin. But the Arcadia was soon destroyed. The members quarrelled amongst themselves; anarchistic views found adherents; and accepted moral standards were challenged. The community broke up in July 1899, while it was still solvent. Two hundred and forty-nine of the settlers went and joined the American Settlers' Co-operative Association at Duke, Ga.; but this venture also broke down in the end of 1901.

The Woman's Commonwealth was founded by Mrs. Martha MacWhirter at Belton, Texas. The movement was the fruit of a religious revival, and its adherents were, to begin with, greatly persecuted; but they were diligent, thrifty, and pious, and achieved material success. They do not exclude men from the membership, but the only man who joined the community withdrew after a few years. They have removed to Washington, D.C., and in 1906 numbered eighteen women.

The more important communistic societies throughout the world will be dealt with in separate articles under their own names.

LITERATURE.—J. H. Noyes, *History of American Socialisms*, Philadelphia, 1870. There is a complete set of the scarce Oneida publications in the British Museum. W. H. Dixon, *The New America*, 2 vols. London, 1867, and *Spiritual Wives*, 2 vols. London, 1868; C. Nordhoff, *The Communistic Societies of the United States*, London, 1875; M. Hillquit, *History of Socialism in the United States*, New York and London, 1908; F. A. Bushee, *Communistic Societies in the United States*, 1906; W. A. Hinds, *American Communities and Co-operative Colonies*, 2nd revision, Chicago, 1908; A. Brisbane, *The Social Destiny of Man*, Philadelphia, 1840; *The Phalanx; The Harbinger*; N. Hawthorne, *The Bithedals Romanes*, Boston, 1852; J. T. Codman, *Brook Farm, Historic and Personal Memoirs*, Boston, 1849; O. B. Frothingham, *Life of George Ripley*, Boston, 1882; E. O. Randall, *History of the Zoar Society from its Commencement to its Conclusion*, Columbus, 1890; Albert Shaw, *Isaiah, a Chapter in the History of Communism*, New York, 1884; R. McCulley, *The Brotherhood of the New Life and Thomas Lake Harris*, 1893; *Blackwood's Magazine* (for Salem-on-Erie), Feb. 1880.

R. BRUCE TAYLOR.

COMMUNITY OF GOODS.—See COMMUNISM.

COMPARATIVE RELIGION.—See RELIGION.

COMPETITION.—*Introduction*.—'Competition' is the name commonly applied to that kind of relation which exists between rivals who are striving to attain the same end or object; it is a term characteristic of the system of modern commerce and industry, on which (on the hypothesis of free bargaining among sellers and buyers of goods or services) prices, rates of wages, and interest are determined. The 'higgling of the market,' as it has been called, is assumed to give free play to the forces of supply and demand, and out of the conflict of interests there emerges a price, or rate, which tends to equalize the supply and the demand; by the operation of competition a market value is obtained which is deemed the equitable rate in the circumstances. Competition of this kind is seen at its best on the Stock Exchange and in wholesale markets, where the conflict of interests is between experts who are practically on a par as regards their means of forming a judgment upon the economic conditions of the problem. But competition is by no means limited to commercial affairs; it is the chief method of determining the course of action in most cases of conduct where alternatives are presented, and the question is one of value or worth in which the fittest is a desideratum.

In the absence of competition, value is fixed by some customary standard, or it is arbitrarily determined by authority, or it is regulated by the self-interest or caprice of a monopolist individual

or ring sufficiently strong to control the conditions of sale. Economists have generally regarded competition in which the market is free and the competitors are on equal terms as the most equitable mode of securing a fair price. On the other hand, competition has often been assailed as an instrument of injustice and harshness, and it has been denounced by socialists, as a means of oppressing the labouring classes. It will be found, on examination of instances adduced in support of this charge, that the competition in such cases is not really free, but that, owing to some defect of ignorance, weakness, inability, etc., the competitors are not on equal terms, e.g. the employees may be keenly competing for the work, but the employer (in a sweated industry) may be *de facto* a monopolist who can dictate terms. This is not a case of genuine free competition.

To avoid any apparent approval of this one-sided and imperfect competition, the term 'free enterprise' has been adopted by economists as more correctly expressing the system under which individuals, or groups of individuals, combined in societies, freely compete to dispose of their goods or services, and others strive on like terms to purchase their goods or services; thus, by the play of the various forces, a rate is arrived at which will, in the circumstances, tend to equilibrium between supply and demand, satisfy the wants of society, and allow production to be carried on.

In primitive times, custom was the chief force in determining shares; and, though now a declining force, custom still survives in the form of 'customary' charges, fees, and rates. At a later period, authority fixed prices and wages for the labouring classes. The famous Apprenticeship Statute of Elizabeth (1563), which, along with its other regulations, authorized a local assize of bread, and fixed the wages and hours of labour, was a typical example of the views and practices long prevalent in England on these matters. The Industrial Revolution, which began in the latter part of the 18th cent., fostered the competitive system, though for many years its very partial operation acted adversely to the interests of the factory employees. The social and economic reforms of the 19th cent. have been instrumental in removing those disabilities, and have rendered the competition of the workers effective by measures affording education, liberty of combination, and collective bargaining, and by regulation of the processes of industry—in fact, by bringing about a set of conditions in which the parties to the industrial contract are placed upon approximately equal terms.

In some countries monopoly in the form of rings and trusts has gained a strong hold upon industry and commerce, and places restraints upon competition which tend to enrich the monopolists at the cost of the community. Socialism, again, advocates the substitution of the State for the individual in the ownership of wealth and the control of production as the means to an equitable distribution; but it is not yet proved that this system would afford the needful incentive to production, and it would probably be attended by evils far greater than those of a modified competitive system. Cf. COMMUNISM, SOCIALISM.

1. Various forms.—Meanwhile it may be urged that competition is an inherent factor in human nature; it is much more than a commercial or industrial phenomenon, and displays itself in a thousand forms.

(a) *In games and sports.*—In games and sports of every kind the competitive struggle is the essential feature; the spirit of rivalry, the keen desire for success in the contest between opponents, and the strong partisan spirit of the onlookers, all demonstrate the competitive instinct and exhibit

the gratification afforded by its exercise. Such competition does not necessarily beget ungenerous sentiments between individuals or nations. It is held to cultivate a manly and honourable spirit, to train men to seek success by fair and honest striving and to bear defeat with dignity. 'To play the game' is a phrase that is now applied to the serious affairs of life, and carries with it the connotation of honourable competition. Under the name of 'emulation,' competition is approved as a stimulus to rivalry in well-doing, and the competitive instinct is admitted as a wholesome factor among the forces which tend to develop human life and character.

(b) *In public service.*—In the public service and many other employments, appointments are made by competitive examination. In every occupation there is rivalry for place and priority; in the legal and medical professions the competition is for employment and rank, while the fees are usually fixed by custom. The selection of men for prominent posts in business, in politics, and in the Cabinet is a matter of competition in which relative merit is the avowed test. In every walk of life the competitive element appears; the reward may be pay, position, rank, power, dignity; the criterion is comparative worth. The competitive value of ability, capacity, industry, or skill of a kind suitable for the task is advanced as the only satisfactory ground of the award, and appointments which do not accord with the competitive idea are not deemed to be for the public advantage.

The universality of this competitive spirit, and the desire that the best man, instrument, or method shall be employed, and that superiority shall be established by fair contest, afford convincing proof that competition is a strong factor in human nature, and one which is apparently ineradicable. Every new invention that reduces the severity of labour, or adds to human comfort or convenience, competes with methods already existing, and tends to displace them by its superior efficiency; old trades are extinguished by the advent of new ones, just as wooden ships have given place to steel ships, and as the motor seems likely to drive out horsetraction. Economic progress is a competitive process; the best methods tend to survive, and inferior ones to disappear, in the contest for the highest utility.

2. Advantages.—Competition is not a thing, a force or agent; it is a method or mode of action, a relation between a number of conflicting forces at a point. The problem has some resemblance to that of the mechanical composition of forces. Competition has been denounced as the unrestricted action of self-interest, but many various interests enter into the determination of human conduct, and some self-interest at least is essential in every human being who lives by doing useful work; further, the interests of those dependent upon the worker are amongst the most potent in making him seek the best return for his labour. Again, there can be no competition unless individual self-interest is curbed and held in check by other competing self-interests; and it has been shown that the play of these various interests in a perfect market tends to give the rate most generally advantageous in the circumstances. Moreover, it is incorrect to suppose that competition always lowers prices and wages; it quite as frequently raises them; its action is an equalizing or levelling tendency. If, for example, prices be low in an isolated seaside village, and a railway be extended to reach the village, prices speedily rise to the level of other places offering like conveniences. If in any occupation there is an increased demand and more labour is required, wages tend to rise; if the trade declines and the demand for labour is

reduced, wages tend to fall. The Bank rate of interest fluctuates frequently; i.e. it rises or falls according to the relative scarcity or abundance of loanable capital. Competition simply seeks to produce equilibrium between supply and demand by bringing the whole of the competing factors to one level. Experience shows that, as human nature is at present constituted, self-interest stimulates industry, the acquisition of skill and knowledge, and enterprise, all of which are active agents in advancing the material well-being of the race.

Combination to some extent restrains the self-interest of the individual, but only to direct it more effectively in union with that of others. Trade Unions, Co-operative Societies, and Joint-Stock Companies do not remove competition; they organize it in groups of interests, and all alike aim at securing as large a share of wealth as possible for their members. The individual interest becomes a combined, yet still competitive, interest. If, however, combination develops into a monopoly, it extinguishes competition; the interests of the trust are adverse to those of the rest of society on which its tendency is to prey; monopoly gives full play to the action of selfish instincts.

Competition is often charged with causing waste, as by advertising, overlapping, and duplicating the machinery of supply. There is ground for the complaint; every institution devised by man has imperfections; they arise from his imperfect knowledge and from moral defects in human nature. Excessive advertising implies an over-eagerness for gain, and a desire to monopolize; it is a symptom of greed. The tendency to organize businesses on a large scale, both in production and in distribution, reduces the waste incidental to small businesses without destroying necessarily the advantages which flow from free competition.

3. Disadvantages.—The most serious defects of competition, however, arise from the fact that in practical affairs there are many limitations to its free action; the conditions of life do not afford equal opportunities, the competitors do not start on a par, either in education, capacity, opportunity, or means; hence competition is not usually, as the abstract theory assumes, real and effective; one party enjoys some advantage over the other, and the system seems to work out unfairly. The ill-effects of imperfect competition are illustrated in the 'sweated industries,' in underselling by a strong and wealthy rival with intent to crush out a weaker opponent, and in various modes of unscrupulous dealing. These cases give rise to an outcry against 'unrestricted competition,' and create a demand for some form of legislative interference. The previous analysis will have shown that the evil is not in *competition*, but in the circumstances which cause it to be imperfect and ineffective; the remedy, therefore, lies in removing the obstacles which render it ineffective. This is a difficult and tedious task, but it can be accomplished by patient and well-considered measures, which can only be briefly indicated here. (1) The first is the method of placing restraints upon particular abuses; of this method a century of social legislation offers a multitude of examples, such as laws forbidding the employment of women in mines, and of children under a certain age in any occupation, the protection from dangerous machinery, and rules and regulations under which certain industries may be carried on. (2) Other remedies aim at strengthening the weak by education, by the diffusion of special information and aids to organization, and by various measures which tend to render them effective in the defence of their own interests; these methods are manifold and costly, and they require time for their effective development. (3) Another method is for the State

or municipality to undertake the operations which tend to become monopolies, or which cannot be successfully carried out in the public interest except as single undertakings. The Post Office, waterworks, street-lighting, and tramways supply examples of this class.

In every case the mode and degree of Government interference should be determined only after full investigation and after the expediency of such interference has been proved, and it should not be of a kind to check free enterprise where that is possible. The joint application of these various methods has already accomplished much in modifying the defects of imperfect competition; it has raised whole industries from ineffective to effective competition, and has elevated the general standard of living of the masses. New developments of industry constantly call for new modes of interference. The aim, however, is not the elimination of competition; that seems to be undesirable and indeed impossible unless human nature first be greatly altered. The object is rather to give freer and ampler play to the efforts of men to exercise their powers of self-help and to develop their own individuality, to give them better opportunity, and to stimulate them to manly self-reliance and voluntary co-operation by offering greater security for the enjoyment of the fruits of their industry.

Conclusion.—Competition is not a system of life; it is not even an institution in the proper sense of the term; it has evolved as a method of dealing with certain relations which inevitably arise out of the existing organization of men in societies; it is limited in its operation to fields in which it is found expedient, and its bearing is economic and utilitarian. The acceptance of competition does not conflict with any of the nobler instincts or the exercise of the higher virtues. That the Bank rate should be determined by competition is most convenient and expedient, but every individual receiver of interest is at liberty to devote his receipts to purposes of philanthropy, to public or private charity, or to the promotion of any religious movement or end that he deems desirable. Even in these fields he will encounter competitive claims.

The old idea of competition as an original law of nature, ordained under evolution to work out the survival of the fittest and suppress inferior forms in every department of nature by its unimpeded action, has long ceased to receive acceptance in the domain to which ethical principles apply. The advocates of the *laissez-faire* principle in industrial competition during the early part of the 19th cent. professed to deduce their views from Adam Smith's doctrine of natural liberty. Adam Smith, however, had no experience or conception of the factory system; his efforts were directed to the removal of the disabilities which hampered trade and labour in his day. He advocated liberty, opportunity, education, freedom of enterprise, and he held that enlightened self-interest would in such circumstances work out happier and more prosperous economic conditions than those which the restrictions of his time permitted. It was a perversion of his doctrine of economic freedom to apply it to the defence of a system which enslaved children for the purpose of obtaining cheap labour. What constituted freedom to the children and women whose lives were worn out by the toil undergone in the mills before factory legislation became effective? The moral sense revolts at this interpretation of competition as an economic principle working for the common good.

It is in the *conditions* of life that ethics finds scope for its action, and the modification of these conditions is the task for religious and moral influences. In some form or other competition

will ultimately appear, unless, as already explained, monopoly or arbitrary authority excludes it. Ethics and economics join hands in the solution of practical social problems. Moral motives and principles should operate to modify unfavourable conditions and to mould voluntary conduct by the dictates of nobler sentiments, but they do not suspend economic laws although they alter the circumstances in which the economic action takes place. Ethical principles are imperative; they enforce duties the performance of which alters human conditions. Economic laws are statements of cause and effect; they indicate what results will follow from the combined action of certain forces. There is no discord and no conflict between the ethical and the economic; rather they act, as it were, on different planes.

The mistakes of the *laissez-faire* school with regard to competition arose out of their interpretation of its nature; they assumed that it was imperative and just in the circumstances existing, but neither authority nor justice appertains to economic laws any more than to the law of gravitation; they are the attributes of ethical motives to conduct. It is for man to do what is just in ameliorating the conditions in which his less fortunate fellow-creatures exist. Economic consequences will ensue from existing conditions whatever they may be, and competitive action is a form of economic activity which is unavoidable in modern industrial methods and conditions.

LITERATURE.—Every important work on general Economics makes reference to competition. The following may be consulted with advantage: Adam Smith, *Wealth of Nations*, 1776; D. Ricardo, *Political Economy*², 1819; John Stuart Mill, *Principles of Pol. Econ.* 1848, new ed. 1909; J. E. Cairnes, *Leading Principles of Pol. Econ.* 1874; W. Stanley Jevons, *Theory of Pol. Econ.* 1879; Alfred Marshall, *Principles of Economics*³, 1907, *Some Aspects of Competition*, 1890; Henry Sidgwick, *Principles of Pol. Econ.* 1883; E. R. A. Seligman, *Principles of Economics*, 1907. It will be seen how gradually the need for regulations and restraints has come to be recognized in order to render the operation of competition equitable and salutary.

G. ARMITAGE-SMITH.

COMPLACENCE (Biblical).—This term is represented by EV 'good pleasure' (*εὐδοκία*, Lk 2¹⁴, cf. 12³², Mt 3¹⁷, Eph 1⁵⁻⁹). Cf. Milton (*Par. Lost*, iii. 276):

'O thou
My sole complacence!'

In the Bible, complacence is a Divine as well as a human attribute. As a Divine attribute, its meaning and moral worth can best be seen by a consideration of the character of the persons with whom God is complacent or well pleased, and also of the ethical ends or purposes upon which the Divine complacence or good will is set.

1. In the OT.—In the OT the Divine complacence rests upon moral and spiritual character. The soul of Jahweh is well pleased with His servant, described in Is 42¹⁻⁴ as spiritual, gentle, modest, and courageous in the pursuit of moral ends. In the prophets generally the complacence of Jahweh rests upon moral character, especially upon the virtues of justice, kindness, and humility (cf. Mic 6⁸), and not upon acts of ritual service. In the Psalter, Jahweh is represented as delighting not in the strength of a horse, as taking no pleasure in the legs of a man, but as taking pleasure in them that fear Him and hope in His mercy (Ps 147^{10, 11}). In the Law of Holiness [H], Jahweh is pleased with sacrifices that are without blemish (Lv 22¹⁹), but probably He is pleased with them only as symbolic of the complete and perfect devotion of the worshipper's heart.

2. In the NT.—In the NT the Divine complacence is represented as resting pre-eminently upon Jesus Christ. At the Baptism (Mt 3¹⁷) and on the Mount of Transfiguration (17⁵) a voice from above declares that the Divine complacence rests upon Him. Then it is declared to rest upon

Him as the person in whom the ideal features of Jahweh's servant described in Is 42¹⁻⁴ are fully realized (Mt 12¹⁸). With Jesus, as realizing in His character gentleness, humility, and courage, and as the moral hope of men, God is pre-eminently well-pleased.

But at the same time the Divine complacence is said in the NT to rest upon men who by faith attain to Christlike elements of character. In such, faith is an essential condition of receiving the Divine complacence. 'Without faith it is impossible to please God' (He 11⁶, cf. 10³⁸). Then the Divine complacence rests upon the soul that serves Christ in a life of righteousness, peaceableness, and joy (Ro 14¹⁸); and also upon acts of generous brotherly kindness (He 13¹⁶).

The OT and NT are at one in exhibiting the Divine complacence as resting upon moral character or righteousness, and upon that alone. This righteousness, it may be well to point out, is not a righteousness divorced from religion. Jesus is the beloved Son of God; the ideal servant of Jahweh has the Divine Spirit put upon him; and men in general with whom God is well pleased have a righteousness which is received by faith and from the Holy Spirit. Not apart from God does any one enjoy the Divine complacence.

3. Complacence as the final good will or eternal good pleasure of God.—Cf. Baxter, *Cath. Theol.* i. 1, 8, 'As God's efficient will causeth the thing willed, so His final will or complacence supporteth the pleasing thing in being.' An example of this usage is found in Lk 12³², where Jesus tells His disciples not to fear, for it is the Father's good pleasure to give them the kingdom; another example is found in Eph 1⁵ (cf. 1³), where it is according to the good pleasure of God that believers have been chosen in Christ to be holy and blameless and to be adopted as sons. In these passages the eternal complacence or good pleasure is directed to the creation of moral ends—holy persons and a Divine kingdom.

The idea is really the same here as in the two preceding sections, but it is now viewed *sub specie æternitatis*. The Divine complacence is in itself and eternally upon holy ends, whereas in the former sections it is upon those ends as realized in actual holy character.

4. Value and validity of the idea.—The value of the idea is that it shows the God of the Bible to be a God who from eternity to eternity and through all the days of man delights in holiness, and finds His joy in a kingdom of holy persons. A God with such a complacence is an absolutely holy, moral Being. The validity of the idea scarcely belongs to this article, but it may be said that, where God is really acknowledged as one whose sole complacence is in the eternal Son of God and in those made sons by faith, there will be moral and spiritual results which show the idea to be valid and true.

Terms under which the idea may be considered:—in OT *יָדוֹן*, *דָּוָה*; in NT *εὐδοκία*, *εὐδοκία*, *εὐδοκία*.

D. RUSSELL SCOTT.

COMPLETENESS.—Completeness in relation to religion may be taken to apply to the conditions of attainment of various stages on the road towards perfection (g.v.), though, it is true, completeness in its full sense is attained only when the triumph over the lower self-will is accomplished and there is final union with the Divine will. But there are various stages of struggle, and the toilsome climb upward has long ago been compared to the ascent of a ladder, every rung of which marks a completed victory over some temptations and allurements of the sinful world that would drag the soul down to perdition. Completeness is a quality or state of being which must ever enter

into our ideals, for only in the perfection of the parts can the harmony of the whole be assured.

Pythagoras held that the cosmos is built on number, and modern science deals with atomic numbers and vibrations, concord and dissonance, periods and spaces. Number demonstrably enters largely into the constitution of the Universe. Completeness in the sacred writings is generally indicated by the numbers 3, 7, and 12, and these show completion of certain elements, periods, or successive stages. Three is the perfect number; seven is the sacred, or complete scale number; twelve is the number of the manifest being, and signifies fullness. These numbers constantly appear throughout the Gospels. For instance, when Jesus was 'twelve years' old, 'after three days' He was taken in the temple disputing with the doctors (Lk 2:42, 46). Again, though often something happens on the sixth day, the climax is on the seventh, six being a number signifying preparation. Thus, 'after six days' (Mt 17) Jesus takes three disciples up a mountain and is transfigured before them on the seventh day. The number twelve appears in the important complete categories of the tribes, the disciples, the months of the year, and the signs of the zodiac. Nine, being the square of three, is a perfect number for completion on the three lower planes of being, i.e. the lower mental, the emotional, and the physical. Thus we have the nine 'fruits of the spirit' mentioned in Gal 5:22. Nine is the sacred number of being and becoming. Ten—the seven and the three—is a complete number, having relation to creative forces. There are ten Sephiroth, ten Prāṇāptis, or Lords of Being.

Completeness, therefore, is both qualitative and quantitative, and we must not lose sight of either aspect in considering it. Both aspects relate to ideals, and, as applied to human nature, perfection is not reached until the state of fullness is accomplished in both. St. Paul writes of attaining 'unto a full-grown man, unto the measure of the stature of the fulness of Christ' (Eph 4:13). This would indicate the soul's perfection and fitness to enter the Kingdom of Heaven.

There are two sayings of Jesus—one preserved by Clement of Alexandria (*Strom.* iii. 18), and the other to be found in the Second Epistle of Clement of Rome (ch. 12), and given as a quotation from the *Gospel of the Egyptians*—which express the soul's ultimate completeness in Christ. The first is: 'When ye trample on the garment of shame, and when the two shall be one, and the male with the female, neither male nor female.' The meaning of this may be rendered: 'When ye have cast off the lower vehicle of the senses; and when the emotions, having been raised and united with the reason, are one with it; and when the twain, female-male, the double sex nature, have transcended their former aspects and have become one, then shall the Christ consciousness be attained. When the process is completed, the asexual condition is completed on the physical plane.'

The second saying is: 'When two shall be one, and that which is without as that which is within, and the male with the female, neither male nor female.' The meaning is similar to that of the first. The lower and higher natures of man become one when the lower, or the without, becomes sufficiently purified to be united to the within, or Christ-body. 'That which God hath joined together let not man put asunder.' The natures male-female, female-male, are so that neither is before or after the other. But more than this; it has united the sexes, and so become sex-less. A paradox! but a paradox that is perfectly intelligible to those who read not after the letter, but with the eye of the Spirit. In the completed man the condition of sex separateness is outgrown; 'there can be neither bond nor free, there can be no male and female; for ye are all one man in Christ Jesus' (Gal 3:28).

COMPROMISE.—See **ETHICS**.

COMPURGATION.—This was a primitive legal process whereby a man accused in the courts, or making an accusation against another there, established his case by summoning his kindred and friends to testify on his behalf, not as to the facts of the case, but, in theory at least, as to his character. These were called his *compurga-*

tors, and took oath on his behalf; and the burden of their testimony was that the accused, for instance, was not an outlaw or a 'kinless loon,' but a regular member of society such as it was. In theory, the number of compurgators a man called was strictly regulated according to the offence, from one to thirty. Thus twenty-four had to be produced by a man accused of stealing a cow (Cosmo Innes, *Scotch Legal Antiquities*, 1872, p. 211). In the time of David I. it was becoming optional for the accused, or the defender, to accept wager of battle or to clear himself by purgation; and in the *Ancient Laws and Customs of the Burghs of Scotland* (i. 11), we find careful provision made: 'Si burgensibus calumpniatus preterierit etatem pugnandi et hoc essonaverit in sua responsione non pugnabit sed juramento xii. talium qualis ipse fuerit se purgabit' (cf. also *Leges Burgorum*, xxvi. 107; and *Fragmenta Collecta*, viii. 28). In some cases the oaths of eleven, in others of six, compurgators were sufficient. These compurgators did not give evidence, but simply vouched for the status of the accused or accuser. In practice, compurgation resolved itself frequently into little more than what Bagehot (*Physics and Politics*, 1887) and, after him, A. J. Balfour, have called the refinement of counting heads instead of breaking them. The greater *tourbe*—the more numerous body of compurgators—carried the day, as E. W. Robertson says in his *Scotland under her Early Kings*, 1862 (i. 267). But, if a poor man could produce even one respectable witness as his compurgator, in an accusation against oppression, his plea became the king's plea, and had all the prerogative privileges attached to a royal suit. This was, however, only in the later days, when 'the king's justice' and 'the king's peace' were setting aside and superseding local and tribal justice. To the 'kinless loon,' unable to bring forward any respectable witness to vouch for him, the legal alternative was the ordeal or the wager of battle. The latter, however, was available practically only against equals. Against superiors it was not available unless, indeed, the superior chose to provide a proxy to do battle for him. The Burgh Laws (*Burghs*, i. 8) carefully appreciate the dignity of the burgess of a Royal Burgh: 'Burgensis domini regis potest habere duellum de burgense abbatis, prioris, comitis vel buronis, sed non e converso.' On the other hand, except on the supposition of the possibility of bribing the clergy, who generally superintended the ordeal, which A. Lang suggests (*History of Scotland*, 1900, i. 149), there was little hope for the outlaw on trial by this method.

Upon these primitive legal processes, which, though by no means exclusively Celtic in origin, survived longer among Celtic peoples, the growing power of the kings introduced the system which ultimately developed into trial by jury. See also Cosmo Innes, *Scotland in the Middle Ages*, 1860.

COMTISM.—See **POSITIVISM**.

CONCENTRATION AND CONTEMPLATION.—There comes a time in the life of every soul when mental concentration becomes necessary to spiritual growth. For long periods mobility of thought and rapid changes from one object of perception to another are essential to mental development. The mind must constantly take in fresh ideas and contemplate them on all sides, bringing into play, at the same time, the faculties of analysis, judgment, synthesis, etc. Then, as the mental powers are perfected, the Ego becomes gradually aware of a distinction between

itself and its mental instrument, and this leads it to commence a course of mind-training, and the bringing of all the mental activities into subjection to the will. This regulative energy first takes the course of dismissing some subjects of thought and choosing others by direct exercise of volition, in this way changing states of consciousness by an effort proceeding from a higher mental plane than that of ordinary thought. By this means, objectionable thinking is dismissed, and worry, anxiety, grief, etc., are gradually surmounted. Concentration becomes possible as mental control becomes established. The will is then able to fix the attention, momentarily at first, on a particular idea, singled out from other ideas, and to keep it in view for a time. To do this effectually all streams of thought must be stopped, and the one idea kept steadily in mind. The difficulty of controlling the thoughts has always been recognized. Said Arjuna, 'For the mind is verily restless, O Krishna; it is impetuous, strong, and difficult to bend. I deem it as hard to curb as the wind.' To this Krishna replied, 'It may be curbed by constant practice and by indifference (or dispassion)' (*Bhagavad-Gita*, vi. 34, 35).

Agos ago, the deepest thinkers of the race advocated the practice of concentration as necessary in order to allow of the influx of spiritual energy and the raising of the soul to God. In India, the state of consciousness brought about by the successful practice of concentration is known as *yoga*. The meaning of *yoga* (g.v.) is usually given as 'union,' or the merging of the human will into the Divine will. In practical *yoga* the signification is taken differently. According to Patañjali:

'Concentration, or *yoga*, is the hindering of the modifications of the thinking principle. At the time of concentration the soul abides in the state of a spectator without a spectacle. At other times than that of concentration, the soul is in the same form as the modification of the mind. The modifications of the mind are of five kinds, and they are either painful or not painful; they are: Correct Cognition, Misconception, Fancy, Sleep, and Memory. . . . The hindering of the modifications of the mind, already referred to, is to be effected by means of Exercise and Dispassion. Exercise is the uninterrupted, or repeated, effort that the mind shall remain in its unmoved state. This exercise is a firm position observed out of regard for the end in view, and perseveringly adhered to for a long time without intermission. Dispassion is the having overcome one's desires. Dispassion, carried to the utmost, is indifference regarding all else than soul' (W. Q. Judge, *Yoga Aphorisms of Patañjali*, pp. 1-6).

In this Hindu system of *rāja yoga*, concentration is directed to correct the tendency of the mind to diffuseness, and obtain mental one-pointedness, or the fixing of the attention upon one idea kept steadily in view to the exclusion of other ideas. The object is not to cease from thought, but to control and direct the mental mechanism, and make it subservient to the higher will or intelligence which is above and separate from it. The observances which are conducive to concentration are, according to Patañjali, eight in number: Forbearance from wrong speaking or doing; Religious, or purificatory, observances; Suitable Postures; Suppression or Regulation of the Breath; Restraint over the Senses; Attention; Contemplation; and Profound Meditation. This last, called *samādhi* (g.v.), is understood so to raise the consciousness that high spiritual knowledge flows into the soul, and the conception is attained of unity with the All and the One. The posture in concentration must be steady and pleasant: what would suit a Hindu would not suit a Westerner. The breathing exercises, in exhalation, inhalation, and retention, are for the steadying of the life forces, and the production of certain physiological, followed by psychical, effects in the brain. In the system of Patañjali there are directions for performing concentration in regard to many ob-

jects, with a view to acquiring enlarged knowledge, faculties, and powers.

Among the Neo-Platonists, concentration was understood and practised, though not, perhaps, with the thoroughness of the Hindu *yogis*. Complete self-forgetfulness and union with the Divine nature were sought. Plotinus observes to Flaccus:

'The wise man recognizes the idea of God within him. This he develops by withdrawal into the Holy Place of his own soul. He who does not understand how the soul contains the Beautiful within itself seeks to realize the beauty without, by laborious production. His aim should rather be to concentrate and simplify, and so to expand his being; instead of going out into the manifold, to forsake it for the One, and so to float upwards towards the divine fount of being whose stream flows within him' (quoted by Max Müller in *Theosophy*, etc., 1893, p. 432).

The Mystics of the Middle Ages knew the value of concentration. Peter Poiret in his *Divine Economy* (p. 93) wrote:

'The understanding, to pass into the order of faith, must have these two conditions: the first, that it be empty, and shut to all ideas of worldly things, both heavenly and earthly; the second, that it keep itself open before God after an indeterminate and general manner, not particularly fixing upon anything. This being supposed, with the faith of desire aforementioned, God causes to rise in the soul His divine light, which is His eternal substantial word, which does Himself modify (if I may say so), or rather fills and quickens the understanding of the soul and enlightens it as He pleases.'

At the beginning of last century J. G. Fichte gave his experience:

'All inward spiritual energy appears, in immediate consciousness, as a concentration, comprehension, and contraction of the otherwise distracted thought into one point, and as a persistence in this one point, in opposition to the constant natural effort to throw off this concentration, and to become once more diffused abroad. Thus, I say, does all inward energy appear; and it is only in this concentration that man is independent, and feels himself to be independent. . . . In short, the original image of spiritual independence in consciousness is an ever self-forming and vitally persistent geometric point; just as the original image of dependence and of spiritual nonentity is an indefinitely outspreading surface. Independence draws the world into an apex; dependence spreads it out into a flat extended plain. In the former condition only is there power, and the consciousness of power; and hence in it only is a powerful and energetic comprehension and penetration of the world possible' (*Way towards the Blessed Life*, Eng. tr., 1849, p. 127).

Coming to modern times, we find in that remarkable work by Henry Wood, *Ideal Suggestion*, the following (abridged from pp. 60-70):

'If one who has never made any systematic effort to lift and control the thought-forces will, for a single month, earnestly pursue the course here suggested (of concentrating the mind on grand ideals), he will be surprised and delighted at the result, and nothing will induce him to go back to careless, aimless, and superficial thinking. When one goes into the silent sanctuary of the inner temple of soul to commune and aspire, the spiritual hearing becomes delicately sensitive, so that the "still small voice" is audible, the tumultuous waves of external sense are hushed, and there is a great calm. The ego gradually becomes conscious that it is face to face with the Divine Presence, that mighty, healing, loving, Fatherly life which is nearer to us than we are to ourselves.'

So important is it to have the direct testimony of experience in concentration that we add that of the deep-feeling and deep-thinking writer Edward Carpenter, who, in his *Art of Creation* (1904, p. 208 ff.), writes:

'The Self is entering into relation with the Body. For, that the individual should conceive and know himself . . . as identified and continuous with the Eternal Self of which his body is a manifestation, is indeed to begin a new life and to enter a hitherto undreamed world of possibilities. . . . To still the brain, and feel, feel, feel our identity with that deepest being within us, is the first thing. There in that union, in that identity, all the sins and errors of the actual world are done away. . . . Remaining there in silence as long as may be, then out of that state will inevitably spring a wave of conscious feeling—of joy, courage, love, expansion, or whatever it may be—a feeling not foreign or fabricated or ephemeral, but deeply rooted and expressive of our real life. Then holding on to that root-idea, that feeling, that emotion, that desire, whatever it may be, confident in its organic rightness . . . perfectly naturally and inevitably out of it will flow certain forms of Thought. . . . Long and persevering must the practice and exercise be, by which power to direct thought and feeling may be attained, and by which the sense of identity with the universal Self may be established.'

It will be seen, from the uniform testimony of deep religious thinkers of all ages of the world, that concentration is found to be a necessary step to the complete subjugation of the lower nature to

the higher. It is also necessary to the development of higher faculties, called intuitional or spiritual, because they are superior to and more illuminating than the ordinary human faculties. But it must be remembered that the exercise of intuitional faculty may have a spiritual result only, of incalculable value to the recipient, but incommunicable to others because inexpressible in terms of common experience.

G. A. GASKELL.

CONCEPT (logical).—The logical concept consists of certain features in cognition which correspond to what Parmenides required of 'being'—that it should be 'uncreated and indestructible, alone, complete, immovable, and without end'; and also to what Plato required of each and all of the several 'forms' of being—that they should be single, eternal, and unchangeable. Both these thinkers professed to be describing the object of thought.

'You cannot find thought without something that is, to which it is betrothed' (Parmenides). 'Knowledge is relative to being . . . being is the sphere . . . of knowledge' (Plato, *Rep.* 477).

On the other hand, the concept corresponds to certain ideals in the use of words, on which the value of words in social converse, and as instruments of thought, depends; including definiteness and fixity of meaning. Throughout the history of Logic, the theory of the concept has been burdened with difficulties pressed on it by theories as to being; and has, on the other hand, been tempted to borrow types of solution proper only to easier problems of verbal usage. It has been dominated in turn by the theory of Universals and by that of Terms. The strictly logical problem, however, is to describe a certain function of cognitive process, whatever may be the metaphysical value of the objects, and to fix ideas of internal structure for that process, however much or little may be hoped from the usage of words in sustaining them.

1. Primary function of concept.—The primary function of the concept is thus described by Kant:

'Human knowledge takes place by means of ideas which make what is common to many things its ground—we cognize things only by means of attributes—all thought is nothing but conception by means of attributes' (*Introd. to Logic*, § 8).

The concept is thus primarily 'the predicate of possible judgments,' and so is 'contained in an indefinite number of different possible ideas, as the element common to all.' By virtue of this qualification, it subserves a secondary use in bringing this indefinite number of possible ideas within the area of possible subjects for predication, or, rather, in expanding this area beyond the confines of merely perceptual experience and imagery. As its organ in language, it uses the General Term or Universal Word, which has a possible, if not an actual, plurality in denotation.

'The Universal Word is that of which the signification is sufficiently to be understood without its ceasing to be common to several things, inasmuch as any hindrance to its being common is not that it cannot be so understood' (Averroes, *Kitaab-al-Najaf at Al-Mantiq*, Rome, 1593, p. 1; Vattier's tr. *La Logique*, 1668, § 11).

Although, as against the earlier modern doctrine—of Locke, Wolff, and Hamilton—that Judgment consists in a comparison of concepts, the judgment claims in our current logic to be the real unit of thought, and, although conceptual function can be realized only in the act of judgment, yet judgment has a distinctive function of its own: while for the sake of judgment, and at the moment of judgment, the ideational content, the content considered as 'incomplex' (Aristotle), must reach an ideal distinct from and only ancillary to the ideal of the judgment as a complete whole. The doctrine, more properly psychological, that the concept is created by judgment must be reconciled with an antithetical postulate in Logic, that 'the possibility of perfect judgments is determined by the

extent to which the raw material of all human ideas has taken permanent form in concepts' (Sigwart, *Logic*, § 40). And a description of the ideals or norms of the conceptual process takes a place preliminary to the normative theory of judgment.

The form which Nominalist Logic takes in this department is a doctrine of Terms—the words or phrases which constitute the predicative half of a proposition, or take the place of its subject. The doctrine of Terms has advantages over that of the concept as such, for purposes of clear teaching or for reference in scientific discussion. By classifying Terms into Unilateral and Bilateral, Singular and General, Concrete and Abstract, Attributive, Distributive and Collective, Absolute and Relative, Positive, Privative, and Negative, it calls attention to widely different ways in which the things and events about which we think have been manipulated by thought, previously to being dealt with in special judgments under present consideration. By the distinction between Denotation and conventional Connotation, and by the dependent distinction between Verbal Propositions and Real, it prepares the way for canons of consistency in the use of Terms, and of the assumption of self-evidence, or the requirement of proof, for propositions in the course of debate or of scientific instruction. These doctrines are able to be more definite than the corresponding doctrines of Conceptual Logic, though they emphasize too exclusively the formation of those special concepts which are already current in minds other than the individual thinking mind; and also the occasion and demand for proof which arise adventitiously in debate or teaching rather than from the individual's logical conscience. A special emphasis of that kind is needed only to express the individual's logical solicitude that his own concepts shall be shared, or shall be capable of being shared, by fellow-thinkers. 'In the construction of logical concepts, our aim is to establish one mode of arranging their manifold ideal contents for all thinking beings' (Sigwart, § 40). Community of concepts brings, not indeed the possibility itself of perfect judgments, but the possibility that these judgments may display the ostensive hall-mark of their perfectness, namely, 'universal validity.' For the universally valid is the 'necessary,' and the necessary 'corresponds with the existent.' Nevertheless, it is by a 'subjective' activity, and in the individual mind, that concepts must be initiated.

2. Negative rule of the concept.—As a negative qualification for the conceptual function, the ideational content, or distinctive outlook, of a cognition must be made independent of any one defined time or place. Parallel with the psychological description of an 'idea,' that it 'disengages itself from the original intuition with its spatial and temporal connexions' (Sigwart, § 7), the logical description of a predicate common to many possible judgments requires that a perceived or 'imaged' nature shall be 'freed from the individualizing conditions proper to space and time' (Aquinas, *de Universalibus*, Tract. 1). We must not, however, assume, with Aquinas, that it is quantitative limitation of matter, or, with Duns Scotus, that it is idiosyncrasy as a creative form, or that it is any other 'condition proper to space and time' except sheer particularity within the system of space and time itself, which is the negative of the conceptual principle. Otherwise, the natural course of development for the concept would be side-tracked in the Aristotelian ontology of matter, form, and substance, or in the modern epistemology of thing and person. Perceptual and imaged content lies at the mercy of a point and a moment in the Herakleitan flux, and the function of the concept is to transcend that point and moment. It may well be that the 'nature' which is freed from per-

ceptual limitations is not necessarily the nature of an individual substance, as Aristotle conceived this, whether individualized by matter or by idiosyncrasy. It may be a quality, a quantity, or an event—anything determinate; for example, *It rains*. The nature may, indeed, include individuality within itself, and we may form the concept of an individual thing or person, predicable of many particular moments or places of its existence: *This is the forest primeval, Thou art the man*. Our conceptual faculty accepts from Perception and Imagination such forms of the momentary material as may have found their way there from the structure of Reality.

'Accident and Genus and Property and Definition [the Predicables] will always be in one of the Categories [the structural forms of Reality], since all propositions through these signify either what a thing is, or quality or quantity, or some other category' (Aristotle, *Top.* i. ch. 7, 103b, 10).

And, similarly, our conceptual faculty accepts, and does not itself undertake the function of, those epistemological forms which in modern philosophy replace the Aristotelian categories. The Kantian categories, or pure concepts of the Understanding, are 'conceptions of objects as such.' They make possible the objects which fall under the Aristotelian categories. The concept in the logical sense merely makes them possible also as predicates in a judgment.

'General Logic has to investigate, not the source of conceptions, not how they arise as presentations, but how, in thinking, given presentations become conceptions. It is all one whether these conceptions contain anything either taken from experience, or factitious, or taken from the nature of the understanding. Their logical origin consists in the act of reflection by which one presentation common to several objects takes on the form required for Judgment' (Kant, *Logic*, pt. i. § 5).

3. **Positive rule of the concept.**—As a positive qualification for the conceptual function, the ideational content must be 'posited as identical with itself' (Lotze, *Outlines of Logic*, Eng. tr. 1887, § 9), and discriminated from the perceptual or imaged content which shares with it the point and moment of intuition (cf. Lotze, *Logic*, § 11). The psychological law that an idea, besides its intrinsic characteristics, acquires through its past history a determinative influence on the course of intellection, 'a meaning,' is thus paralleled by the logical faculty of Abstraction. The faculty, however, is prophetic in its motive; it aims at future judgments. But it does not, like the psychological law, necessarily contain historical reference, and therefore does not need to be initiated by Comparison. The theory that judgment consists of the comparison of concepts has naturally allied itself with a theory that conception consists of, or at least is based on, comparison of particular instances, and that the concept is a 'notion of resemblance' (Hamilton, *Lectures*, 1859-60, ii. 287, iii. 117). And neither Empiricism in Logic nor reformed Conceptualism has repudiated the latter theory with the same consistency as the former (J. S. Mill, *Examination of Hamilton*, 1865, chs. xvii. and xviii.). As a psychological or genetic fact, plurality of instances in experience gives an occasion and stimulus to the faculty of Abstraction, especially when reinforced by the application of a common name, and by the contrast of individual differences.

'It is the different combinations of attributes in different things, and their changeableness in one continuously intuited object, which first impels us to disengage them from one another, and makes us able to think of each independently; and it is the repetition of action which first impels us to express its permanent ground by an adjective' (Sigwart, § 6, 2).

And, under a methodological rule, comparison of instances may be made a chosen means to abstraction, as it was consciously by Socrates, and as it is instinctively by every one in learning the meaning of words.

'The notion lies so concealed among foreign things, that one may easily mistake in disengaging it therefrom . . . but the

labour is greatly facilitated if we compare instances together, as thereby we come to see what they have in common, and what circumstances may be omitted' (Wolff, *Logic*, 1712, Eng. tr. 1770, bk. i. § 9).

But into the strictly logical ideal of a predicate comparison enters only if it means the same act as Discrimination. It may, however, be part of a special fact predicated. In *Red is a colour*, the fact predicated is general unanalyzable resemblance to other colours—blue, yellow, and the rest—where these have been compared. General resemblance is one kind among other kinds of import in propositions, but not the universal import (Mill, *Logic*, 1843, bk. i. ch. 5).

4. **Regulation of simple universals.**—These negative and positive conditions may be fulfilled either by the simplest of our ideas, named First Universals by Lotze, or by ideas which contain several elements cohering or 'belonging together' on a plan. These latter are named by Lotze as more strictly Concepts.

In the case of the First Universals, identity must be sustained throughout a series of quantitative or qualitative variations, which are intrinsic to the mere presentation of the Universal, since without such variations there could be no consciousness. There must be simple identity throughout simple differences. Colour is identical throughout yellow, red, green, and blue; musical pitch, through bass, tenor, and soprano; loudness or warmth, through every degree of intensity; the linear, the enduring, the aggregative, through every magnitude in space, time, or numerical sum. Where, as in the case of loudness, the differences are quantitative, there must be abstraction of that sensible impressiveness which varies. But where, as in the case of colour and pitch, they are qualitative, we may suppose that the proper work of abstraction is done by a 'consciousness of resemblance' (Lotze, § 16); or by a logical *deus ex machina* in the form of a word, colour, pitch (Sigwart, § 41, 11); or that there is an unconscious 'pleonasm' in our perception of simple qualities, which, until it yields to scientific analysis and becomes conscious, leaves our idea 'confused' (Leibniz, *New Essays*, bk. iii. ch. iv. § 16). The abstraction in such cases is incomplete or implicit; but the function of the concept is realized, just as in fact and in analogical reasoning the resemblance between individual instances of a truth will do the work of a universal middle term. 'So far as you conceive the similarity of things you conceive something more, and the universality consists only in that' (Leibniz, bk. iv. ch. xvii.).

5. **Regulation of composite universals.**—When the unconscious 'pleonasm' of which Leibniz speaks becomes conscious, or when we abstract a conscious plurality, the composite concept contains, if not a plan of coherence, at least difference within its own content. Our faculty of Abstraction must maintain the composite identity, not merely through variations intrinsic to presentation, but through various textures of presentation. Without such variations in texture there could be consciousness, but no world. Some only, or all, of the elements of the composite may change: *coloured line*, through *red right line*, *yellow right line*, *blue curve*. Thus the concept furnishes a predicate, not merely for many possible simple judgments, but also for composite judgments, or for what Hamilton described as 'a fasciculus of judgments' not explicitly developed in thought (*Lectures*, iii. 117): *This is a line, and is coloured*. The several elements so realized are technically named 'marks' or 'attributes.'

The internal coherence which Lotze requires depends on general forms of relational existence or of the 'objective synthesis of apprehension,' such as those named 'categories' by Aristotle and

Kant respectively. They are interwoven with the composite material of our ideas in every degree of complexity, and may enter into a predicate either singly, for example a state, *I was asleep*, or as a plan of inter-related substances, states, activities, and modes, such as *I knew he thought I thought he thought I slept*. The logical value of a composite concept lies in the conscious identity of a relational scheme: the dependence of colour sensation on the muscular activity in tracing a line, the objective control of a knowing activity by a certain relational content of another person's thoughts. In Bacon's sentiment (*Essay* xliii.), *There is no excellent beauty that hath not some strangeness in the proportion*, the force is not merely that beauty has strangeness as well as proportion, but that the strangeness is in the proportion. If the scheme constitutes also a natural species, e.g. the interdependence of colour, consistence, weight, and certain chemical affinities and molecular susceptibilities—*metal*—it has scientific value as well. The symbolic expression to be chosen for the composite concept should therefore be, not such as $S = a + b + c$, but rather $S = f(a, b, c)$, and as relationships become clearly conscious, it might take on some specification of significance for f , such as $S = a(b^c \sin d)$ (Lotze, § 28).

6. Conscious realization of the function.—The concept, defined by its function and its ideal structure for the functional purpose, is not open to the reproaches made against Abstract Ideas by modern psychological Nominalists. Berkeley may have been conclusive as a psychologist, and certainly he was as a metaphysician, when he pointed out that we cannot perceive or imagine 'colour . . . which is neither red, nor blue, nor white, nor any other determinate colour'; or a triangle which is 'neither oblique nor rectangle, neither equilateral, equiangular, nor scalenon; but all and none of these at once'—'What more easy than for any one to look a little into his own thoughts, and there try whether he has, or can attain to have, an idea that shall correspond with' this description of 'the general idea of a triangle' (*Principles of Knowledge*, 1710, *Intro.*, §§ 8, 13). Hamilton and Mansel admit psychologically that the concept 'cannot in itself be depicted to sense or imagination' (Mansel, *Prolegomena Logica*², 1860, p. 15), and 'cannot be realized in thought at all' except it be 'applied to an object' (Hamilton, iii. 135). But for logic it is sufficient that the abstract idea can be realized as a 'mode of understanding' the contents of perception and imagination, and even can be realized only in relation to such contents: *This blue is a colour; This right-angled figure is a triangle*. When the concept is spoken of as an Essence, it is obviously with a reference to the concrete.

'The Essential is that whereof the content, on the one hand, is understood and grasped in the mind, and the thing to which it is essential, on the other, along with it at the same time; while the thing cannot be understood without the content being previously understood as belonging to it' (Avicenna, *op. cit.* p. 2; Vattier, § 1.1).

And Lotze would prefer to use the name 'concept' itself only when a content, or, as he himself describes it, 'the composite idea which we think as a connected whole,' is in explicit relation to the 'thing understood,' or 'composite matter.'

'I speak of a composite matter (s) as conceived . . . when it is accompanied by the thought of a Universal (S), which contains the condition and ground of the co-existence of all its marks and of the form of their connection' (*Logic*, § 26).

7. Secondary function.—This strictly relational significance of the concept, however, is only a secondary value, which it acquires when, instead of its primary use as a predicate, it takes on a secondary use as defining or replacing a subject, or as a constituent of a subject. *Mars is red* makes possible *The red planet keeps the first watch of the night*. *This band of colour is red* makes possible *Red lies at an extreme of the spectrum*. The merely attributive term becomes a concrete or an abstract term; it acquires the function which

in old logical technique is called *suppositio*. The concept itself becomes, in the phraseology of conceptual logicians, 'representative' of the merely perceptual or imaged subject which it defines or replaces. The concept is justified in assuming this secondary function under a postulate of Aristotle's, resembling, though not equivalent to, the *dictum de omni*: 'whenever anything is predicated as of a subject [that is, as the nature of a subject], whatever may be asserted of that predicate may be asserted of the subject' (*Categories* ch. 3, 16, 10).

In Plato's parable of the duncheon (*Rep.* bk. vii.), where, of course, the Aristotelian value for the perceptual individual as primary subject is not allowed, a prisoner who has returned from seeing the sunlit glory of conceptual realities will think and speak of these, rather than of the perceptual shadows as they flicker on the cavern walls. Through such parables Plato 'imported into the schools the portent of Realist philosophy' (Milton, *de Idea Platonica*). But it is especially the secondary function of the concept that tempts logical theory into the controversy as to Universals. So long as perceptual things and events are subjects, and concepts mere predicates, we need claim actuality only for the former, and validity only for the latter; and, whether we speak of such predicates as eternal 'forms,' with Plato, or as *sermones*, with Abelard, we are still logically in touch with reality through our subjects; and the 'real significance' of our total judgment, the ideational content considered as 'complex' (Aristotle), is the same. But if the concept takes the place of a perceptual or imaged subject, as it does in all Abstract Science, the significance of the judgment may be altered. Is abstract science still to be called 'true,' or can it be only 'valid'? In Aristotle's doctrine of Predicables, the Species stands as subject, or at least defines the individual who is implicit subject, to other kinds of predicate. And from this view of it the problem arises which Porphyry formulated:

'I shall omit to speak of genera and species as to whether they subsist in the nature of things or in mere conceptions only; whether, if subsistent, they are bodies or incorporeal; and whether they are separate from, or in and along with, perceptual things' (*Intro.* to *Categories*, l. 2).

Leaving aside, like Porphyry, the ontology and epistemology of the problem, the following answer may be offered for guidance in Methodology. The Platonic world of Ideas has mere validity, and not, like things and events, actual existence or occurrence (Lotze, bk. iii. ch. 2). It can in thought replace actuality, through only the unalterable conditions of our intuitive experience, as it does in 'a priori' science, or through belief narrowly so called in contrast with knowledge, as it does in empirical science (see art. BELIEF [logical]). The belief in genera and species rescues our conceptual faculty from the reproach of being either purposeless or arbitrary in our dealings with actuality, and gives practical seriousness to abstract truth. In such belief we expect the indefinitely frequent recurrence of perceptual subjects covered by a given conceptual description. A system of Jurisprudence assumes that theft and breach of contract will often come before our magistrates, though any particular heinousness of intention or seriousness of damage may be unique. Biology assumes the human organism, but not definite idiosyncrasies or monstrosities; Chemistry, the combination of elements in fixed proportions and groups, but not in fixed absolute quantities; Mensuration, definite shapes, but not sizes. There are forms of dimension, natural kinds, substances, and modes of event (Venn, *Emp. Logic*, 1889, ch. iii. § 4). The belief in them must, however, submit to regulative canons of Methodology, and must adapt itself to different spheres of fact and of purpose.

'All species are not compossible in the Universe, great as it is, and that too, not only in relation to things which exist contemporaneously, but also in relation to the whole series of things' (Leibniz, *New Essays*, bk. iii. ch. 6, § 12).

8. **Goal of development.**—The conceptual predicates of perceptual judgments and the conceptual subjects of abstract truth develop into larger systems, which register the achieved progress of knowledge and mark out the ideational areas within which both subject and predicate of further knowledge are to be sought. Examples are: atomic weight, acoustic vibration, plant fertilization, human nature, mercantile credit, political administration. Could knowledge unite all such as these in one supreme organization, it would have reached the 'Good' of Plato, and the 'All' of Parmenides.

9. **Formal perfections.**—(a) *Independent.*—The concept as a purely logical topic was especially prominent from the time of Descartes to that of Wolff. The ideal presented was, according to Wolff, as follows:

'A notion is clear when sufficient to distinguish by it the object to which it belongs . . . distinct, when we can repeat it to another or represent to ourselves its distinguishing marks separately; . . . complete, when the marks assigned are sufficient to distinguish the things at all times from other things; . . . adequate, if we have distinct notions also of the characteristics themselves' (*Logica*, ch. i. §§ 9-16, cf. *Philosophia Rationalis*, 1728, pt. i. § 2, ch. iii.). 'Descartes proceeded no farther than to clear and distinct ideas; Leibniz added adequacy. . . I thought it needful also to distinguish notions into complete and incomplete' (*Logica*, *Introductio*).

(b) *Relational.*—A further logical ideal prescribes conscious relations between our several concepts, which fit them to co-operate in determining any conceptual subject. This comes through the arrangement of concepts in a series proceeding from the 'category' or complex of categories as *summum genus* to complete description short of adding place and time, the *infima species*: *Substance, cube, cube of gold, cube of pure gold, cube of pure gold with sides measuring 1 cm.* The members of such a series, while they approach the *infima species*, must, as the price of their adequacy, sacrifice width of the sphere for their co-operative use. The law is that the intension and extension of a concept must stand in inverse relation to each other. The extension meant by such a law is not, of course, a number of individuals, or what Mill describes as 'an aggregate of objects possessing the attributes included in the concept' (*Exam.* p. 304), the denotation or application of its name. The name 'coin' applies to the output of the mints of the world; its concept co-operates in the function of description with the varied standards of material, design, and value.

That the 'predicamental line,' as early logicians called it, the deepening of intensive distinctiveness in a series of concepts, shall be finite is to be secured, not as they secured it, through Realist ontology (Aldrich, ed. Mansel¹, 1862, App. A), but by methodological canons of belief. Geometry closes its description of its subjects with such details as the equality and inequality of sides or angles in a triangle, Jurisprudence with the terms of indictment for a crime. Beyond the *infima species*, Science passes into mere Information. And that the sphere of varieties open to a genus shall be finite is secured by our limits of sensibility, as in the case of colours; by our faculty of intuition, as in triangles; by artificial standards, as in measurements; by experience and fact, as in races of mankind; or by our own practical purposes, as in virtues or legal contracts.

10. **Formal discipline.**—The rules for formally perfecting the concept through its relationships come under the topics Division and Definition. Those of Division require that each step of selection for a co-operative series shall be made in full view of the area of possibilities: we must

range under genera their species. Those of Definition require that the step itself shall be fully conscious: every open possibility of determinative accretion to the genus shall be closed except one, the Difference.

Cf. also the following article.

LITERATURE.—This is co-extensive with systems of Logic. Monographs are chiefly of metaphysical, psychological, or scientific interest. As recent representative books may be mentioned, in addition to those quoted above and those quoted under art. CONCEPTUALISM, the following: Joseph, *Introductio ad Logicam* (Aristotelian), Oxford, 1906; Peillaube, *Théorie des concepts* (Neo-scholastic), Paris, 1895; Janet and Séailles, *Hist. de la philosophie*, Paris, 1887, pt. i. § 3, chs. 1-3; Bain, *Mental Science*, 1884, App. A; and the *Logics* of Veitch (1885), Ueberweg (1868), Keynes² (1887), Wundt (1880-83), Erdmann (Eng. tr. 1896), Bosanquet (1888), and Venn³ (1894).

J. BROUGH.

CONCEPTION (psychological).—1. Definition.

—In knowledge of a class as opposed to its instances, of a totality as opposed to its parts, or of an individual as opposed to any of its particular appearances, and in the maintenance of a point of view, there is a common characteristic, viz. identification of reference, with change in the occasion of cognition. Such knowledge is conceptual, and, speaking psychologically, conception is the name for the state of cognition wherein the subject of consciousness recognizes identity of reference for differing experiences, and has an idea which Logic would term a 'general' or an 'abstract' idea. The psychology of conception must explain the recognition of 'sameness' amid change, and the generalization and abstraction which this involves; i.e. it must trace out the development of concepts. See CONCEPT (logical).

2. **Origins of current theory.**—Nowhere is psychology more inextricably interwoven with philosophical theories than in the doctrine of the concept. The present form of psychological discussion connects itself historically with the views of the earlier English philosophers, for whom the problem as to the nature of general ideas was one belonging to the theory of knowledge. By appealing to psychology for a solution they gave a new interpretation to the problem itself.

For Hobbes the question of ancient and mediæval philosophy, What corresponds to the universal of knowledge?, was replaced by the question, How does man advance from the particular experience of sense and memory to the universal knowledge of thought? His answer is, By use of signs, of which names are the chief.

'A mark, therefore, is a sensible object which a man erecteth voluntarily to himself, to the end to remember thereby somewhat past, when the same is objected to his sense again. . . . A name or appellation, therefore, is the voice of a man arbitrarily imposed for a mark to bring into his mind some conception concerning the things on which it is imposed.'¹

'Because from divers things we receive like conceptions, many things must needs have the same appellation . . . and those names we give to many are called universal to them all; as the name of man to every particular of mankind. . . . The universality of one name to many things, hath been the cause that men think the things are themselves universal; . . . deceiving themselves, by taking the universal or general appellation for the thing it signifieth.'²

With Locke the inquiry became more deeply tinged with psychology, and took the form of a psychological answer to the question, How come we by general terms?

'Words become general by being made the signs of general ideas; and ideas become general by separating from them the circumstances of time and place, and any other ideas that may determine them to this or that particular existence. By this way of abstraction they are made capable of representing more individuals than one; each of which, having in it a conformity to that abstract idea, is (as we call it) of that sort.'³

Psychological though this account may be, it throws little light on the nature of the state of consciousness wherein a man has a general idea, or on this way of abstraction which makes ideas capable of representing more individuals than one.

¹ *Human Nature*, ch. v. § 11.

² *Ib.* § 51.

³ *Essay concerning Human Understanding*, bk. iii. ch. iii. § 6.

It is comparatively easy for Berkeley's wit to discredit the supposed product :

'Whether others have this wonderful faculty of abstracting their ideas, they best can tell : for myself, I dare be confident I have it not.'¹

Berkeley's own account of general names is this :

'A word becomes general by being made the sign, not of an abstract general idea, but of several particular ideas, any one of which it indifferently suggests to the mind. . . . By observing how ideas become general, we may the better judge how words are made so. . . . To make this plain by an example. Suppose a geometrical line is demonstrating the method of cutting a line in two equal parts. He draws, for instance, a black line of an inch in length : this, which in itself is a particular line, is nevertheless with regard to its signification general ; since, as it is there used, it represents all particular lines whatsoever. . . . And, as that particular line becomes general by being made a sign, so the name "line," which taken absolutely is particular, by being a sign, is made general.'²

The same account is given by Hume, but a fuller explanation is attempted as to how an idea can be made a sign :

'Abstract ideas are . . . in themselves individual, however they may become general in their representation. The image in the mind is only that of a particular object, tho' the application of it in our reasoning be the same, as if it were universal. . . .

When we have found a resemblance among several objects, that often occur to us, we apply the same name to all of them, whatever differences we may observe in the degrees of their quantity and quality, and whatever other differences appear among them. After we have acquired a custom of this kind, the hearing of that name revives the idea of one of these objects, and makes the imagination conceive it with all its particular circumstances and proportions. . . . They are not really and in fact present to the mind, but only in power. . . . The word raises up an individual idea, along with a certain custom ; and that custom produces any other individual one, for which we may have occasion.'³

The contribution made to conceptual theory by the subsequent Association psychologists consisted in a fuller interpretation of Hume's doctrine of Custom. Thus James Mill, who follows Hobbes very closely on the question of the origin and function of general names, is able to give, as Hobbes could not, a psychology explanatory of the idea generated by the use of the name as a mark for various particulars :

'Man first becomes acquainted with individuals. He first names individuals. But individuals are innumerable, and he cannot have innumerable names. He must make one name serve for many individuals.'⁴

Hence individual names pass into general names — 'man,' 'horse,' etc. New individualizing names, used to carve out sub-classes from a group so named, become associated also with other groups, e.g. 'black' with 'man,' and also with 'horse.'

By frequent repetition, and the gradual strengthening of the association, these modifications are at last called up in such rapid succession that they appear commingled, and no longer many ideas but one.'⁵

Black is therefore no longer an individualizing attribute, but a general name. From such names, when their special class reference is lost, come the so-called abstract terms, e.g. 'blackness.'

Thus in the course of development, names being able by association to call up many different ideas, these ideas, also by association, coalesce into a complex idea.

'Ideas . . . which have been so often conjoined that, whenever one exists in the mind, the others immediately exist along with it, seem to run into one another, to coalesce, as it were, and out of many to form one idea ; which idea, however in reality complex, appears to be no less simple than any one of those of which it is compounded.'⁶

From Mill onwards, although the language used about the product may vary, the psychology of conception in the Association school is an account of the process of forming such complex ideas and of their expression in language. Alexander Bain may be taken as the best representative of this psychology. For Bain a general idea is the product of retentiveness and constructive imagination. He analyzes the process of forming it into four steps : (1) a classification of resembling instances ; (2) a generalization through abstraction (an instance is

taken as a type, or from various instances a type is formed embodying the features common to the class) ; (3) a name is given for the class and for its common features ; (4) the definition setting forth the common features is formulated. Retentiveness, by the Law of Similarity, supplies the first step in this process ; the remaining three—abstraction, naming, and definition—require the aid of constructive imagination, since the selection of this and that feature out of the material supplied by retentiveness is possible only for association guided by 'a sense of the effect to be produced, and a voluntary process of trial and error continued until the desired effect is actually produced.'¹

Bain also tells us that

'abstraction does not properly consist in the mental separation of one property of a thing from the other properties. . . . All the purposes of the abstract idea are served by conceiving a concrete thing in company with others resembling it in the attribute in question.' 'When we are discussing government, we commonly have in view a number of governments alternately thought of.' 'To be a good abstract reasoner, one should possess an ample range of concrete instances.'²

Whence comes that 'sense of the effect to be produced' which guides the trial of instances, Bain does not explain. 'The only generality possessing a separate existence is the name.' The name with a possible range of instances is what is in the mind when we have a general idea.

This line of thought—which attempts to explain how names acquire a general significance, and how a mental content, which by its origin is particular, can be so worked over that it can do duty as general—may be said to reach its culminating point in the doctrine of the 'generic image' introduced by Francis Galton :

'I doubt, however, whether "abstract idea" is a correct phrase in many of the cases in which it is used, and whether "cumulative idea" would not be more appropriate. The ideal faces obtained by the method of composite portraiture appear to have a great deal in common with these so-called abstract ideas. The composite portrait consists . . . of numerous superimposed pictures, forming a cumulative result in which the features that are common to all the likenesses are clearly seen ; those that are common to a few are relatively faint and are more or less overlooked, while those that are peculiar to single individuals leave no sensible trace at all.'³

'My argument is, that the generic images thus arise before the mind's eye, and the general impressions which are faint and faulty editions of them, are the analogues of these composite pictures.'⁴

3. Criticism of theories.—Here, then, the generality of significance is sought for in the image itself. Because my idea means 'dog in general,' my image must portray 'dog in general.' The complexity of the significance must be paralleled in the complexity of the mental content. Yet even so, such a content is hopelessly particular ; still, it is a dog, be it never so weird in form. This is the terminus to which the 'succession of various images' suggested by Berkeley, the 'power of calling up individual instances' claimed by Hume, the 'complex idea' of Mill, and the 'range of concrete particulars' of Bain naturally lead. But it is a blind alley in the maze of cognition. The necessary turning-point was missed as far back as Berkeley. Berkeley recognized the 'representative' function of the content of consciousness which lies behind a general name. He says the particular is 'a sign,' but his general theory of knowledge forbade his accepting any state of consciousness as representing what it itself was not. Of ideas the *esse* is *percipi*. If sensations cannot represent sensible qualities, how can a particular image represent other particulars ?

Berkeley's predecessor, Locke, who defined an idea as 'whatsoever is the object of the understanding when a man thinks,' might have made,

¹ *Senses and Intellect*⁴, 1894, 'Intellect,' ch. II. p. 541, ch. IV. p. 607.

⁶ *Ib.* ch. III.

and indeed in some passages in the *Essay* does seem to make, the distinction between a state of consciousness and the significance of that state. He is, at all events, clearly conscious that the product 'by this way of abstraction' has a representative function.

Hume, no less than Berkeley, finds it necessary to speak of the idea as 'a sign,' although in his *Treatise* he makes no clear distinction between a state of consciousness and its significance. It was the lack of this distinction between 'what is known' and 'the features of the state of knowing' that led the Association school to explain the perception of a thing with all its various sense-qualities by an escort of revived sensations accompanying the datum of the moment, and the conceptual force of an idea by a complex of associations, multitudinous or coalescing (see ASSOCIATION). Bain, in speaking of the 'effect which is to be produced' by constructive imagination, seems conscious of the representative function which the resultant state of consciousness has to fulfil, but he gives it no explicit psychological interpretation.

4. Re-construction of theory.—Stout formulates the needful distinction thus:

'In the process by which we take cognizance of an object, two constituents are distinguishable: (1) A thought-reference to something which, as the thinker means or intends it, is not a present modification of his individual consciousness. (2) A more or less specific modification of his individual consciousness, which defines and determines the direction of thought to this or that special object; this special mode of subjective experience we may call a *presentation*.'¹

The distinction is vital for the whole psychology of cognition, but the failure to recognize it has perhaps had its worst effects in the doctrine of Conception. How any mental state can mean or stand for what it itself is not, is in current psychology the problem of 'meaning.' The task of the psychology of conception is to seek, among the conditions and developments of meaning in general, those which bring forth 'generality' as a definite content of meaning, and further to inquire what are the special characteristics of the states of consciousness wherein this meaning is given.

5. Theory of meaning.—The earliest states of consciousness can hardly be regarded as signifying what they themselves are not. 'The only class of thoughts which can with any show of plausibility be said to resemble their objects are sensations.'² When life is sensory, what is known (if, indeed, we may use the word 'known') and the state whereupon it is known resemble one another—resemble only, for even here the state is conative and affective as well as sensory. The progress from this stage to the next, wherein one experience can suggest another not actually present, where, therefore, 'what is known' differs from 'the presentation' of it, is traceable to interest. From the first, the experiences which make up the stream of consciousness are not all of the same forcefulness. Organic selection alone would make this impossible, and to organic must be added subjective selection. Further, the course of the currents in the stream of consciousness is in part determined by subjective conditions. The term 'interest' is used to denote this 'forcefulness' and this 'set of direction' in the stream. The successive phases of consciousness which work out to a natural completion some forceful trend, e.g. the satisfaction of some organic craving, are connected in a specially intimate way, and constitute what Stout has termed a 'conative unity.' By virtue of this unity, when phases like the earlier ones recur in experience, they can suggest the later, or do the work of these in subsequent psychological life. This is the beginning of the 'representative function' of a present state of consciousness.

Baldwin distinguishes two modes in which representative value or meaning is given to the presentation of the moment—the 'recognitive' and the 'selective.' In the former, the datum of sensation determines the trend of the stream of consciousness; in the latter, the conative and affective processes set the current this way or that. With the former, therefore, past experience dominates meaning, for the present datum is not a bare 'that,' but has a function of its own derived from its history in experience. With the latter, the datum is coloured and interpreted by the light of present desires and feeling.

6. Meaning as perceptual.—Even at the stage of sense-perception, the development of meaning, both as 'recognitive' and as 'selective,' has progressed some way. A given sensation can stand for any experience which has entered into one conative unity with a like sensation, and the recurrence of a want or of an emotional condition will endow the present datum with power to suggest the sequence of experience relevant to the occasion. It is thus, to use James's phrase, that 'different states of consciousness have come to mean the same.' The table looked at and the table touched give different sense-data, but the data in each case can mean the same group of experiences and can suggest the same activity. Speaking of the ease with which a child recognizes an object as the same in spite of great differences, Baldwin says:

'What this really means is, that the child's motor attitudes are fewer than his receptive experiences. Each experience of man (for example) calls out the same attitude, the same incipient movement, the same coefficient of attention, on his part, as that, e.g., with which he hails "papa,"'¹

Although there is at this stage a sense of 'sameness,' and in so far nascent generalization, it seems premature to term it conception, or to say, with James, that the polyph which had the feeling 'Hullo! thingumbob again!' would be a conceptual thinker.

7. Meaning as conceptual.—In perception, whether the meaning be determined recognitively or selectively, the sameness or generality is embedded in the particularity of sense. For conception,

'the universal must, so to speak, be dragged from the dim background of consciousness, and thrust into the foreground, there to be scrutinised and manipulated by the mind.'²

An x must not merely be recognized as an x , but there must be consciousness of the features in virtue of which it is x and not y , i.e. consciousness of its x -ness.

Comparison is the psychical method, and language the instrument for accomplishing this task. Comparison involves both differentiation and assimilation, and is a more complex phase of mental process than either of these considered separately. In virtue of the dominant interest of the moment, experiences which differentiation has dissociated in representative value are brought before consciousness in a new unity, and experiences which assimilation has at first fused disclose distinctive values contributory to new resultant wholes. Such a process implies growing facility in the concentration of attention and enlargement in its span.

The dog differentiates a 'game' and the 'chase of prey.' A man unites them in the idea of 'sport'; but by the emergence of this very idea, 'sport,' a new antithesis is provided to the basal values—both 'game' and 'chase of prey,'—which, therefore, to the man become more definite and conscious ideas than they can be to the dog. Similarly, when the child referred to by Baldwin comes to feel the distinctive value of the genuine 'papa,' the emergence of this distinction will also serve to develop the unity of this and his other experiences on their basal value as 'man.'

¹ *Mental Development*, 1895, ch. xi. p. 325

² Stout, *op. cit.* bk. II. ch. ix. p. 174.

Memory, imagination, and sense-perception all supply occasions for this interplay of differentiation and assimilation, and—

'thus the common element stands out in contrast to the differences; whereas in mere recognition no such contrast exists.'¹

8. Function of names.—The use of names greatly assists this disengagement of the general meaning from the particular. The name, which is part of the group of experiences constituting knowledge of a particular thing, has the power of reviving the whole complex. And it has special value as a fixation point for the concentration of attention, because it can be given perpetual existence at will, and in this way can reinstate the whole unity much more vividly than any image. Again, sameness or difference of name facilitates comparison and contrast of instances, and thus helps to strike forth the universal embedded in the particular. Further, a name enters as an identical member into many unities. There is nothing in its own nature to determine the specific nature of the whole which it shall suggest. A bare word by itself may mean 'this' or 'that' or 'the other,' the specific determination depending upon the interest of the moment. With a combination of names, however, there will be a combination of the unities or wholes of which these names are integral parts; and thus there will be a certain mutual determination of meaning. It is to denote such mutual determination of one unity by another, and the consequent reconstruction of meaning, that the term 'apperception' (*q.v.*) may be most fittingly used.

9. General and abstract.—The two varieties of meaning noticed by Baldwin develop the two types of conceptual meaning, which are distinguished as knowledge of the general and knowledge of the abstract. It is recognitive meaning that leads to the idea of the class as opposed to its instances, of a totality as opposed to its parts, of an individual as opposed to its appearances. It is selective meaning that leads to abstractions, points of view. The latter are the concepts which James has especially in view when he says that '*the only meaning of essence is teleological*,' and that '*classification and conception are purely teleological weapons of the mind*.'² Conceptual meaning may be determined by the desires and needs of the subject, yet such selective meaning is as open to be shared by all mankind, and as objective, as is recognitive meaning. The two meanings can never be regarded as independent; the sensory and ideational data must influence the affective and conative values of the moment; and the affective and conative values must colour the data and their intrinsic meaning. It is only from the logical point of view that the concept, be it a general idea or an abstract idea, represents a norm or standard, the 'changeless' and 'necessary,' which regulates the flux of the 'particular' and 'contingent.'

10. Theory of presentation.—As to the nature of the state of consciousness whereupon the subject is aware of the general, can psychology ascribe to it any special characteristics? It would follow from the foregoing that the concept is a 'meaning,' and that, when the conditions of development are fulfilled, any state of consciousness may serve as its vehicle; in other words, no specific variety of presentation appears necessary for a thought reference which is general. A sense-datum may mean a perceived object,—it may mean an abstract idea; for example, to the lay mind a roughly worked flint may be just this stone 'and nothing more,' while to the ethnologist it suggests the occupations of prehistoric man. Similarly, an image may mean a memory or a concept; a word may be understood as a sense-determined particular or as a class name.

¹ Stout, *op. cit.* bk. II. ch. ix. p. 174.

² *Op. cit.* ch. xdl. p. 285.

Experimental research¹ has tended to confirm the conclusion to which a more speculative analysis has led. K. Marbe² has collected introspective records made by trained observers concerning their state of consciousness when they pronounced varied judgments, wherein the meaning ranged from simple to complex. These records give no evidence of any experiences which, as such, are characteristic either for the pronouncement of judgment or for the understanding and evaluation of a judgment pronounced by others. And what is true of judgment will be true of the conceptions involved. Later researches³ would seem to show that it is impossible to characterize introspectively the nature of an isolated moment of consciousness as one of conception or one of judgment. Remembering, indeed, that, as Ward says, 'like other forms of purposive activity, thinking is primarily undertaken as a means to an end, and especially the end of economy,'⁴ it would seem that introspection must report on the whole trend of consciousness, on a series of processes which hang together as the working out of an end, before it can diagnose the case as 'perceiving,' 'thinking,' 'willing,' etc. Thus one writer notes that there is a consciousness of the *Aufgabe*, or end, which controls the series of processes; others lay stress on *Bewusstseinlage*, awareness of the trend or consciousness of disposition or attitude towards given objects. These *Bewusstseinlagen* would seem to correspond to what James terms 'transitional states of consciousness' and to his 'feelings of tendency'—states which have a cognitive function, but whose nature psychology can hardly define. Stout recognizes similar constituents in the stream of thought.

'There is no absurdity in supposing a mode of presentational consciousness which is not composed of . . . experiences derived from and in some degree resembling in quality the sensations of the special senses; and there is no absurdity in supposing such modes of consciousness to possess a representative value or significance for thought.'⁵

It may be that it is upon the presence or absence of these presentations, or upon their character, or, again, upon the mode in which the whole series of cognitive, conative, and affective phases of consciousness are related to one another, that the difference between thought and will, perception and conception, depends.

CONCEPTUALISM.—The question whose various answers may be grouped under the heads of Realism, Nominalism, and Conceptualism is that of the nature of genera and species (*i.e.* the universal), and their relation to the particular thing. It may be stated in the ontological or in the epistemological form, according as the aim is to discover the place occupied by the universal in *reality*, or its place in *knowledge*. While Realism maintains, in one form or another, the objective reality of the universal, and Nominalism takes the opposite course of denying actuality to all save the particular thing, Conceptualism mediates between these extremes. It agrees with Nominalism in denying separate, hypostatic reality to the

universal. On the other hand, it holds, with Realism, that the universal is more than a mere name, or *flatus vocis*. The universal is real, in the first place epistemologically, as the concept (*q.v.*) wherein intelligence grasps the common attributes in different things, and raises them into a true notion. But it has also a certain ontological reality, inasmuch as, in the act of conception (*q.v.*), in which the common qualities of different things are apprehended in a unity, the natural predicate comes to the front (Abelard). In other words, that which belongs to the nature of the things, and is thus the basis of predication regarding them, forms the content of the act of conception. This universal (not mere *vox*, but *sermo*, i.e. predicate) possesses reality, though not hypostatic reality. The mediæval discussion of this question took its rise in the Latin translation by Boethius of the *Isagoge* of Porphyry, which is an introduction to the *Categories* of Aristotle; but the real source of the whole controversy lies farther back, in the discussions between the Sophists, with their doctrine of individualistic subjectivity, and the Attic Idealists, Socrates, Plato, and Aristotle, who insisted, each in his own way, that in knowledge the mind takes hold upon the real, which is universal. Modern epistemology inclines on the whole to the view that the individual thing, the object of knowledge, is the meeting-place of the universal and the particular; and that reality is neither pure particularity nor pure universality, but an essential unity and synthesis of the two.

FREDERICK TRACY.

CONCORDAT.—*Meaning of the word.*—In the Middle Ages, conventions of all kinds were called 'concordats,' especially agreements formed between the convents and the bishops, and between the bishops and the civil power. 'There was an ancient concordat made with the king and the bishop of Paris in 1222 for the settlement of the royal jurisdiction and of the temporality of the bishop in some parts of the said town. Among other points, it was agreed that public outcries *voce praeconis* should take place, by the authority of the king and the bishop conjointly, in the places where the temporal justice of the said bishop prevailed' (Fevret, *Traité de Pabus*, Lyons, 1736, i. 18; see, in Fink, *De concordatis dissertatio canonica*, Louvain, 1870, pp. 1-2, a list of episcopal concordats). But, since the 15th cent., more precisely since the Council of Constance, the name 'concordat' has usually been confined to the compacts which are entered into by the Pope on the one hand, and the civil power on the other. Taken in this sense, which is, if not the only one, at least the one most generally accepted, the concordat may be defined as a convention by which the Church of Rome and a State determine and regulate their mutual relations.

1. HISTORY.—I. Concordats before the 19th century.—The Church could not sign any treaty with the civil power during the whole time that she accepted or submitted to the yoke of the emperors or kings.

(a) The first concordat was the result of the effort which she made to free herself from the subjection of the Emperor of Germany. It was concluded at Worms in 1122 between Pope Calixtus II. and Emperor Henry V. It comprises two declarations, independent of each other. The first, drawn up in Henry's name, is entitled *Privilegium*

Imperatoris; the second, drawn up in Calixtus' name, is called *Privilegium Pontificis*. The Emperor takes an oath (1) to give up the right of investiture by ring and staff, (2) to guarantee freedom of episcopal election, (3) to restore the possessions taken from the Church. The Pope, on his side, authorizes the Emperor (1) to be present at the election of bishops and priests, (2) to give investiture by the sceptre. These two documents may be found in Hardouin, *Acta conciliorum*, vii. 1115, Paris, 1714, and in all collections of councils. The *Monumenta Germaniae*, sec. iv. t. i. 159 and 161, give a critical edition of them. The following is the translation:

'*Privilege of the Emperor.*—In the name of the holy and indivisible Trinity, I, Henry, by the grace of God Emperor of the Romans, for the love of God, the Holy Roman Church, and the lord Pope Calixtus, and for the salvation of my soul, abandon to God, to the holy Apostles Peter and Paul, and to the holy Catholic Church, all investiture by the ring and the staff, and I grant that in all the churches of my Empire there shall be freedom of election and free consecration. All the possessions and all the rights of Saint Peter, which from the beginning of this quarrel to the present day have been taken away and are in my possession, I will do all in my power faithfully to restore. Further, I will restore, as indicated by the princes and the regulations of the law, the property in my possession which belongs to other churches, princes, and, in general, to all clergy and laity. As to those which I do not possess, I will do all in my power to have them restored. I will give true peace to the lord Pope Calixtus and to the Holy Roman Church, and to all those who are or have been of its party. Whenever the Holy Roman Church invokes my aid, I will give it faithfully. When she has cause to complain, I will show her justice.'

'*Privilege of Calixtus.*—I, Calixtus, servant of the servants of God, to thee Henry, my very dear son, by the grace of God Emperor of the Romans, I grant that the elections of bishops and abbots in the kingdom of Germany, that is to say, in the part of the Empire which constitutes thy kingdom, shall take place in thy presence, without simony or violence. When any discord happens to arise, thou shalt grant thy approbation and support to the better party, after taking the counsel and opinion of the metropolitan and the bishops of the district. Let the prelate-elect receive from thee investiture by the sceptre, and he shall fulfil all the obligations that he owes to thee. In other parts of the Empire, let the consecrated bishop receive from thee investiture by the sceptre within six months from his consecration. He shall fulfil to thee all the obligations which he owes to thee, with the exception of all the rights which are recognized to belong to the Roman Church. Every time that thou shalt express any complaint to me, and ask my help, I will come to thine aid, as I ought to do. I grant true peace to thee, and to all those who are or have been of thy party during the times of discord' (Bernheim, *Zur Gesch. des Wormser Konkordats*, Göttingen, 1898; Schaefer, *Zur Beurtheilung des Wormser Konkordats*, Berlin, 1905).

(b) At Worms the Papacy had tried to rescue the Church from the yoke of the civil power; three centuries later, at the Council of Constance (1418), it signed new conventions, but, this time, on quite different conditions. The *Concordats of Constance* (cf. Hübler, *Die Konstanzer Reformation u. die Konkordate von 1418*, Leipzig, 1867) mark the effort of Christianity to lighten the burden laid upon her by the Papacy. This was at the beginning of 1418. All the members of the Council were agreed upon the necessity of demanding reforms from the Pope, but they ceased to agree when they came to state definitely the reforms to be effected. Not being able to negotiate with all the nations at the same time, Pope Martin V. negotiated with each nation by itself. He accordingly signed conventions separately with the French, Germans, English, Italians, and Spaniards; hence arose five concordats, which long ago were reduced to three, because the Italian and Spanish conventions were expressed in the same form as the French.

The English concordat comprises the following six articles: (1) *On the number and nationality of cardinals.* The number of cardinals must be limited; they must be chosen indifferently from all the kingdoms of Christendom. (2) *On indulgences.* Indulgences make gold abound in certain privileged places, to the great detriment of the parish churches; they also give occasion for sinning to several people who, because of them,

believe themselves quite justified in committing sin. To bring this state of affairs to an end, bishops will denounce scandalous indulgences to the Pope, who will suppress them. (3) *On the government of the churches.* The churches shall henceforth be brought under the charge of the bishops. (4) *On the pontifical insignia.* Many inferior prelates received from Rome the right of wearing these insignia; concessions of this kind after the death of Gregory XI. are annulled; those granted previous to that event are retained. (5) *On dispensations.* Dispensations authorizing one and the same man to possess several benefices should be very rare; as a matter of fact, they are frequent; this state of things must disappear in the future; as for the past, we shall confine ourselves to suppressing scandalous concessions. Other abuses: the Apostolic See exempts for a longer or shorter period, in some cases for ever, the holders of benefices from entering upon the orders corresponding to their benefices; that must not be; henceforth the beneficed clergy must receive orders only if they are entitled to them. The Apostolic See gives dispensations of residence; it must no longer do so without legitimate reasons. Likewise it must no longer deliver letters to the monks authorizing them to receive benefices. (6) *On the admission of Englishmen to the various offices of the Roman curia.* The English nation must be treated like the other nations.

The French concordat comprises seven articles, which treat of (1) the number and character of cardinals; (2) the provision of churches and monasteries, the reservations of the Apostolic See, the collation of benefices, the 'expectativæ' favours, the confirmation of elected beneficiaries; (3) annates; (4) trials to be lodged at the Roman curia; (5) commendams; (6) indulgences; and (7) dispensations.

The German concordat consists of the following eleven articles: (1) on the number, character, and appointment of cardinals; (2) on the provision of churches, monasteries, priories, dignities, and other benefices; (3) on annates; (4) on the trials to be lodged at the Roman curia; (5) on commendams; (6) on simony; (7) on excommunicated persons; (8) on dispensations; (9) on the revenue of the Pope and the cardinals; (10) on indulgences; and (11) on the scope of this concordat.

In the last two concordats, the articles referring to cardinals and indulgences sum up the corresponding provisions of the English concordat. The article on annates is unknown in the English concordat, since, at that time, the rule about annates was not in operation, so to speak, in England. France and Germany knew it only too well, and sought to free themselves from it. The concordats of Constance gave them only partial satisfaction. With regard to France, the Pope pledged himself, for five years, to collect only half of the revenues of the first year of the churches and abbeys which should become vacant; he promised, besides, to bestow the 'expectativæ' favours neither on monastic benefices whose revenues did not exceed £4, nor on hospitals, hospices, inns, almshouses, or leper hospitals. With regard to Germany, he took an oath that he would not levy a tax on benefices of a revenue below twenty-four florins. The other articles refer to various abuses which the Roman curia promised to reform. The article relating to the provision of benefices, however, is an exception. Here the Pope makes no concession. He maintains that Rome has the right to endow various classes of benefices according to the regulations passed by John XXII. in the bull *Execrabilis* (1318) and in the bull *Ad regimen* (1325).

The concordats of Constance were read during the forty-third session of the Council which was

held on 21st March 1418. The edition which we possess is preceded by a preface by the cardinal of Ostia (*Universis et singulis, Joannes . . .*), from which we learn that the French concordat was recorded on 15th April and published on 2nd May. It was the same with the other concordats. The French and German concordats were concluded for five years (see Artt. 7 of the former and 11 of the latter). The English concordat was concluded *ad perpetuam rei memoriam* (see Art. 6 of this concordat). As a matter of fact, the German concordat very soon fell into disuse. The French concordat, rejected by the Parliament, was accepted by the Duke of Burgundy, who governed the north of France, but was rejected by the Dauphin (Charles VII.), who reigned in the south; then, several years later, it was suppressed throughout the whole extent of French territory. The English concordat was maintained without any difficulty. We have no information regarding the Italian and Spanish concordats (the English concordat may be found in Hardouin, viii. 893; von der Hardt, *Magnum æcumenicum Constantiense concilium*, Frankf. and Leipzig, 1700, i. 1079; Wilkins, *Concilia Magnæ Britannia et Hibernia*, London, 1737, iii. 391; Lenfant, *Hist. du Concile de Constance*, Amsterdam, 1714, ii. 444; the French concordat in Hardouin, viii. 883; von der Hardt, iv. 1566; Lenfant, ii. 436; the German concordat in Hardouin, viii. 888; von der Hardt, i. 1055; Lenfant, ii. 108).

(c) The third concordat which we meet with is the *Concordat of Princes*, concluded between Eugenius IV. and the German princes in Feb. 1447. The circumstances were as follows:—When the Council of Basel had issued its decree of suspension against Eugenius (24th Jan. 1438), the electoral princes of Germany—the Emperor Sigismund having died in the midst of it all—began by declaring themselves neutral; then they published the declaration of Mainz, often called *Instrumentum acceptationis*, in which they professed to accept, with certain modifications, the decrees of the Council of Basel relating to the reform of the Church. The aim of Eugenius IV. was to abolish the neutrality, i.e. to bring the German princes to declare themselves on his side. His efforts were not in vain. He first won to his cause the head of the Empire, Frederick III., and his secretary Æneas Sylvius (afterwards Pope Pius II.). Having become the partisan of Eugenius, Æneas prevailed upon several electoral princes and modified their arrangements. Still all the difficulties were not removed. The German princes, who had become favourable to Eugenius IV., continued to remain connected with the *Instrumentum acceptationis*, i.e. with the decrees of Basel. On 7th Jan. 1447 a solemn embassy, led by Æneas, appeared before the Pope, and informed him of the conditions under which they pledged themselves to recognize him. These conditions were four in number. They demanded of him that he should (1) call a General Council at a date and in a place which would be fixed without consulting him; (2) recognize the power, authority, and pre-eminence of this General Council; (3) lighten the burdens that weighed on the German nation; (4) withdraw the sentence of deposition that he had pronounced against two of the electoral princes, viz. the archbishops of Cologne and Trèves. After a month of negotiations, Eugenius IV. accepted these conditions on his death-bed, modifying them, however, by omissions and vague assertions.

The Concordat of Princes is composed of a brief and three bulls. By the brief *Ad ea ex debito* (6 Feb. 1447), the Pope, although he observes that the convocation of a General Council is not the best means of pacifying the Church, pledges himself to convoke one within ten months, and to take as its place of assembly one of the five villages named by the princes. He declares that he venerates the Council of Constance, and

the Councils which represent the Catholic Church, with their power, authority, and eminence (not pre-eminence), as they were venerated by his predecessors, from whom he does not wish to deviate in anything. The bull *Ad tranquillitatem* (5th Feb.) suppresses the burdens which weigh upon the German nation, in compliance with the decisions made at Basel and accepted at the diet of Mainz. It merely asks that an indemnity be granted to the Holy See in compensation for the pecuniary losses which the new state of things would inflict upon it, and it resolves that this point shall be the object of a special convention. The bull *Ad ea quæ* (5th Feb.) promises the reinstatement of the archbishops of Cologne and Trèves, provided that they swear obedience to the Pope. The bull, *Inter cetera desideria* (7th Feb.), ratifies all the ecclesiastical elections which took place in Germany during the time of the neutrality, removes the penalties which were then incurred, and absolves all the partisans of the Council of Basel who, within six months, shall return to the Holy See. We may remark here that, after having published the first three documents, Eugenius signed a secret bull, *Decet Romanæ pontificis*, by which he annulled those of his concessions which might, unknown to him, cause prejudice 'to the holy doctrine of the Fathers, and to the privileges and the authority of the Holy See' (cf. the texts in Walter, 100; Münch, I. 77; Raynaldus, *Annales ecclesiastici*, 1747-59, ad annum 1447, n. 4; for the history, cf. Hefele, *Conciliengeschichte*, Freiburg, 1887, vii. § 830).

(d) The Concordat of Princes had not been signed by all the electors; moreover, it had put off to a later concordat the question of the compensation to be granted to the Holy See. It therefore required a complement, which it received in the *Vienna Concordat*. This convention was concluded on 17th Feb. 1448 between Pope Nicholas and Frederick III., head of the Empire, acting in the name of the German nation. It was promulgated by the bull *Ad sacram Petri sedem* on the 19th of the following March. It reserved to the Holy See the collation of a certain number of bishoprics and inferior benefices; authorized canonical election for the other benefices, with right of confirmation reserved to the Pope; and restored the annates which the Concordat of Princes had suppressed. In a word, the Vienna Concordat is almost an exact reproduction of the German part of the Concordat of Constance (text in Nussi, p. 15; discussion in Hefele, vii. § 831).

(e) Like Germany, France also had her concordat, known as the *French Concordat* of 1516, concluded between Leo X. and Francis I. as a result of an interview at Boulogne. The Church of France had, from 1438 up to this time, been under the rule of the *Pragmatic Sanction* of Bourges. Now this Pragmatic, borrowed from the Council of Basel, was extremely odious to the popes and kings, whom it left without authority over the clergy. Besides, since 1438, popes and kings had on several occasions attempted to repeal it, but without coming to any settlement. The concordat of 1516 suppressed it. It is expressed in the bull *Primitiva illa Ecclesia*, published on 18th Aug. 1516 and approved by the Lateran Council on 18th December following.

The special characteristic of this agreement is the suppression of elections. Up to 1516, bishops were elected by the chapters; abbots and priors by the convents. In the terms of the concordat, elections are abolished and give place to royal nomination, to which is afterwards added pontifical confirmation. When a bishopric becomes vacant, the king nominates to the place a licentiate or a doctor of theology or law, who has completed his 27th year, and has all the requisite qualifications. This nomination must take place within six months. The Pope confirms the nomination, if it is made according to the rules, but, if not, the king must make a second nomination, and if this again does not fulfil the conditions, the Pope nominates some one himself. Nevertheless, the Pope is authorized to provide for churches which happen to be vacant in the Roman curia (i.e. whose incumbents have died in Rome). Further, princes by blood, nobles, and mendicant monks distinguished by their merit are exempted from the obligation of degrees. The nomination of abbots and priors, as well as bishops, is the sole right of the king; it also must be confirmed by the Pope.

The concordat of 1516 encountered most lively opposition in France. The University forbade the printers and the publishers to print and issue the text of the convention. It published, besides, a proclamation in which, after praising the Councils of Basel and Constance, it appealed from the badly-advised Pope to the legitimate coming Council. The Parliament refused to record it for some time.

The clergy also gave utterance to protests. But the king went on, and the Parliament had to submit on 22nd March 1517, and make the entry (text of the bull *Primitiva* in Nussi, p. 20; Hardouin, ix. 1867; Isambert, *Recueil général des anciennes lois françaises*, 1822-23, xii. 75).

(f) In the 17th cent. Charles II. of England entered upon negotiations with Rome to reconcile the English Church with the Pope. The agent chosen by the king was an Irish nobleman, Richard Bellings, private secretary of the queen-mother, Henrietta of France. Bellings brought to Rome a document in which Charles II. declared that he accepted the profession of faith of Pius IV., the decrees of the Council of Trent and the other Councils on the subject of faith and morals, and, further, the rules that the two former Popes had laid down concerning Jansenius. He declared that he 'reserves, as they do in France and other countries, only certain special rights and certain customs which wont have consecrated in each particular church.' There followed the enumeration of the special rights claimed by the king: that archbishops and bishops should retain their Sees, but that they should receive a new consecration by three Apostolic legates sent from Rome for this purpose; that the archbishop of Canterbury should be raised to the dignity of patriarch and should be the centre of all the ecclesiastical administration of the kingdom, without appeal to Rome except in a very small number of cases; that provincial Synods should be held every year, and that provincial Councils should be assembled at fixed intervals; that the king should nominate all bishops; that ecclesiastical possessions, alienated during the preceding reigns, should remain the property of their present holders; that Protestants should maintain the free exercise of their religion; that the dispensation of celibacy should be applied to the bishops and priests who were already married; that the communion should be given in both kinds; that disputed questions of doctrine should not be discussed; that some religious orders should be re-established, but subject to the jurisdiction of the bishops.

Bellings brought back from Rome an answer which has not been recovered. For reasons that we do not know, nothing came of the scheme (cf. Barnes, 'Charles II. and Reunion with Rome,' *Monthly Review*, Dec. 1903).

(g) From the 16th to the 18th cent. Spain concluded six concordats, viz. the concordat of 6th Sept. 1523 between Charles v. and Hadrian VI.; the concordat of 14th Dec. 1529 between Charles v. and Clement VII.; the concordat of 8th Oct. 1640 between Philip IV. and Urban VIII.; the concordat of 17th June 1717 between Philip v. and Clement XI.; the concordat of 26th Sept. 1737 between Philip v. and Clement XII.; and the concordat of 11th Jan. 1753 between Ferdinand VI. and Benedict XIV. In this last convention, which held until 1833, the king obtained the right of nominating to almost all the benefices, on condition that he should contribute a considerable sum to the pontifical treasury (Nussi, p. 120).

The Spanish concordats have been discussed by Hergenröther, 'Spaniens Verhandlungen mit dem römischen Stuhle,' *Archiv für katholisches Kirchenrecht*, x. (1893) 1-45, 185-214, xi. (1894), 252-263, 367-401, xii. (1894) 46-60, 385-430, xiii. (1895) 91-106, 393-444, xiv. (1896) 170-215.

(h) In Italy we find the concordat of 17th Dec. 1757 between Maria Theresa and Benedict XIV. about the duchy of Milan (Nussi, p. 128); the concordat of 20th Jan. 1784 between Joseph II. and Pius VI. about the same duchy (*ib.* p. 138); the concordat of 24th March 1727, completed on the 29th of the following May, between Victor Amadeus and Benedict XIII. about Sardinia (*ib.* pp. 48, 54); the concordat of 5th Jan. 1741, of 1742, and of

24th June 1750 between Charles Emmanuel III. and Benedict XIV. about the same kingdom (*ib.* pp. 69, 98, 117); and the concordat of 2nd June 1741 between Charles III. and Benedict XIV. about the kingdom of the Two Sicilies (*ib.* p. 72).

(i) In Portugal we find the bull of Nicholas v. confirming the concordat of 1288 concluded between the bishops and the king of Portugal (Nussi, p. 2); the concordat of 17th July 1516 between Emmanuel and Leo X. (*ib.* p. 36); and the concordat of 20th July 1778 between Queen Mary and Pius VI. (*ib.* p. 136).

(j) Poland had a concordat concluded on 10th July 1737 between Augustus and Clement XII. (*ib.* p. 64).

(k) Bohemia had one concluded between Ferdinand II. and Urban VIII. on 8th March 1630 (*ib.* p. 39).

(l) Other concordats. Concerning Spain, between Eleonore and Gregory XII., 1372 (Hüfler, *Archiv für kath. Kirchenrecht*, vii. 364); concerning the Two Sicilies, between Hadrian IV. and William, 1156 (Watterich, *Pontificum Romanorum vite*, ii. 352); between Celestine III. and Tancred (Watterich, ii. 732); between Innocent III. and Constance, about 1200 (Sentis, *Monarchia Sicula*, 83); between Clement IV. and Charles of Anjou, 1265 (Luenig, *Codex diplomaticus Italie*, ii. 946); and between Innocent VIII. and Ferdinand, 1487 (Raynaldus, *Annales eccl.*, ad annum 1487, p. 11).

2. Concordats of the 19th century.—(a) France.—The concordat of 1516 was valid in France until the Revolution, which put in its place the Civil Constitution of the Clergy (1790). The religious tumults which this constitution aroused were appeased by the concordat of 1801, which inspired several other concordats, and consequently deserves special attention. It was Bonaparte who took the initiative in the concordat, and the first man to whom he made known his scheme was the Bishop of Vercelli, Martiniana. It was the day after the battle of Marengo. The conqueror of Austria, meeting the old prelate on the way, charged him to announce to the Pope that he wished to re-establish the religious affairs of France, and to treat with Rome on the following grounds: (1) renunciation of former bishops and exclusion of intruders; (2) nomination of new bishops by the Government, and canonical institution by the Holy See; (3) new circumscription of dioceses, justified by the reduction of the number of former ones; and (4) conversion of Church property into salaries for the clergy. The negotiations went through three stages. They were first started in Paris between Spina, the representative of the Holy See, and Bernier, the representative of the French Government (Nov. 1800—end of Feb. 1801); and they ended in a scheme of concordat presented by the First Consul for the signature of Spina, who refused, saying that he was deputed to negotiate and not to sign. The First Consul then sent his scheme to Rome. This was the second stage, which lasted from March to 6th June. The Pope, along with the cardinals, examined the French scheme, introduced several modifications into it, and sent his counter-scheme to the First Consul. In the meantime there arrived from Paris an ultimatum announcing that the negotiations would cease if the First Consul's scheme was not adopted in full in 46 days. The Pope opposed this ultimatum, and on 6th June the French minister, Cacault, left Rome. Then the third stage began. As a matter of fact, Cacault, obliged to set out to obey his master's orders, had taken Cardinal Consalvi with him. The latter arrived in Paris on 20th June. Negotiations were resumed, and continued until 5th July, when at last they were successfully completed. The most troublesome question, the one which had caused the conflicts, was the nomi-

nation of the bishops. From the beginning of the negotiations Rome had quite readily resigned herself to the reduction of the number of bishoprics, to the alienation of the Church property, and to the administration of the salary. But, on the other hand, the nomination of bishops was, in her opinion, a privilege of which only a purely Catholic Government was worthy. From the French Government which claimed this privilege Rome claimed in return that it should profess Catholicism. She had to give up her claims. The First Consul absolutely refused to write in the concordat that the French Government would profess the Catholic religion. Consalvi succeeded only in obtaining the promise that Catholic worship might be publicly exercised, conforming itself with the police regulations.

The French concordat of 1801 was signed at Paris on 15th July by the plenipotentiaries Consalvi, Spina, and Caselli on the one hand, and Joseph Bonaparte and Bernier on the other. It was ratified at Rome by the Pope in the bull *Ecclesia Christi* of 15th Aug. 1801, and at Paris by the First Consul on 10th Sept. following. It was recorded as a law of the State on 8th April 1802, and solemnly published on Easter Day, 17th April. The following is the text:

Convention between the French Government and His Holiness Pius VII. The Government of the Republic recognizes that the Catholic, Apostolic, and Roman religion is the religion of the great majority of French citizens. His Holiness equally recognizes that this same religion has survived, and derives at the present time, the greatest good and the greatest glory from the establishment of Catholic worship in France, and from the personal profession of it by the Consuls of the Republic. Consequently, following this mutual recognition, as much for the good of religion as for the maintenance of internal tranquillity, they have agreed as follows: *Art. 1.* The Catholic, Apostolic, and Roman religion shall be freely exercised in France; its worship shall be public, conforming itself with the police regulations which the Government shall judge necessary for public tranquillity. *Art. 2.* The Holy See, in concert with the Government, shall make a new circumscription of the French dioceses. *Art. 3.* His Holiness shall declare to those holding French bishoprics that he expects from them in firm confidence, for the sake of peace and unity, every kind of sacrifice, even that of their Sees. After this exhortation, if they refuse this sacrifice commanded for the benefit of the Church (a refusal, however, which His Holiness does not expect), provision shall be made for the appointment of new officials to govern these newly-divided bishoprics in the following manner: *Art. 4.* The First Consul of the Republic shall nominate, within three months from the publication of the bull of His Holiness, to the archbishoprics and bishoprics under the new arrangement. His Holiness shall confer the canonical institutions, according to the forms established by agreement with France before the change of government. *Art. 5.* Nominations to bishoprics which shall be vacant immediately shall likewise be made by the First Consul, and canonical institution shall be given by the Holy See in conformity with the preceding article. *Art. 6.* The bishops, before entering upon their duties, shall take directly at the hands of the First Consul the oath of fidelity which was in use before the change of government, expressed in the following terms: "I swear and promise to God, on the Holy Gospels, to be obedient and faithful to the Government established by the constitution of the French Republic. I promise also to have no dealings, to be present at no council, to belong to no league, whether at home or abroad, which may be contrary to the public peace; and if, in my diocese or elsewhere, I learn that anything is being plotted to the prejudice of the State, I will make it known to the Government." *Art. 7.* The ecclesiastics of the second order shall take the same oath at the hands of the civil authorities named by the Government. *Art. 8.* The following form of prayer shall be recited at the end of the Mass, in all the churches of France: "Domine, salvam fac Rempublicam; Domine, salvos fac Consules." *Art. 9.* The bishops shall make a new circumscription of the parishes of their dioceses, which shall have no effect without the consent of the Government. *Art. 10.* The bishops shall nominate to the curacies. Their choice shall fall only upon persons acceptable to the Government. *Art. 11.* The bishops may have a Chapter in their Cathedral, and a Seminary for their diocese, but the Government shall not be obliged to endow them. *Art. 12.* All churches, metropolitan, cathedral, parish, and others not secularized, necessary for worship, shall be placed at the disposal of the bishops. *Art. 13.* His Holiness, for the sake of peace and the happy re-establishment of the Catholic religion, declares that neither he nor his successors shall in any way trouble those who have acquired alienated ecclesiastical property; and that consequently the possession of this same property, and the rights and revenues attached to it, shall remain unchanged in their hands or in those of their assignees. *Art. 14.* The Government shall guarantee an adequate salary to the bishops and clergy whose dioceses and parishes shall be included in the new division.

Art. 15. The Government shall at the same time take measures to enable French Catholics, if they wish, to endow churches. Art. 16. His Holiness recognizes in the First Consul of the Republic the same rights and prerogatives as the old Government enjoyed. Art. 17. It is agreed between the contracting parties that, in case any one of the successors of the First Consul now acting should not be a Catholic, the rights and prerogatives mentioned in the article above, and the nomination to bishoprics, shall be regulated, with respect to him, by a fresh convention' (Nussi, p. 139; Debidour, *Hist.* p. 880).

[The concordat of 1801 has been treated by Rinieri, *La Diplomazia pontificia nel secolo xix.*, Rome, 1902, in which there is an abundant bibliography; and by Mathieu, *Le Concordat de 1801*, Paris, 1903.]

The foregoing seventeen articles constitute only the concordat properly so called, i.e. the convention signed on 15th July 1801 by the plenipotentiaries of the French Government, and ratified in Rome on 15th Aug., then on 10th Sept. in Paris. But the political assemblies that recorded the concordat on the date of 8th April 1802 added to it, by command of the First Consul, a police regulation comprising seventy-seven articles, and known by the name of *Organic Articles*. Rome has never ceased to protest against the Organic Articles, but her protests have been in vain. All the Governments which have succeeded in France have placed these articles on the same footing as the concordat, and determined their attitude by them.

The concordat of 1801 was valid in the Church of France during the whole of the 19th cent., but it was suppressed by the law of 9th Dec. 1905, called the 'Law of Separation.' Two conventions, however, tried to supplant it, viz. the *Concordat of Fontainebleau* (1813) and the Concordat of 1817. The Concordat of Fontainebleau was concluded between Napoleon and Pius VII. on 25th Jan. 1813, and promulgated on 13th Feb. following. It comprised eleven articles, one of which, the fourth, authorized the Metropolitans to give canonical investiture to bishops in cases in which the Pope refused to give it within six months. But, in a letter to the Emperor written on 24th March, Pius VII. declared that his conscience compelled him to withdraw his signature. Napoleon went on, and on the very next day, 25th March, he declared the Concordat of Fontainebleau to be binding. His fall, which happened shortly afterwards, ruined his enterprise. The Concordat of Fontainebleau was not put into operation (Debidour, p. 693). It was the same with the concordat of 1817, concluded between Louis XVIII. and Pius VII. This convention, which was intended to annul the work of the First Consul and to revive the concordat of 1516, was not accepted by the French Parliament (Nussi, p. 153; Debidour, p. 696). On 1st Sept. 1836 the French Government signed a concordat with Pope Leo XIII. about Pondicherry (*Juris pontificii* . . . p. 349). It signed another on 7th Nov. 1893 about Tunis (*ib.* p. 369).

By the encyclical *Gravissimo officii* of 10th August 1906, Pius X. forbade Catholics to form the religious associations which, by Art. 4 of the Law of Separation, had the right to transfer church property. In consequence of this decision, which was contrary to the desires of the majority of the French bishops (*Le Temps*, 24th and 25th Aug. 1906), the Catholic Church of France was deprived of all its property.

(b) *Germany*.—The Peace of Luneville (1801) and the Decree of Ratisbon (1803), by secularizing the ecclesiastical estates and several abbeys, ruined the Church of Germany. It had to be re-constructed. Various schemes were planned. Bavaria, allured by the example of the French concordat, tried to obtain a regular contract from Rome. Württemberg and Baden followed the same track. Moreover, in 1804 the Emperor Francis II. thought that, to save the dying Holy Empire, he could negotiate a general concordat for the whole Empire. These enterprises vanished in 1806, when

the German Empire was succeeded by the Confederation of the Rhine, and when the chief of this Confederation, Napoleon, declared that he himself wished to give it a concordat. But the difficulties with Pope Pius VII., which very soon began, prevented Napoleon from carrying out his scheme. When the Congress of Vienna was opened, nothing had been accomplished. At this Congress, Metternich endeavoured to re-constitute the national German Church, and to spread the idea of a collective concordat in which the condition of all the German churches would be regulated at once along with Rome. His scheme, strongly supported by Wessenberg, who imagined a national Church independent of Rome, was opposed by Bavaria. The Congress of Vienna broke up without taking any action. Instead of a Catholic German Church governed by a collective concordat, they were to have Catholic German churches governed by particular concordats (cf. Goyan, *L'Allemagne religieuse: Le Catholicisme, 1800-1848*, Paris, 1905, i. 107 ff.; H. Brück, *Gesch. der kath. Kirche im neunzehnten Jahrhundert*, Mainz, 1889, i. 258).

Bavaria began with its concordat of 5th June 1817, ratified at Munich on 24th October. This convention comprises eighteen articles, of which the following are the chief provisions:

'Art. 1. The Catholic, Apostolic, and Roman religion shall be preserved in its purity and integrity in the kingdom of Bavaria and the territories belonging to it, with the rights and privileges which belong to it in accordance with Divine laws and canonical principles. Art. 5. The duty of bishops being to see to the teaching of the faith and morality, they shall experience no obstacle to this duty even in the case of public schools. Art. 9. In view of the benefits resulting from the present convention to the affairs of the Church and religion, His Holiness shall grant to His Majesty King Maximilian Joseph and to his Catholic successors, by a bull which shall be drawn up immediately after the ratification of the present convention, permission for life to nominate, to the vacant archbishoprics and bishoprics of the kingdom of Bavaria, worthy ecclesiastics who have the qualifications required by the canonical laws. But His Holiness shall give them canonical institution according to the ordinary rules. Art. 15. Whenever the archbishops and bishops shall inform the Government that there have been printed or brought into the kingdom books whose contents are against the faith, good morals, or ecclesiastical discipline, the Government shall take suitable means to prevent their circulation.'

Rome could not but be glad at this concordat, so favourable to her interests; but her joy vanished when the Bavarian Government published the 'Religious Edict,' which subordinated the Church to the State. The Roman curia raised lively protests against these organic articles. After long conferences they ended with the Declaration of Tegernsee (1821), in which the king of Bavaria promised that the concordat, considered in itself, should have the value of a law of the State, and that the guarantees granted by him to the Catholic Church should be in no way diminished by the stipulations of the Religious Edict. The concordat of 1817 is still valid in Bavaria (text in Nussi, p. 146; Münch, ii. 217; Walter, p. 204).

After the concordat of Bavaria we come to the concordat of Prussia. The king of Prussia, Frederick William III., received many Catholic subjects at the Congress of Vienna, and he desired to give full satisfaction to their religious sentiments. He therefore resolved to negotiate with the Pope about the re-constitution of the bishoprics. In 1816 the scholar Niebuhr was sent to Rome to transact this business. The unwillingness of the Chancellor Hardenberg caused the affair to last a long time. At last, on 15th July 1821, there appeared the bull *De salute animarum*, the so-called 'delimiting bull,' which was ratified by Frederick's Government on 23rd Aug. following. So Prussia had her concordat. She has preserved it to the present day. It is in terms of the bull *De salute animarum* that the Catholic Church of Prussia is governed.

This bull refers specially to the regulating of the division of dioceses, the composition of chapters, and the material state

of the clergy. Most of the measures which it lays down would be of no interest, and need not be quoted here. Two points only are worthy of notice: (1) Bishops are nominated by chapters, who, in virtue of the brief *Quod de fidelium* of 16th July 1821, must ascertain by means which they shall consider good that the elected person shall be *persona grata* to the king; (2) Prussia takes an oath to guarantee before 1833 a really adequate endowment to the archbishops and chapters. But up to the present this article has remained a dead letter, and Prussia confines herself to paying the clergy the interest on the promised endowment (text in Nussi, p. 188; Münch, ii. 260; Walter, p. 239). In 1902, Germany concluded a concordat concerning the University of Strassburg (*Analecta ecclesiastica*, x. 491).

Hanover had its concordat three years after Prussia. It had commenced to negotiate with Rome as early as 1816, when its aim was a compact similar to the French concordat. But it did not succeed in getting Rome to accept its conditions, and, after five years of fruitless conferences, it resolved to follow the example of Prussia, and, like it, to bring into its concordat only the re-constitution of the dioceses. It therefore asked a 'delimiting bull,' which was granted on 24th March 1824. This was the bull *Impensa Romanorum pontificum*.

It fixes the limits of the two bishoprics of Hildesheim and Osnabrück, settles the revenues which the king promises to pay the clergy, and specifies that, within four years, these revenues shall be guaranteed by an endowment of real property. Lastly, it authorizes chapters to nominate the bishops, after, however, sounding the Government. Before giving canonical institution, Rome reserves to herself the right of making inquiries about the candidates presented to her (text in Nussi, p. 222; Münch, ii. 302; Walter, p. 265).

The governments of Württemberg, Baden, the two Hesses, ducal Saxony, Mecklenburg-Schwerin, Waldeck, Bremen, and Frankfurt united to obtain from Rome a common concordat. They drew up, under the name of a 'declaration,' a scheme of Latin ecclesiastical constitution, which they presented to be accepted by Rome (1819). Consalvi replied to this scheme by a very different counter-scheme. The united governments modified their declaration slightly, and presented it once more as the *Magna Charta libertatis Ecclesie Catholice*. Consalvi drew up a second report, which emphasized the dissent, but proposed a delimiting bull as a basis of provisional understanding. This proposal was accepted, and on 16th Aug. 1821 there appeared the bull *Provida solersque*, which established the ecclesiastical province of the Upper Rhine, composed of the five bishoprics of Freiburg, Rottenburg, Mainz, Limburg, and Fulda, with Freiburg as the Metropolitan See (Nussi, p. 209). The States in question accepted this bull and published it, at the same time, however, adding a series of organic articles entitled *Church Pragmatic*. Rome strongly protested against this document. The States tried to resist, but the Pope refused canonical institution to the bishops who were presented to him. The States were then compelled to modify their Pragmatic. In consideration of this concession, the Pope published, on 11th April 1827, the bull *Ad Dominici gregis custodiam*, which appears as the complement of the preceding one, and establishes a pragmatic regulation in six articles.

The first of these articles authorizes the chapters to nominate the bishops, with the consent of the civil authority. The fifth entrusts the training of 'clerks' to episcopal seminaries supported by the State, but managed in conformity with the law of the Council of Trent. The sixth guarantees freedom of communication between bishops and the Holy See, and declares that each bishop in his diocese shall exercise to the full the jurisdiction conferred on him by canonical law (Nussi, p. 239).

The States, one after another, accepted this bull, with the reservation that nothing must be inferred 'which might injure the rights of royal sovereignty, or which might be adverse to the laws of the country, to episcopal rights, or to the rights of the Evangelical Church.' Then, on 30th Jan. 1830, they promulgated an ordinance entitled the 'Thirty-nine Articles,' which revived the old *Church Pragmatic*. Pope Pius VIII. replied to this ordinance by the brief *Pervenerat non ita* of 30th June

1830, in which, after reproaching the bishops for not having themselves informed him of the Thirty-nine Articles, he enjoined upon them to defend the liberties of the Church. For a long time the bishops turned a deaf ear to this order; but at last, in 1851, yielding to the general feeling, which, since the events of 1848, had been turning all minds towards liberty, they had a bill published, in which were enumerated the liberties required by the Church, namely: liberty in the training of 'clerks' and in nominations to ecclesiastical posts, the right of possessing and erecting Catholic schools, the admission of monastic orders into the country, and the free administration of the property of the Church. After various incidents, Württemberg concluded a concordat with Rome, which was expressed in the bull *Cum in sublimi* of 22nd June 1857 (Nussi, p. 321). Baden, on its side, concluded one which is confirmed by the bull *Eterni patris vicaria* of 22nd Sept. 1859 (Nussi, p. 330). These two conventions gave satisfaction to the episcopal claims, and gave them especially the right to control education. But in 1860 the Baden Parliament forced the Grand Duke to annul the ordinance which the concordat promulgated. In 1861 the Parliament of Württemberg followed the same line of action. The concordats of Württemberg and Baden were therefore abrogated before being put into effect. Instead of them, the two countries in question regulated the affairs of the Church by laws. The Württemberg law of 30th Jan. 1862 proved quite favourable, but the Baden law of 1864 subjected education to a régime contrary to the conditions of the concordat.

(c) *Austria*.—Down to the middle of last century the Catholic Church of Austria was under the regulations which Joseph II. had given it, i.e. it was completely subject to the civil power and almost detached from Rome. In 1849, under the pressure of the occurrences which had disturbed Germany in the preceding year, the Austrian bishops asked and obtained free intercourse with Rome and the abolition of the Imperial *pacet*. This was the beginning of a new era. In 1853 the Austrian Government begged a concordat from Rome. The negotiations ended amicably, and the concordat concluded on 18th Aug. 1855 was published in Rome by the bull *Deus humane salutis auctor* of 3rd Nov. 1855, and in Vienna by the law of 5th Nov. following. It comprises thirty-six articles, of which the following are the chief:

Art. 1. The Catholic, Apostolic, and Roman religion shall be protected throughout the whole Austrian Empire and in all the countries belonging to it, with the rights and privileges which it ought to enjoy in accordance with Divine law and canonical prescriptions. *Art. 16.* The most august Emperor will not allow the Catholic Church, its faith, its liturgies, or its institutions to be slandered either in word, deed, or writing. Nor will he allow the prelates and ministers of the churches to be hindered in the discharge of their ministry, especially in everything that concerns religion and morals, or in the discipline of the Church.

Other articles place education and printing under the control of the bishops, remove matrimonial trials from civil courts and submit them to ecclesiastical jurisdiction, and recognize in the bishop the right of inflicting punishment on the 'clerks.' According to Art. 19, bishops are to be presented, i.e. nominated, by the Emperor ('*praesentat seu nominat*'), and canonically appointed by the Pope. Art. 25 reserves to the Emperor the ancient right of patronage, authorizing him to nominate a certain number of canons and curates (Nussi, p. 310; *Collectio lacensis*, v. 1221). This concordat, which brought the Austrian State completely under the power of the Pope, had only an ephemeral life. As early as 1862, in the Reichsrath, it was exposed to attacks, which went on increasing. The opposition received a first satisfaction in the constitutional laws of 21st Dec. 1867 and 25th April 1868, which, while allowing the Church its freedom of action, declared

it subject to the laws of the State. Then came the three laws of 25th May 1868, which extended the jurisdiction of civil courts to marriages, removed from the bishops the management of schools, and allowed to Dissenters the same rights as to Catholics. The Pope protested strongly against these three laws, which he styled 'abominable laws' (address on 22nd Jan. 1868). It was in vain. The concordat of 1855, however, still continued to exist, at least theoretically, in spite of the great breaches made in it by the laws of 1868. It prolonged its existence until the day when the Vatican Council proclaimed Infallibility. Then the Austrian Government decided to denounce the concordat. In conformity with this decision, Count Beust, in a despatch of 30th July 1870, informed the Pope that the concordat of 1855 was 'affected by decay, and regarded as repealed by the Imperial and Royal Government.' Nevertheless, the religious position of Bosnia and Herzegovina is regulated by the concordat concluded between Austria and the Holy See on 8th June 1881 (*Juris pontificii*, p. 342).

(d) *Spain*.—The death of Ferdinand VII. (1833) was the signal for great disturbances, in the course of which the concordat of 1753 was annulled. To restore peace to the minds of the people, Queen Isabella II. concluded a fresh convention with Pope Pius IX., this being the concordat of 16th March 1851, whose chief provisions were:

Art. 1. The Catholic, Apostolic, and Roman religion shall be the religion of the Spanish nation, to the exclusion of all other worship. It shall enjoy all the rights and privileges claimed by the law of God and canon law. Art. 2. Education shall be under the control of the bishops. Art. 4. Royal authority shall preserve the right of nominations guaranteed it by the concordat of 1753. The other articles deal chiefly with the new circumscription of bishops and the endowment of the clergy (Nussi, p. 281).

Some years later the Spanish Government violated this concordat by the so-called law of 'amortization,' which ordered the immediate sale of the Church property. The Roman curia protested, and the nuncio left Madrid. Being unable to maintain resistance for any length of time, the Spanish Government yielded, and signed the additional convention of 25th Aug. 1859 to the following effect:

The State promises not to sell any Church property in future without the consent of the Holy See; the Church has the right of possession; the Holy See accepts what has been done, and brings forward no claim against the sales effected; the Church property shall be converted into inalienable incomes (Nussi, p. 241).

Towards the end of last century the Spanish Government made two separate attempts (1881 and 1894) to remove education from under the control of the bishops, but both failed. On 19th June 1904, Spain concluded with Pope Pius X. a concordat intended to regulate the position of the monks. This convention comprises twelve articles, which may be summed up to the effect that the congregations at present existing remain; the establishment of new congregations shall be subordinated to the authorization of the ecclesiastical power and the civil power (*Acta sanctæ sedis*, xxxvii. 157).

Since 1901 the Spanish Government has been entreating the Vatican to modify the Concordat. While awaiting the end of the negotiations, which the Roman curia is contriving to prolong, it has (by a decree of 31st May 1910), to the great dissatisfaction of Rome, imposed restrictions on religious congregations and (by an ordinance of 10th June 1910) authorized the outward signs of non-Catholic cults.

(e) *Russia*.—On 3rd Aug. 1847 the Czar Nicholas I. concluded with Pope Pius IX. a concordat, the chief conditions of which were: the Holy See shall nominate bishops only after an understanding with the Czar (Art. 12); the bishops shall nominate as curates clergy approved by the Government

(Art. 30); the teaching in seminaries and the administration of ecclesiastical affairs shall be in the hands of the bishops (various articles, Nussi, p. 273). Between 1847 and 1866, Rome complained several times that this last point was not observed. At last, in 1866, the insult committed against the Pope in the palace of the Vatican by the Ambassador from Russia to the Holy See brought about the rupture of the diplomatic relations between Rome and St. Petersburg. Leo XIII. renewed them by the convention of 23rd Dec. 1882 (*Analecta ecclesiastica*, iv. 75); but his endeavours to secure liberty of ecclesiastical administration were futile.

(f) *Italy*.—Concordat of 16th Sept. 1803 between Napoleon and Pius VII. about the Italian Republic (Nussi, p. 142). Concordat of 17th July 1817 between Victor Emmanuel I. and Pius VII. with regard to Sardinia (Nussi, p. 155). Concordat of 18th Feb. 1818 between Ferdinand and Pius VII. concerning the Two Sicilies (Nussi, p. 178). Concordat of 16th April 1834 between Ferdinand II. and Gregory XVI., intended to complement the former one (Nussi, p. 254). Concordat of 27th March 1841 between Charles Albert and Gregory XVI. on the subject of ecclesiastical immunity in Sardinia (Nussi, p. 266). Concordat of 25th April 1851 between Leopold II. and Pius IX. regarding Tuscany (Nussi, p. 278). All these conventions, even that of 1803 concerning the Italian Republic, recognize Catholicism as the State religion, except where they are confined to granting privileges to the Church. They were all superseded at the time of the formation of the present kingdom of Italy.

(g) *Switzerland*.—There are three concordats to be mentioned here: (1) the concordat of 26th March 1828 between Leo XII. and the districts of Berne, Lucerne, Soleure, and Zug with reference to the establishment of the bishopric of Basel (Nussi, p. 242); (2) the concordat of 7th Nov. 1845 between Gregory XVI. and the district of St. Gall with reference to the establishment of the bishopric of this name (Nussi, p. 269); and (3) the concordat of 1st Sept. 1884 with the Federal Council to remove the Catholics of Tessin from under the jurisdiction of the Italian bishops (*Acta sanctæ sedis*, xxii. 449; *Juris pontificii*, p. 343). The last convention was definitely fixed on 16th March 1888 (*Juris pontificii*, p. 345).

(h) *Holland*.—The king of the Netherlands, William I., concluded with Pope Leo XII. a concordat attested by the bull *Quod jamdiu* of 16th Aug. 1827. The first article of this treaty declares that the French concordat of 1801 shall be applied to the country which is to-day called Holland, and which is designated in the convention by the name of 'the provinces north of Belgium.' Art. 17 of the French concordat, referring to the nomination of bishops, is excepted. The concordat of Holland stipulates that the bishops shall be nominated by the chapters, who, however, shall submit their choice to the consent of the king (Nussi, p. 232).

(i) *Belgium*.—The Catholic Church of this country was under the rule of the French concordat of 1801 until the year 1830. From that time, i.e. from the day of Belgian independence, the concordat was suppressed, and made way for a rule established by the Belgian constitution without a preliminary agreement with Rome. The State interferes neither in the nomination nor in the installation of ministers of worship, but it takes under its charge the salaries of bishops, curates, and vicars.

(j) *Portugal*.—Between this country and Pius IX. was concluded the concordat of 20th Feb. 1857 regarding the bishoprics of Goa and Macao (Nussi, p. 318). This concordat was supplanted by that of 7th Aug. 1886 (*Leonis Pontif. XIII. allocutiones*,

ii. 205; *Acta sanctæ sedis*, xix. 185; *Juris pontificii*, p. 349).

(k) *Montenegro*.—The concordat of 15th Aug. 1886 took Antivari under the jurisdiction of the bishop of Scutari (*Leonis Pontif. XIII. allocutiones*, ii. 275; *Juris pontificii*, p. 357).

(l) *England*.—In 1814 the Prime Minister, Lord Castlereagh, submitted to Cardinal Consalvi a scheme of concordat with regard to the English Catholics. Castlereagh claimed the three following points: (1) an oath of fidelity to the established Government and to the Constitution shall be imposed upon Catholics; (2) no episcopal nomination shall take place without the Government being previously advised of the candidates; the Government shall have power to offer objections and even to declare its *veto*; (3) all acts coming from Rome, except those of the Penitentiary, shall be submitted to the Royal *exequatur*. When Pius VII. was consulted by Consalvi, he replied that he accepted the oath of fidelity, but that he could not grant the king of England the *veto* or the *exequatur*. Lord Castlereagh's scheme fell through (de Richemont, 'Un essai de concordat entre l'Angleterre et le Saint-Siège,' *Correspondant*, 25th Sept. and 10th Oct. 1905).

(m) *Malta*.—On 12th Jan. 1890 there was concluded between England and Leo XIII. a concordat with regard to Malta. The clauses of this treaty were as follows:—(1) The British Government shall henceforth be consulted in the choice of the bishop of Malta and Gozzo; (2) the Holy See shall nominate an Englishman to superintend the seminary, where courses shall be given in English; (3) instructions shall be sent to the clergy to forbid interments in the churches (*Leonis Pontif. XIII. allocutiones*, iv. 68; *Juris pontificii*, p. 364).

(n) *Central America*.—The Republics of Guatemala, San Salvador, Honduras, Nicaragua, Costa Rica, and Hayti concluded concordats with Rome on the following dates: 7th Oct. 1852, Guatemala (Nussi, p. 303); 22nd April 1862, San Salvador and Honduras (Nussi, pp. 367, 349); 2nd Nov. 1861, Nicaragua (Nussi, p. 361); 7th Oct. 1852, Costa Rica (Nussi, p. 297); 28th March 1866, Hayti (Nussi, p. 346). All these conventions recognize Catholicism as the State religion, grant to the civil power the right of episcopal nomination, and fix the material resources of the clergy. Mexico, on the contrary, has refrained from forming any concordat, has proclaimed freedom of worship, and has left the Church to its own resources.

(o) *South America*.—Concordats similar to those we have just mentioned were concluded by Ecuador on 26th Sept. 1862 (Nussi, p. 349); Venezuela, on 26th July 1862 (Nussi, p. 356); Colombia, on 31st Dec. 1887 (*Acta sanctæ sedis*, xxi. 7; *Juris pontificii*, p. 358). Ecuador obtained a new concordat slightly modifying the former one on 2nd May 1881 (*Juris pontificii*, p. 335), completed by an additional convention of 8th Nov. 1890 (*ib.*, p. 339). Colombia supplemented its convention by an additional one on 20th July 1892 (*Analecta ecclesiastica*, i. 24; *Juris pontificii*, p. 362).

ii. JUDICIAL CHARACTER.—The problem of the judicial character of concordats gives rise to three main theories, which regard concordats (1) as privileges granted by the Church; (2) as international contracts or treaties; (3) as laws emanating from the civil power.

1. *Theory of privilege*.—This theory holds that in concordats the Church gives all and receives nothing; that it makes gracious concessions to the State to which the latter has no right, and that the State, on the contrary, when guaranteeing certain advantages to the Church, does no more than pay its debt. Concordats therefore do not

impose any obligation of justice on the Papacy, and the Pope may derogate from them when he thinks fit. According to these principles, the concordat may be defined (Tarquini, *Institutiones juris ecclesiastici publici*, Rome, 1862, p. 73) as 'an ecclesiastical law made by the authority of the Pope for a State or a Kingdom, at the instigation of the head of that State, and laying upon the prince the obligation of observing it religiously.' It is easily seen that this theory is based on the doctrine, so dear to the Middle Ages, that civil power is subordinated to ecclesiastical power. And, down to the middle of the 19th cent., it has been in favour with Roman theologians, as Baldi (*De nativa et peculiare indole concordatorum apud scholasticos interpretes*, Rome, 1883, p. 65ff.) has preposterously demonstrated.

The following are a few of the proofs brought forward by Baldi. To the question as to whether the Pope can derogate from the Germanic concordat, the canonist Branden replies: 'We need not pause long over this question. Whosoever recognizes that the Supreme Pontiff is the vicar of Christ, with full administration of all the possessions belonging to the churches, will have no difficulty in admitting that His Holiness, on account of the fullness of his power, can abrogate the concordat wholly or in part. When it is said that the concordat has the value of a contract, it means on the side of the Germanic peoples. They are, in the first place, obliged by Divine right, as Christians, to submit themselves to the Supreme Pontiff with regard to reservations. They are, moreover, bound by the concordat established with a view to pacification, so that they would be inexcusable if they refused to obey the Apostolic See by violating a ratified compact. But, on the Pope's side, the concordat made on behalf of the Germanic races contains only a favour whose fate depends entirely on the inclination of the Pope according to the words: *Quidquid tibi veris*. . . Now the Pope may easily give up papacy, but he cannot abdicate the powers inherent in papacy by Divine right.' The theologian Laymann wonders whether the Pontifical legate might confer benefices during the months when, according to the Germanic concordat, the collation is left to the bishops. He replies: 'The negative answer seems preferable to me for this reason: that the concordat of Nicholas v. with the German nation is supposed to have the value of a contract from which the Supreme Pontiff is not in the habit of derogating, although, in virtue of the fullness of his power, he might derogate.' In another place the same author expresses himself thus: 'The Pope, in consequence of the fullness of his power, may derogate from the concordat and confer benefices after the interval that is given to him, both during the months reserved to him, and in others also.'

The canonist Wagmareck says: 'In spite of the approval, ratification, and acceptance of the concordat by the Pope, the latter may, in consequence of the fullness of his power, abrogate this arrangement completely or in part, considering that it has as its aim the right to benefices and ecclesiastical property, a right which, being connected with spiritual things, has nothing whatever to do with the laity, and which the clergy themselves could not possess independently of the Supreme Pontiff.'

In Pirhing we read: 'Although, properly speaking, the Supreme Pontiff may, in virtue of the fullness of his authority, derogate (from the Germanic concordat) for some serious reason concerning the public welfare, he is, nevertheless, not in the habit of doing so, and he would not do it without disadvantage, except in the case where a serious and extraordinary cause demanded a measure of this kind for the good of the Church.'

Reiffenstül expresses himself thus: 'It is most probable that the pontifical legate cannot confer benefices during the months reserved to collators. This is, in fact, contrary to the spirit of the concordats passed between the Apostolic See and other nations. Now these concordats have the character of a contract from which the Supreme Pontiff is not accustomed to derogate, although, properly speaking, the fullness of his power allows him to do so.'

Nicolaris uses the same words: 'The Pope cannot derogate from the Germanic concordat arbitrarily and without a legitimate reason, but he may do so when a just and reasonable cause demands it. . . In the compacts which he makes he cannot and does not wish to abdicate his authority without reserving the chief part of it. A person may easily, for purposes of private utility, give up a private right; but he cannot give up a public right, especially when it is divine (which is the case) and when it is connected with the public interests of the Church. That the head of a hierarchical or politico-sacred body should not be the head of it, and should not have, as such, the power of Divine right inherent in the chief of that body, is a contradiction. But the concordats which the Pope passes with a king or a prince, from the point of view of the Pope, are not so much contracts as privileges. . . Now privileges are revocable. It is the same with concordats.' To support his statement, Nicolaris quotes a decision arrived at by the Court of Rota in the year 1610, which says: 'There is no doubt that the Pope may derogate from the concordat in virtue of the very great power that he possesses with regard to benefices. His is, in fact, the universal Ordinary, and he cannot have agreed to the concordat so far as to tie his own

hands. It is sometimes said that the Germanic concordat has the value of a contract. But this is not true, as spiritual things do not come under business, but are drawn up under the form of favours. Other texts may be found in Baldi, *op. cit.*

This theory reigned in the Catholic schools down to the year 1871. It was held by Tarquini, professor in the Roman College, in his book, *Institutiones juris ecclesiastici publici* (p. 73). It also formed the basis of the book published by Maurice de Bonald, *Deux questions sur le concordat de 1801*, Geneva, 1871. Several bishops declared to the author of the latter book that he had faithfully interpreted the mind of the Church (cf. the texts in *Acta sanctae sedis*, vi. 536 ff.), and the Pope himself sent him a brief (19th June 1872) to say that he had explained the real and authentic idea of concordats, as, in the conventions bearing upon the things which concern it, the Church does not seek to take possession of the rights of others, but yields up her own rights. But, shortly after, the Minister of Religions in Bavaria read the pontifical brief to the Parliament of that country, and concluded that, since the Holy See considered concordats as privileges and not as compacts, the civil power was not bound by them either. This incident caused great agitation, and showed the majority of the theologians how dangerous was the theory of the privilege-concordat. Since 1871 this theory has had only a very small number of representatives in the Catholic Church, among whom we may mention Scavini, *Theologia moralis*, Milan, 1894, bk. iv. p. 105; Gaspar de Luise, *De jure publico seu diplomatico Ecclesiae Catholicae*, Naples, 1877, p. 505; Baldi, *op. cit.* p. 65 ff.; Satolli, *Prima principia publici ecclesiastici*, Rome, 1888, p. 45. General opinion is in favour of the contract-concordat.

2. **Theory of contract.**—This theory regards concordats as contracts, which are included in the category of international treaties, and which lay a strict obligation of justice on the two contracting parties—on Popes and on Governments. It is based on the very terms of the concordats and on repeated declarations made by the Popes. In the bull *Primitiva illa Ecclesia*, Pope Leo X. practically says:

'As we agree to the above arrangement with King Francis, because of his sincere devotion to us and our See, . . . and as we desire its inviolable observation, we decide that it has the power and the value of a real obligatory contract, legitimately concluded between us and the Apostolic See on the one hand, and the above-mentioned king and his kingdom on the other, neither we nor our successors being able to derogate from it by any letter or favour.'

In the Spanish concordat of 1753 we read (Art. xxv.):

'His Holiness, pledging his faith as Supreme Pontiff, and his Majesty, giving his word as Catholic king, mutually promise in their name and in the name of their successors to observe completely and for all time each and all of the foregoing articles, wishing and declaring that neither the Holy See nor the Catholic king can claim more than is comprised and expressed in the above-mentioned chapters.'

In the bull *Ecclesia Christi*, intended to promulgate the French concordat of 1801, Pope Pius VII. says:

'We promise and take an oath in our name and in the name of our successors, to fulfil and observe sincerely and inviolably all that is contained in these articles.'

We read likewise in the Bavarian concordat:

'Each of the contracting parties, as well as his successors, promises to observe religiously all that has been agreed upon in these articles.'

The theory of the contract-concordat has been held in modern times by some jurists. Calvo (*Le Droit international*², Paris, 1870-72, i. 703) says:

'Concordats are not, properly speaking, international treaties, as the Church cannot be regarded as a nation. It is difficult, however, not to place them in the category of diplomatic agreements, since, on the one hand, they are concluded between two supreme authorities foreign to each other, who combine their action and negotiate on neutral ground for the purpose of preventing all chance of clashing, and since, on the other hand, they pass through all the formalities devoted

to the other treaties from the time of the negotiation until the exchange of ratifications.'

The same doctrine used to be taught also in France and in Germany by theologians interested in Gallic maxims. But until the most recent times theologians who were anxious to defend the rights of the Papacy rejected it. They were not ignorant of the declarations by which the Popes vowed to be faithful to concordatory stipulations, but they got rid of this objection by distinguishing between the Pope's ordinary power and his extraordinary power. According to them, concordats bound the ordinary power of the Pope, but not his extraordinary power. (This is very well explained by Baldi, p. 77.) Since 1872 several theologians and canonists, devoted to the maxims of the Curia, have taught the contract idea of concordats, combining it, however, in various degrees with the theory of the privilege-concordat. According to Giobbio (*I Concordati*, Rome, 1900, p. 54), concordats are contract-privileges, i.e. privileges granted by the Pope to the civil party, but granted under the form of a contract. Before him M. Liberatore (*La Chiesa e lo stato*, Rome, 1875, p. 353) had brought forward the same doctrine in slightly different words.

3. **Theory of the civil law.**—According to this theory, the concordat is a civil law, which from a judicial point of view is exactly the same as the other acts emanating from the legislative power of a country. Undoubtedly, before promulgating this law the State has settled the terms of it conjointly with the Pope. But this agreement, which has had an influence on the framing of the law, cannot have given any special judicial character to the law itself. Like all other laws, the concordatory law arises from the only legislative power in the country which has established it; it may be revoked as soon as this power thinks fit. This theory is held to-day by most jurists in France, Germany, and Italy. Bluntschli (*Das moderne Völkerrecht*, Heidelberg, 1871, p. 443) says:

'International law can protect concordats only in an imperfect way, because, on the one hand, the contracting State can make use of all the means authorized by the law, and can even have recourse to violence; and, on the other, if the Church does not possess these means, it can make use of those which religious authority grants it, and which are not placed under the control of international law. Concordats, therefore, form a separate class to which the principles which govern ordinary treaties must not be applied except with caution. . . . Concordats, as a rule, are only temporary settlements of the relations between Church and State, made by common consent, on the borders where they touch and often enter into conflict. In reality the State is quite as well authorized to settle these questions alone and without the help of the Church as the latter is to make religious resolutions. This right of both parties is not lost in consequence of the concordat.'

CONCUBINAGE.

Introductory (J. A. MACCULLOCH), p. 809.
Christian (D. S. SCHAFF), p. 817.

CONCUBINAGE.—1. Definition.—Concubinage may be defined as the more or less permanent cohabitation (outside the true marriage bond) of a man with a woman or women, who usually form part of his household, and whose position may be that of secondary wives, women bought, acquired by gift, or captured in war, or domestic slaves. Captive women are generally made household slaves, and are not always necessarily concubines, but, where concubinage is recognized, they can hardly fail to become concubines, cohabitation with them on the part of the father or sons being occasional or habitual. In some cases they are made wives, legal or secondary, though it is sometimes illegal to marry a slave. The female servants of a wife may become the husband's concubines, though usually only with her permission (see § 4). In these various forms concubinage has had a well-nigh universal range, yet there are exceptions (see § 2). Its differentiation from marriage must have originated when some ceremony of marriage was first used, unless we suppose, with Westermarck (*Moral Ideas*, London, 1908, ii. 391, 395), that monogamy was originally the general form of union; hence the first wife had a higher place when polygamy became general.¹ But, if men were at first polygynous whenever possible, like many of the higher apes, taking women as it suited them, still one woman—the first acquired, the favourite, or the most assertive—would be in a better position than the others, and would occupy in relation to them the position which, later, the married woman occupied in relation to the secondary wives or concubines, when marriage, as a definite institution, came to be marked by a ceremony or by some regulated method of obtaining a wife, e.g. by purchase or service. The first wife would then, for many reasons, occupy a higher position than later wives, as is the case in most polygamous societies, or than women with whom the husband had relations without going through the ceremony of marriage. She was the first to be obtained by her husband, she would generally be of higher rank than later comers, and by her established position she would exert her authority over them.² Probably, too, the growing dignity of the first wife would lead to the neglect of the marriage ceremonial in the case of other wives. This would in any case be necessary where the man went to live with the family of his wife; subsequent 'wives' would be obtained in other ways, and would have a lower position. Thus, even when polygyny takes the form of polygamy with concubinage, the concubines being on a different footing from the wives, the latter, as compared with the first or chief wife, are usually in a subordinate position. In polygamous households with no concubines, the later wives can hardly be differentiated from concubines. The chief wife has been bought or served for, the secondary wives and concubines are women obtained in easier ways. Indeed, where wives are obtained only by purchase, a man will often be content to purchase one, and will obtain secondary wives or concu-

¹ If there was ever a primitive monogamous sentiment, it soon became obscured, as the polygynous sentiment has certainly been almost universal, though, in actual practice, polygyny is generally limited in any single society (see § 2).

² Even where all the wives are equal, as among the Bechuana, the first, or the woman of highest rank, 'has the upper hand when they are unable to agree' (Starcke, *Prim. Family*², London, 1896, p. 59).

Greek and Roman (W. KROLL), p. 819.

bines by means of raids undertaken expressly for that purpose, as among the Kafir, who make raids to capture women whom they make concubines to escape the necessity of purchasing wives. Here we must distinguish between the gaining of a bride by capture from a strange tribe—a practice which obtains among some 40 peoples (Tylor, *JAI* xviii. 245 ff.)—and the much more generally diffused custom of making secondary wives or slave concubines of women taken in war or raids.¹

This practice was probably the origin of slavery. Male captives were at first slain or sacrificed. Women and children, though sometimes sacrificed, eaten, prostituted, or sold, were more generally made slaves, secondary wives, or concubines. Their position as slave-workers led men to see the value of similarly enslaving male captives. Generally speaking, where there are no slave women, as among the Australians, Melanesians, Hottentots, Fuegians, and some American Indian tribes, there will be no concubines, and the wives are then in an extremely servile position.

The difference between the chief and lesser wives or concubines would certainly be augmented where the latter were captives, and the former chosen from native women. This difference extended itself as civilization advanced—the wife being taken from a man's own rank, concubines from women of a lower rank. Thus, in practice, polygyny in its various forms comes gradually to be monogamy, with legal concubinage; and finally issues in monogamy, with concubinage as an unauthorized or illegal practice. But at certain stages of society, as Spencer has shown (*Principles of Sociology*, i. [London, 1877] 708), there is a connexion between militancy and polygyny, warlike tribes which capture many women being inevitably polygynous. In the higher civilizations, while concubines are occasionally obtained by war, they are more often purchased, as in ancient Mexico, China, Japan, Abyssinia, India, etc.; or sometimes they form a gift from one king to another or to a subject.

2. Causes and limits of polygyny.—As long as men are regarded as the owners of women, there will be no limit set to their acquiring them, whether as wives or as concubines or both. Many causes have contributed to make man polygynous (see Westermarck, *Hist. of Hum. Mar.*² p. 483 ff.); nevertheless polygyny, whether in the form of polygamy or concubinage, could never, at any time or in any region, have been practised by all the members of a tribe or people. As an examination of descriptions of polygynous peoples shows, it is the privilege of the few, partly because of the expense of supporting several women, partly because a universal polygyny would necessitate an enormous excess of females over males, and partly because, at the lower levels of civilization, the old and influential men (Australia)—good hunters, brave warriors, and head men—and, at higher levels, the rich and powerful—chiefs, kings, and men of rank—appropriate most of the women. Thus, through necessity, the bulk of the people, the poorer and often the younger men, are monogamous, whether they like it or not. Polygyny thus comes to be associated with the reputation of a warrior, with wealth, or with greatness. It becomes a sign of these, and also the test of wealth or consequence. This is true even of the Australian natives, with whom a man's riches are measured by the number of his wives, or, as among the Urubunna tribe, the number of a

¹ Respect for women in war is sporadically found among American Indian tribes, the Kabyles, and elsewhere (*Hobhouse's Morals in Evolution*. London, 1906, i. 251).

man's *piraungaru* women depends on his power and popularity (Letourneau, *L'Evol. de l'esclavage*, 32; Spencer-Gillen², 62). Thus polygyny becomes the privilege of the few, and is sometimes forbidden to the common people. On the other hand, where maintenance is easy, or where, for any reason, there is a large surplus of women, it will be more widely diffused. And, since at certain levels women are the labourers and food-providers, and are skilful in the numerous occupations of savage life, they are able to provide for themselves and for their lords, and all the men of the tribe will try to possess as many of them as possible in order to be maintained by them. Nevertheless, as a general rule, it is true that polygyny is for the minority only, and is strictly proportioned to a man's prowess, wealth, or rank. Thus, in Dahomey 'the king has thousands of wives, the nobles hundreds, others tens, while the soldier is unable to support one' (Forbes, *Dahomey*, London, 1851, i. 25); and among the South American Araucanians the poor and feeble must be celibates or monogamous, while others buy wives and procure concubines by raids (D'Orbigny, *L'Homme américain*, Paris, 1839, i. 403). Statements like these regarding polygynous peoples are common—the people have one wife, chiefs, warriors, and kings have many wives and concubines, and in some cases they alone, or the wealthy, are allowed to possess them, as among some N. and S. American tribes, some Ainu tribes, and the ancient Peruvians (Westermarck, p. 437; von Siebold, Suppl. to ZE, 1881, p. 31; § 4 (6)).

A strict monogamy and, in consequence, no concubinage, occurs among some 50 peoples, either from necessity or from scarcity of women, but often also from preference. Some of these tribes are often the kindred of polygynous tribes. Among these monogamous groups are some of the lowest peoples—the Veddas, Andaman and Nicobar Islanders, and some Australian tribes (Bailey TES, new ser., ii. 291 ff.; Man, JAI xii. 136; Distant, ib. iii. 4; Curr, *Austral. Race*, London, 1886-7, i. 402, ii. 371, 378; cf. Westermarck, p. 436 ff.), while polygyny is rare among the Fuegians, Hottentots, and Bushmen (Westermarck, p. 442; Waitz, *Anthrop. der Naturvölker*, ii. 341; Burchell, *Travels in the Interior of S. Africa*, London, 1822-4, ii. 60).

3. Concubinage among lower races.—If already, in the most primitive times, there was a tendency to give one wife a slightly better position than the others, this tendency is most marked both in savage and in barbaric polygamous societies, especially where polygamy is limited to rich or great men. A higher position is usually given to the first wife—the wife who was married according to a ceremony (which in some cases must not be repeated)—or, less frequently, to the favourite wife (e.g. the Damaras, where her son inherits [Anderson, *Lake Ngami*³, London, 1856, pp. 225, 228]), or to the one who has borne most or healthiest children (Lane, *Mod. Egyptians*, London, 1846, i. 240; Polak, *Persien*, Leipzig, 1865, i. 226), or to one who has some outstanding characteristic. Where the first married is the chief wife, this is generally because she is of the husband's rank, while later 'wives' are of lower rank, sometimes even captives; and in such cases she is often regarded as the only legitimate wife. There are exceptions to this, as where each wife has a separate hut, chamber, or hearth, or where there is equal cohabitation with each, or each in turn is given a temporary supremacy, or where all are sisters (Post, *Grundriss der ethnol. Jurisprudenz*, 1894, i. 145, 63 f.). Yet even here the first wife tends to be recognized as chief. As a rule, this 'hierarchical polygamy' is well-marked. There is a chief or 'great' wife, and lesser wives who pay her respect, and who are often her handmaids, and are certainly in subjection to her. For this reason it is difficult to discriminate between instances of true monogamous marriage with concubinage and this hierarchical polygamy, since in one case the concubines, in the other the lesser

wives, are practically in the same position, are often acquired in the same way (by capture or purchase as slaves), and are not married with the usual ceremony, while their children have often a different status from those of the chief wife (§ 9). The examples of polygamy with concubinage will be discussed later; in such cases the position of the lesser wives is less servile than that of the concubines.

The monogamous Karoks of California permit a man to keep as many female slaves as he pleases, but cohabitation with more than one brings obloquy (Powers, *Tribes of California*, Washington, 1877, p. 22). Among many American Indian tribes a distinction is drawn between the first or real wife and all successors, her children alone being legitimate or of the father's rank (Westermarck, p. 443). In Guatemala a man could make concubines of his female slaves; and, when a young noble married a child wife, he was also given a concubine (NR ii. 650, 664). In Nicaragua, where bigamy was punished, and where it was forbidden under pain of death to use the marriage ceremony a second time, concubinage was recognized (NR ii. 671; Herrera, *Hist. générale*, Paris, 1671, i. 330). Among many S. American tribes the first wife and her children have special privileges, and she is mistress of the house. She has usually been purchased or acquired by the husband's labour; the others are captives made in tribal raids (Post, i. 143, note; Waitz, iii. 383; Wallace, *Amazon*, London, 1895, p. 346; Westermarck, p. 443; D'Orbigny, ii. 307). The Araucanians are forbidden to have more than one wife, but concubines are allowed (Post, i. 62). One wife and, subject to her, many concubines (often women captives captured in raids) are permitted to the Ainus, Mongols, and Tangutans (Bickmore, TES, new ser., vii. 20; Batchelor, *Ainu of Japan*, London, 1892, p. 288; Prejevalsky, *Mongolia*, London, 1876, i. 69, ii. 121). In Burma a married man who can afford it buys concubines; while among the peoples of the Indian archipelago and in Siam, the first wife or the wife who has been ceremonially married occupies a different position from that of the other wives or concubines (Letourneau, *La Condition de la femme*, 224; Crawford, *Indian Archipel.*, Edinburgh, 1830, i. 77, iii. 100; Colquhoun, *Amongst the Shans*, London, 1855, p. 182). A Malay refused to give his daughter to a man of his own rank who is already married. If the latter wants more wives, he takes them from a lower class, and they are regarded as concubines, the ceremony being observed at the first marriage alone (Starcke, *Prim. Family*⁴, 264). With some of the aboriginal Indian tribes one wife only is permitted, but concubines are allowed (Deccan [Köhler, ZVRW viii. 114]), or the first wife has the pre-eminence, the others being her servants (Dalton, *Desor. Eth. of Bengal*, Calcutta, 1872, p. 216; Letourneau, *Evol. of Marriage*, 138). While polygamy was general in Polynesia, the lesser wives were subordinate to the chief wife, who did no hard work, and they were of lower rank, or captives taken in war. They were concubines rather than wives (Maoris, Tongans, Tahitians, Samoans, etc. [Taylor, *Te Ika a Maui*, London, 1870, p. 338; Letourneau, *La Femme*, 105, 107, 119; Ellis, *Polynesian Researches*, London, 1869, i. 273; Cook, *Voyage to the Pacific*, London, 1785, i. 401]). With the Bantus of Timor and the Nueri of New Guinea one legitimate wife and permissible concubinage is the rule (Post, i. 62). Among several of the Bantu peoples of Africa the lesser wives are in the position of concubines, e.g. with the Basutos the 'great' wife is mistress of the house, and the others are inferior, and regarded as concubines (Casella, *The Basutos*, London, 1861, p. 186); and among the tribes of East Central Africa the chief wife is a free woman and superintends the work of the others, who are slaves (Macdonald, *Africana*, London, 1882, i. 134). This is true also of some of the Negro tribes (Post, i. 62). Among the Hovas of Madagascar there is a chief wife (*vadi-be*) and 'little wives' (*vadi-keli*); the former has her own hut, the latter live together in equal servitude (Letourneau, *La Femme*, 297 f.; Rochon, 'Voy. to Madag.', in Pinkerton, *Voyages*, London, 1814, xvi. 747). Among the Australian polygynous tribes, where a man may have as many wives as he can obtain or keep, the first is superior in authority if she can maintain her position with the younger and later wives. This is especially the case where, besides his individual wife, a man takes one or more of the women belonging to the class into which he has a right to marry (Dawson, *Aust. Aborigines*, Melbourne, 1881, p. 33; Woods, *Nat. Tribes of S. Aust.*, Adelaide, 1879, p. 12; Palmer, JAI xlii. 282; Howitt, ib. xx. 53 f.; Thomas, *Natives of Aust.*, London, 1906, p. 176). Sometimes, where marriage is forbidden to priests, as among Mongol tribes, they are permitted to have concubines (Köhne, ZVRW ix. 461).

But, among many savages there are marriages to several wives, concubinage sometimes co-exists with this polygamous arrangement, though even here the first wife married is usually the chief, and exercises authority over the lesser wives and concubines. In some cases, however, as among the ultra-polygamous Negro households, there may be several head wives (Post, *Afr. Jurisprud.*, Oldenburg and Leipzig, 1887, i. 313, 315). In most cases concubines are here captives taken in war or raids, though occasionally they are purchased.

Among the Eskimos polygamy and concubinage are occasionally found, women captured in fight being made concubines (Steller, *Kamschatka*, Frankfurt, 1774, ii. 157). Among the Apaches and other polygamous tribes of N. America, and among the nomadic tribes of the S. American pampas, besides wives there are numerous concubines—female prisoners taken in the *razzias* which are so frequent (Reclus, *Prim. Folk*, London, 1889, p. 128; D'Orbigny, i. 403). This is also true of the polygamous Kafir tribes that made raids expressly to obtain girls as concubines, who, unlike their wives, were without protection and at their mercy (Letourneau, *La Femme*, 77). But the most striking examples are found among the Negro tribes, especially those of Dahomey, Ashanti, etc. Generally a man has as many wives and concubines as he can buy or otherwise procure. Concubines are usually obtained in raids, or are bought as slaves, or are given to his favourites by the king. The number of wives and concubines increases in proportion to a man's position and wealth, the kings of the barbarous kingdoms often having hundreds or thousands in their harem, while they have a right over every unmarried girl (Speke, *Source of the Nile*, London, 1863, p. 344; Bosman, in Pinkerton, xvi. 479–80; Burton, *Mission to Gelele*, London, 1864, ii. 67; Letourneau, *L'Esclav. 81 f.*). The Fijians of New Guinea raid villages to obtain concubines, and in Fiji polygamy was accompanied by concubinage, chiefs often possessing hundreds of concubines, while there was a custom by which a bride took with her a child of the lower class and presented her to her husband when she had attained puberty (Letourneau, *ib.* 43, *Marriage*, p. 124; Williams, *Fiji*, London, 1858, i. 32). In Samoa, besides their wives, of whom one had a high position, chiefs made concubines of young women among their subjects (Pritchard, *Polynes. Remin.*, London, 1866, pp. 132, 372). In the Indian archipelago, polygamy with concubinage is generally confined to men of high rank (Westermarck, p. 440), but among the Lampongs of Sumatra the custom is for each man to have four wives, besides concubines. The third and fourth wives are subordinate to the first and second respectively, and the concubines to all four wives. The house is divided into three parts—*prampung*, *balangan*, and *tenga*. The first wife lives in the *prampung*, the second in the *balangan*, the third and fourth in wings of the *prampung* and *balangan*; the *tenga* is shared by the concubines (Post, *Ethnol. Jurisp.* i. 144 f.).

Some revolting forms of concubinage occur sporadically. For example, among the Caribs captive women were not eaten, but were kept for bearing children, who were eaten. The same occurred in Darien, where the mother also was eventually eaten (Andree, *Anthropophagie*, Leipzig, 1887, p. 72; Markham, *Travels of P. de Cieza de Leon*, London, 1864, p. 50 ff.). With this may be compared the Guarani and Tupi custom of allotting to each prisoner a woman of the tribe until the time came for him to be eaten, when the woman was one of the first to share in the meal; and the Mexican custom of giving four girls to the captive destined to be sacrificed to Tezcatlipoca. These were named after four goddesses, and were specially trained for this purpose (Letourneau, *La Femme*, 161; Andree, 85; *NR* iii. 423).

The custom of Europeans living with native women in different parts of the world and having children by them is a common form of concubinage, and one which dates from the first contact of white men with savages.

4. Concubinage among higher races.—(1) While monogamy was general among the people in *Egypt* (Herod. ii. 92), there was no restriction upon polygyny, and it flourished among the higher classes. Monogamy was binding upon the priests, but some of them appear to have had concubines; a high priest c. 40 A.D. says: 'I had beautiful concubines' (Diod. Sic. i. 80; W. Max Müller, *Liebespoesie der alten Ägypter*, Leipzig, 1899, p. 5). Among the higher classes each wife had her own house, of which she was mistress; but they had different rights, according to their rank. Besides them were concubines—domestic slaves, or war captives, who had few rights. Kings had one chief wife—the 'great spouse' or queen, often a sister—many lesser wives varying in rank, and innumerable concubines—foreign women, hostages, captives, or slaves. On the monuments, kings boast of the number of women they had carried off in war. These were taken to the harems, while there was also a regular tribute of women from various places. The nobles imitated the royal establishment, and besides the legitimate wife had concubines, dancers, and slaves. Wall-paintings

often exhibit the king with his queen seated by him, and his lesser wives or concubines dancing before them. At a later period polygyny was still more the privilege of the higher classes and officials, while from the time of king Bocchoris onwards (c. 730 B.C.) marriage contracts are found in which a wife (probably because of her possession of property) has a clause inserted which insists on the husband's making her a payment in the event of his taking another wife or concubine (see Maspero, *Dawn of Civilization*, London, 1894, pp. 51 f., 270, 298; Flinders Petrie, *Hist. of Egypt*, London, 1896, ii. 274; Wilkinson, i. 318 f.; Letourneau, *La Femme*, 336 ff.; Paturet, *La Cond. jurid. de la femme dans l'anc. Egypte*, Paris, 1886, p. 22).

(2) With the ancient peoples of the East, concubinage was common and of great antiquity, the word for a rival wife (Heb. נָשִׂיָּה) being common to all the Semitic languages. Among the *Babylonians* the Code of Hammurabi shows the conditions of its existence about 2285 B.C. Polygamy was restricted, and had little hold upon the people, the bulk of whom were monogamous, the wife generally having a high place in the community. But it was commoner among the rich and powerful, one of the wives ranking before the others. In marriage contracts it was often stipulated that, if the husband took another wife or a concubine, the first wife might leave him, while he would have to pay her an indemnity (Maspero, p. 735; Sayce, *Social Life among the Assyrs. and Bab.*, London, 1893, p. 45 ff.; Johns, *JThSt* iv. 180). But, according to the Code, a man might marry a second wife if 'sickness had seized' the first (§ 148). The wife might give the husband a slave girl as a concubine to bear him children, but he must not then take one himself. If she tried to rival her mistress on that account, the latter might put a mark on her and place her among the slaves, but could not sell her if she had borne children. Where a childless wife failed to supply a concubine, the husband might take one himself, but she was not to be on an equality with the wife (§ 144 f.). A concubine might be put away, but her marriage portion must then be returned. This was what had been given her by her father when he gave her as a concubine (§§ 137, 183 f.). Such concubines were rather lesser wives, and the Code shows that they had a fixed status. But apparently a man's maidservants or slaves might also be concubines without legal status. Their children shared in the goods of the father at his death only if he had acknowledged them; but, in any case, they were free (§ 170 f.; Johns, *The Oldest Code of Laws*, London, 1903). Such slave concubines were entirely at the mercy of their master, whose right over them was absolute, and 'the begetting of children by their master was desired rather than otherwise' (Maspero, p. 735). Kings had several wives as well as concubines, and sometimes the son of a favourite slave might be nominated as the successor to the throne. They had also the right to take any female slave from her master as a concubine. In such a case the seller of the slave undertook all responsibility incurred by such a claim (*ib.* 708; Sayce, p. 77). There existed among the people irregular marriages, in which the father's consent was not required, and no purchase price was paid for the woman, though cohabitation, terminable at will, took place. Such a woman, however, was regarded by the law as a mere concubine, and had to wear a stone with her own and her husband's name and the date of their union (Maspero, p. 735).

In *Assyria*, kings were probably monogamous, but had several concubines; rich men also had many female slaves, dancers, and flute-players (Rawlinson, *Five Great Monarchies*, London, 1862,

i. 505; see also Kohler-Feiser, *Aus dem bab. Rechtsleben*, Leipzig, 1890-98).

(3) Among the *Hebrews*, though the bulk of the people were probably monogamous (but cf. 1 S 12), polygamy and concubinage were permissible and provided for in the laws (cf. Dt 21¹⁶), and were practised by the well-to-do (cf. Jg 19). The moving cause of polygyny was probably desire for offspring, as with many other peoples, especially in the East. In the patriarchal age there are some likenesses to the Bab. Code. Jacob is not to take other wives besides Laban's daughters (Gn 31³⁰). The wife might give her husband one of her female slaves as a concubine in order to raise up children—a common Eastern custom, the children being reckoned to the wife, who retained her authority over the slave. Thus, Sarah gave her handmaid Hagar to Abraham (who had other concubines); Rachel gave Bilhah to Jacob, 'that I may also have children by her'; and Leah gave him Zilpah when she 'saw that she had left bearing' (Gn 16³ 25⁶ [cf. 1 Ch 1³²] 30⁸⁻⁹). Each mother and her children had a separate tent (Gn 31³³). In Jg 8³⁰ Gideon has many wives and concubines. Concubinage, which would naturally result from the power of a man over his female slaves, is contemplated in the Law. In the Book of the Covenant a father may sell his daughter as a concubine or slave-wife for the buyer or his son. She is not to be set free in the Sabbatical year, though this rule is abrogated in Dt 15¹²⁻¹⁷ (or perhaps by that time the selling of a Hebrew woman as a concubine no longer existed). She was not to be sold to a foreigner; but, if she did not please her master, she might be redeemed by her kinsfolk, or she might be given to his son. If he took another, the food, raiment, and 'duty of marriage' of the first were not to be diminished (Ex 21⁷⁻¹¹). Failing any of these alternatives, she was free. Her position was nearly that of a legal wife. Captives (foreign women) taken in war were a fruitful source of concubinage (Nu 31¹³⁻¹⁸, Dt 20¹⁴), but special provisions were made for their treatment in the Deuteronomic code (Dt 21¹⁰⁻¹⁴). Not for a month was her owner to cohabit with a captive, but, unlike the legitimate wife, she could be repudiated without formal divorce, in which case she was free and could not be sold. As concubines a certain stigma attached to these captives in comparison with the wife obtained by purchase in the tribe (Gn 31³⁰), though the latter was scarcely more free. The rules about not selling concubines are in accordance with the general Oriental feeling that it is disgraceful to sell them, especially when they have borne children (cf. W. R. Smith, *Kinship and Marriage*², London, 1903, p. 92). In Lv 25⁴⁴ bondmaids may be bought of the heathen or of 'strangers that do sojourn among you.' These, like all female slaves, would become concubines, and there was probably an extensive traffic in them. Polygamy and concubinage were largely practised by the wealthy and by kings, though in Dt 17¹⁷ the multiplying of wives by the latter is forbidden as a cause of unfaithfulness. David had 10, Solomon 300, and Rehoboam 60 concubines (2 S 5¹³ 20³, 1 K 11³, 2 Ch 11²¹). In this they followed the custom of most Oriental monarchs. Though legislation permitted polygyny, monogamy in later times is evidently held up as an ideal. This ideal is unmistakably set forth in Gn 22²³⁻²⁴, while it is again pointed to in the cases of Noah and his sons, and of Lot, Isaac, and Joseph. Monogamy is also assumed in Proverbs and elsewhere, and is strikingly exemplified in the Prophetic books in the relation of Jahweh to Israel alone among the nations, as that of husband to wife, while the inconveniences of polygyny are pointed out in Gn 16³ 30⁸, Dt 21¹⁶, 1 S 1¹⁸, 2 S 16²¹. There was thus in some quarters a protest against polygyny,

but, though it was doubtless less and less practised, it remained as a general custom (cf. Jos. Ant. xvii. i. 2).

(4) Among the early *Arabs*, captives taken in war became the wives or concubines of their captors; but, even in Muhammad's time, if they bore their master a child, they could not be sold or ransomed. Probably their children were then freeborn and legitimate. In earlier times, however, and in the case of Negro slave women, the children were slaves. Raids were undertaken with a special view of obtaining women (W. R. Smith, *op. cit.* 89).

In *Muhammadan* countries, a man, according to general opinion, may have four wives, and, if he can deal with them 'with equity,' as many slave concubines—'those whom your right hands have acquired' (*Qur'ān*, iv. 3)—as he pleases, provided they are not sisters or otherwise related in any way which would prevent his marrying them. Concubines are defenceless, and over them their owner has unlimited power, though sometimes the situation of a favourite concubine may be more agreeable than that of a wife (*DI*, p. 671; Lane, *op. cit.* i. 243). One of the wives, usually the first married, is regarded as the chief, and is called the 'great lady,' though her place may be taken by a lesser wife if she is childless, or if the latter becomes the favourite. Concubines may be war-captives, offspring of a female slave by another slave or another man, or women given as a gift, but more often they are purchased. After acquiring a female slave, the owner must wait for a period of 1 to 3 months before making her his concubine. Slave concubines may be Muslims, Jews, or Christians, but not idolaters or within the prohibited degrees. In Arabia and Egypt they are often of mixed Abyssinian race; black slave girls have generally a menial position. White female slaves, for whom a large price is paid, are to be found only in the harems of the wealthy (Lane, i. 241-2; Letourneau, *L'Esclav.* 280 f.). Where a man has not four legal wives, public opinion regards it as commendable for him to marry a female slave who bears him a child, but she must first be set free. Where the child of a concubine is acknowledged by the father, it enjoys the same privileges and inheritance as the child of the free wife, and the mother cannot be sold or given away. Unless the owner emancipates and marries her, she remains a concubine, but is free at his death (Lane, i. 139 ff., 244; Letourneau, p. 280 f.). In practice many Muslims are monogamous from necessity or conviction—about 5 per cent in India and Egypt, and 2 per cent in Persia (Lane, i. 252; Amér 'Ali, *Personal Law of the Muham.*, London, 1880, p. 29 ff.). In India it is quite the exception to find any Muhammadan zenanas where there is a plurality save in the case of barrenness (Billington, *Women of India*, London, 1895, p. 16). On the other hand, it is not uncommon for a man to have concubines and no wives, in which case they are often made much of, and enjoy a luxury and comfort equal to that of a wife (Lane, i. 243). Where a wife has female slaves of her own, they cannot become the husband's concubines without her permission, and this is not often granted (*ib.* i. 241).

(5) Among the ancient *Persians* (including Parthians), kings had several wives, of whom one was regarded as wife in a different sense from the others, who were of lower birth; and the monarch also had many concubines, whom he had a right to take from any part of his kingdom. They were kept in close seclusion, and in each palace there were separate apartments for the queen and the concubines. The statement of Herodotus (i. 135), that the Persians marry many wives and keep a still greater number of concubines, refers only to

the wealthier classes, many of whom had an excessive number of concubines. The chief wife had to be of the husband's rank. In war, women and children were taken captive and became slaves, and the kings frequently made presents of several beautiful slaves to the bravest warriors. In Media, polygyny was common among the wealthy (see Herod. iii. 68, 88; Est ²²⁻¹⁵; Rawlinson, *op. cit.* iii. 216, 219, *Parthia*, London, 1894, pp. 404, 407, 414; Spiegel, *Erän. Altertumskunde*, Leipzig, 1871-78, iii. 677, 679-80; Letourneau, *L'Esclav.* 323). In modern Persia the Shah may take any woman, married or unmarried, free or slave, in the kingdom, and place her in his harem (Letourneau, p. 325).

(6) With the ancient *Mexicans*, *Mayas*, and *Chibchas*, while a titular monogamy prevailed, especially among the poor, the rich and powerful practised polygyny on a large scale. Besides the first, the true and lawful wife, whose children alone inherited, there were lesser wives and numerous concubines. Nobles had as many as 800 concubines, and they were counted by thousands in the palaces of the monarch. To his favourites or to visitors the latter would make presents of these concubines, or he occasionally offered them as sacrificial victims. In cohabiting with a concubine no ceremony was necessary, nor was her owner under any obligation to her. Concubines were generally war captives, or girls and women taken from their homes, or children sold by their parents. Each province paid to the monarch a tribute of Indian women for sacrifice or slavery. Another kind of marriage, differing from that of the chief wife, resembled the Roman concubinate. A priest knotted together the mantle of the man and the skirt of the woman, who could not then be repudiated without motive, though she and her children could not inherit. Another method of union was that by which parents chose young girls for their sons. No ceremony or contract was necessary for these temporary unions, but they were sometimes legitimated in the event of issue (see *NR* ii. 264, 271; Waitz, iv. 130, 360, 366; Prescott, *Conq. of Mex.*, New York, 1850, i. 121, 135; Sahagun, *Hist. de Nueva España*, 1829, bk. vi. ch. 21; Letourneau, *La Femme*, 184).

In *Peru* a similar condition of affairs prevailed. Monogamy was obligatory for the people, but it was nominal for the Inca and the nobles. These had one chief or real wife (in the case of the Inca, his sister) besides other wives and concubines. The Inca's secondary wives were distant relatives; but besides them he had numerous concubines, taken from all parts of the kingdom, since all women were at his disposal, and it was a signal favour to be chosen for the royal harem. The Inca also had the choice of the Virgins of the Sun, who, when he dispensed with them and permitted them to return to their homes, were honoured and maintained in great state. The royal seraglio often numbered several thousands, dispersed through the different palaces (Prescott, *Conq. of Peru*, New York, 1890, p. 53 f.; Garc. de la Vega, *Royal Comment.*, London, 1869-71, i. 310; Letourneau, *La Femme*, 193 ff.).

(7) Among the ancient *Germans*, according to Tacitus (*Germ.* 18), monogamy was customary, save among the nobles, who were polygamous. This was also the case with the Scandinavians, though this polygyny probably meant marriage with one chief wife and union with lesser wives or concubines. Among the Scandinavians, especially in the later times of conquest, concubines were captives, often of noble rank, taken in war or raids, or foreign bondswomen, often from the East or Greece, bought in regular slave traffic. In the king's court there was usually a large train of

fair captive women who acted as wine-bearers at banquets, and such women were also found in lesser numbers in the houses of nobles. Kings gave presents of concubines to brave warriors, or one man offered 'gold-decked slaves' to another. The bond with such concubines was loose as compared with the marriage-tie, which was sacred and respected (Geijer, *Samlade Skrifter*, Stockholm, 1873-5, v. 88; *Heimskringla*, ed. Laing and Anderson, 1889, i. 127 ff.; Vigfusson-Powell, *Corp. Poet. Boreale*, Oxford, 1883, ii. 473 ff.). The later Germanic kings and emperors and often the rich, even into Christian times, had wives and numerous concubines. With the Germans the concubine had neither the rank nor the privileges of the wife, nor had her children any claim to succession, though in Norse law the children of a concubine of 20 years' standing were capable of inheriting (Ploss, *Das Weib*, Leipzig, 1905, i. 655). See also *CONCUBINAGE* (Christian). For the Slavs, cf. the references given by Krek, *Einleit. in die slav. Literaturgesch.*, Graz, 1887, p. 362, note.

(8) Among the *Celts* monogamy was general, though kings occasionally appear with two wives (*ZCP* iii. 9; Stokes, *Lives of Saints*, Oxford, 1890, p. 237). Concubinage was quite usual, especially among the higher classes, concubines being either war captives or slaves, but the legitimate wife was mistress of the house. Little is known of the practice of the Continental Celts, but the polygyny of the Gauls (Caesar, *BG* vi. 19) was probably of this kind, viz. a chief wife and lesser wives or concubines. In the Irish texts, concubinage is occasionally referred to, and so much was it a recognized institution that it is provided for in the Brehon Law. King Diarmaid in the 6th cent. had two legitimate wives and two concubines. The children of the latter were in an inferior position, and the second wife had been espoused because the first was barren. Popular custom is reflected in the mythico-heroic tales. The mythic king Conchobar takes his prisoner Deirdre and cohabits with her without any objection on the part of his wife, and then offers her to Eogan for a year. But sometimes the wife made objection to the presence of a concubine; e.g. Dubthlach's wife threatened him with divorce if he did not sell the slave whom he had bought, and who was about to bear him a child (later S. Brigit). The concubine was, therefore, sold to a Druid. Slave women were liable to become concubines, and were often subjected to gross indignities (see d'Arbois de Jubainville, *La Civilisation des Celtes*, Paris, 1899, p. 288 ff.; Joyce, *Social Hist. of Anc. Ireland*, London, 1903, ii. ch. 19). Free women in Ireland appear sometimes as concubines, or as united in free love to warriors (Meyer, *Cath Finntrága*, Oxford, 1885, p. 29). In Wales, girls were hired from their parents for a fixed price, and a penalty was enjoined if the connexion was relinquished (Gir. Camb. *Descr. Camb.* ii. 6).

(9) In *Abyssinia*, the Emperor has one wife, the *itighe*, and a large number of lesser wives or concubines, and he has also the right to send for any woman who pleases him. This is considered a great honour. His example is followed by the nobles and wealthy men, who, besides a wife, have many domestic concubines. Women taken in war are made concubines (Letourneau, *Marriage*, 162, *La Femme*, 286).

(10) In *China*, besides the chief wife, one or more secondary but legitimate wives or concubines are a recognized institution, the ceremony of marriage being gone through with the first only, who must be of the husband's rank. Bigamy, or raising a concubine to the rank of wife during the lifetime of the wife, is illegal, but a man whose

wife reaches the age of 40 without having children must take a concubine for the sake of the ancestral cult. The secondary wives must obey the chief wife, who calls the man 'husband,' while they call him 'master'; but she is not expected to show jealousy of them, and, as popular poetry insists, should provide for their comfort. They are of inferior station, and, as they are usually purchased, they are mainly a luxury of the rich. They may be repudiated without any formality, or sold again by their owner. Poor parents freely sell their daughters as concubines—this being legal in China—either directly to rich men or to men who trade in concubines, and who educate them and re-sell them at a high price. While concubinage is legal, at the present time it is blamed unless the wife has no children, and a man loses respect when he multiplies concubines. Frequently they are taken only with the wife's consent. Children of concubines and domestic slaves have the same legal rights as those of the wife, if the mother has been received into the house. They are regarded as the wife's children, not the concubine's; they wear mourning at her death, but not at that of their mother, and lavish on her expressions of affection and respect, while they treat their own mother with contempt (Medhurst, *JRAS China*, iv. 15, 21, 31; Gray, *China*, London, 1878, i. 212 ff.; Letourneau, *La Femme*, 246 ff.). Mandarins in Korea are obliged by custom to have more than one wife as well as several concubines, while concubinage is very common among the nobility, the wife being doomed by etiquette to a species of widowhood (Ross, *Hist. of Corea*, Paisley, 1879, p. 315; Griffis, *Corea*, London, 1882, p. 251).

(11) In ancient Japan, though wife, mistress, and concubine were terms which were not distinguished, an occasional distinction is drawn in the texts between the chief wife and secondary wives or concubines, of whom she sometimes shows jealousy, while they are of lesser rank (Chamberlain, *Ko-ji-ki*, Suppl. to *TASJ* x. [1883] pp. xxxviii, xl, 270). In later times the position of the wife became that of the wife in China, while concubinage was legalized, the law specifying the number of concubines a man might have according to his rank. Their children are equal in law with those of the wife, who is regarded as their mother. She is addressed as *O-ku-sama*, 'honourable lady of the house,' and her position is a high one; but she must not show jealousy, however numerous the concubines may be. In circles which represent modern Japan, concubinage is ceasing to be practised and is regarded as incompatible with civilization (Rein, *Japan*, London, 1884, p. 423; Letourneau, *La Femme*, 233; Griffis, *Rel. of Japan*, London, 1895, p. 320; Norman, *The Real Japan*, London, 1892, p. 183).

(12) In India, while the bulk of the people lived and still live in monogamy, polygyny has always been recognized and practised by the rulers and wealthy, though it is prohibited by certain tribes and sub-castes, or is permitted in theory but practised only in case of sterility, since the begetting of a son is all-important (Billington, *op. cit.* 15; Dubois, *Hindu Manners, Customs, Ceremonies*, Oxford, 1897, i. 210; cf. also Strabo, p. 709). The Vedas show that polygyny was practised, though perhaps not commonly, and it included concubinage. One poet prays that Pushan will provide him with many damsels, and the texts speak of captive women taken in fight and given as presents (Muir, v. 457, 461). In later times several passages of Manu refer to a plurality of wives (iii. 12, viii. 204, ix. 85 ff.), though there is some attempt to establish monogamy (v. 168, ix. 77-82, 101). Brāhmanas and rich Kṣatriyas (to the latter of whom the loosest forms of marriage were

sanctioned) had lesser wives or concubines. The case of the Brāhman with four wives of different castes is contemplated,¹ but the first wife must be of his own caste, and she had precedence over the others, hence they were in the position of superior concubines rather than wives, and their children received a lesser share of the inheritance. The first marriage was regarded as more sacred, being contracted from a sense of duty, and not for mere self-gratification (iii. 12, ix. 147; Mayne, *Hindu Law and Usage*, Madras, 1878, p. 75). The troop of wives who belong to the king, and whose duties are carefully prescribed, were also superior concubines rather than true wives (vii. 219 ff.). Women carried off in battle became slaves of the victors, i.e. concubines in an inferior position. In modern times polygyny is an undoubted right for those who can afford it, and concubinage is a matter of common custom, especially in the higher ranks, but the first wife is chief and retains her prerogatives. 'By the law a Hindu may marry as many wives, and by custom keep as many concubines, as he may choose' (Balfour, *Cyclop. of India*, London, 1885, iii. 252; Mayne, pp. 75, 372; Dubois, i. 211). Concubines are sometimes secretly kept in a separate establishment to avoid the wife's jealousy, though the *Padma Purāna* directs her to avoid domestic quarrels on account of another woman whom her husband may wish to keep (Dubois, i. 311, 351). Women who are unable to find husbands commonly form connexions as concubines, while devotees who take vows of celibacy often have concubines under various pretences (Dubois, i. 210, 288). Priestesses of the Śiva and Viṣṇu cults are frequently mistresses of the priests, and dancing girls associated with temples, e.g. that of Jagannātha-kṣātra in Orissa, are practically concubines of the officiating Brāhmanas (Dubois, i. 133-4; Ward, *Hist. Lit. and Relig. of the Hindoos*, London, 1817-20, ii. 134). Concubines are entitled to maintenance when the connexion with them has been of a permanent character, analogous to that of female slaves, members of a man's household, in earlier times (Mayne, p. 367; for further details and references, see Jolly, *Recht und Sitte*, Strassburg, 1896 [= *GIAP* ii. 8], pp. 64-67).

(13) See CONCUBINAGE (Greek and Roman).

5. Forms of marriage and of sexual union analogous to concubinage.—Some forms of marriage, etc., are not far removed from marriage with concubinage.

(a) The custom of so-called group-marriage found especially among the Urabunna of Central Australia is of this kind. A man has one or more women allotted to him from the group with which marriage is possible to him. To them he has only a preferential right. Other men have access to them, while he has access to other women of the same group. The women to whom men have thus occasional access are *pirawungaru* to them, and they are in effect accessory wives (=secondary wives or concubines, Spencer-Gillens, pp. 62-3, bp. 73; for the analogous custom of the Dieri tribe, see Howitt, *passim*; and for 'group-marriage' as a whole, Thomas, *op. cit.* p. 127 ff.). Among other Central Australian tribes a man may lend his wife to men of the intermarrying group at any time. These also, with certain others, have access to her at the time of marriage, while a still wider system of access prevails at certain ceremonial occasions (Spencer-Gillens, p. 141). The women, apart from his wife or wives, to whom a man has access are practically occasional concubines to him.

(b) Where polygamy is systematically associated with polyandry, the wives with whom a man or men are associated practically stand to the first wife in the position of secondary wives or concubines. Where the husbands of a woman are brothers, as among the Todas, 'if the wife has one or more younger sisters, they in turn, on attaining a marriageable age, become the wives of their sister's husband or husbands' (Shortt, *TES*, new ser., vii. 240). Or, as among the Nairs, where a

¹ Roger, *Open-Deure tot het verborgen Heydendom*, Leyden, 1661, p. 217 f., records a Cooromandel tradition that the father of the poet Bhartṛhari had a wife from each of the four castes. The poet was his son by the Śūdra wife, and by his early devotion to his 300 wives caused his father much anxiety, because of the belief that 'whoever has begotten children by a Śūdra wife, he, so long as any descendants survive, remains deprived of heaven.'

woman may have several husbands, not necessarily brothers, a man may marry several women (Forbes, *Oriental Memoirs*, London, 1813, i. 385). Sometimes, too, these wives become paramours (concubines) of other men (Todas (Reclus), p. 197; Kunnayans of Madura (Mayne, p. 50)). In many instances of polyandry, especially of brothers, the elder brother is the chief husband and the younger are lesser husbands. The arrangement thus corresponds to that of the chief and lesser wives, and the younger brothers are a sort of 'male concubines' (cf. Westermarck, p. 516). In most of these cases the children are attributed to the chief husband and call him father.

(c) Besides the practice of lending wives or of exchanging them at festivals—both of very wide occurrence (see ADULTERY [Primitive and Savage], § 7)—the exchange of wives for a shorter or longer period as a sign of friendship occurs sporadically, often between chiefs. The custom is found among the Australians, Eskimos, several American Indian tribes, in Polynesia, with the negroes of Angola, etc. (Thomas, p. 177; Nansen, *Eskimo Life*, London, 1893, p. 148; Letourneau, *La Femme*, 107, 114, *Marriage*, 82, 61; Westermarck, pp. 75, 488), while Sir G. Mackenzie says tinkers in the 17th cent. used each other's wives as concubines (Lang, *Sir G. Mackenzie*, London, 1909, p. 322). In such cases the woman becomes the paramour of the man.

(d) Again, where a chief, ruler, or priest has, or claims, the right to a woman for the first night or nights of her marriage, such women are in the position of temporary concubines. This practice is found among the Eskimos, the Caribs, and certain Brazilian tribes; in Nicaragua; in Malabar, and Cambodia; in New Zealand; in Africa; in ancient Ireland, and elsewhere (Westermarck, p. 76 ff.; Giraud-Teulon, *Les Origines du mariage*, Paris, 1884, p. 82 ff.; Letourneau, *Marriage*, 47; Meyer, *op. cit.*, p. 21). The right is also claimed at other times, or a chief or king may take any girl or woman as he pleases (Westermarck, p. 79; Letourneau, *L'Esclav.* 208; Meyer, p. 29; O'Grady, *Silva Gadelica*, 1892, li. 408), or access may be granted as a favour, e.g. in the case of Kalmuk priests, who are not allowed to marry (Westermarck, p. 79; for other instances, cf. vol. i. 126b).

(e) There are numerous instances, especially among savages, in which girls before marriage are free to form connexions with men, while it is considered almost dishonourable not to have a lover (Westermarck, *Moral Ideas*, li. 422). This is very common in Africa; and an extreme instance of it occurs among the *lusu*, where men do not marry until the age of thirty. Young men, therefore, are allowed to select one or two young girls after giving a present to the mother. The girls live in the warriors' quarters, and are given great liberty. When they are of a marriageable age, they return home, and must live morally (Johnston, *Uganda Protectorate*, London, 1902, li. 822). Among some American Indian tribes, girls preferred free love to marriage, and accompanied hunters on expeditions. If children were born they were legitimate, though not on the same level as children born in wedlock (Letourneau, *La Femme*, 135). In other cases these connexions are a kind of trial marriage, and may become permanent if the girl proves with child (Reclus, p. 194; Westermarck, pp. 23, 24, 71; Post, i. 54; Gir. Camb. li. 8; for the three years' trial connexions to certain Essenes, see Jos. *B. J.* viii. 15). But there are other temporary unions which are still more suggestive of concubinage. These are found sporadically among savages (Post, i. 63), but occur at higher levels also. Among the Assyrian Arabs a custom exists by which a woman is the wife of a man for three or four days in each week, but may form other connexions on the remaining days. Some have seen in this a survival of the *mot'a* marriage of the ancient Arabs—a form of temporary union with a woman dwelling with her own family (Spencer, i. 636; W. R. Smith, *op. cit.* 33 ff.). In Persia a wife may be tried for a legally stipulated time, at the expiry of which the parties may separate or renew the contract (Westermarck, p. 519). In Japan a daughter may be hired for a temporary union, the duration of which is fixed by contract. This union often exists between Europeans and Japanese girls (Letourneau, *La Femme*, 232; Krellner, *Im fernem Osten*, Vienna, 1881, p. 235). In Tibet, temporary marriages are contracted for six months, one month, or a week—perhaps a form of polyandry. Traders form temporary connexions with women—a common custom elsewhere wherever caravans halt or markets are held (Rockhill, *Land of the Lamas*, London, 1891, pp. 212, 144). Among the ancient Irish, temporary marriages for a year existed. They were arranged at the Beltane festival (1st May), and at next Beltane were broken, when the woman passed to a new husband (Giraud-Teulon, p. 380). This is akin to the Scottish 'handfasting,' by which 'at the public fairs men selected female companions with whom to cohabit for a year. At the expiry of this period both parties were accounted free; they might either unite in marriage or live singly (Rogers, *Scotland, Social and Domestic*, London, 1869, p. 109).

(f) Occasionally a wife is allowed a legal paramour, to whom she stands in the relation of a concubine. He takes the place of the real husband in his absence, and is often a younger brother. This custom is found among the Aleuts, Thlinkets, Kolochees, Kaniagnuts, some African tribes, some Papuans, and in Nukuhiva (Erman, *ZE* iii. 163; Dall, *Alaska*, London, 1870, p. 416; Kohler, *ZVRW*, 1900, p. 384; Lisiansky, *Voyage round the World*, London, 1814, p. 83; Post, *Afr. Jurispr.* 448, 472). In Sparta a second husband was also permitted to increase the family (Xenoph. *Rep. Lac.* i. 9; Müller, *Doric Race*, London, 1880, li. 211). Among the Konyags adultery is punished by making the lover a member of the household, a secondary husband and servant (Reclus, p. 67).

(g) Among the Reddies, when a woman is married to a young

boy, she cohabits with the father or uncle of the boy, who, when he grows up, takes the wife of another boy (Shortt, *TFS*, new ser., vii. 264 f.). Cohabitation of the father with the *sou's* wife during his minority also exists among the Ostyaks, Osetes, and the Vellah caste in Coimbatore, in the Marquesas Islands; and it existed among the old Prussians and among the Russian serfs before the emancipation (Westermarck, p. 454; Post, i. 56).

6. The taking of a secondary wife or a concubine is not necessarily felt as a reproach by the legal wife. Frequently, where women have to work hard, the concubine is rather welcomed, and the wife may even encourage the husband to take one as a means of lightening her labours, especially as it also gives her a certain amount of power over the new-comer. This may also happen where polygyny gives standing, or is a proof of respectability and wealth.

Among the Zulus the chief wife works hard, so that the husband may be the sooner able to take a younger woman, over whom she will have authority. Other examples are found among Negro and Kafir tribes, the Apaches, Brazilian tribes, the Eskimos, Bagobos of the Philippines, etc. (Westermarck, p. 496; Nansen, *op. cit.* 144 ff.). Among the Arabs of Upper Egypt a wife expects her husband to provide her with a slave who will also be his concubine (Baker, *Nile Tributaries*, London, 1868, p. 125 ff.). Where the wife is old, or has no children, or is absolutely devoted to her husband, she will sometimes urge him to take a concubine, or will herself provide one, as examples cited above have shown (cf. also Lane, *Arab. Society*, London, 1883, p. 246 f.; Westermarck, pp. 489, 495). But generally the desire on the part of the man for variety, for the gratification of sensual passion, and occasionally the wish for numerous offspring, and the fear of childlessness, especially where ancestor-worship exists, are the motives for polygyny.

7. Bars to concubinage.—On the other hand, jealousy often causes much unpleasantness in polygynous households. It may lead to the suicide of the wife, or to her ill-treatment if she raises objections, or, again, to her ill-treatment of the new-comers. Hence jealousy is often a powerful means of preventing polygyny.

Taking a second wife or concubine is sometimes a ground for the wife's divorcing her husband (Tuaregs [Duvetier, *Les Touaregs*, Paris, 1864, p. 429]; Malays [under '*Semando* marriage,' Waitz, v. 145]; some Indian tribes [Post, i. 63; cf. vol. i. p. 125a], or for the wife's leaving her husband for a man who will take her as his only wife (Oharuas [Azara, *Amérique Mérid.*, Paris, 1809, li. 22]; see also § 4, above [Egyptians and Semites]). In some cases a second wife or concubine can be introduced only if the wife is childless (Santals, tribes of the Deccan, Panjab, and Bombay [Post, i. 63]), or with the wife's consent (Kandhs [Reclus, p. 281]; some Papuan tribes [Kohler, *ZVRW*, 1900, p. 341]; see also Post, i. 63). Sometimes no more than one concubine is permitted, as in the case of the Karoks (§ 3).

Among those lower peoples with whom monogamy is customary or polygamy is forbidden, concubinage is sometimes expressly interdicted or is quite unknown.

This is the case with the Papuans of Dorey (Earl, *Papuans*, London, 1853, p. 81), the Karens, Kandhs, Tamils in Ceylon, the Koch and Old Kukis, the Mrús and Tongthas (with whom it is wrong for a master to take advantage of a female slave), some tribes of the Malay Peninsula, etc. (Westermarck, p. 436; Mayne, p. 76; Dalton, p. 91; *JASBe* xxiv. 621; Lewin, *Wild Races of S.E. India*, London, 1870, pp. 193, 235). Outside of marriage the Kabyle law recognizes no sexual relation, and the concubinate is unknown (Hancouart and Letourneau, *Kabylie*, Paris, 1872-73, li. 148). In Cambodia, special laws protect female slaves. If one becomes pregnant, she may leave her master, while in the Malacca peninsula she is free in such a case (Letourneau, *L'Esclav.* 215; Waitz, i. 153). Public opinion among the Battaks is against cohabitation with a female slave. Should she become a concubine, custom (*adat*) regards her as a lesser wife (Letourneau, p. 201). See also § 4 (China, Japan).

In cases where the husband at marriage went to live with his wife's people, and where polyandry was not conjoined with polygamy, concubinage would seldom exist.

8. Standing of the concubine.—Where a concubine is a purchased slave, or a war captive, and often in other cases, she has no control over her own person. As the wife or daughter is often lent to a guest, so the lesser wife, concubine, or female slave is frequently given to him.

In Fiji, the concubines of the chiefs were at the disposal of warriors or guests (Letourneau, *Marriage*, 124). In Samoa, chiefs who tired of their concubines placed them in the guest-house (Fritchard, *op. cit.* 132, 172). In Abyssinia, the concubines of the king were offered to persons of importance (Combes and Tamiet, *Voy. en Abyss.*, Paris, 1889, li. 120). Herrera says of the Cumanas that 'great men kept as many women as they pleased, and gave the beautifullest of them to any stranger they entertained' (Spencer, i. 684).

Not infrequently concubines or slaves are pros

tituted for money, which goes to their owner, as among the Maoris (Letourneau, *L'Esclav.* 176), Nutka Columbians (*NR* i. 191-94, 217), the Greeks, the Babylonians (Kohler-Peiser, iv. 28-29), and the ancient Arabs, though this was forbidden by Muhammad (*DI*, p. 597), etc.

Generally the concubine can be repudiated without formality, or even sold, though there are exceptions, as when a slave becomes free when she bears her master a child (see above).

Adultery with a lesser wife or concubine is usually less severely punished than in the case of a chief wife.

Among some Negro tribes, adultery with the latter is punished with death, with the former by a fine (du Chaillu, *L'Afrique équat.*, Paris, 1862, pp. 67, 435). In Java, the punishment is slight (Waiz, i. 315). Among the Battaks, if the concubine has borne no children to the master, the lover must pay her value to him; but, if she has, both are punished with death (Letourneau, *L'Esclav.* 201). Among some Mongol tribes the owner could take all the lover's possessions, but the concubine was not punished, and unchastity with the concubines of priests (who were not married) was unpunished (Post, ii. 360, 374). In Muhammadan law the adultery of the slave wife is less culpable than that of the free woman (Letourneau, *L'Esclav.* 252). In Peru, criminal connexion with one of the Inca's wives or concubines (or with the Virgins of the Sun) was punished with death and confiscation (Prescott, p. 63; Letourneau, p. 195). Generally speaking, the lighter punishment for adultery with a concubine resembles the graded punishments allotted according to the rank of the wife in various societies.

As the wife is often sacrificed at her husband's death, to accompany him into the other world, so, very frequently, concubines are killed at their owner's death for the same purpose.

In Darien and Panama, all, and in Peru a chosen few, of the concubines of nobles or of the Inca were sacrificed (Seemann, *Voyage of H.M.S. Herald*, London, 1853, i. 316; Prescott, pp. 15, 43). In New Zealand, at the death of a chief, some female slaves were crucified; their sacrifice at the death of important persons was common in Melanesia (Letourneau, *La Femme*, 33, 119, *L'Esclav.* 42). The practice is common in Africa; while in India, at the death of a great prince, not only his wives, but often his whole harem, died on the pyre (Letourneau, *La Femme*, 399).

Frequently the eldest son or heir inherits his father's wives and concubines (excluding his own mother).

This occurred in Mexico in the case of women who had not borne children to the deceased, among the Mishmis, Maoris, Bechuana, many Negro tribes, and the ancient Arabs and Hebrews (Spencer, i. 680; McLennan, *Studies in Ancient Hist.*, 2nd ser., London, 1896, p. 475; Bosman, in Pinkerton, xvi. 480; du Chaillu, *op. cit.* 268; Letourneau, *La Femme*, 89; W. R. Smith, *op. cit.* 104 ff.; 2 S 1622 [Abesalom's act signified that his father was dethroned]. Sometimes the brother succeeds to his brother's wives and concubines (Spencer, i. 680). Among the Mapuches, grown-up sons by one wife take another widow as their common concubine (*ib.* 750).

9. Standing of children by concubines.—This varies in different regions. The concubine generally being in the position of a slave, and frequently a foreigner, the child is normally a slave and illegitimate, and inherits nothing at the father's death. This is the case among many savage and barbaric peoples, and is, to some extent, the result of counting descent through the mother—the child taking the mother's rank irrespective of that of the father. It also results from the dislike which some peoples have for any relation outside legitimate marriage.

Among the Algonquins, the children of the second wife were illegitimate (Heriot, *Travels through the Canadas*, London, 1807, p. 324; see also § 3, above). With the Mayas and Mexicans, children of concubines inherited nothing (*NR* i. 650, ii. 265). In New Zealand, even when children of a chief, they were of servile condition, and in Fiji the wives whose children inherited were few in number (Letourneau, *L'Esclav.* 176, *Marriage*, 124). In Guinea and in other parts of Negro Africa they are slaves; on the Gold Coast they are not regarded as relatives; and in Timbuctu are incapable of inheriting (Letourneau, *La Femme*, 39; Post, *Afric. Jurisp.* i. 239). In Cumana, the son of the chief wife inherits everything (Waiz, iii. 383); in the Kingemill Islands, the son of the wife of highest rank (Wilkes, *U.S. Exploring Exped.*, N. York, 1851, p. 556). In Siam, the children of the wife married by the *khan mak* ceremony alone inherit (Colquhoun, *op. cit.* p. 182), and among the Tangutans and Mongols children of concubines are illegitimate, and inherit nothing (Prejelsky, *op. cit.* i. 62, ii. 121). Among the Lycians, children of a slave wife or a concubine were illegitimate (Herod. i. 173). In India, children by a concubine are entitled to maintenance, but not to inheritance. In some castes the children are

illegitimate, but the father may settle something upon them in his lifetime. The position of children by a Sûdra woman married to a man of higher caste is much disputed in the older law; sometimes they are said to be entitled to maintenance only, sometimes to a lesser or greater share of the inheritance (Mayne, pp. 63, 73, 390-91; Dubois, i. 210; see also § 4 [Arabs, Germans]).

Where children are sold by their fathers, those of concubines will generally be first traded for gain. The practice is common in the Solomon Islands, in large tracts of Negro Africa, and in China (Letourneau, *L'Esclav.* 39, 235; Giraud-Toulon, pp. 430, 431).

In some instances, inheritance is graded according to the position of the mother—the children of a chief wife being most favoured, those of the lesser wives and concubines receiving lesser shares.

With the Beluns of Timor, children of concubines inherit a third part of the residuum, and in the Philippines and Burma their share is small (Post, i. 147). With the Kivungas, children of lesser wives inherit two parts, children of slaves one part, and children of the chief wife four parts (Kohler, *ZVRW* vi. 197). In Egypt, all were legitimate; but those born in actual marriage took precedence of and had superior rank to children of women of inferior rank or slaves (Maspero, pp. 52, 273). In Peru, the eldest son of the *coya* alone inherited the throne, but children by other women had no inferior position (Letourneau, *La Femme*, 195 f.). In India, the illegitimate son of a Sûdra has privileges of inheritance (a moiety, and sometimes an equal share or the whole) when the mother has been under the father's control (his female slave or the slave of his male slave, according to Manu, ix. 179, and, in modern law, an unmarried Sûdra woman kept as a concubine. The concubine in earlier times would always be a slave). The underlying idea was that the marriage of a Sûdra was of so low a nature as to be itself a kind of irregular connexion (Mayne, pp. 63, 380 f., 463 ff.; Jolly, *ZDMG* xiv. [1890] 85).

In other cases, again, there is no difference in the position of children of a chief wife and of others. This is particularly the case where a childless wife gives her husband a concubine, or where the wife is reckoned the mother of all the children.

Examples are found in Brazil (v. Martius, *Völkerschaften Brasiliens*, 1867, i. 126); with some Negroes and Kafirs (Post, i. 17); in Abyssinia (Letourneau, *La Femme*, 289); among the Bodos and Dhimals (Hodgson, *Misc. Essays*, Lond. 1880, i. 122); among the Kandhs of Orissa (Kohler, *ZVRW* viii. 265); among the Ainus (Westermarck, p. 445); in Sarawak and Borneo, when a man dies intestate (Brooke, *Ten Years in Sarawak*, Lond. 1866, ii. 321); and among the Samoyedes and Tatars, with the latter of whom also male children by a concubine receive double the portion of a wife's female issue (Post, i. 17, 146). Among Muhammadan peoples, when sons of concubines are acknowledged by the father, they inherit equally with sons of wives; otherwise they are slaves (Lane, i. 148). In ancient Arabia, the son of a slave woman, if acknowledged, became a full tribesman (W. R. Smith, *op. cit.* p. 136). In Babylonia, the sons of a 'maid-servant,' i.e. a slave, shared equally with those of the wife if the father had said to them, 'My sons.' But they were slightly inferior (Johns, p. 85; see also § 4, above). Among the Hebrews, it is probable that all the children acknowledged by the father (except those born of adultery or incest) were legitimate; but the position of a concubine's sons is not defined legally with respect to inheritance. Nominally, they inherited with the other sons (the eldest of whom received a double share [Dt 21:17]), especially where they were reckoned as the children of the legal wife. All the sons of Jacob rank as heads of tribes (Gn 49). But perhaps generally they had a less share, and their position would depend on the attitude of father, wife, or other sons. Abraham gave his concubines' sons presents and sent them away (Gn 25:6); Sarah says, 'The son of this bondwoman shall not be heir with my son,' but this is because she is angry with Ishmael (Gn 21:10, cf. 16⁹). Jephthah's brothers drive him out, though he complains of the treatment, which may, therefore, have been unusual, even as, in his case, to the son of a harlot brought up in the father's household (Jg 11:7; see also § 4 [China, Japan]).

Where mother-right and inheritance through the mother prevail, there are some instances of the father making over his property to children of a lesser wife or concubine. This occurs among the Kimbunda, the Wanyanwazi (who allege as the reason that their wife's children have relatives to aid them, while the others have not [Burton, *Lake Regions*, London, 1880, ii. 23]), the Fantis, and in Guinea. Some have seen in this one method by which inheritance based on mother-right passed over to the patriarchy, which involved the succession of sons to fathers (McLennan, p. 114; Giraud-Toulon, p. 440). Where concubines are women captured in war, or purchased, they and their children belong to the man in a way in which the children of the wife under mother-right do not. And where there were many concubines of this sort, men would soon form 'a preference for marriage which made the husband his wife's lord, and made his children belong to him' (W. R. Smith, *op. cit.* p. 279; cf. Spencer, i. 651). This would be the case where genuine marriage by capture existed, since it tended to break up the whole system of mother-right.

10. Concubinage hardly exists in the lowest savage communities, but it is found in savage societies at a higher level, and is much more common in warlike, barbaric, and partially civilized societies, concubines being either war captives or purchased. In either case their position is little better than that of slaves, subject to their owner's caprices, though, if they become his favourites, their position is a happier one. In some cases they are slaves of the wife or part of her dowry, or house-servants or slaves. In all these societies concubinage is sanctioned by custom or law, whether monogamy or polygamy is the form of marriage, and very often laws exist regulating the position of the concubine, and even tending to ameliorate her position. Although polygamy is found in all barbaric civilizations, a tendency to monogamy, with more or less restricted concubinage, is found in many of them (Egypt, Babylon, the Hebrews), as it is also found sporadically at lower levels (§ 3); or polygamy is entirely restricted to the higher classes (Mexicans, Teutons, Celts, Abyssinians); or, again, polygamy is illegal, but concubinage is allowed (China, Japan, Greece, Rome). Finally, where a higher view of marriage begins to prevail, even concubinage tends to pass away, and becomes more and more a vicious luxury of a few of the rich, as it was in early and mediæval Europe. This is occasionally a natural tendency arising with the growth of a higher civilization, or from contact with a purely monogamous civilization, or it may be induced through the rise of a more ethical religion which condemns lust. For, wherever the monogamous sentiment prevails, wherever other attractions than youth and beauty are looked for in woman, wherever love becomes more refined and the devotion to one woman more absorbing, wherever it is felt that polygyny is an insult to the female sex, wherever woman tends to be on an equality with man, and wherever married people pledge themselves to purity of life, all irregular connexions are soon looked upon as wrong, and concubinage becomes more and more rare. In modern Christian countries it no longer exists as such, though rich men may keep women, more or less secretly, for the gratification of their passions, and prostitution is still an enormous social evil.

LITERATURE.—There is no work dealing exclusively with this subject, but much information will be found in G. E. Howard, *Hist. of Matrim. Institutions*, 3 vols., Chicago and London, 1904; C. Letourneau, *Evolution of Marriage*, London, 1897; *La Condition de la femme dans les diverses races et civilisations*, Paris, 1903; *L'Évolution de l'esclavage*, Paris, 1894; A. H. Post, *Grundriss der ethn. Jurisprudenz*, Oldenburg and Leipzig, 1894-96; *Stud. zur Entwicklungsgesch. des Familienrechts*, Oldenburg and Leipzig, 1890; O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, s.v. 'Beischläferin,' 'Polygamie,' etc.; T. Waitz and G. Gerland, *Anthropol. der Naturvölker*, Leipzig, 1859-72; C. S. Wake, *Evol. of Morality*, London, 1878; E. Westermarck, *Hist. of Human Marriage*, London, 1891 [1894]. J. A. MACCULLOCH.

CONCUBINAGE (Christian).—From the beginning there were in the Church two distinct movements—one elevating and sanctifying the family, the other glorifying celibacy and virginity. Both are traced back to the NT, and the second more particularly, though not exclusively, to Mt 19¹² 22³⁰ and to St. Paul's words to the Corinthians (1 Co 7). The second was already vigorous in the early part of the 2nd century. Clement of Alexandria presents a beautiful picture of marriage (*Pædag.* iii. 250; Schaff, *Ch. Hist.* iii. 364); and Tertullian at the close of the treatise he wrote to his wife (*ad Uxorem*, 'Ante-Nic. Fathers,' Amer. ed. iv. 39-50) likewise emphasizes the dignity and blessedness of marriage, which he, as well as the other Fathers, regarded as a spiritual rather than a physical union. In spite of this high view of marriage, the conceptions of the early Fathers did not rise completely above the old Roman social

distinctions so as to set aside the concubinate relation as illegal according to the Scriptures.

For the clergy the rule of celibacy came to prevail in the Western Church, though a law of celibacy was voted down in the Council of Niceæ (325). The Synod of Elvira, early in the 4th cent., is by almost general agreement regarded as the first Council that insisted upon marital abstinence for the three higher grades of the clergy (see Funk, 'Cölibat und Priesterehe im christl. Altertum,' *Abhandlungen*, i. 121-155). In the East, marriage was always allowed to the clergy, although the rule came to prevail that priests might not marry a second time. As for the laity, the Church seems not to have spoken positively against concubinage for nearly 400 years. In accordance with the Roman practice, Callistus, bishop of Rome (217-222), permitted the concubinage of senators with freedwomen to continue. The *Apostolic Constitutions* (viii. 32, 'Ante-Nic. Fathers,' Amer. ed. vii. 494) allowed the baptism of a concubine who was faithful to her heathen consort ('slave to an unbeliever'), but they stipulated that, if a Christian have a concubine, be she a freedwoman or a slave, he must contract legal marriage as a condition of his remaining in the Church. The sentiment of the Church, however, was altogether in the right direction in the matter of the marriage of laymen. This is shown by Constantine's law of 320 (*de Conub.* v. 26), which forbade a man to have a concubine if his wife were living. His laws protecting womanhood, whether virgin, widow, or married, were a direct product of the Christian principle of the sanctity of marriage. Gibbon, in the course of a discussion of the Justinian laws concerning marriage, could say: 'The dignity of marriage was restored by the Christians' (ch. xlv. [vol. iv. p. 478, ed. Bury, 1906]).

The First Synod of Toledo (A.D. 400) marks a positive turning-point from the practice of old Rome. It declared that a Christian having both a believing wife and a concubine should be excluded from the Church. A man, however, who had not a wife but a concubine, and only one, should not be repelled from the Church ('qui non habet uxorem et pro uxore concubinam habet, communione non repellatur'; see Mansi, *Concilia*, 1901-09, iii. 997 ff.; Hefele, *Conciliengesch.* ii. 78 ff.). About the same time (402) a Roman Synod (see Hefele, ii. 88) took the same action when it forbade a Christian to marry a deceased wife's sister, and in the same canon forbade him to have a concubine if he had a wife living. This action was regulative for the Middle Ages, and the canon of the Toletan Synod was often referred to. The judgment of Leo the Great (458) was not out of keeping with it, though it strongly favours the hard Roman law. When asked whether a man who left a concubine and married a wife committed bigamy, he replied in the negative (*Ep.* clxvii. 6, 'Nic. Fathers,' Amer. ed. xii. 110). The concubinage of clerics was from the 4th cent. frequently forbidden by conciliar action, and punished with severe penalties. The Third Synod of Orleans (538) forbade the ordination of a man who, during his wife's lifetime, or after her death, kept a concubine. The ecclesiastical references to lay-concubinage are relatively infrequent, but they are in the right direction.

Among the conciliar regulations of the early Middle Ages on lay-concubinage are the following: A Roman Council of 826 (Hefele, iv. 50) forbade a married man to have a concubine ('non licet uno tempore duas habere uxores, uxoremve et concubinam'); so also the Synods of Paris (829; see Hefele, iv. 67), of Mainz (851), and Rome (1059 and 1063). The Synod of Mainz (851) stipulated that a man who had a concubine and did not live with her legitimately might put her away

and marry another; and it also permitted a man having a single concubine to go to communion. Strange to say, the older Roman and Teutonic law was re-affirmed when the Synod of Tribur (895; see Hefele, iv. 556) declared that marriage could be contracted only between equals (as the law of Justinian had done by implication in the 6th cent. when it called concubinage 'unequal marriage').

The strict procedure of the Hildebrandian popes and Hildebrand himself, beginning with the Roman Council of 1059, against all priestly marriage or concubinage is set forth in art. CELIBACY (Christian). And it is sufficient here, in regard to clerical concubinage from this time on to the Reformation, to say that it continued in all countries, but especially in Spain, Hungary, Germany, and England. The Councils of London (1102, etc.) and Westminster, under Anselm and his successors (see Hefele, Lea, etc.), laid down, at the Pope's instance, the most stringent laws against the secret marriage or concubinage of priests and monks, and the entrance of their sons into the benefices of the fathers. The wide prevalence of concubinage is attested beyond contradiction by Eadmer, who says: 'Almost the greater and better part of the English clergy were the sons of priests' (*Hist. Nov. iv.*), by Giraldus Cambrensis, Walter Map, and such English chroniclers as Matthew Paris and Henry of Huntingdon. Adrian IV. (1154-1159), the only English Pope, was the son of a monk of St. Albans, an abbey which at a later period became notorious for its licentious degeneracy. The Bishop of Ely's concubine, Maud of Ramsbury, defended his castle of Devizes (1139) until her son was held up before her eyes and the threat was made to hang him (Ordericus Vitalis, bk. xiii. ch. 40 [Bohn's ed. 1853-56, iv. 211]). The Papal legates coming to England insisted upon the clergy abandoning their concubines; but one of them at least, the Cardinal of Crema, most urgent in these exhortations, was himself caught with a harlot after celebrating mass (Henry of Huntingdon, and Matthew Paris, an. 1125). In the middle of the 15th cent., de la Bere, bishop of St. David's, by his own statement (1452), drew 400 marks yearly from priests for the privilege of having concubines. In the earlier part of the 14th cent., Pelayo Alvarez, bishop of Silves in Portugal, in his famous 'Lament of the Church' (*de Planctu Ecclesiae*), declares that the clergy of Portugal lived freely with women, even women of noble birth, in life-long compacts, and that their children were almost as numerous as the children of laymen. John of Paris in his tracts (about 1330) questioned whether the law of celibacy should not be withdrawn, in view of the fact that it was so poorly observed. The clergy in parts of Germany in the 14th cent. refused to put away their wives. Nicolas of Clemanges says that laics in many parishes ('in plerisque parochiis') would not tolerate a cleric unless he had a concubine ('nisi concubinam habeat'). Lea (*Hist. of Sacerd. Celibacy*, i. 423) is forced in his concluding remarks on sacerdotal celibacy in the Middle Ages to say: 'The records . . . are full of the evidences that indiscriminate license of the worst kind prevailed throughout every rank of the hierarchy.' One of the most notorious offenders in high places in the 16th cent. was Cardinal Beaton of Scotland. On the eve of the Reformation, in Switzerland and other parts of the Church, the concubinage of the clergy was a large source of revenue to the bishops. In the diocese of Bamberg five gulden was paid by the priest for every child born to him, and about 1500 such children were born annually (see Hase, *Kirchengesch.*¹⁰ 1877, ii. 449). The income from the Swiss see of Constance from this source is said to have been 7500 gulden in 1522.

Zwingli lived in the relation of concubinage as priest, and Bullinger and Leo Judae were the sons of priests. Erasmus complained of the unhallowed gains of bishops from taxes levied upon priests holding concubines. The 'Complaints made by the German nation' to the Diet of Worms (1521) included a charge against the higher ecclesiastical dignitaries of permitting the cohabitation of priests on account of money ('wie sie unehe-liche Beiwohnung von gelts wechen gedulden').

The concubinage of laymen in any form was for the first time subjected to severe penalty by Leo X. and the Fifth Lateran Council (1516). The Council of Trent (1563) at its 24th session (Mirbt, *Quellen zur Gesch. des Papsttums*², 1901, pp. 245-249; Schaff, *Creeds of Christendom*, 1877, ii. 193 ff.), by its strict definition of marriage as a sacrament, by the ceremony it declared necessary, and by the repudiation of divorce except in the modified form of separation from bed and board, made all forms of concubinage unlawful and sinful. The validity of a civil contract of marriage was expressly denied by Pius IX. in the Syllabus of Errors of 1864 (No. 73; Mirbt, p. 369; Schaff, ii. 231); and the same Pope, in his Allocution of Sept. 1852, declared that civil marriage and marriage among Christians who deny the sacramental character of the rite are nothing more than a base and low concubinage condemned by the Church ('turpem et exitialem concubinatum, ab ecclesia damnatum'; Friedberg, *Kirchenrecht*⁸, p. 386).

The attitude of the Protestant Reformation and the Protestant Churches to marriage repudiates all concubinage as an adjunct to the union between one man and one woman, or as a substitute for it. Luther's first distinct and final pronouncement on the subject was issued in his *de Votis Monasticis* (1522). It took the ground that marriage is the natural state ordained by God, and that it has a dignity above the celibate state, and he urged nuns and monks to marry rather than indulge concealed passion. Luther's main position was taken by Marsiglius of Padua in his *Defensor Pacis*, 1324 (see Scholz, *Die Publizistik zur Zeit Philipps des Schönen*, Stuttgart, 1903, p. 452 ff.). In the year 1522, Zwingli and ten other priests petitioned the Bishop of Constance for permission to marry. It remains a blot on Luther's career that he gave his consent to the second marriage of Philip of Hesse, which was virtually concubinage. The well-known freedom of the princes at that day does not justify Luther in having allowed what he no doubt considered the lesser of two evils. The purity of his own family life set an example in the right direction, which, however, does not altogether counteract his advice to the prince of Hesse. The VI. Articles of Henry VIII. are the last official State legislation in England against clerical concubinage. They punished it, after the first offence, with death. In consequence, Cranmer sent his second wife, the sister of Osiander, back to Germany for a time. *The sacredness of the marriage tie and the sacredness of personal purity both in man and woman* have been principles of the Protestant Churches from the beginning, and control their treatment of all forms of fornication and concubinage. They look back as regulative to the Seventh Commandment, and to the words of our Lord concerning monogamy and the permanent nature of the marital tie.

LITERATURE.—E. A. Friedberg, *Corpus juris canonici*, 2 vols., Leipzig, 1879-1881; Henry C. Lea, *Hist. of Sacerdotal Celibacy in the Chr. Ch.*³, 2 vols., London, 1907; Hefele, *Conciliengeschichte*, 9 vols., Freiburg, 1893, Index under 'Concubinatus'; F. X. Funk, *Kirchengesch. Abhandlungen und Untersuchungen*, 2 vols., Paderborn, 1897-99, i. 121, 'Colibat und Priesterhe im christl. Altertum'; the works on Church History and the treatises on Canon Law, as E. Friedberg, *Lehrbuch des kath. und evangel. Kirchenrechts*¹, Leipzig, 1903, and P. Hergen-

röther (Rom. Cath.), *Lehrbuch des kath. Kirchenrechts*, Freiburg i. B. 1905, p. 690 ff. etc.; the art. 'Concubinatus' in Wetzler-Welte, iii. 842-846 and 'Konkubinatus' in *PRE* 3 x. 745-747. General reference may also be made to the literature given under CELIBACY (Christian).

DAVID S. SCHAFF.

CONCUBINAGE (Greek and Roman).—While the Greek and Latin terms for 'concubine' (παλλακίς, -ή, *pallakís*) are essentially the same, and are both directly derived from the Sem. *pilleges*, 'paramour,' we must, nevertheless, carefully distinguish between the two peoples in regard to the actual practice of concubinage.

1. **Greek.**—Among the Greeks, concubinage was based upon slavery. In Homeric times there might subsist between the owner and his purchased or captured slave-girl a relationship by which no one—save perhaps the regular wife—was offended: witness the cases of Achilles and Briseis, Agamemnon and Chryseis (whom he desired to take home, and of whom he thought more highly than of Clytemnestra, *Il.* i. 112). It is true that the sons born of such connexions were bastards (*vóthoi*), but the father often brought them up with his lawful children. Thus, Menelaus provides the marriage feast for his son by a slave mother (*Od.* iv. 10); while Theano, the wife of Antenor, seeks to please her husband by bringing up his son by a slave as one of her own children (*Il.* v. 70; cf. viii. 284, and Euripides, *Andromache*, 222). The fact of Priam's having a king's daughter as a secondary wife (*Il.* xxi. 85, xxii. 48) must be taken as indicative of a barbaric stage of civilization, and the same may be said of his having—besides nineteen sons by Hecuba—thirty-one by other women, one of the thirty-one being Doryklus, who is explicitly spoken of as *vóthos* (*Il.* xi. 490). Even in the Epic age, however, poetry was finding themes in the contentions arising out of these unions, as is illustrated by the story of Phoenix, who at the instigation of his mother set his face against his father's concubine (*Il.* ix. 449)—a subject afterwards handled dramatically by Euripides in his *Phoenix* (cf. also Sophocles, *Trachiniae*).

As regards the later period, our knowledge of the subject—partial as it is—relates only to Athens, though we may assume the existence of similar conditions in other States. In Athens a valid marriage could be contracted only by a man and a woman who were both citizens, since it was a union of this kind alone which could fulfil the real purpose of marriage, viz. the continued supply of citizens. Nevertheless, marriages between male citizens and alien women, and—though in rarer instances—between female citizens and alien men, were not infrequent, as is shown, in particular, by the inscriptions; such alliances, in fact, were almost a necessary consequence of the large proportion of foreigners resident in Athens. The harsh law mentioned in [Demosthenes] in *Neær.* 16, by which the alien party in such marriages was sold as a slave, cannot have had more than transitory validity. Practically no discredit rested upon those who entered a union of this kind, but their children remained *vóthoi*, i.e., though they were not slaves, they did not enjoy the rights of citizenship, and could not receive more than 1000 drachmæ of the paternal inheritance. Nevertheless, as generally elsewhere (Aristotle, *Polít.* iii. 3. 5; for Byzantium, Aristotle, *Oecon.* ii. 4), the strictness with which the regulations were applied varied according to the State's requirements in men and money. The *ἐπιγαμία* could be granted to foreign nationalities, as, e.g., to the Eubœans before 413 B.C. (Lysias, 34, 3), whereby, in all probability, even marriages previously contracted were legitimized, and, by the connivance of the authorities, *vóthoi* were admitted to the rank of citizens.

It must be borne in mind that the *vóthoi* in Athens were very numerous; in an earlier age a special gymnasium in the Cynosarges had been set apart for them (Plutarch, *Themist.* 1). In particular circumstances, it is true, a drastic revision of the roll of citizens (*διαψήφισις*) might be made. Thus in 445-4 B.C., when Psammetichus gifted a large quantity of corn to the Athenians, and an endeavour was made to reduce the number of recipients to the lowest possible figure, Pericles revived the ancient law that the rights of citizenship belonged only to the offspring of a marriage where both parties were citizens, whereupon it was found that 4760 *vóthoi* (the number is doubtless exaggerated) had been surreptitiously entered upon the burgess rolls. In the Comedians and Orators, accordingly, the gibe most frequently hurled against an enemy or an adversary at law was the reproach of non-citizenship, and hence a slur was sometimes cast upon the mother also, as, e.g., Aspasia, who is called *παλλακίς κυνῶπις* and *πόρνη* (Cratinus, frag. 241; Eupolis, frag. 98); but these epithets need not be taken too literally.

It is unlikely that any legalized system of concubinage existed in Athens. Here, as elsewhere, no doubt, a man might cohabit with his female slaves or with other women, and in one case at least the law countenanced the relationship; if a man had a *παλλακή* who had borne him free-born children, he might kill with impunity a lover whom he found in her company (Lysias, i. 30 f.; Demosthenes, in *Aristocr.* 23, 53). When it is said in [Demosth.] in *Neær.* 122 that *παλλακαί* are kept for the care of the body, the reference is probably to female slaves (cf. the instance in Antiphon, i. 14). Iseus, iii. 39, on the other hand, has in view the case where the legal guardian gives away a young woman as a *παλλακή* and provides her with a dowry; the reference can hardly be to a legal betrothal (*ἐγγύησις*). It was possible, of course, to take a *hetaira* into one's house as a *παλλακή*, as is reported of Hyperides and Isocrates (Athænaeus, xiii. p. 590d, 592d).

2. **Rome.**—In Rome, where several distinct kinds of marriage were recognized, every other sexual relationship was in ancient times probably called *pælicatus*. According to an old law which was traced to Numa, the *pælex* was forbidden to touch the altar of Juno—the patroness of marriage (Gellius, *Noctes Atticæ*, iv. 3. 3). Neither in this reference nor in any other from the ancient period can *pælex* signify a concubine with a recognized position beside the legal wife, as the moral rigour then prevalent in Rome repudiated every relationship of that kind; and, wherever the word *pælex* bears this meaning, as, e.g., in Comedy, it betrays the influence of Greek literature. Even in that age, doubtless, a sexual relationship might subsist between master and slave-girl (Valer. Max. vi. 7. 7), but, by reason of the downtrodden condition of Roman slaves, the *ancilla* did not take the place of the Greek *παλλακή*. By the close of the Republic, however, we have the testimony of Granius Flaccus (*Dig.* l. 16. 144) to the fact that 'now' the name was given to the mistress of a married man; and such liaisons were not uncommon (Cic. *de Orat.* i. 183). The epithet was then applied by Juvenal (ii. 57) to a slave-girl living in intimate relations with her owner; nor was a connexion of this kind treated as illegal until A.D. 326 (*Cod.* v. 26). We even find a discussion of the case where a wife in the marriage contract stipulates for an indemnification should the husband after marriage again take a concubine (*Dig.* xlv. 1. 121). Here the Roman practice diverges from that of Greece, as the offspring of such unions were regarded as *vulgo quæsitæ* (i.e. *sine patre* or *incerto patre*), and followed the status of the mother.

The terms *concubina* and *concubinatus* are first met with in the works of Plautus, and are there applied exclusively to Greek conditions; thus, to speak of a marriage without dowry as a *concubinatus* (*Trin.* 690, *Stich.* 562; cf. Terence, *Phormio*, 653) corresponds to the Attic, not the Roman, point of view. But the word was even then in use (*The Sauris ling. lat. iv.* 98), though it had not a legally determinate connotation; it was perhaps applied to the marriages of slaves (see below), or to those between *ingenui* and *libertinae*, which, though not valid in law, were probably recognized by public opinion in later times (*Cic. pro Sest.* 111). In the Imperial period, again, the signification of *concubinatus* was modified by the marriage laws of Augustus, which forbade the union of free-born men with women of tarnished reputation (courtesans, procuresses, adulteresses, actresses), while senators were further prohibited from marrying emancipated women or the daughters of parents of ill repute. The man who maintained a relation resembling marriage with any such woman (*i.e.* with her *alone*) was said to be living in *concubinatus*. The laws, it is true, so far recognized unions of this sort that proceedings for *stuprum* were not taken against the parties. The children were out and out *vulgo quæsi*, *spurii*, or *naturales*—these terms are used indifferently in the inscriptions, which also give *filiastræ*—and took the status of the mother, as appears even in their names: thus the son of Publius Paccius Januarius and Mameria Grapte is called C. Mamercius *sp(urii) f(ilius)*, not Paccius or P(ublii) *f(ilius)* (*CIL* x. 1138). They stood in no legal relationship to their father, and accordingly could not be abintestate heirs, but were, in all probability, legally related to their mother. The *concubinatus* of a patron and an emancipated woman was specially common, and ranked—from the senatorial point of view—as in the circumstances more respectable than marriage (*Dig.* xxv. 7 pr.). In later times it was customary for the governor of a province to live with a concubine, and Alexander Severus caused her to be maintained at the public expense (*Vit. Alex.* 42). No stain attached to such an arrangement, and in many cases the connexion was regarded by the public as a regular marriage, while it was sometimes eventually placed upon the higher footing (*e.g.* *CIL* v. 1071); in the inscriptions the concubine is not infrequently called *coniux*, and the man *maritus*. When Septimius Severus prohibited marriages between patroness and freedman, Bishop Callistus of Rome gave permission to the women of his diocese to live in *concubinatus* with *emancipati* and *servi* (Hippolytus, *Refut.* ix. 12). After the death of Faustina, Marcus Aurelius took as a concubine the daughter of a procurator, so that his children might not have a stepmother (*Vit. M. Aur.* 29).

The subject of military concubinage must be dealt with by itself. The *milites gregales*, who were Roman citizens, were prohibited from marrying, and the women with whom they cohabited—commonly, as it appears, called *focariæ*—were regarded as concubines, even when they had been the regular wives of the soldiers before the date of enrolment. But, if a soldier received his honourable discharge (*missio honesta*) at the close of his period of service, his concubine became a wife, unless there was some special impediment. As a matter of fact, the privilege of marrying an alien concubine belonged only to the troops of the metropolitan cohorts, while other soldiers were restricted to women who had the rights of citizenship. Such marriages, however, had no retrospective effect upon the children who had been born during the period of service (distinguished in the inscriptions by the addition of the word

castris), and these still remained *spurii* (see above). The restrictions in question seem to have been removed by Septimius Severus, who allowed the *milites gregales* to marry during service; they certainly possessed this right in the 4th cent. A.D. We have information to show that in the military town of Lambæsis from A.D. 198 the legionaries lived with their families outside the camp.

The term *concubinatus* did not embrace the *contubernium* of slaves, as the latter ranked simply as chattels. It frequently happened, indeed, that the owner favoured marriages amongst his slaves, either with a view to augmenting his property, or for other reasons, as when he thought that his overseer (*vilicus*) would not do his duty well without a helpmeet (Cato, *de Re Rustica*, 143). But such unions had no legal validity, though it is likely that in actual practice they were generally recognized, and sometimes the way to a regular marriage was opened by the emancipation of both parties (*Dig.* xxxii. 1. 41; *CIL* ii. 2265). The terms *maritus*, *uxor*, and *coniux* are also found in this connexion (*e.g.* Apuleius, *Metamorph.* viii. 22).

The Christian emperors from Constantine onwards endeavoured as a rule to suppress concubinage, and to legitimize the children of these unions. Justinian permitted legitimation in all cases where there was no lawful issue. He was not unfavourable to the practice of concubinage, and regarded it as in some sense a legal institution. The Church likewise gave its sanction to that species of concubinage which was permanent and substantially like marriage (*e.g.* Augustine, *de Bono Coniug.* 3), and tolerated it even among the clergy. In the East, concubinage was prohibited in the 9th cent. by Basilius Macedo and Leo the Wise, but it persisted in the West until it was proscribed by the legislation of the 16th century. See CONCUBINAGE (Christian).

W. KROLL.

CONCURSUS.—According to theologians, God has not only created the world, but also by a continuous action (*creatio continua*) preserves it (*conservatio*), else it would cease to exist.

It has been argued, *e.g.*, by Aquinas (*c. Gent.* iii. 66-67; cf. *Sum.* i. qu. 105) and Suarez (*Metaph. Disp.* xxii. 1-8) that this *conservatio* involves that God concurs or acts immediately in the actions of finite beings, so that He is the cause of all their actions; and it is this activity, viewed in relation to the activity of created things, that is termed *concursum Divinum*. When this preservative and concurrent activity is regarded as directing the course of things towards their final end, there results the concept of the Divine governance of the world (*gubernatio*). The *providentia* of God is regarded as including (1) *conservatio*, and (2) *gubernatio*. The following texts from Scripture are quoted in support of the Divine concurrence:—Job 10⁹, Ps 104²⁹, Jer 23²⁴, Mt 5⁴⁰, Lk 12²⁸, Jn 3²¹ 15⁴, Ac 17²⁷, 1 Co 3⁷, Eph 1¹¹, Col 1¹⁷, He 1³, Wis 8¹ 11²⁷.

In Augustine's *de Civ. Dei*, xii. 25, God is conceived as ordering all things, as the true cause of growth and increase, and His secret power is viewed as penetrating all things; this efficient power being withdrawn, they sink into nothing.

The doctrine appears in a still more determinate form in Aquinas, who holds that God not only creates things, but also sustains and preserves them in being. It follows, however, from this that all inferior beings act only by virtue of the

Divine activity; for they give being to other things only if they themselves actually exist (*loc. cit.*). The same argument is used by Suarez (*loc. cit.*). God is therefore the cause, in all things that operate, of their operation; and each thing works as it does only through the power of God. Its activity is but the instrumental cause in the hand of God, who is the principal cause. God not only gives forms to things, but preserves them in being, directs them to their action, and is the end of their activities.

This theory of Aquinas is exposed to two opposite dangers or difficulties. On the one hand, it might be said, and was said by the Arabian philosophers, that God is the sole acting cause; that an action of the creature in addition to that of the Creator is rendered superfluous; that it is impossible to have two actions producing the same effect; that, therefore, it is not the fire that warms, but God in the fire. On the other hand, it may be said that God, having in the beginning given to things their forms and powers of action, no longer continues to act immediately in them. To these difficulties Aquinas acutely replies that, if the causal order in created things be withdrawn from them, this would imply a want of power in the Creator, who must be able not merely to act in things, but to give to them the power of acting; that the operative powers found in things would be assigned to them in vain—they would in fact be deprived of what was best in them—if nothing was effected by them; that, in fact, all created things would be, in a manner, in vain, if deprived of their proper operation. Again, a difference of operation, in view of the differences of finite things, would be no longer possible. To the objection that the same effect cannot proceed from the two causalities—the Divine and the finite—he replies that this would be so only if both belonged to the same order; it does not apply if one be the prime, the other the secondary, agent. If we make this distinction, we may regard the effect as produced, not partly by God and partly by the natural agent, but wholly by both, only in a different manner.

To the last—what may be called the deistic—difficulty, which would degrade the Divine action in things from an immediate to a merely mediate action, as was afterwards done by Durandus de S. Porciano, Aquinas replies with a very subtle metaphysical argument. Form is within the thing, its inner nature, and the more intensely so the greater its priority and universality; but God is especially the cause of universal being in all things, which is that which, above all, most intimately belongs to things. It follows that God operates most intimately in things; and it requires only the addition of the dialectical process to find in this the universal of the Hegelian philosophy.

In his application of these principles to human volition, Aquinas remains perfectly consistent. As he does not regard God as giving to things a power of acting which they of themselves exert, so neither does he regard God as giving to the human will a power of willing which it then exerts of itself in the natural order. This would perhaps make the explanation of human freedom more easy, but it would contradict his general view, and human freedom would not be a freedom in God. His language is emphatic: 'God is a cause to us not only of our will but also of our willing' (*c. Gent.* iii. 89). Yet God, while thus acting in our voluntary actions, does not coerce or compel us; we remain free; in fact, our freedom is the result of the action of God. This enabled Aquinas afterwards to take up the position that neither directly nor indirectly can God be considered as the cause of sin, i.e. of that defect in the act by reason of which it is sinful.

In the Catechism of the Council of Trent the position of Aquinas is maintained.

'Question xxii. God, by His government, does not overturn the force of secondary causes. But not only does God protect and govern all things that exist by His providence, but also, by an internal virtue, impels to motion and action whatever things move and act, and this in such a manner as that, although He excludes not, He yet prevents the agency of secondary causes; for his most secret influence extends to all things, and, as the wise man testifies, "reacheth from end to end mightily, and ordereth all things sweetly," Wisdom viii. 1' (tr. by J. Donovan, 1829).

In the Roman Catholic schools the doctrine gave rise to a famous controversy. The theory of the co-operation or concurrent action of God applies, as we have seen, not only to things with their natural forces, but also to the actions of men. In both cases a distinction may be drawn. The concurrence or co-operation is general, and without it

things cannot act; but it may also be held that the particular form or modification which the concurrence receives in particular things or in the actions of men is itself determined by the Divine concurrence or co-operating activity; or it may be held that this is determined by the particular physical or moral agent involved, the Divine concurrence empowering the agent to act, though the mode or form of action is due to the agent itself. This distinction becomes of great importance in connexion with the actions of men.

The Molinists, or followers of Molina, maintained a direct and positive influx of the Deity into the free acts of our will—an influx or influence not, however, into the will itself, which it neither moves, determines, nor bends to the act, but which it only assists and concurs with in the production of any act whatsoever. The Thomists maintained that this restricted too much the absolute dominion of God, if it did not subject His concurrence to human control. They held that a positive influx of the Deity takes place, not merely into actions, but into our determinations themselves, and efficaciously produces whatever of being and perfection is in our free acts. This physical 'pre-motion,' however, though efficaciously directing our actions, is not to the prejudice of our liberty, since the unimpeded power to do the opposite always remains in the free agent. Suarez endeavoured to supplement the Molinist doctrine by admitting a direct influence of the Deity on our action; which, however, was only a moral influence, due to the disposition of surrounding circumstances.

Molina illustrated his doctrine of the simultaneous concurrence of God with creatures by the comparison of two men towing a boat, or carrying a burden; but the distinction might perhaps be better illustrated by the attempts which are sometimes made, in connexion with the conservation of energy, by the defenders of free will, to separate the directivity of energy from the energy itself which is transferred.

The controversy thus merges in the free-will controversy, and it is chiefly in this form that the doctrine presents itself in Protestant theology. The doctrine of Predestination affords an extreme solution of the problem. That doctrine was upheld by both Luther and Calvin. According to Luther,

'the will of man may be called a free will, not in relation to what is above it, that is, God, but is to be esteemed free in relation to what is beneath it; that is to say, with my goods, fields, house, and farm, I can act, manage, and deal freely, as I will . . . but in relation to God, and in matters which concern his salvation, man has no free will, but is captive and subject to the will of God and of Satan' ('Vom unfreien Willen,' *Luther's Werke*, Frankfurt, 1840, p. 665).

The startling conjuncture contained in the close of this sentence is explained by another position in Luther's treatise. It is certainly stated in the Bible that God wills not the death of the sinner, but Luther distinguishes between the revealed and the hidden or inscrutable will of God (*ib.* p. 691); and by this latter will even sin is determined. It is an inevitable inference from this that evil is a moment in the hidden will, even if posited to be overcome. If Luther seems here to tend towards a monistic pantheism embracing evil in its scope, we must remember that his view is also a forecast of German speculation for almost three centuries. It may be said that Hegel's dialectic, which also includes evil as a moment within it, is an attempt to analyze this inscrutable will. This will is, intrinsically, not very different from the physical 'pre-motion' of Banez.

This consequence of Luther's doctrine was not very acceptable to his followers. Melancthon had already sought to make provision for human freedom, and in subsequent Lutheran dogmatics a greater independency is given to the creatures. J. Gerhard (*Locus ii.*, 'de Natura Dei,' § 187, vol. i. p. 294), following Lombardus, distinguishes three degrees of Divine presence: a general presence by

which God is present to all creatures and by which He preserves and governs them; a *special* presence of grace and glory in the saints; and a *singular* presence with which the whole and entire plenitude of Deity dwells in the human nature of Christ. The general presence of God is not a bare indistinctness apart from operation, or a bare operation apart from essential propinquity, but embraces both at once. Gerhard's view of the general presence of God does not include more than such a relation as that contemplated by Molina, at least so far as human action is concerned. In Quenstedt a more strictly Thomistic view is adopted.

'God,' he says, 'not only gives to secondary causes the power of acting and preserves it, but immediately flows into the action and effect of the creature, so that one and the same effect is produced, not by God alone, nor by the creature alone, nor partly by God partly by the creature, but by one total efficiency; by God and the creature at the same time; by God as universal and first cause, by the creature as particular and secondary' (quoted by Biedermann, *Christl. Dogmat.* 2 ii. 277).

It is obvious that the *concursus* may be differently conceived, according as stress is laid on the Divine action or on the action of the secondary causes. When the action of the latter is resolved completely into the former, we have a conception of the *concursus* similar to that which Descartes and Bayle had of the *conservatio*. These writers, instead of regarding the *conservatio* as a causation of the continued existence of things, viewed it as a continuous reproduction of the thing, a continuous re-creation of what was constantly falling back into nothing. In a similar manner the action of the secondary causes may be considered as wholly dependent on the Divine will, which resides in God, and gives to their action such and such a character. As Biedermann points out (*op. cit.* ii. 276), this mode of apprehending the *concursus* is the characteristic of the Reformed dogmatics, and philosophically agrees more nearly with the concept of God as the Absolute. On this view it follows that the Divine action must be conceived as *prævius* to, as well as simultaneous with, that of the creature. The action of the second cause is not conceived in these systems as influencing the first, but the first is held to influence the second by determining it to operation (cf. Pietet, vi. 311, quoted by Biedermann, ii. 277; Heidegger, *Medulla theol. Christ.*, 1696, loc. vii. 14). If these views be adopted, the difficulty of freeing the Divine Cause from responsibility for sin in human action becomes intensified; for it is difficult to see what is left to the human will, apart from the Divine, upon which the responsibility for sin may be laid.

If we interpret the *concursus* in the sense of Molina, and if, especially in relation to human actions, we regard it in such a way that God does one part, while to man is left some other part—the choosing or directing function—the doctrine is unquestionably exposed to the objection urged by E. von Hartmann (*Religion des Geistes*, Berlin, 1882, p. 352) that the collective (Divine-human) cause is halved, and an abstract nonistic solution is adopted for one half, and a deistic solution for the other. Hartmann's own solution, the concrete-monistic, which regards all Divine activity as activity of the creature, and all activity of the creature as Divine, is pantheistic, and excludes the concept of the *concursus*.

The problem that meets us in the Thomist and Lutheran theology postulates a more refined solution. The problem is to reconcile the eternal, unchangeable will of God with the free action of the human will in time. This seems conceivable only if we regard such free action as not altogether in time, but, with Kant, as an intelligible act out of time; or, with Hegel, as an infinite power of going back into self, of the ego, of thought, which free action can therefore be eternally willed as

such and as free by God. The problem is not confined to the human will; we encounter it also in the Infinite of mathematics. Modern speculation tends to view the Infinite as something actual. Our notion of the actual is, above all, that what is actual is, actually, what it is. Is then the infinite series of natural numbers actually odd or even? If it is not determinately one or the other, then apparently the actuality of the Infinite must be something different from what is ordinarily meant by actuality. In like manner, it may be argued that free action, in its indeterminate character, cannot be actually in time, or must be an eternal self-determined act out of time.

The term *concursus Dei* has also been applied to the doctrine of occasionalism (*q.v.*), which postulates the action of the Deity as mediating the connexion of soul and body; but this sense is quite distinct. The theological *concursus* acts in and with the natural action of the cause, and neither supersedes nor supplies its place.

Dogmatik*, Berlin, 1884-1886, ii. 277.

G. J. STOKES.

CONDITIONAL IMMORTALITY.—The doctrine that immortality is not inherent but conditional, depending on the use made by the individual of this present life. 'From this point of view man is a candidate for immortality. Perpetual life becomes the portion of the man who, by faith, unites himself to God' (Petavel, *Problem of Immortality*, p. 15). In its modern form Conditionalism may be said to be contained in two propositions: (1) that the endless life of the righteous is not the result of any natural immortality inherent in man, but is the gift of God; (2) that the punishment of the wicked, in the world to come, will not be of endless duration, since their life must finally be extinguished.¹ Thus Conditionalism is important chiefly as an attempt to solve the problem of the ultimate fate of the obstinately wicked. Those who have found themselves unable to accept the traditional view that sinners live for ever in a state of suffering have, generally speaking, adopted one or other of two theories: Universalism (*q.v.*), the doctrine of the ultimate reconciliation of all men to God; or Conditionalism, which, in its modern development, involves Annihilationism (*q.v.*).

1. History of the doctrine.—Although Conditionalism, historically speaking, is a recent doctrine, not held by any considerable body of men until the 19th cent., it is found here and there, in a more or less developed form, from the earliest times. Some writers² have claimed for it an Egyptian origin. But the first certain instance of a philosophic presentation of conditionalistic ideas is found in the teaching of the Stoic Chrysippus († c. 206 B.C.). Diog. Laert. (vii. 157) says: Κλεάνθης μὲν οὐν πᾶσας [τὰς ψυχὰς] ἐπιδικαμένουν μέχρι τῆς ἐκπύρωσεως, Χρύσιππος δὲ τὰς τῶν σοφῶν μόνων. The view of Chrysippus was accepted by some, though not all, of the later Stoics,³ but Conditionalism never became a

¹ It is to be observed that these two propositions are quite separate. The second does not necessarily follow from the first.

² e.g. A. Matter, art. 'Ancientisme des Ames,' in *Encyclop. des sciences relig.* (Paris, 1877); G. Rawlinson, *Ancient Egypt*, I. 315 (London, 1881); A. Wiedemann, *Anc. Egypt. Doctrine of Immortality* (Eng. tr., London, 1896).

³ Seneca, *Consolat. ad Marciam*, ad fin.: 'Nos quoque felices animæ et æterna sortitæ . . . labentibus cunctis . . . in antiqua elementa vertemur'; Tac. *Agria*. xvi.: 'Si, ut sapientibus placet, non cum corpore extinguuntur magnæ animæ'; Arius Didymus (ap. Euseb. *Præp. Evang.* xv. 20): 'Ἐνιοὶ τὸν Στοικῶν λέγουσι] τὴν μὲν [ψυχὴν] τῶν σπουδαίων μέχρι τῆς εἰς τὸν ἀναλίσσεως τῶν πάντων [ἐπιμένειν], τὴν δὲ τῶν ἀφρόνων πρὸς ποσότην χρόνου.

generally received doctrine among the Greeks and Romans. Roman Stoics like Epictetus and Aurelius either doubted or denied the immortality of the soul; while, on the other hand, the increasing popularity of Neo-Platonism brought into prominence the rival theory of its inherent immortality. Among the Jews some Rabbis, notably Maimonides († 1204),¹ held that the wicked would not live for ever. Of early Christian writers, however, there is only one who unquestionably taught a conditionalistic doctrine. At the beginning of the 4th cent. the African apologist Arnobius² (*Disput. adv. Gentes*, ii. 15-54) argues that the sin, imperfections, and infirmities of the soul make it impossible to believe that it came direct from God. And, for the same reason, it cannot be inherently immortal. It survives the body indeed, but is immortal only by the gift of God. The souls of the obstinately wicked are gradually destroyed in Gehenna. That which is immortal cannot suffer pain. But the souls of the obstinately wicked do suffer intense pain; therefore they must eventually die of it. 'Sunt enim [animæ] mediæ qualitatis (sicut Christo auctore compertum est) et interire quæ possint, Deum si ignoraverint, vitæ et ab exitu liberari si ad eius semina³ atque indulgentias applicarint' (*op. cit.* ii. 14).

From the 4th cent. to the 18th, Conditionalism was not taught by any one claiming to be an orthodox Christian. Certain isolated thinkers, like Duns Scotus († 1309) and Petrus Pomponatius (early 16th cent.), maintained that the immortality of the soul is incapable of demonstration.⁴ But such teaching does not, necessarily at any rate, involve Conditionalism. In truth, Conditionalism never commended itself to the Church. Platonic influences in the first place, and the growth of purgatorial doctrine⁵ later, tended to lead men further and further away from conditionalistic speculations, and during the early days of the Reformation the immense influence of Calvin brought about the acceptance by most Protestant bodies of formulæ which strongly affirmed the doctrine of the endlessness of punishment. But meantime conditionalist views were being put forward by certain isolated thinkers, Christian and non-Christian.

Fausto Paolo Sozzini (=Socinus, † 1604), in a letter written as early as 1563, rejected the doctrine of the natural immortality of the soul, and in his later controversy with Francesco Pucci he stated his views more fully.

He argues that, since man has the power of reproducing his species, he must be naturally mortal, for an immortal being does not beget children. Further, an immortal frame does not require food. Man's body is evidently different from a spiritual and immortal body. All the causes which lead to death existed even before man sinned. If man had not sinned, he might have been preserved from death by the favour of God, though naturally mortal. By sinning, Adam refused this gift for himself and his posterity. Therefore, unless by the favour of God, we too must die and remain in the state of death.⁶

Thomas Hobbes († 1679), in his *Leviathan* (iii. 38), says:

'The fire prepared for the wicked is an Everlasting Fire, that is to say, the Estate wherein no man can be without torture, both of body and mind, after the Resurrection, shall endure for ever; and in that sense the Fire shall be unquenchable, and

the torments Everlasting; but it cannot thence be inferred that he who shall be cast into that fire, or be tormented with those torments, shall endure and resist them so as to be eternally burnt and tortured, and yet never be destroyed or die. And though there be many places that affirm Everlasting Fire and Torments (into which men may be cast successively one after another for ever), yet I find none that affirm there shall be an Eternal Life therein of any individual person; but, to the contrary, an Everlasting Death.'

Similar views appear to have been held by John Locke († 1704).

By death some men understand 'endless torment in hell-fire: but it seems a strange way of understanding a law, which requires the plainest and clearest words, that by death should be meant eternal life in misery. Could any one be supposed [to intend] by a law that says, "For felony thou shalt die," not that he should lose his life, but be kept alive in perpetual exquisite torment?' (*Reasonableness of Christianity*, § 1).

Even so orthodox a Calvinist as Isaac Watts († 1748), in his *Ruin and Recovery of Mankind*, § xi. (*Works*, 1753, vi. 270-274), asks 'whether the word "death" might not be fairly construed to extend to the utter destruction of the life of the soul as well as of the body.'

On the Continent of Europe, Benedict Spinoza († 1677), in his posthumous tract¹ *de Deo, de Homine, et de Felicitate*, argued against the natural immortality of the soul, and elaborated his theory in the 5th book of his *Ethics*. In Prop. xlii., Scholium (Eng. tr., White-Stirling, 1894), he says:

'The ignorant man is not only agitated by external causes in many ways, and never enjoys true peace of soul, but lives also ignorant, as it were, both of God and of thought, and as soon as he ceases to suffer ceases also to be. On the other hand, the wise man, in so far as he is considered as such, is scarcely ever moved in his mind, but, being conscious, by a certain eternal necessity, of himself, of God, and of things, never ceases to be, and always enjoys true peace of soul.'

The exact meaning attached by Spinoza to phrases like 'never ceases to be' is a subject of dispute; but at least it is clear that he was a Conditionalist in the sense that his 'immortality' is not enjoyed by any but the wise man.

In France, J. J. Rousseau († 1778), while he held the doctrine of the immortality of the soul, yet thought that the souls of the very wicked perish at death. In a letter of 1758 he says:

'Il est vrai qu'il y a des âmes si noires que je ne puis concevoir qu'elles puissent jamais goûter cette éternelle béatitude dont il me semble que le plus doux sentiment doit être le contentement de soi-même. Cela me fait soupçonner qu'il se pourrait bien que les âmes des méchants fussent anéanties à leur mort, et qu'être et sentir fût le prix d'une bonne vie.'

The opinions quoted so far are chiefly those of philosophers and thinkers rather than theologians, and in some cases they are in the nature of *obiter dicta*. But in 1706 there appeared a complete treatise from the pen of the learned theologian and non-juror Henry Dodwell, advocating conditionalist views. Dodwell had been Camden Professor of History in the University of Oxford, and had a great reputation for scholarship and orthodoxy. The full title of his work sufficiently indicates the nature of its conclusions. It is called *An epistolary discourse proving from the Scriptures and the First Fathers that the soul is a principle naturally mortal—but immortalised actually by the pleasure of God to punishment or to reward, by its union with the Divine Baptismal Spirit, wherein is proved that none have the power of giving the Divine Immortalising Spirit since the Apostles, but only the Bishops*.² This work provoked considerable controversy, being answered by Samuel Clarke, Anthony Collins, and others. Dodwell defended himself in three pamphlets published in

¹ *Constitutiones de Fundamentis Legis*, pp. 47, 48, Lat. tr. by W. Vorst, Amsterdam, 1838. F. W. Farrar (*Eternal Hope*, London, 1892, Excursus v.) discusses the eschatological views of the Jews. See, further, J.E. art. 'Eschatology.'

² For the views of Arnobius see Smith-Wace's *DCB* (1877) i. 168.

³ For the unintelligible MS reading 'semina,' *minas* and *misericordiam* have been conjectured. Reifferscheid reads *misericordias*.

⁴ This view was implicitly condemned by the Fifth Lateran Council and by a Bull of Leo x. (1513).

⁵ The conception of Purgatory did in fact modify, for the faithful at least, the doctrine of endless punishment for the wicked in a Universalist direction.

⁶ Socinus, *Works* (Frankfort, 1656), i. 537 ff.; see also J. Toumin, *Life and Sentiments of Socinus* (1777).

¹ This treatise was not known to exist till the discovery by Ed. Boehmer of Halle (1851) of an abstract of it, and the subsequent finding of two Dutch MSS containing the whole of it. It is a rough draft of the *Ethics*. The word 'immortality' is used in it, but not in the *Ethics*.

² A little before the appearance of Dodwell's book, Aubert de Versé, a French Protestant, had formulated a theory of Conditionalism in his treatise *Le Protestant pacifique* (1894). He says: 'La mort est la mort, et la vie est la vie. La mort naturelle prive de la vie et du sentiment pour un temps, et la mort éternelle en prive pour jamais.' His position corresponds with that of Locke.

1707-1708; and an anonymous¹ work indicating his main position, *The Holy Spirit the Author of Immortality*, appeared in the latter year. The controversy, however, soon died out, and for over a century nothing more was heard of it.

The latter part of the 19th cent. saw a great revival of interest in eschatological questions, and the difficulties of the traditional view of the ultimate destiny of the obstinately wicked were stated with great force by a number of writers. In 1846, Edward White, a Congregational minister, published his *Life in Christ*, which is justly regarded as an epoch-making book in the history of Conditionalism.² White's views were supported by a considerable number of theologians and thinkers in England and America, as well as on the Continent of Europe. A fairly complete list will be found on pp. 18-26 and 500-501 of Petavel's work, *The Problem of Immortality* (Eng. tr. by F. A. Freer, 1892). In Germany Richard Rothe, in France and Switzerland Charles Lambert, Charles Byse, and E. Petavel,³ in Italy Oscar Cocorda, and in America C. F. Hudson and W. F. Huntingdon have been prominent advocates of conditionalistic views, and have won many adherents. Thus Conditionalism has at length, in the 20th cent., taken its place among those eschatological theories which are to be reckoned with.

2. Arguments in favour of Conditionalism.—The main arguments on which the more recent advocates of conditionalistic views rely to prove their case may be summed up as follows:—

(1) *Arguments based on the language of the OT and NT.*—The chief passages relied on by Conditionalists are the following: Gn 216.17 34.19, 22-24, Dt 30.15, 19, 20, Ps 214.37.10, 20 49.20 73.10, 20 92.7 94.23 145.20, Pr 8.35, 26 11.19 12.28 24.30, Is 51.8, Ezk 18.26-32, Mal 4.1-3, Mt 7.13-19 10.28 13.30, 40, 48, 49 16.36, Lk 13.4, 5, Jn 3.16, 18 5.24, 40 6.32-35 8.51 10.28 11.25 14.6, 19 15.6, Ro 6.21-23 7.8 8.11, 13, 1 Co 3.16, 17, 2 Co 2.15, 16 4.3, Gal 6.7, 8, Ph 3.18, 19, 1 Th 5.2, 2 Th 1.9 (ἀθάνατος αἰώνιος—a unique phrase in NT), 1 Ti 6.19, He 10.26-29 12.29, Ja 1.15 5.20, 1 P 1.12 4.18, 2 P 1.4 2.13 3.3, 1 Jn 3.15 5.11, 12, Rev 2.11 3.3 20.11 21.6 22.1, 4. These passages are held to prove: (a) that man is not inherently immortal; immortality is the attribute of God only (1 Ti 6.16); death, in its literal sense, is the result of the Fall; (b) that immortality is a gift offered to the righteous; (c) that it is conditional; the Bible never speaks of the immortality of the soul; (d) that obstinate sinners are frequently threatened with death, and spoken of as destroyed; and that death means destruction of body and soul.

It is plain that in all discussions on the language of Scripture the essential point is the precise meaning to be attached to the words 'life', 'death', and similar expressions.⁴ Are they to be interpreted literally or in a moral sense?⁵ The conditionalist

position (forcibly stated by Locke in a passage already quoted) is that Biblical writers, when they use these expressions, use them in the obvious and literal sense. The opposite view is put by S. D. F. Salmond in his *Christian Doctrine of Immortality* (Edinburgh, 1897, pp. 615-623). He argues that in a good many, at any rate, of the NT passages relied on by Conditionalists the word 'life' (ζωή) means something more than mere existence (e.g. Jn 5.4 11.25, 26, Eph 2.1-6, Col 2.13 3.1, 1 Ti 5.6). And, further, he quotes certain passages from the NT which, in his opinion, are irreconcilable with Conditionalism (Mt 25.46, Mk 3.29, Jn 3.36, Ac 1.25, Rev 20.10).¹

(2) *Patristic evidence.*—It is claimed by Conditionalists that the early Christian Fathers are on their side. The opinions of Arnobius have already been stated, and it is not seriously disputed, that he held conditionalistic views. But, from Dodwell onwards, conditionalist writers have brought forward a considerable body of Patristic evidence to prove their contention that many of the other Fathers in early times were on the same side. Some of the passages cited are not convincing,² but others certainly contain expressions which are, at any rate, capable of a conditionalistic interpretation. Justin Martyr (2 Apol. 7) uses the phrase ἵνα καὶ οἱ παῖδες ἀγαθοὶ καὶ δάσκαλοι καὶ ἄνθρωποι μὴ κέτι ζῶσι. In his *Dialogue with Trypho* he puts into the mouth of the aged Christian who is instructing him words which seem formally to deny the inherent immortality of the soul. After a repudiation of the Platonic doctrine of pre-existence, he goes on to say (Dial. v.): οὐδὲ μὴ ἀθάνατον χρὴ λέγειν αὐτὴν (i.e. τὴν ψυχὴν), οὐκ εἰ ἀθάνατος ἐστὶ καὶ ἀγέννητος δηλαδὴ. He then proceeds to develop his views, saying that the souls of the righteous will not die, while the souls of the wicked will be punished, ἐστ' αὐτὰς καὶ εἶναι καὶ κολάζεσθαι ὁ θεὸς θέλει. And later on in the same chapter he uses the phrase τούτου χάριν καὶ ἀποθνήσκουσιν αἱ ψυχὰι καὶ κολάζονται.³ Irenæus (adv. Haer. v. 2) says: ἐκ τῆς ἐκείνου ὑπεροχῆς, οὐκ ἐκ τῆς ἡμετέρας φύσεως, τὴν εἰς αἰὶν παραμὼν ἔχομεν. The most important, however, of the passages in Irenæus bearing on this question is found in ii. 56 (=ii. 34), where, in commenting on Ps 148.21, he concludes with these words (Lat. tr.):

'Non enim ex nobis, neque ex nostra natura vita est: sed secundum gratiam Dei datur. Et ideo qui servaverit datum vitae . . . accipiet et in saeculum saeculi longitudinem dierum. Qui autem abiecit eam . . . ipse se privat in saeculum saeculi perseverantia (= διαμνησί).'

More doubtful is the language of Athanasius, whose words are (de Incarnatione, 3):

εἰ δὲ παραβαίεν καὶ στυφαίνετες γένοιτο φαῖλοι, γινώσκουσιν ἑαυτοὺς τὴν ἐν θανάτῳ κατὰ φύσιν φθορὰν ὑπομένειν, καὶ μὴ κέτι μὲν ἐν παραδείσῳ ζῆναι, ἔξω δὲ τούτῳ λοιπὸν ἀποθνήσκοντας μένειν ἐν τῷ θανάτῳ ἐν τῇ φθορᾷ.

After Athanasius, conditionalistic doctrines are found but very rarely. Petavel quotes Nemesius, de Natura Hominis, i.; Theophylact, Com. on 1 Ti 6.16; Nicholas of Methone, Refut. 207 ff.; and a synodical letter of Sophronius read at the Third Council of Constantinople (A.D. 680) as instances of the sporadic survival of such views. But he

1 For further discussion of these and similar passages see C. A. Row, *Eternal Retribution* (1887), pp. 185-847.

2 e.g. Ep. Barn. 20 (where the phrase θάνατος αἰώνιος occurs); Clem. 1 Ep. ad Cor. 35 (eternal life is the gift of God); 2 Ep. ad Cor. 7 (ἀθανάτων ἀθάνατος); Ignatius, ad Polyc. 2, ad Sm., ad Ephes. 20 (the Eucharist is φάρμακον ἀθανασίας); Theophilus, ad Autolyt. ii. 27 (οὐτὶ οὐδὲν φόνος θνητῶν ἐγένετο, οὐτὶ ἀθάνατος); Lactantius, Inst. Div. vii. 5 ('non secula naturae, sed merces praemiumque virtutis'); Clem. Alex. Ped. i. 6, ad init. (immortality conferred by baptism).

3 Justin's pupil Tatian uses similar expressions; cf. adv. Graecos, 13 (146 B), οὐκ ἐστὶν ἀθάνατος ἡ ψυχὴ καθ' ἑαυτὴν, θνητὴ δέ.

4 Elsewhere (e.g. c. Gentes, 83) Athanasius seems to teach the inherent immortality of the soul; and E. White (op. cit. p. 425) admits that he holds the doctrine of the "eternal death" of conscious suffering for the obstinately wicked.

¹ Assigned to Joseph Pitts in the B.M. Catalogue.

² *Life in Christ: Four Discourses upon the Scripture Doctrine that Immortality is the peculiar Privilege of the Regenerate*, London, 1846. A third edition of this work, revised and enlarged, was published in 1878, and was translated into French in 1880 by Charles Byse.

³ Dr E. Petavel is a distinguished Swiss theologian, and his work is the most complete account of Conditionalism yet published. He includes among the supporters of Conditionalism Dr R. W. Dale (quoted in the preface to Petavel's *Struggle for Eternal Life*, Eng. tr. 1876), Prof. Sir G. G. Stokes (quoted by E. White in preface to *Life in Christ*, p. vii), and Archbishop Whately, who, in *Scripture Revelations Concerning a Future State* (10 pp. 189, 190), suggests Conditionalism as a possible hypothesis.

⁴ The usual words for 'life' are Heb. חַיָּה and ζῆν, Gr. ζωή (more than 100 times in NT), and, less commonly, ψυχή. The words and phrases denoting 'death' and 'destruction' are much more numerous both in Hebrew and in Greek (Petavel, op. cit. pp. 445-452).

⁵ The language found in the NT . . . decidedly suggests that the ultimate penalty, in the eternal order, of impenitence is extinction of the guilty soul, even as the ultimate issue of the work and victory of Christ is the extinction of evil' (J. M. Schulhof, *Law of Forgiveness*, Cambridge, 1901, p. 146).

admits that they were generally 'drowned in the rising tide of the Platonic theory which was made to triumph in the Church by the pseudo-Clementines, Tertullian, Minucius Felix, Cyprian, Jerome, and especially Augustine' (*op. cit.* 242). Taken as a whole, the Patristic evidence goes to show that a considerable number of early Fathers affirmed, in opposition to the Platonic doctrine of inherent immortality, that eternal life is the gift of God imparted through the Incarnation, and that the soul is not naturally immortal. Whether any of them, save Arnobius, went further than this in the direction of Annihilationism is not certain. Two considerations make us hesitate before pronouncing definitely. In the first place, there is often considerable doubt as to the exact sense in which the Fathers use the words 'life,' 'death,' and similar expressions. In many instances, they, like the writers of the Bible, seem to employ them with a moral and spiritual rather than a physical meaning. In the second place, the earliest of the Fathers were not scientific theologians, and their language is not always self-consistent. Justin Martyr, the most important witness for Conditionalistic views among the Apologists, uses language which clearly implies the endless suffering of the wicked.¹ All, therefore, that can be said with certainty is that many of the early Fathers support the first of the two propositions maintained by modern Conditionalists, while one at least (Arnobius) supports the second also, and holds that the punishment of the wicked will not be of endless duration.

(3) But, over and above the appeal to authority, Biblical and Patristic, Conditionalists urge that their views are in *harmony alike with the most recent theories of science and with the highest spiritual instincts of mankind*. Science, it is said, fails to supply any proof of the immortality of the soul. Conditionalism does not demand such proof, since it also rejects the doctrine of an inherent immortality. Again, science has shown that man is physically closely allied to the lower animals; while, intellectually, there is little, if anything, to choose between, *e.g.*, the higher animals and the most backward races of mankind. If we postulate immortality for all men alike, science asks whether we can logically stop at man and deny the immortality of the more intelligent animals. This difficulty, which confronts the Universalist and the Traditionalist alike, is no difficulty for the Conditionalist. Further, the doctrine of the 'survival of the fittest' is one of the most assured of those taught by modern science. Con-

ditionalism is that doctrine transferred to the spiritual world.¹ If, again, it is true that ultimately the value of every doctrine must be measured by its ethical and practical results, Conditionalism, it is urged, is, from this point of view, in a very strong position. It keeps the mean between 'the dualist pessimism which makes evil eternal, and the perfidious optimism which asserts that all will end well for every one.'² Traditionalism, by raising doubts as to God's justice and love, leads to despair and unbelief. Universalism, by teaching the ultimate salvation of all, fills men with a fatal sense of security, and robs them of a great motive for spiritual effort. Conditionalism does not run counter to our highest conceptions of the justice and love of God, while, by representing immortality as a prize to be won, it stimulates and inspires. At the same time, since it does not exclude the possibility of the suffering of the obstinately wicked before their annihilation, it gives due weight to the solemn warnings of Scripture.

On the whole, it may be said that, although Conditionalism presents certain difficulties of its own,³ it is free from many others which have been urged against its rivals. While some of the arguments adduced by Conditionalists, especially those founded on the language of the Bible and the early Fathers, will not prove all that its advocates claim for them, yet some important considerations of a scientific and ethical character are in its favour. The spread of the doctrine during the last fifty years among men of various schools of thought is a sufficient indication that it offers a solution of eschatological problems acceptable to a large and increasing number of seekers after truth.

LITERATURE.—Most of the more important works dealing with the subject have been mentioned in the course of the article. Besides those, the following are useful: C. Lambert, *Le Système du monde moral*, Paris, 1877 (treats the question from a philosophic standpoint); C. Byse, *Notre durée*, Paris, 1885; Oscar Cocorda, *L'Immortalità condizionata*, Torre Pellice, 1888; R. Rothe, *Dogmatik*, Heidelberg, 1870, vol. iii. (esp. pp. 133-169, 291-336); C. F. Hudson, *Debt and Grace*, New York, 1892 [discussion of Patristic evidence]; J. B. Heard, *The Tripartite Nature of Man*, Edinburgh, 1882; S. Senhouse-Minton, *The Glory of Christ*, London, 1899; H. Constable, *The Duration and Nature of Future Punishment*, London, 1876; Sir J. Stephen, *Essays in Ecclesiastical Biography*, London, 1853, vol. ii., Epilogue; F. Palmer, *Winning of Immortality*, New York, 1910. A full list of ancient and modern works on eschatology (including Conditionalism) is that of Ezra Abbot, compiled as an Appendix to W. R. Alger's *Critical History of the Doctrine of a Future Life*, Boston, 1880. Cf. also art. ANNIHILATION in vol. i.

CONFESSION.

Assyro-Babylonian (T. G. PINCHES), p. 825.
Christian.—See PENITENCE.

CONFESSION (Assyro-Babylonian).—Though the word for 'confession' in Assyr.-Bab. is uncertain,³ there is no doubt whatever that the idea existed among the peoples of the Tigris-Euphrates valley. By this term they understood the acknowledgment of sin or of wrongdoing on the part of one who felt himself thereby out of favour with the deity whom he worshipped, or in danger of that disadvantage. The sin or wrongdoing might affect a fellow-man, or might be an offence against religion, justice, or morality, for which the deity, jealous with regard to the due observance of right,

¹ Cf. *1 Apol.* xxi. 8: ἀναθανίζεσθαι δὲ ἡμεῖς μόνους δεδιδόμεθα τοὺς δούλους καὶ ἀναγέρνους ἑαυτοῖς βίωντας, κολαζέσθαι δὲ τοὺς ἀδίκους καὶ πρὸς μεταβάλλοντας ἐν αἰωνίῳ πυρὶ πιστεύομεν. See also *xviii.* 1, iii. 6, 7; *2 Apol.* ix. 1.

² It was probably some form of the root *pītā* (*pētā*), 'to open,' 'reveal' (see *pīt pē*, below).

Egyptian (J. BAIKIE), p. 827.
Hebrew (A. E. SUFFRIN), p. 829.

exactod a penalty and inflicted punishment. This moral or religious aspect of sin, however, was probably a late development, the feeling of wrongdoing having been originally purely ritual—a failure to perform sacrifice or worship, or a defect either in the performance or in the offering. Thus it was that the feeling of being in disfavour with the deity arose, and one of the means of grace

¹ 'Le conditionnalisme serait, à ce point de vue, un cas particulier, le plus important, du procédé général de sélection qu'emploie la nature, de la prodigalité qui se remarque en toutes ses œuvres. Il se rapprocherait du Darwinisme' (Larousse, *Dict. Universel*, Supplément, p. 883f., Paris, 1878, art. 'Conditionnalisme' [a good account of the doctrine, chiefly from the philosophical side]).

² Petavel, *op. cit.* p. 386.

³ See the vigorous attack in Salmond, *op. cit.* pp. 611-629. J. A. Beet, *The Last Things* (London, 1905, pp. 236-240, 299-305), is more sympathetic.

ould naturally be the making of confession—self-humiliation and abasement by the acknowledgment of the sin. Humiliation was evidently regarded as being acceptable to the deity, and acknowledgment of wrongdoing as paving the way to forgiveness. Moreover, it may be supposed that the man who stood self-accused before the deity not only appeared the deity by that act, but also forestalled any informant who might present his misdeeds in a less favourable light.

With the Babylonians the feeling that the deity might be displeased by possible wrongdoing was exceedingly ancient, and probably originated with the Sumerians. A worshipper, in consequence of misfortune happening after he had offered prayer or sacrifice, or after he had performed a rite, found the cause in some imperfection of his service. Not only had the service to be perfect, but the celebrant likewise had to be faultless in all his members, or imperfections in the ceremonial would occur. Moreover, he had to be ritually clean. For this reason, sin was originally the transgression of ritual laws, and appears as such throughout Babylonian religious literature.¹

'Uncleanness has come against me; and to judge my cause, to decide my decision, have I fallen down before thee. Judge my cause, decide my decision, remove the evil sickness from my body, take away whatever is evil of my flesh, and my sinews. The evil which is in my body, my flesh, and my sinews, let it this day come forth, and let me see the light.'²

Confession and contrition, however, seems to have been a secondary thing with the Assyro-Babylonians—purification by means of ritual acts and ceremonies took its place. In the rituals for purification, a certain act has to be performed which is expressed by the Sumer. phrase *ka-tuh(h)uda*, rendered, apparently, by *pit pā*, 'opening of the mouth,' which followed the *ka-tuh(h)uda*, or 'washing of the mouth.' If the latter was symbolical of the necessity of speaking the truth, and the determination on the part of the worshipper to do so, then the 'opening of the mouth' (if that be the meaning of the expression), which follows, might stand for a direction to confess³ to the god the nature of the sin or deficiency which made the ceremony necessary.⁴

In all probability the nature of these confessions as indicated by some of the numerous Assyr.-Bab. penitential psalms. An exceedingly perfect one is that published in the *Cuneiform Inscriptions of Western Asia*, iv. pl. 10. This is addressed to gods and goddesses known and unknown, and refers, therefore, to sins and failings both known and unknown. The following will indicate the nature of this example:

'The forbidden thing of my god unknowingly I have eaten;
The unallowed thing of my goddess unknowingly I have trampled on;

Lord, my sins are many, great are my omissions;
God, my sins are many, great are my failings;
Goddess, my sins are many, great are my failings.
The sins I committed I knew not;
The failings I committed I knew not;
The forbidden thing I ate I knew not;
The unallowed thing I trampled on I knew not.
The lord in the wrath of his heart hath looked upon me;
The god in the anger of his heart hath turned against me;
The goddess is angry with me and evilly hath entreated me;

A known or unknown god hath oppressed me;
A known or unknown goddess hath caused me pain.

¹ J. Morgenstern, 'The Doctrine of Sin in the Babylonian Religion,' *MVG* x. (1905) 3, p. 2.

² *ib.* p. 4.

³ *Epēš pā*, 'to open the mouth (to speak),' is given as a synonym of *pit pā* (Muss-Arnolt, *Assyr. Dict.*, Berlin, 1901-05, p. 851a).

⁴ Rib-Addi attributes the weakness of old age, etc., from which he was suffering, to the anger of the gods of Gēbal on account of his sins, which, however, he had confessed (*hēš epēš ana lāni* [Winckler, *Tontafeln von Tel-el-Amarna*, Berlin, 1896, no. 71; Kaudtner, *El-Amarna Tafeln*, Leipzig, 1910, no. 187, lines 29 ff.]).

I besought, but none took my hand;
I wept, but he did not approach my side.
I call aloud, none heareth me;
I am oppressed, I cover myself, I look not up.'

The penitent here mentions that he had made supplication to his merciful god, had kissed the feet of his goddess, and had appealed to god and goddess known and unknown. He calls upon them all to look favourably upon him, and asks each how long his goodwill will be withheld. Men know nothing—not even whether they do evil or good. The suppliant, however, needs help, and (being willing to confess and acknowledge that he has sinned) continues as follows:

'Turn the failure I have committed to good;
Let the wind carry away the sin I have wrought;
Tear asunder my many misdeeds like a garment.
My god, my sins are 7 times 7—free me from my sins;
My goddess, my sins are 7 times 7—free me from my sins;
God known or unknown, my sins are 7 times 7—free me from my sins;
Goddess known or unknown, my sins are 7 times 7—free me from my sins;
Free me from my sins, that I may bow down before thee;
May thy heart, like the heart of the mother who bore (me), return to its place;
Like the mother who bore, the father who begot, may it return to its place.'

The following is part of a confession to a goddess:
bitterly do I lament.

[My sins] are many, my mind is embittered (thereby).
Lady,² cause me to know my act, set for me a refuge;
Remove my sins, lift up my countenance.³

Another text speaks of the shame which the penitent feels:

'He prostrates himself to his god with sighing;
He weeps, he withholds not lamentation (?)—
"Let me tell my deed—my unspeakable deed."
Let me repeat my word, my unspeakable word:
My god, let me tell⁶ my deed, my unspeakable deed."⁴

In this last, contrary to custom, there is apparently a desire to specify the nature of the deed, and things so bad seem to be presupposed that permission has to be asked to mention (or detail) them. Unfortunately, the text is defective after the last line translated, so that the conclusion to be deduced therefrom is doubtful; but it may be supposed that we have here a case in which confession, with specification of the sin or wrongdoing, is provided for.

In all these inscriptions the penitent makes his confession directly to the deity, without the intermediary of a priest or any other person. The priest, however, in certain cases, introduces him to his god, stating that he is sick, in distress, cast down, trembling, raining tears like a cloud, uttering words of submission with sighing. What, he asks, has my lord's servant thought out and planned? Let his mouth reveal what I do not know! Whereupon the penitent, confirming, speaks for himself:

'[Many are my sins, which I have wholly sinned;
Let this [misfortune] pass, let me go forth from tribulation.
[Many are my sins, which I have wholly sinned;
Let this [misfortune] pass, let me go forth from tribulation.]'

Numerous phrases asking for pardon, peace, comfort, etc., for the penitent follow, and were seemingly pronounced by the priest.

The king naturally had to keep himself pure and always fit to represent the people. For this reason, when he came to perform a ceremony, he said: 'May the tablet of my sins be broken'—probably an actual tablet, upon which all his misdeeds were inscribed.⁵

In Ashurbanipal's well-known prayer to Nebo,⁶ the confession of his sins, as well as his perfection

¹ Lit. 'I speak words,' or the like.

² *Istar* (Zēr-panitum); cf. vol. ii. p. 643b.

⁴ Lit. 'unrepeatable.' Or 'confess' (*luqūš*).

⁵ Zimmern, *op. cit.* pp. 86, 65 ff.

⁶ *ib.* p. 88, lines 18-21.

⁷ Morgenstern, *loc. cit.* p. 120.

⁸ Strong, *Trans. of the 9th Internat. Congress of Orientalists*, London, 1898, li. 199 ff.

in service, was the great offering which he made to the deity:

'Assur-bani-âpli confessed his sins,¹ he constantly prayed to Nebo, his lord;
What he set at the feet of the Queen of Nineveh he concealed not in the assembly of the great gods;
What he stored in the sanctuary of Urkiti he concealed not (even) in the assembly of his haters;
"In the assembly of my haters forsake me not, Nebo—
In the assembly of my oppressors (?) forsake not my life."²
At this point come the lines printed in art. BIRTH (Assyr.-Bab.) in vol. ii. p. 644^b, and the king is then informed that his haters shall disappear like ripples on the surface of the water, and like sandhills (?) on the face of the land—"thou shalt stand up, Assur-bani-âpli—in the presence of the great gods thou shalt give praise to Nebo." To all appearance, these concluding words contain the promise of ultimate pardon and rehabilitation.

LITERATURE.—This is indicated in the notes.
T. G. PINCHES.

CONFESSION (Egyptian).—Of the deep sense of the guiltiness of sin and the deep contrition for it which are characteristic of the Hebrew or of the Christian religion, the Egyptian knew nothing, or, at all events, expressed nothing. It would be too much to say that he had no sense of sin, for of the wrongness of certain acts, and, in a very marked and unusual degree, of the wrongness of certain frames and dispositions of character, he had a very clear and accurate perception; but, at all events, he had no conception of repentance, or, at least, none which has left any mark upon his religious literature. It must always be remembered that there are immense gaps in our knowledge of the Egyptian religion, and that the bulk of our information with regard to the view which the Egyptian entertained of sin is derived from a single book—the Book of the Dead—whose sole purpose was to secure for the deceased Egyptian a safe passage through the dangers which awaited him after death, and a triumphant vindication before the Judge of the under world; but in none of the religious literature that has survived—neither in the Book of the Dead, nor in any of the numerous hymns to the various deities, nor in any of the tomb-inscriptions—is there to be found the slightest trace of such a thing as acknowledgment of sin or repentance for it. There is no penitential element whatsoever in Egyptian religious literature. What we must understand by confession in the Egyptian religion would be much better described by such a word as 'repudiation.' So far as the written records go, no Egyptian ever confessed a sin; but every Egyptian sturdily and steadfastly repudiated sin, and, in fact, the destiny of the deceased in the other world depended largely on his ability to repudiate with clearness and accuracy a certain definite list of sinful acts, words, and thoughts.

Our information on the subject is almost entirely derived from the remarkable document known by the curious and self-contradictory title of the Negative Confession—a document which forms ch. cxxv. of the Book of the Dead. It is not possible to state with exactness when this very important document came into the form in which we now have it. The papyri which preserve it to us are not older than the time of the XVIIIth dynasty (1680-1350 B.C.); but it must have been in existence, at least in its main elements, long before that period. The inscription in the tomb of Ameny at Beni-Hasan (XIIth dyn.) contains a distinct element of repudiation: 'No little child have I injured; no widow have I oppressed; no fisherman have I hindered; no shepherd have I detained.' Large portions of the text of the Book of the Dead are found on coffins of the Middle

Kingdom (XIth and XIIth dynasties), and that Osirian view of the life after death to which the Negative Confession belongs is as old as the Pyramid texts (Vth and VIth dyn.), while a tradition which there is no reason to doubt ascribes the finding of ch. xxx. of the Book of the Dead (the famous appeal to the heart not to bear false witness against its owner in the Day of Judgment) to Prince Hordadef in the reign of Menkaura (IVth dyn.). While, therefore, the present Judgment-scene of the Book of the Dead, containing the Negative Confession, may not be older than the XVIIIth dynasty, there can be little doubt that its fundamental conceptions are almost as old as the Egyptian Kingdom.

Chapter cxxv. of the Book of the Dead consists of three parts: (a) an introduction, containing a hymn of adoration to Osiris, and a form of the repudiation of sins which, there is reason to believe, is older than the actual confession which follows it; (b) the Negative Confession itself; and (c) an address to the gods of the under world. The whole chapter forms a part of the ritual which is supposed to be gone through in the scene of the judgment of the dead, and the confessional part of it seems to be supplementary to the actual judgment whose issue was determined by the weighing of the heart of the deceased against the feather which was the emblem of Maat, the goddess of Truth. In his confession the Egyptian testified that he had not been guilty of certain sins which would have involved his punishment in the spirit world; but apparently his repudiation of iniquity was not held to be in itself sufficient for his vindication, since it had to be corroborated by the unprejudiced evidence afforded by the weighing of his heart. However stoutly the deceased might assert his innocence of all sin, it was not considered advisable to allow the heart to give its testimony before it had been implored in a special prayer not to shame its owner. In one of its many varying forms this prayer runs thus:

'O my heart, my mother! O my heart, my mother! O my heart of my existence upon earth! May nought stand up to oppose me in judgment in the presence of the lords of the trial; let it not be said of me and of that which I have done, "He hath done evil against that which is right and true"; may nought be against me in the presence of the great god, the Lord of Amenet! Homage to thee, O my heart! Homage to thee, O my heart! Homage to you, O my reins!'

The heart, thus cajoled, might be expected to corroborate the confessional statements of its owner.

It is not certain whether the repudiation of sins preceded or followed the weighing of the heart, and the point is immaterial. Arrived at the Judgment Hall—"the Hall of Double Maati," or of the Twofold Truth—the deceased began his confession by reciting a brief formula of invocation to Osiris, which runs as follows:

'Praise be to thee, thou great god, thou lord of the two truths! I have come to thee, O my lord, that I may behold thy beauty. I know thee, and I know the names of the forty-two gods who are with thee in the Hall of the Two Truths, who live on the evil-doers, and who drink their blood each day of the reckoning before Unnefer [Osiris]. I come to thee, and bring to thee truth, and chase away wrong-doing.'

After this invocation, he recited a preliminary repudiation of sins in a form somewhat shorter than that of the Negative Confession, the number of sins repudiated being generally about thirty-seven, as against forty-two in the more elaborate form which followed. The sins repudiated are not always the same in the various versions; but the variations are not in any case of great moment. The following version is from the well-known papyrus of Nu (XVIIIth dyn.):

'I have not done evil to mankind. I have not oppressed the members of my family. I have not wrought evil in the place of right and truth. I have had no knowledge of worthless men. I have not wrought evil. I have not set foremost in the considerations of each day that excessive labour should be performed

¹ *Iptet Assur-bani-âpli Arni-su.*

² *Ib. p. 206, lines 27-31, revised.*

for me. I have not brought forward my name for exaltation to honours. I have not ill-treated servants. I have not thought scorn of God. I have not defrauded the oppressed of his property. I have not done that which is an abomination unto the gods. I have not caused harm to be done to the servant by his master. I have not caused pain. I have made no one to suffer hunger. I have made no one to weep. I have done no murder. I have not given the order for murder to be done for me. I have not inflicted pain upon mankind. I have not defrauded the temples of their offerings. I have not purloined the cakes of the gods. I have not carried off the cakes offered to the *khus* [illuminated souls]. I have not committed fornication. I have not polluted myself, or diminished from the bushel. I have neither added to nor filched away land. I have not encroached upon the fields of others. I have not added to the weights of the scales. I have not misread the pointer of the scales. I have not carried away the milk from the mouths of children. I have not driven away the cattle which were upon their pastures. I have not snared the feathered fowl of the preserves of the gods. I have not caught fish with fish of their kind. I have not turned back water in its time. I have not cut a cutting in a canal of running water. I have not extinguished a fire when it should burn. I have not violated the times of the chosen meat-offerings. I have not driven off the cattle from the property of the gods. I have not repulsed God in his manifestations. I am pure. I am pure.'

In all probability this introduction represents an older form of confession, and was originally all that was expected of the deceased. The development of the doctrine of the Judgment, however, led to its being supplemented by a more extended and formal version. Along with Osiris, there sat in the Hall of the Two Truths forty-two gods, who formed a kind of jury before which the deceased had to plead. The number forty-two may have been selected because the most general division of the land of Egypt gave forty-two nomes or districts, and there was thus a god for each nome. Maspero suggests that they were chosen one from each of the cities of Egypt which recognized the authority of Osiris (*Dawn of Civilization*, p. 188). These jurors were creatures of terrifying aspect and still more terrifying titles, and before each of them the deceased was obliged to declare that he had not committed the particular sin which that god had authority to punish. The titles of the gods are such as—'Clasper of Flame,' 'Devourer of Shades,' 'Crusher of Bones,' 'Devourer of Blood,' 'Destroyer,' and so forth. There are variations in the different papyri, and the list here given is from the papyrus of Nebeni in the British Museum. Each confession is prefaced by 'Hail thou,' and the title of the particular god addressed is given. The confession is as follows:

(1) I have not done iniquity. (2) I have not committed robbery with violence. (3) I have done violence to no man. (4) I have not committed theft. (5) I have not slain man or woman. (6) I have not made light the bushel. (7) I have not acted deceitfully. (8) I have not purloined the things which belong to God. (9) I have not uttered falsehood. (10) I have not carried away food. (11) I have not uttered evil words. (12) I have attacked no man. (13) I have not killed the beasts which are the property of God. (14) I have not acted deceitfully. (15) I have not laid waste ploughed land. (16) I have never pried into matters. (17) I have not set my mouth in motion against any man. (18) I have not given way to anger concerning myself without a cause. (19) I have not defiled the wife of a man. (20) I have not committed any sin against purity. (21) I have not struck fear into any man. (22) I have not violated sacred times and seasons. (23) I have not been a man of anger. (24) I have not made myself deaf to words of right and truth. (25) I have not stirred up strife. (26) I have made no man to weep. (27) I have not committed acts of impurity or sodomy. (28) I have not eaten my heart. (29) I have abused no man. (30) I have not acted with violence. (31) I have not judged hastily. (32) I have not taken vengeance upon the god. (33) I have not multiplied my speech overmuch. (34) I have not acted with deceit, or worked wickedness. (35) I have not cursed the king. (36) I have not fouled water. (37) I have not made haughty my voice. (38) I have not cursed the god. (39) I have not behaved with insolence. (40) I have not sought for distinctions. (41) I have not increased my wealth except with such things as are my own possessions. (42) I have not thought scorn of the god who is in my city.'

Following upon this confession comes an address to the assessor-gods in which the deceased passes from the repudiation of sin to the positive assertion of his meritorious conduct.

'Praise to you, ye gods, ye who are in the Hall of the Two Truths, in whose body is no lie, and who live in truth. . . . Behold I come to you without sin, without evil. . . . I have done

that which man commandeth and that wherewith the gods are content. I have pleased the god with that which he loveth. I have given bread to the hungry, water to the thirsty, clothing to the naked, and a passage over the river to him who hath no boat. I have made offerings to the god, and funerary gifts to the illuminated souls.'

An examination of the two lists shows that in both cases the compilers had some difficulty in making out the requisite number of sins, as there are several confessions which are practically duplicates of others which have been made before, e.g. in the Negative Confession, 'I have done violence to no man,' 'I have not acted with violence,' 'I have not behaved with violence'. and again, 'I have not acted deceitfully' occurs twice, while in addition we have 'I have not acted with deceit, or worked wickedness.' Such repetitions were, of course, almost inevitable when a definite list of transgressions had to be filled up by a sometimes hasty and often careless scribe, who well knew that the document on which he was engaged was never likely to be read by any one after it had once been placed in the coffin of the deceased.

An analysis of the sins repudiated in the introduction and the Negative Confession may be attempted, giving the number of sins falling under particular heads in either document:

	Intro- duction.	Negative Confession.
Sins against the gods	10	6
" " " person of others	12	4
" " property	6	5
" " purity	1	3
" " of deceit	3	4
" " of character and disposition	6	18

There are, of course, in both lists, some sins of such a character that they might occupy a place in more than one of these categories. An examination of this classification suggests what is on other grounds extremely probable—namely, that the introduction is a survival from more primitive times, and represents a code of morality earlier than that of the Negative Confession. Thus, sins of sacrilege and sins against the person of others occupy by far the most prominent position in the introduction, as would be expected in a more primitive state of society, amounting in number to 10 and 12 respectively—22 sins out of 37. In the Confession these numbers have shrunk to 6 and 4. On the other hand, the sense of the sinfulness of acts of impurity has increased, if we may assume its increase from a more elaborate repudiation of such acts. But the most remarkable development is the growth in the sense of the importance of character. While the introduction repudiates six sins specially affecting the inner man, the Confession repudiates no fewer than eighteen.

When we come to consider the particular sins which the Egyptian judged to be fatal to him who committed them, we find several which are obviously the product of the conditions under which Egyptian agriculture was carried on. 'I have not turned back water in its time,' and 'I have not cut a cutting in a canal of running water,' both point to dishonest appropriation of irrigation water. Leaving these out of consideration as being the result of special circumstances, we see that what the Egyptian wished to avoid, or to be held to have avoided, in his life was something like this—impiety and sacrilege; crimes of violence against others, either direct or by incitation; adultery and unnatural vice; cruelty, ferocity, and unkindness towards defenceless inferiors. In all these points the Egyptian Confession indicates a code of morality not superior to that current among other nations, and indeed in some respects distinctly of an outward and formal type. The stress laid upon merely ceremonial sins is an obvious defect. As Maspero says (*op. cit.* 191), 'the material interests of the temple were too

prominent, and the crime of killing a sacred goose or stealing a loaf from the bread offerings was considered as abominable as calumny or murder. Where the Confession is striking is in its development of the sense of those duties which a man owes to his own character and self-respect. Particularly remarkable is the stress laid upon reticence and control of speech. Four at least of the repudiations refer to this—deprecating slander, foul speaking, disdainfulness of speech, and mere profusion of words. This is quite in accordance with what we learn from other sources as to Egyptian ideals of character. 'Let thy thoughts be abundant,' says the oldest Wisdom book of Egypt, 'let thy words be under restraint.' Again, anger and hasty judgment, mischief-making, and the insolence of pride together furnish the subject of eight repudiations. If Erman's interpretation be correct, useless remorse is deprecated by the obscure repudiation 28, 'I have not eaten my heart.' Budge's version is more commonplace: 'I have not lost my temper and become angry.' The sin of closing the mind to ideas and inspirations of truth is repudiated in 24, 'I have not made myself deaf to words of right and truth,' and conceivably also in the last item of the introduction—'I have not repulsed God in His manifestations,' or 'stopped a god in his comings forth.' A sense of fair play even to the creatures gives us 31 of the introduction—'I have not caught fish with fish of their own kind' (? cf. Ex 23¹⁹ 'Thou shalt not see the a kid in his mother's milk').

On the whole, that which distinguishes the Egyptian Confession is not what it is so frequently extolled for—an exceptionally high standard of morality. The Confession itself shows that the standard was very much that which has obtained among all nations that have a right to be called civilized. Its distinction is the stress which it lays on the inner duties—those duties which a man owes to himself, and which ennoble and strengthen character. Self-restraint and self-possession, dignified reticence, and absence of meddlesomeness, the capacity of bearing prosperity without insolence, and the resolve to preserve an open mind towards the truth—the effort to maintain such a sound and wholesome standard marks out the Egyptian code as being of a particularly high type. Even if it be permissible to infer that the insistence on these virtues suggests that the Egyptian character was specially prone to faults against them, it must still be admitted that no other nation ever formulated and stereotyped such a list of man's duties to his own character as part of its acknowledged code of morality. It has been pointed out that what seems to us the defect of the whole idea of the Confession—the absence from it of anything approaching a sense of repentance for wrongdoing—appears to be a permanent factor of the Egyptian character.

The essential mode of justification in the judgment,' says Petrie (*Rel. of Anc. Egypt*, p. 89), 'was by the declaration of the deceased that he had not done various crimes; and to this day the Egyptian will rely on justifying himself by sheer assertion that he has not done wrong, in face of absolute proofs to the contrary.'

JAMES BAIKIE.

CONFESSION (Hebrew).—1. The term.—The Hiph. and Hitp., חָתַן and חָתַנָה, of the verb חָתַן, 'to throw,' acquired the meanings of 'to praise' and 'to confess.' The former stands for both, the latter is the technical term for 'to confess.' Both are rendered in the LXX by εὐχαριστοῦμαι. The nouns derived from it are חָתָן, 'praise,' 'thanksgiving,' and in Jos 7¹⁹ and Ezr 10¹¹ 'confession of sin'; and the late Hebrew חָתָן = 'confession of sin.'

The connexion between throwing, praising, and confessing is not obvious. The suggestion that a gesticulation with the hand was made while praising and confessing is too fanciful. It is more probable that חָתַן signifies metaphorically 'to throw knowledge about,' to make it public, and is thus cognate to חָתַן and חָתַנָה.

2. Confession of sin against God.—Whatever the Israelitish conception of sin was in any period of their known history, an admission of it was expected from the penitent, whether a penalty was to follow or not. Without, therefore, following the chronological order of the various documents, we find throughout the OT individual and public confession insisted on and practised.

Very early in the Book of Genesis, the questions addressed to Adam and Cain (3⁹ 4⁹) were calculated to extract confession. Judah confesses Tamar more just than himself (38²⁶). Jacob confesses his unworthiness (32¹⁰), and his sons their guiltiness concerning Joseph (42²¹). Joshua urges Achan to confess (Jos 7¹⁹). David confesses when Nathan brings his sin home (2 S 12¹³); so do the Israelites in a body when brought to repentance (Nu 14⁴⁰, 1 S 7⁶ 12¹⁰).

The mission of the prophets was 'to declare unto Jacob his transgression and to Israel his sin' (Mic 3⁸; cf. Jl 2¹², Is 58¹), and a reciprocal acknowledgment was expected (Jer 2³⁵ 3¹², Hos 14¹).

The Psalter abounds in instances of public and individual confession. Foremost stands Ps 51, which embodies a fully-developed conception of sin and grace. Its ascription to David indicates an appreciation of David's confession in 2 S 12. Ps 32 is a model penitential psalm, in which a pious man is reluctant for some time to admit the sin of an accusing conscience, until some external circumstance forces confession from his lips (Köberle, *Sünde und Gnade*, Munich, 1905, p. 352). Similarly in Ps 38 a pious man ascribes his misfortunes to his sins which he can bear no longer, and unburdens his conscience by 'declaring his iniquity and confessing his sin' (v. 18).

The religious aspect of the book of Proverbs is Eudæmonism. The wise man is happy, and he is wise who regulates his life in accordance with the Divine commands. The sinner is a fool. Confession of sin is an act of wisdom (28¹³).

In the sacrificial cult, confession of sin was an essential element (Lv 5⁶ 16²¹, Nu 5⁶ 7). According to Maimonides (*Yad Ma'as, Hak. iii. 14*), the sacrificer of a sin, trespass, or burnt-offering laid both hands between the horns of the victim, and said:

'I have sinned, committed iniquity, transgressed, have done thus and thus. I repent before Thee, and this is my atoning sacrifice.'

On the Day of Atonement the high priest is said to have confessed three times. Standing by his victim between the porch and the altar, facing west, and with his hands upon its head, he made the following confession:

1 Malbim on Lv 5⁶ says that חָתַן has the opposite meaning of 'to conceal,' 'to deny.' It is peculiar to man to hide his knowledge of God and of his sin. The טָרָן proclaims them.

2 On this the Talmud remarks: 'Judah's praise consists in his confession'—a double play on his name (*Meg. 25⁶*; see also *Sot. 7* and 10).

3 The present writer is inclined to think that the unusual expression חָתָן is a mistake, having arisen from similarity to the previous חָתָן, and that the original reading was חָתָן חָתָן. This also completes the synthetic parallelism.

'I beseech thee, Jahweh, I have committed iniquity, I have transgressed, I have sinned before thee, I and my house. I beseech thee, Jahweh, forgive now the iniquities and the transgressions and the sins wherein I have committed iniquity and transgressed and sinned before thee, I and my house. As it is written in the law of thy servant Moses, "For on this day shall atonement be made for you, to cleanse you from all your sins."'

The priests and people responded: 'Blessed be the name of His glory for ever.' The second time was over the sin-offering of the priests, when the same formula was used, with the addition of 'the sons of Aaron, thy holy people' after 'I and my house.' The third confession was made over the scape-goat, and the same formula was worded in the third person plural, with 'Thy people, the house of Israel,' substituted for 'I and my house.'

The Exile wrought a material change in the religious disposition as well as in the outward fortunes of the people. In the place of the defiant Israelitish nation there returned from Babylon a Church of serious and timid Jews. Without doubting that they were the successors of ancient Israel and heirs to the promises, they were rendered diffident by their miserable resources. They saw in their inferiority God's chastisement for their sin. Confession of sin became henceforth a concomitant of religious exercise (see *Ezr* 9th, *Neh* 9th). The confession in *Dn* 9^{th-10} resembles in several ways that of *Neh.* and *Bar* 1^{st-17}; but, as Marti (*Com.* on *Dan.* p. 65) observes, the similarity is due not to quotations from each other, but to some common stereotyped liturgical prayers from which all drew.

A peculiar feature of exile and post-exilic confession is the aggregate conception of sin to which is reckoned the 'sins of the fathers.'¹ The truth contained in the Talmudic adage that Israelites were each other's sureties (*Sheb.* 39, and elsewhere) is older than the Talmud. Viewing themselves as partakers of a common blessing, they felt a share in the cause of the common misfortunes. Liturgical confession, therefore, arose not from a sense of individual sin or the imperfection of human nature, but from the desire for amelioration of present circumstances. It is the pious man who is ever ready to confess. Tobit enumerates his virtues, his loyalty to Jahweh and the Law (ch. 1). He leads a blameless life, but confesses his sins and goes into judgment with his fathers. His model integrity saves Azarias from the fire, but he confesses, 'We have sinned' (*LXX Dn* 3^{2st}). Individually a pious man had few sins to confess. Legal observance could keep him sinless, and the sacrificial cult made good that in which he failed through ignorance. 'No sinner ever slept in Jerusalem. The evening sacrifice atoned for sins of the day, and that of the morning for sins of the night' (*Mid. Rab.* and *Tanch.* on *Nu* 28th; also *Rashi* on *Is* 1st). Sin being not sinfulness but actual sin, and that a collection of single sins, a pious man was able to know what to do and what to avoid, so as to keep a clean balance with God. Not the righteous like the patriarchs, but actual sinners like Manasses, need repentance and confession (Prayer of Manasses). To this class of general liturgical confession belongs the sixth petition in the *Shemone Esre*: 'Forgive us, O our Father, for we have sinned; pardon us, O our King, for we have transgressed.'

After the destruction of the Temple, the Day of Atonement, even without sacrifice, retained its expiatory power, and has since been observed as a day of fasting, repentance, and confession. The form of confession at first was brief and general—'We have sinned.' R. Akiba knew already the first four verses of the *Abinu Malkenu*, one of which is 'Our Father, our King, we have sinned before thee' (*Ta'an.* 25b). For other short forms of confession see *Yoma* 87b. That of Rab was:

¹ In the Sephardic and Kabbalistic recensions of the *Ashamnu* (see below), 'we and our fathers have sinned' is still given.

'Thou knowest the eternal secrets, and the hidden mysteries of all the living. Thou searchest out the innermost recesses, and triest the reins and the heart. Nothing is concealed from thee, or hidden from thine eyes.'

Longer is that of R. Hamnuna, which stands at the end of the *Shemone Esre*:

'O my God, before I was formed, I was nothing worth, and, now that I have been formed, I am but as though I had not been formed. Dost I am in my life; how much more so in my death. Behold, I am before thee as a vessel full of shame and confusion. O may it be thy will, O Lord my God and the God of my fathers, that I may sin no more; and, as for the sins I have committed, purge them away by thy great mercies, but not by means of sufferings and sore diseases.'

R. Bibi directed that one should say:

'I confess all the evil that I have done before thee. I stand on an evil path. Whatever I have done, I will do the like no more. May it be thy will, O Lord my God, to pardon all my iniquities, to forgive all my transgressions, and to atone for all my sins' (*Lev. R.* iii. 3).

A loud enumeration of individual sins was considered arrogant (*Sot.* 7b). The rule still is that confession of individual sins shall be inaudible, except when concealment would implicate the innocent (*Shulhan Aruk, Tur. Or. Hay.* 607).

The liturgy of the Day of Atonement gradually increased in bulk with suitable prayers and confessions, prominent among them being the *Ashamnu* and '*Al-Het*, called the lesser and greater confessions, and repeated four times in the course of the twenty-four hours of the fast, with a slight tap on the breast at the mention of each sin. The former consists of twenty-four expressions for sin, alphabetically arranged, the last letter being repeated three times. It is probably the confession referred to in the *Didache*. The '*Al-Het* is a more exhaustive catalogue of sin, also alphabetical, and has in the *Asikhenazic* use forty-four lines, each commencing, 'For the sin wherein we have sinned before thee,' etc.

It is a pious custom to submit to forty stripes save one, on the eve of the Day of Atonement. The penitent, lying prostrate with head towards the north, silently confesses his sins while (generally) the attendant of the synagogue lays on gently with thongs made of calf-skin, repeating three times *Ps* 78th (which in Hebrew has thirteen words), a word at each stroke (*Shulh. Ar., ut supra*).

There exists in the Prayer-book also a daily confession of sin, called *puq*, which is said morning and evening (except on festivals and other occasions) after the '*Amida*, in a sitting posture, with head resting on elbow. Originally it consisted of one verse:

'O thou who art merciful and gracious, I have sinned before thee. O Lord, full of mercy, have mercy upon me, and receive my supplications,'

after which private confession is made, and one's wants stated non-liturgically. Its older name is *קריאת*, 'prostration' (cf. *Jos* 7th). Since prostration was generally discontinued after the destruction of the Temple, this indicates its great antiquity.

'A distinguished man should not use *קריאת* unless he is sure that his prayer will be answered like Joshua's.' Compare Christ's posture in Gethsemane. R. Eliezer's mother did not allow him to 'fall on his face on the day of his excommunication' (*Bab. mes.* 59b). On Mondays and Thursdays the *puq* is preceded by a mediæval confessional prayer of legendary authorship.

Every Jew confesses on his deathbed, after a prescribed form. Criminals are urged to confess, within ten cubits' distance of the scene of execution. If they have nothing to confess, they are instructed to say: 'Let my death be an atonement for all my iniquities' (*Sanh.* vi. 2).

3. Confession of sin against man.—The Mosaic legislation made provision for material reparation of injuries done to one's neighbour. But the ideal of Hebrew equity went beyond legal compensation, and demanded the conciliation of the offended party, without which 'not all the rams of Nebaioth

in the world could procure pardon' (*Bab. kamma*, 92a). Thus Joseph's brethren pray for forgiveness (Gn 50¹⁷); note also the confession of Pharaoh (Ex 10¹⁷), and cf. 1 S 15²⁴ 24¹⁰ 26²¹, 2 S 19²⁰. In later Judaism it was raised to a positive precept. 'Although the offender offers the legal compensation, he is not yet forgiven until he entreats him for it' (*Bab. kam.* viii. 7). The Day of Atonement expiates sin against God, but not sin against man, unless the offended party is conciliated (*Yoma* viii. 9). Suspicion of the innocent comes under the category of injuries. The suspect must be informed of it, and honourable amends made to him (*Ber.* 31b). Strictly the conciliation must take place before three witnesses. If the offended party is dead, the conciliation should take place over his grave in the presence of ten witnesses (*Yoma* 86-88). The eve of the Day of Atonement is generally selected for acts of reparation of this kind. No distinction of class is acknowledged. Even Rabbis of renown were known to condescend to regain the goodwill of those whom they injured. Rab, in a dispute with a butcher, was offended by the latter. On the eve of the Fast he expected the transgressor to ask for forgiveness. As he did not do so, he called on him and effected the conciliation (*Yoma* 87). If the injured party refuses to forgive after the third entreaty, he is called cruel, except in the case of slander, which one is not bound to forgive (*Shulh. Ar., Tur Or. Hay.* 606).

LITERATURE.—Hamburger, *RE*, s.v. 'Bekennntnis'; W. Bacher, *Agada d. bab. Amorder*, Strassburg, 1879, *Ag. d. Tannaiten*, do., 1884, *Ag. d. pal. Amor.*, do., 1892; D. W. Bousset, *Rel. d. Judent.*, Berlin, 1906; J. Elbogen, *Stud. z. Gesch. d. Jüd. Gottesdienstes*, Berlin, 1907; art. 'Confession,' in *JE*; F. Weber, *Jüd. Theol.*, Leipzig, 1897.

I. Scope and limitations of the article.—It is the object of this article to furnish a survey of the history of Confessions of Faith, indicating their origin, their contents, and their inter-relationships, together with some brief reflexions, suggested by the survey, upon their uses and their influence for good and evil in the religious world. Other articles (CREEDS [Ecum.], COUNCILS [Christian: early]) will tell of the development of the three great Catholic Creeds of Christendom, and of the meeting of the historic authoritative assemblies of the Church. Under the title 'Confessions' it will not be possible to deal in detail with documents of a private, individual, or tentative character; these will be mentioned only when they are of special interest. The public Confessions which have been or still are authoritative in the various sections of the Chris-

tian Church will be treated comprehensively, though their great number—exceeding 150—makes it necessary to dismiss many of them with the briefest notice. A comparative glance will be turned on the non-Christian world in search of documents or testimonies analogous to the Creeds of Christendom. Happily, there is small room for doubt or controversy in regard to the authenticity of Confessions, and questions as to date, authorship, editions, etc., will for the most part be handled very lightly, in the interests of clearness. The table of contents printed above, and the chronological table of Confessions printed on pp. 894-901, will help to make plain the principle of arrangement followed in the article. Selections from the relevant literature will be given at various points throughout the article.

2. Definition: synonymous and similar terms.—Amid all diversities of name, literary form, occasion, purpose, and authority, a 'Confession' is a public avowal and formal statement, more or less detailed, of the doctrinal contents of religious belief, framed by an individual or by a group of individuals. It may be addressed, orally or in writing, to a few persons in sympathy or out of sympathy with it, or to a congregation, or to a church, or to the world. It may be a brief spontaneous ejaculation of faith, or a summary of deliberate conviction, or a veritable treatise on doctrine. If short, comprehensive, and dignified enough for use in public worship, and if prefaced by the words 'I believe,' or 'we believe,' it becomes a *Creed*. If longer and more minute and systematic, it is technically a *Confession*. Broken up and analytically simplified into a series of didactic questions and answers to assist the memory and intelligence of the young and the unlearned, it is a *Catechism*. Viewed as a proclamation, in an apologetic or other interest, of distinctive doctrine, it is a *Manifesto*, a *Declaration*, a *Profession*, a 'Symbol,' a 'Platform.' As a bond of union it is a *Consensus*, a *Covenant*, a *Form*, or *Formula*. As a test of doctrine it is a *Standard*. As a disavowal and condemnation of errors it is a 'Syllabus.' In respect of its contents, it may be entitled *Decrees*, *Canons*, *Articles*, *Theses*, *Propositions*, 'Places.' When modified and re-issued, it may appear as a 'Revision.' The form of words in which the individual subscribes or professes a Confession is the Formula of Subscription, or simply the 'Formula.'

3. Origin, aims, and uses.—If religion be the natural response of the human soul to the Power by whose fiat and by whose providence it exists, no element in religious experience is so comprehensive and so momentous as faith. Observation and knowledge of the facts of life, wonder, fear, and doubt in presence of them, underlie religion; but, unless they issue in distinctive faith, religion is still unconstituted. Faith does not shut its eyes to things seen, but, while seeing them, looks beyond to realities discerned behind them. It is the organ of religious truth. Like hope, its serene, and love, its passionate, sister, faith in its full meaning is vital to the highest experience of religion, and as such is bound to find expression when religion becomes self-conscious and articulate. It remembers the past, and leans upon it; it fills the present with life and power; it faces the future with eager expectancy; it is the bond between all the phases of religious life, the link, indeed, which unites that life with the Unseen God. In the language of religious self-utterance, therefore, *credo*, 'I believe,' and *confiteor*, 'I confess or acknowledge,' must always have a foremost place; they are presupposed in all the other moods of worship—in praise, in thanksgiving, in self-abasement, in supplication, in hope, and in love; they are the persistent undertones in the natural liturgy of the universal

religious consciousness. They imply that the period of ignorance or doubt is past; that the spiritual life is come to itself; that the seeker has at last found, and that the spirit is at rest.

The earliest confessions of faith, possibly the best, were avowals of faith in a Person, personal in subject and object alike, not narrowly intellectual—'I believe that God is'—so much as spiritual—'I rest my faith on God'; and the object of this living personal attachment, too full for words, was either God or a teacher who revealed Him. Faith in Jesus personally would naturally precede faith in His Messiahship. But it is obvious that even in personal faith the intelligence has always its discriminating part to play. 'I believe in Jesus the Christ' is a formula combining both forms—'I believe that He is the promised Christ,' and 'I trust Him.' Thus, in the so-called Apostles' Creed—the first elaborate Confession in the Church, and the basis of all others—the true nucleus consists of the threefold affirmation, 'I believe on (*πιστεύω εἰς*, *credo in*) God the Father . . . on Jesus Christ . . . on the Holy Spirit,' much more being intended than that each Person exists, a relationship of personal faith being, in fact, professed. But, just as in each of these simple affirmations a certain intellectual judgment is presupposed, so in the Creed, as a whole, room has been found for clauses descriptive of each Divine 'Person' and His sphere, and involving historical or doctrinal articles of mental faith. From a very early time, confession in terms of the Creed was taken to imply, if not to denote, acceptance of each of these details of history and doctrine—acceptance of the letter as well as of the spirit. Faith was soon understood to be professing not so much its fervent devotion to three Persons recognized as Divine, as its belief in a series of affirmations concerning them, particularly concerning Jesus, whose person, life, and work had been matter for protracted controversy. In the Confessions of the Reformation Period and later times, the personal object is finally lost in the doctrinal purpose; in them the Creed has become a body of distinctive doctrine, nothing else—an attempt to formulate the truth about God and His Christ, not a simple avowal of faith in the God of truth and in His Son, the Truth Incarnate.

Looking back upon the history of Creeds and Confessions, we observe great diversity in their origin and purpose. (1) First and simplest, they were brief spontaneous utterances of new-found conviction, addressed by individuals directly to their personal object, in gratitude, homage, or adoration. They might be utterly unsolicited, like the devotion of the Hebrew Psalmist: 'O Lord my God, in thee do I put my trust' (Ps 71), 'O God, thou art my God' (63); and the demoniacs' tribute to Jesus: 'Thou art the Son of God' (Mk 3¹¹), or deliberately invited, like the response of Simon Peter: 'Thou art the Christ, the Son of the living God' (Mt 16¹⁶). (2) Similarly, they were naturally evolved by the consciousness of the Christian community. Without any definite legislation or injunction, a certain type of profession came to be made at the admission of converts to membership in the Church, *e.g.* the Baptismal formula, or early forms of the Apostles' Creed. The *Te Deum*, a lyric creed, may have been formed similarly. (3) In time, and by natural consent, such individual and common Confessions as appealed to the general sense of Christian communities were adopted for liturgical repetition. The spontaneous lyric or acknowledgment became the familiar psalm, or hymn, or creed, prescribed for public use. (4) Beyond question, the catechizing of professed converts before baptism was the chief and original source of formal confessions. The answers expected from the professing believer gradually took

shape in a series of propositions which were recognized as a sufficient mark of Christianity and claim for admission to the Church. The Apostles' Creed in all its forms, shorter and longer, had this origin and aim. It was literally a *symbolum*, a 'password,' for use on the threshold of the Church. (5) From the beginning it was part of the purpose served by a confession to bear a public testimony to the object of one's faith—public not simply as made openly before the Church, but as before the outside world. The psychological influence of public confession upon a man's own character as a source of stability and decision was as much in view as its impression upon the unbelieving world. (6) Creeds and Confessions have frequently been drawn up simply as a vindication of the true character of the religious belief cherished by a body of Christians. They were primarily authentic expositions of distinctive doctrine, intended to remove misconceptions and to repudiate misrepresentations. Many, perhaps most, of the great Confessions of the Reformation were wholly of this apologetic character, *e.g.* the memorable Lutheran Confession presented to the Emperor at the Diet of Augsburg in 1530, and Zwingli's 'Confession to Charles V.' on the same occasion. Subscription in such cases meant the acceptance and support of the doctrine, with no reference to, or promise of, literal adherence in the future. (7) Very often they were drawn up to settle controversy, either as a compromise between antagonistic issues, or as an authoritative affirmation of the one and condemnation of the other. They served thus to mark off true from false belief, at least according as majorities conceived of these, and gave rise to the accepted distinction between an orthodoxy and a heresy. In this category stand the Nicene Creed, the Canons of Dort, and the Formula Concordiæ, as conspicuous representatives. (8) On other occasions they were drawn up as deliberate bonds of contemplated union or re-union, apart from any pressure of controversy, *e.g.* the Westminster Confession. (9) A very frequent, though secondary, function of Confessions has been to serve as standards of orthodoxy either for members in general of a church, or more especially for office-bearers. Whether formally subscribed upon admission or tacitly accepted, they have been a usual basis of 'discipline.' To be convicted, on trial, of infidelity to them was sufficient warrant for excommunication. As a rule, the Catholic Creeds, though they have been thus used, have not been considered as adequate for disciplinary purposes, and have been supplemented in ecclesiastical usage by the longer Confessions. In the Protestant Churches it has generally been explicitly laid down that the Scriptures of the Old and New Testaments are the supreme standard of faith and practice, and that the accepted Confession is adopted only as a secondary or subordinate standard. (10) Lastly, it may be noted that Confessions have been published in a less authoritative and more speculative way as expositions of particular conceptions of the System of Christian Truth, drawn up with a view to the definition and formulation of men's views, apart either from controversy or ecclesiastical use. Such documents have been individual and tentative, and, unless adopted by Churches, scarcely enter into the present survey.

4. Confessions in ethnic religion.—Though intellectual faith in some degree is presupposed in every form and stage of religion, and though the materials for Confessions are never wanting in the great systems of religion, in all of which forms of public worship, theological literature, and sectarian divisions have their place, it is a striking fact that almost alone in Christendom have Creeds and Confessions in the strict sense been drawn up as

authoritative expositions of the contents of faith. Every religion and every sect within it, every school of philosophy as well as each individual thinker, has a distinctive group of tenets or articles of faith, which tend to find sooner or later a more or less authoritative expression, and so become stereotyped as a rule or norm of belief, and a test or watchword of adherence. These may without difficulty be pointed out in connexion with each of the great systems of human religion, for each has had not only its founder and its church, but its scriptures, its theologies, and its divisions. But we look almost in vain for any documents in ethnic religion, ancient or modern, which correspond to the Christian Creeds and Confessions. 'Antique religions,' writes Robertson Smith in his *Rel. Sem.* (1894, p. 16), 'had for the most part no creed; they consisted entirely of institutions and practices.' In modern times, contact with Christianity has not seldom induced the defenders of other faiths to draw up, teach, and circulate catechisms and manuals of their own cherished doctrine. Especially has this been the case in India, where, e.g., Hindu and Parsi and Buddhist catechisms have been issued for the better education of young and old in their religion, and for the correction of current misunderstandings and misrepresentations on the part of outsiders.¹ We may expect as one result of the rivalry of the great religions a great development of such activity throughout the non-Christian world, with, it may be, the evolution of definite ethnic Creeds and Confessions. But for the most part Oriental religion rests on regulated duties more than on systematized beliefs; ritual and moral works bring their reward, with such unswerving and rigorous precision that an exaltation of doctrine to be professed into the position of a criterion of a man's religion and a determinant of his hereafter is practically impossible. Codes of conduct abound, in which each step in life finds its direction. Hymns and prayers attest the life of faith and hope. Doctrines are articulated, and problems involved in them are faced and argued with unlimited speculative enterprise and genius. Cf. the various artt. on CREED.

5. Confessions in Hebrew religion.—Neither in ancient nor in subsequent Hebrew religion has there ever been exhibited a zeal for the composition and acceptance of binding Confessions. Like most ancient religions, that of Israel was national. Men inherited it naturally, were born into it. It was, indeed, with its beliefs and ceremonies, the distinctive possession of the race. Only in view of sectarian controversy and of proselytization would any formal definition of their faith be necessary beyond the simpler confessions which were inwoven in their forms of worship. Even at the admission of proselytes in ancient times it was not so much a formal profession of doctrines that was required as a sacramental and symbolic initiation through the rites of circumcision and baptism, admitting the Gentile to the household and nation, and therewith also to the religion of Israel. The Hebrew Creed, with its virtual monopoly of monotheism, was so conspicuous, so simple, and so well known as not to require any explicit formulation. Only after Hebrew religion became the religion of a book, of a closed canon of Scripture, did the impulse in Israel, as later in Christendom, arise to define its faith through scholastic controversy more narrowly than by the contents of the Book as a whole. The silencing of the voice of prophecy was the signal for the opening of the mouths of sectarian disputants claiming to possess

orthodoxy and to condemn heresy. See art. CREED (Jewish).

6. Confessions in relation to Christ in the Gospels.—In all the Gospels, conviction that Jesus of Nazareth was the Christ, the veritable Son of God, is represented not only as His own fixed possession and the basis of His ministry in all its many-sidedness, and as strengthened by the repeated Voice from Heaven at His baptism and transfiguration, but as increasingly shared by the Baptist, by the disciples, and by others who came into contact with Him. The narratives further make it plain that it was a definite part of His purpose to elicit in time spontaneous acknowledgments of faith in His Messiahship spiritually understood in relation both to God and to humanity, and that He welcomed them, whether at the time He desired them to be openly proclaimed or not. It is, moreover, the obvious intention of the Four Evangelists, in their choice of biographical matter and in their writing, to be loyal to the aim of their Master, and similarly to induce faith in His Christhood (cf. Jn 20³¹ 'these [signs] are written, that ye may believe that Jesus is the Christ, the Son of God; and that believing ye may have life in his name'). St. Mark, equally with St. John, is careful to record acknowledgments of His Messianic Sonship; nor are St. Matthew and St. Luke less concerned to do the same. There is accordingly in the Gospels a striking abundance of confessional utterance. It is almost wholly direct, personal, spontaneous, brief, simple in form, and concerned with Jesus' Christhood not merely in an official or national sense, but as constituting Him uniquely 'Son of God.' It is reinforced by such passages as, on the one hand, the parallels Mk 1¹, Mt 3¹⁷, Lk 3²², which reproduce the Messianic self-consciousness of Jesus at His baptism, reflected in Peter, James, and John at His transfiguration (Mk 9⁷, Mt 17⁵, Lk 9²⁸); and, on the other hand, Mk 8³⁸, Mt 10³²⁻³³ 28¹⁸, Lk 12²², in which Jesus expressly enjoins fearless confession of Himself. The following are the chief passages:

In Mark the demons who Jesus heals confess Him 'the Holy One of God' (1²⁴), 'the Son of God' (3¹¹), 'Son of the Most High God' (5⁷); blind Bartimaeus hails Him as 'Son of David' (10⁴⁷); the deaf mute's father says, 'I believe; help thou mine unbelief' (9²⁴); the crowd acclaim Him, 'Hosanna! blessed is he that cometh in the name of the Lord,' etc. (11^{9c}). To the high priest's question, 'Art thou the Christ, the Son of the Blessed?' and to Pilate's question, 'Art thou king of the Jews?', He answers in the affirmative (14⁶¹ 15²). In mockery the soldiers hail Him 'King of the Jews' (15¹⁸), in sincerity the centurion at the Cross as 'truly a Son of God' (v. 39). In 8²⁹ Peter's confession is given as simply, 'Thou art the Christ.' In 12²⁸⁻³¹ Jesus condenses the sum of faith and duty in the two 'Great Commandments' prefaced by the 'Hear, O Israel.'

In Matthew we find Jesus confessed as 'Son of God' by demons (8²⁹), by disciples in the boat (14³³), and by the centurion (27⁵⁴); as 'Son of David' by blind men (9²⁷), by a Canaanitish woman (15²²), and by the acclaiming multitude (21⁹), including children (v. 15); as teacher of truth by Pharisees and Herodians (22¹⁶), and frequently as 'Lord' and 'Master'; as 'Christ the Son of the living God' by Peter (16¹⁶), and by Himself before the high priest (26⁶⁸); as 'King of the Jews' mockingly by soldiers (27²⁹), and by Himself before Pilate (v. 11). In the Beatitudes, the Lord's Prayer, and the Great Commandments, articles of the Kingdom are enshrined. In the baptismal formula, 'In the name of the Father, and of the Son, and of the Holy Spirit' (28¹⁹), a confessional summary or nucleus of belief is prescribed. Peter's failure to confess (26⁶⁸⁻⁷⁵) is an object-lesson, while in 7²¹ the insufficiency of mere formal confession is exposed: 'Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father.'

In Luke we have precise parallels to the passages in Mark and Matthew, marked only by slight variations. Demons confess Jesus as 'the Holy One of God' (4³⁴), 'the Son of God' (v. 41), 'Son of the Most High God' (8²²), the blind beggar as 'Son of David' (18³⁸), the crowd as 'the King that cometh in the name of the Lord' (19¹²), the centurion at the Cross as 'certainly a righteous man' (23⁴⁷), Peter as 'the Christ of God' (22⁷⁰); while He Himself acknowledges that He is the Son of God (22⁷⁰), and King of the Jews (23³). In addition to the Lord's Prayer and the Great Commandments, Luke also records the sayings which deprecate confession without obedience (6⁴⁶), and intolerance towards Christians of another following—'Forbid him not: for he that is not against you is for you' (9⁴⁰ 50).

In John we have the Gospel *par excellence* of confession. It is, throughout, the record of successive workings of conviction that Jesus is Christ, and their issue is explicit confession. Belief or faith is the keynote of the book. 'God so loved the world, that he gave his only-begotten Son, that whosoever believeth on him should not perish' (3:16); 'he that believeth on the Son hath eternal life' (v. 36). Apart from the minor confessions of Nicodemus (3:2), and of the Samaritan woman (4:12) to whom Jesus is moved to declare Himself the Christ (v. 26, cf. 9:35-10:36), and of other Samaritans ('this is indeed the Saviour of the world', 4:42), the Gospel records those of John the Baptist—'the Lamb of God, which taketh away the sin of the world' (1:29), 'the Son of God' (v. 34); of Nathanael—'Rabbi, thou art the Son of God, thou art King of Israel' (v. 49); of Martha—'I have believed that thou art the Christ, the Son of God, even he that cometh into the world' (11:27); of Peter for the Twelve—'we have believed and know that thou art the Holy One of God' (6:69); and, supreme among the series, that of Thomas to the Risen Lord—'My Lord and my God' (20:28)—it, with most scholars and in harmony with the Prologue to the Gospel, 'the Word was God,' we take the words of Thomas as an apostrophe to the Christ.

7. Confessions in the other Apostolic writings. —In the Apostolic writings which remain to be considered, the types of confession found in the Gospels are reproduced and extended. All preaching, all profession, and all participation in the Church's young life were of the nature of confession. The memory of Jesus was still vivid, and confession of Him by the Apostles was as personal and simple as ever, though, on the part of those who believed on the strength of their witness, faith naturally came to express itself in terms of what Jesus had historically been as well as of what He meant to the heart. The lapse of time could not but work changes in the forms of confession: reminiscence and doctrine were bound to colour them. The preachers of Jesus had to tell the story of His life in support of their contention that hope and prophecy found fulfilment in Him as the Christ. Their recollection of His career had to be set alongside of their estimate of His Person. Accordingly, in the Apostolic age confession fluctuated between three main forms: (1) acceptance of Him as Christ, or Lord, or Son of God; (2) acceptance of an outline of the main facts of tradition about His home and life; and (3) acceptance of the threefold Divine self-revelation in Father, Son, and Holy Spirit. Instruction of inquirers and converts seeking baptism tended to dwell on certain customary themes, just as the Apostolic preaching reflected in the Acts and Epistles tended to follow certain customary lines, and a more or less uniform standard of historical and doctrinal knowledge was expected to be attained as part, at least, of baptismal qualification. Inevitably the three types varied, but they varied in the direction of greater comprehensiveness and of ultimate convergence. What came in a later age to be known as the Apostles' Creed was, in fact, the briefest possible combination of the three, confessing at once Father, Son, and Holy Spirit, Jesus as Christ, and the main facts of Jesus' earthly life, from conception and birth to death, resurrection, and ascension. We may note the following passages by way of illustration:

In Acts the summaries of the Apostolic sermons, though they vary in length and general character, are alike in this, that they embody personal professions of faith uttered with a missionary purpose. They plainly conform to one type: their common elements were the implicit articles of the growing creed of the Church, and they are presented, naturally, in a markedly Jewish setting. The confessions in Jerusalem of Peter (2:22-24, 3:5-6, 3:18-19), of Peter and the Apostles (5:30-32), of Stephen (7:55), those of Peter at Caesarea (10:36-43), and of Paul at Antioch of Pisidia (13:16-39), turn upon the Messiahship of Jesus of Nazareth according to prophecy, His wonderful works, His holiness and goodness, His crucifixion, resurrection, ascension, promise and gift of the Holy Spirit, upon the need of repentance towards God and faith in Christ. While He is 'Lord' and 'Master,' 'Christ' and 'Son of God,' the Deity of Jesus is not affirmed: He is 'the Son of Man' (7:56), 'a man approved of God,' whom 'God hath made both Lord and Christ' (2:34-35), God's 'Servant,' God's 'Holy and Righteous One,' 'the Prince of Life' (3:15-16). More consciously still the Apostolic faith and message are described as 'preaching Jesus' (8:25), 'teaching and preaching Jesus as the Christ' (5:42, 13:26, 28), witness of the resurrection of the Lord

Jesus' (4:33), 'testifying both to Jews and to Greeks repentance toward God and faith toward our Lord Jesus Christ' (20:21), 'testifying the kingdom of God and persuading them concerning Jesus, both from the Law of Moses and from the prophets' (28:23), 'preaching the kingdom of God and teaching the things concerning the Lord Jesus Christ' (v. 31), 'good tidings concerning the kingdom of God and the name of Jesus Christ' (8:12). Baptism, the sequel of confession, is uniformly administered 'in the name of Jesus Christ' (2:38, 10:48), 'the name' being the centre of belief, the word of preaching and of healing. According to a very early interpolation (8:17), it is administered by Philip on the condition 'if thou believest with all thy heart, and after the confession 'I believe that Jesus Christ is the Son of God' (cf. 16:31). But from the first it is distinguished from John's baptism as being 'of the Holy Spirit, the true Name being thus prepared for and implied.

Reference is made to doctrinal controversy not only between Sadducees and Pharisees: 'the Sadducees say that there is no resurrection, neither angel, nor spirit: but the Pharisees confess both' (2:23), an early theological use of the word 'confess' in reference to articles of faith; but also among Christians regarding circumcision (ch. 16). Christians are described as a 'sect' or 'heresy' of the Nazarenes, and marked off both from Jews and from Gentiles (24:11, 28). But Paul as a Christian can still make a confession characteristic of the Pharisaic school in which he had been trained—'This I confess unto thee, that after the Way which they call a sect ('heresy'), so serve I the God of our fathers, believing all things which are according to the Law, and which are written in the Prophets: having a hope toward God, which these also themselves look for, that there shall be a resurrection both of the just and unjust' (24:14); and, addressing Greeks in Athens, he can appeal to articles of belief held by Jews in common with them, viz. the Creatorship, Fatherhood, and Spirituality of God, and repentance for sin, Jesus being referred to only as 'a man whom God hath ordained' to be His instrument of judgment for all the world and authenticated by His resurrection (17:31).

In the Epistles of Paul, the apostle of faith, we look for the expansion and application, rather than the contraction and definition, of the first principles of Christian faith regarded as doctrine, but passages are not wanting in which an approach is made to a creed-summary. In his Epistles, Paul rests upon the brief confession which characterizes the Apostolic utterances generally in the Gospels and in Acts, stipulating only that it be sincere: 'No man can say, Jesus is Lord, but in the Holy Spirit' (1 Co 12:3). 'The word is nigh thee, in thy mouth and in thy heart: that is, the word of faith, which we preach: because if thou shalt confess with thy mouth Jesus as Lord, and shalt believe in thy heart that God raised him from the dead, thou shalt be saved: for with the heart man believeth unto righteousness; and with the mouth confession is made unto salvation' (Ro 10:8-10). 'To us there is one God, the Father, of whom are all things, and we unto him; and one Lord, Jesus Christ, through whom are all things, and we through him' (1 Co 8:6). Among the foundation truths which Paul had received and hastened to deliver to the Corinthians he emphasizes these—'that Christ died for our sins according to the Scriptures; and that he was buried; and that he hath been raised on the third day according to the Scriptures; and that he appeared to Cephas . . . to all the apostles' (1 Co 15:3-7). In close connexion with the exhortation 'to keep the unity of the Spirit in the bond of peace,' he writes: 'there is one body, and one Spirit . . . one Lord, one faith, one baptism, one God and Father of all, who is over all, and through all, and in all' (Eph 4:3-6). In 1 Ti 3:16 he appears to quote a lyric creed or hymn of the mystery of the faith (cf. 1 Ti 3:9): 'Concessedly great is the mystery of godliness; He who was manifested in the flesh, justified in the spirit, seen of angels, preached among the nations, believed on in the world, received up in glory.' In 2 Ti 1:13 he urges Timothy to 'hold the pattern of sound words which thou hast heard from me . . . and guard the good deposit which was committed unto thee.' In these Epistles to Timothy and Titus there is a grave concern for the retention of 'sound' doctrine and tradition (cf. 1 Ti 1:10f., 2:17, 4:1, 6:1, 2-5, 12, 13, 20, 21, 2 Ti 2:20, 3:14, 4:3, Tit 1:8, 2:7, 8), a fear of speculation and controversy in the Church, and a dread of factious or heretical teaching (Tit 3:10). Plainly the instinct to stereotype the articles of faith is actively at work.

In Hebrews a distinction is made between the rudiments of religion, the first principles of Christ, which the Jew possessed in common with the Christian, viz. 'repentance from dead works, faith in God, baptismal doctrine, laying-on of hands, resurrection of the dead, and eternal judgment' (6:1f.), and mature or perfected doctrine. In 5:12 allusion is made to 'the first principles of the oracles of God' as matter of elementary knowledge.

In 1 John much stress is laid upon the duty of confessing Christ: 'every spirit which confesseth that Jesus Christ is come in the flesh is of God; and every spirit which confesseth not Jesus is not of God' (4:2f.); 'whosoever shall confess that Jesus is the Son of God, God abideth in him, and he in God' (4:15; cf. 5:1). His true humanity and His Divine Sonship are thus the distinctive themes of a Christian confession (cf. 2 Jn 7-10).

Jude speaks of 'the faith which was once for all delivered unto the saints' (v. 3) as threatened by antinomian heresy 'denying our only Master and Lord, Jesus Christ' (v. 4)—suggesting that 'faith' had become a term denoting doctrine instead of a vital activity of the soul.

8. Confessions in the undivided Church: evolution of the Creeds.—Our survey of the NT refer-

ences to confessions of faith has made it evident that at the close of the Apostolic age no particular creed or confession could claim to have been exclusively or even expressly ordained for use either by Jesus or by His Apostles. The explicit sanction of both Master and Apostles could be claimed only for the simple confession, 'I believe that Jesus is the Christ, the Son of God,' or its equivalents. Baptism before the Church was the natural occasion for confession of faith, and for baptism that simple formula was at first sufficient. But, as the Church grew and attracted men who had not enjoyed the privilege of Jewish education in religion either as Hebrews or as proselytes, the course of instruction, both questions and answers, preparatory to admission by baptism, had to be enlarged alike in regard to distinctive OT truth—God the One, the Creator, Upholder, Revealer, Judge—and in regard to distinctive Christian truth—the life and work of Jesus the Christ, the Christian Church, and the Christian Hope. Moreover, from the first, baptism in the name of Jesus, as Christ, Son of God, and Lord, involved a far from narrow range of definite doctrines: it certainly implied acceptance of the distinctive teachings of the Lord and of the Apostolic estimate (religious rather than theological) of His Person and Work: it was a baptism outwardly by water, but inwardly and supremely by the Holy Spirit, the sanctifier and enlightener of men, a baptism of repentance issuing in regeneration, of reconciliation and restoration to God the Father, of the forgiveness of sins, of admission to the Church, the Lord's body. No account of the significance of even the simplest form of baptism and confession would be historically just which ignored any one of these implications. Sacramental acts are always and everywhere charged with meaning, and meaning involves the essence of doctrine. Dogma may be as authoritatively present in ceremonial acts as in Scriptures and literary definitions. Baptism, like communion in the Lord's Supper, was from the first an act eloquent of historical and doctrinal convictions as well as of personal self-surrender and dependence, and these convictions had to do with Father, Son, and Holy Spirit. At first the sense of mystic union with Christ and with the Brotherhood, only deepened by the external enmity of the Jewish Church and by the scorn and suspicion of Greece and Rome, sufficed to make Christians careless, if not unconscious, of the variety of constructions which they individually and locally put upon their Scriptures, traditions, and sacraments. But, as the gate of baptism opened wider and wider to admit the ever-swelling stream of converts, new intellectual as well as moral and political ferment entered with the current, and future controversy was assured.

As was the case with Judaism, so Christianity even at the simplest was a learned religion, a faith resting or leaning upon authoritative Scriptures, which had never been interpreted unanimously by their devotees, a religion, therefore, calling for a learned body of exponents, whose individual characteristics could not but find expression in varying interpretation. It was careful to preserve not only its inherited Jewish Bible but its own Apostolic memoirs and correspondence, and during the 2nd and 3rd centuries it was simultaneously evolving both a Canon of NT Scripture and a standard summary or Canon of Christian Faith to be professed by converts and by worshippers at public service. The two developments were exactly parallel and equally inevitable. The formation of a Canon, provoked by perverse appeals to inferior writings and by the popular need of literary and devotional guidance, as well

as by controversy which threatened to be chronic and seriously to distract the Church and impair its usefulness and reputation, though it looked the larger task, was not only the more urgent but in reality the simpler; it proved so easy, comparatively, to find a line of division between the Apostolic and spiritually impressive writings and the less forceful and commanding products of the later age. Once formed and generally accepted, the double Canon of Jewish and Christian Scripture was bound to play a decisive part in the regulation of doctrine, in particular in the building and the testing of the Creeds. To be able to add to any article of faith the words 'according to the Scriptures,' or to appeal to them in reference not only to Hebrew Law and Prophecy but to Christian Gospel and Fulfilment, was decisive. It is a deeply significant historical fact that the two great Creed-producing eras of the Church, the era of the Fathers and the era of the Reformation, were times when the Scriptures through fresh study and earnest investigation literally 'had free course,' and that to the extraordinary development of serious Biblical scholarship in our own age, as much as to any concurrent cause, we owe our present-day Confessional unrest. There is truth in the paradox that Holy Scripture is never so authoritative and so powerful as when it provokes free inquiry and stirs that spirit of truth-seeking controversy which challenges even the Bible's own right to mould the thought of succeeding ages.

When the NT Canon was finally drawn up, there was as yet no form of Creed of more than local usage and authority. Each church or group of churches had had its own traditional baptismal form, written or—more usually—unwritten, and each writer on the Faith might formulate his own articles if he cared; but, as the closer organization of the Church proceeded, as presbyterian government gave place to episcopacy, and bishops in turn were subordinated to metropolitans or patriarchs, it was natural that a larger uniformity in Creed-usage should be sought and in time effected. Israel had had its high priest, and Rome with all its vastness had its Emperor and Pontifex; the Church, accordingly, as it grew and came to ecclesiastical self-consciousness, tended to draw together and centralize its organization, to become an *imperium in imperio*. The same causes or considerations which advanced the bishops of Rome, Constantinople, Jerusalem, and Alexandria above their fellows, naturally advanced their diocesan Creeds *pari passu*. As Rome drew to the front, its Creed moved with it. In the 4th cent. the Roman Creed was still one among many: even in Italy the Churches of Aquileia, Ravenna, and Milan, and in Africa those of Carthage and Hippo, cherished ancient forms of their own. But, alike in the Eastern and in the Western Churches, the baptismal confessions or 'rules of faith' which had grown up in the early centuries were, in spite of variations in detail, unmistakably one in type and substance, were, in fact, forms of what came to be known as the 'Apostles' Creed.' They are all alike in their brevity, their fitness for liturgical use, their Scripturalness and simplicity, and their structure as expansions of the threefold formula. They differ mainly in respect of their detailed omissions rather than in their positive contents.

'The Apostles' Creed.'—In the Western Church, dominated more and more by Rome, this earliest of formal Creeds never lost its ascendancy. The Roman form of it, itself of extremely early origin, is recorded in Latin and Greek in the second half of the 4th cent. by Rufinus and by Marcellus of Ancyra:

'I believe in God the Father Almighty; and in Jesus Christ His only-begotten Son our Lord who was born of the Holy Ghost and the Virgin Mary, crucified under Pontius Pilate and buried; the third day He rose from the dead, He ascended into heaven and sitteth at the right hand of the Father; from thence He shall come to judge the quick and the dead; and in the Holy Spirit; the holy Church; the forgiveness of sins; the resurrection of the body; (the life everlasting).'

Later it took over clauses from the analogous Creeds of other churches, viz. 'descended into Hades' from Aquileia, 'catholic' (of the Church) from Eastern Creeds, 'the communion of saints' from Gaul, and 'the life everlasting,' if not already in the Roman form, from Ravenna or from Antioch. We do not find it in its now accepted form before the middle of the 8th cent., when the Papal efforts were directed towards securing liturgical uniformity throughout the Western Church.

The Nicene Creed.—In the Eastern Church the Roman Creed has never been recognized. Its Oriental parallels, current in Egypt, Asia, and Greece, held sway till replaced, for liturgical and theological purposes, by the Creed of Nicæa (A.D. 325). The Nicene Creed—itsself based chiefly on the Creed of Cæsarea, and the work of a Council convened by Constantine and consisting almost wholly of Eastern bishops—was the outcome of a deliberate attempt to impose on Christendom, which already possessed a Canon of Scripture, a standard or Canon of Faith which should not only terminate the Arian Controversy, but form a basis of ecclesiastical discipline and define orthodoxy. It was the first Creed that was framed by a Council, enforced by the secular power, purely controversial in origin, theological as distinct from Scriptural in its terms, and furnished with a concluding anathema. Enlarged as the *Constantinopolitan Creed* (A.D. 381; based on that of Jerusalem along with the Nicene), and supplemented by the *Symbol of Chalcedon* (A.D. 451; dealing with the Christological errors of Nestorius and Eutyches), it became and has remained the standard of doctrine in the Eastern Church. In the form of A.D. 381 it runs literally as follows (the Constantinopolitan additions being printed in italics):

'We believe in one God, the Father Almighty, Maker of heaven and earth and of all things visible and invisible.

And in one Lord Jesus Christ, the only-begotten Son of God, begotten of the Father before all worlds (ages), Light of Light, very God of very God, begotten not made, being of one substance with the Father; through whom all things were made; who on account of us men and our Salvation came down from heaven and was incarnate of (the) Holy Spirit and the Virgin Mary and entered into humanity; He was crucified for us under Pontius Pilate and suffered and was buried, and the third day He rose again according to the Scriptures, and ascended into heaven and sitteth on the right hand of the Father; from thence He shall come again with glory to judge the quick and the dead; whose kingdom shall have no end.

And in the Holy Spirit, the Lord and Life-giver, who proceedeth from the Father, who with the Father and the Son together is worshipped and glorified, who speak through the prophets; in one holy catholic and apostolic Church; we acknowledge one baptism unto remission of sins; we look for a resurrection from the dead, and a life of the world to come. Amen.'

The Constantinopolitan form omits the original termination: 'But as for those who say that "there was a time when He was not," and that "He was not before He was begotten," and that "from non-existence He came into being," or who allege that "He is of other substance or essence" or that "the Son of God is created" or "changeable" or "alterable," the Catholic Apostolic Church pronounces them anathema.'

The *Chalcedonian Symbol*, which is in the form of a decree or declaration or confession, not a liturgical creed, affirms:

'We then following the holy Fathers all with one consent teach men to confess one and the same Son, our Lord Jesus Christ, the same perfect in Godhead and also perfect in manhood; truly God and at the same time truly man of a reasonable soul and a body; consubstantial with the Father according to His Godhead, and consubstantial with us according to His manhood, in all things like unto us apart from sin; begotten both before all worlds (ages), of the Father according to His Godhead, and also in these latter days, on account of us and our salvation, of the Virgin Mary, the Mother of God, according to His manhood; one and the same Christ, Son, Lord, Only-

begotten, to be acknowledged in two natures without confusion, change, division, separation; the distinction of natures being by no means taken away by the union, but rather the property of each nature being preserved and concurring in one Person and one Substance, not parted or divided into two persons but one and the same Son, and only-begotten, God the Word, the Lord Jesus Christ; according as the prophets from the beginning have spoken concerning Him, and the Lord Jesus Christ Himself has taught us, and the creed of the holy Fathers has handed down to us.'

In the Western or Latin portion of the Catholic Church the Symbols of Nicæa, Constantinople, and Chalcedon, though they originated in the East among the Greeks and dealt with controversial matters of less interest to the less imaginative West, obtained instant recognition as authoritative Creeds drawn up by legitimate Ecumenical Councils. For the West, as for the East, they settled the henceforth orthodox doctrine of the Person and Work both of the Son and of the Holy Spirit, and therewith of the Divine Trinity. But in the West, from the 6th to the 9th cent., the Eastern Creed in its Latin form received obscurely, but with increasing currency, an addition—the word *filiogue*, 'and from the Son,' in the clause affirming the procession of the Holy Spirit from the Father. This addition, though small in bulk, was to retain its place and to contribute very powerfully to the ultimate schism of East and West. Characteristic also of the Western Church are two remarkable compositions which, though anonymous and devoid of conciliar authorization, won their way to general esteem and liturgical use and to all but Catholic authority—the Ambrosian Confessional hymn *Te Deum*, and the 'Athanasian' Creed *Quicumque*. They are canticles as well as creeds, embodying in their measured verses the orthodox trinitarian theology of the Ecumenical Creeds.

The *Te Deum* is a paraphrase and adaptation of the Apostles' Creed, pieced together, not improbably, from Greek liturgical materials, possibly, as tradition states, by Ambrose of Milan in the 4th cent., or, as some scholars conjecture, by his younger contemporary, Nicetas of Remesiana—certainly a familiar and well established hymn at the beginning of the 6th century. In his writing on 'The Three Symbols or Confessions of the Faith of Christ,' Luther reckons it as third to the Apostles' and Nicene Creeds, and speaks of it as, whether sung or not by Ambrose and Augustine after the baptism of the latter, 'a fine symbol or confession, to whomsoever it may belong, composed in song-form, not only to confess the right faith, but also to praise and thank God withal.'

The '*Athanasian*' Creed.—Longest of all, the *Symbolum Quicumque* consists of two distinct sections, which may have come into being separately, setting forth, on the one hand, the strictly Augustinian presentation of the orthodox doctrine of the Trinity embodied in the earlier Creeds, including the *filiogue* clause, and, on the other, the Chalcedonian definition of the Person and Work of Christ, all prefaced and terminated by the declaration that, except a man believe faithfully the Catholic Faith therein set forth, he cannot be saved (*salvus esse*). It appears to have been completed about A.D. 800, and to have come into use first in the Churches of Gaul, North Africa, and Spain. By its minute and measured orthodoxy it effected a harmony of the accepted Creeds, at least with reference to the three Persons in the Godhead individually and in their mutual relations, and did so with such acceptance that, like the Chalcedonian Creed and the *Te Deum*, it passed into the Treasury of Faith without a challenge, in spite of a solemn anathema pronounced by the third and fourth Ecumenical Councils upon 'any person who should compose, exhibit, or pro-

duce any Creed other than that of the holy Fathers at Nicæa.' It is a merit of the Western Church that it found room, among the most sacred documents of its hereditary faith, not only for the controversial decrees of the first four Councils, but for the *Apostolicum*, the *Te Deum*, and the *Quicumque Vult*, anonymous compositions which express the piety as well as the learned conviction of the Church. But in the tyrannical stress laid in this latest of its Creeds upon the necessity, for salvation, of the faithful acceptance of so large a body of metaphysical and controversial doctrine, there lay an omen of impending disruption in the household of faith. Even before the Great Schism of East and West, there was already Confessional or Symbolic divergence. Not only in government, in language, and in worship, but also in doctrine, it was proving difficult, if not impossible, to maintain Constantine's imperial conception of the outward unity of the Catholic Apostolic Church. See, further, artt. COUNCILS, CREEDS (Ecumenical).

9. Confessions in the Greek and Oriental Churches.—Neither before nor after the Great Schism has the Greek or 'Holy Oriental Orthodox Catholic Apostolic' Church found it necessary or desirable to draw up a new Creed. It recognizes still, as its ultimate standards, the original Nicæno-Constantinopolitan Creed with the addition of Chalcedon, assigning to the *Apostolicum* and the *Quicumque* (of course without the words 'and from the Son') no higher status than that of devotional and private utility. It adheres faithfully to the 'Exposition of the Orthodox Faith' in which John of Damascus harmonized the theological work of the Greek Fathers and Councils of the first seven centuries (about A.D. 750). While proud of the doctrinal immutability thus evidenced, it has not, however, altogether eluded the necessity of producing or adopting or condemning particular Confessions and Catechisms, and in some sense defining its relation to modern movements of thought both in the Protestant and in the Roman Catholic world. Alike in Russia and in Greece there is every likelihood that in future it will have to undertake yet further definitions of its faith; for, thanks to the national autonomy of many of its constituent branches, it cannot but be more and more influenced by the modern advance of the peoples which it represents. In the Turkish as well as in the Russian dominions the advent of political and social reforms, of constitutional liberty and religious toleration, cannot but be the precursor of far-reaching theological activities resulting not only in the development of minor sects, but in the modification of traditional opinions in the Ancient Church.

(1) *General Confessions of the Greek Church.*—Immediately after the fall of Constantinople, in 1453, at the desire of the victorious Sultan, Muhammad II., Gennadius, the newly elected Patriarch, presented to him in Greek and Turkish a Confession of Christian faith in twenty popular articles, with seven appended arguments for the truth of Christianity.

The influence of Protestantism is unmistakable in the moderate orthodoxy of the *Confession of Metrophanes* (1625), a Patriarch of Alexandria, who had lived and studied in English and German Universities and wrote against Romanism without opposing Protestantism; and extremely marked in the *Confession of Cyril Lucar* (1629), Patriarch successively of Alexandria and Constantinople, who died a martyr to the Calvinism which he had embraced in Switzerland, and which he expounded boldly in ten chapters of his Confession.

On the other hand, Protestant doctrine was definitely condemned and repudiated in 1576 in the *Answers of Jeremiah*, Patriarch of Constanti-

nople, to two Lutheran professors of Tübingen who had sent a copy of the Augsburg Confession to him; in the *Catechism or Orthodox Confession of Peter Mogilas* (c. 1640, revised 1643), the learned Metropolitan of Kiev, whose polemic was also against Rome; and in 1672, at the same Synod of Jerusalem which formally approved of both the preceding works, in the *Confession of Dositheus*, Patriarch of Jerusalem, which, without reference to Rome, maintains the distinctive positions of the Eastern Church. As sanctioned by the Patriarchs of the Church in Synod, these three are authoritative expositions of orthodox doctrine.

Something of a reaction towards a more Scriptural and Protestant teaching may be recognized in the widely circulated *Catechism of Platon*, Metropolitan of Moscow, 1762, in the *Longer and Shorter Catechisms of Philaret* (1839, 1840), also a distinguished Metropolitan of Moscow, and in the minor manuals known as the *Primer* and *The Duty of Parish Priests*. The *Full Catechism* of Philaret was approved by all the Eastern Patriarchs as well as by the Russian Holy Synod, and in Russia has taken the place of its most authoritative predecessor, that of Mogilas.

The 'Old-Catholic' Conferences of 1874 and 1875 at Bonn issued in the formulation of a series of articles upon which the Western and Eastern Catholics and the Anglicans present were able to agree as a doctrinal basis for future reunion; but these articles, though markedly influenced by the Russo-Greek representatives, have not been formally recognized by their Synod.

(2) *Russian sects.*—Neither political nor ecclesiastical despotism has availed to prevent the rise of sects within the territories of the Russian State-church. Not to speak of the numerous following of the Roman Catholic Church in Poland and elsewhere, three main sectarian groups with numerous subdivisions have been distinguished, and their united strength has been estimated as one-tenth of the whole population, or one-sixth of the Orthodox—some fourteen millions. The main groups consist of: (a) Starowjerzy, or Old-believers, who resented the liturgical reforms of Patriarch Nikon in the 16th cent., and who are still represented by the *Popowzy* (priest-retaining and organized) and *Bespopowzy* (priestless and unorganized); (b) the Chlysty, Skopzy, Duchoborzy, and Molokany, characterized by mystic, ascetic, or rationalistic eccentricities; (c) Baptists, Standists, and others more or less in sympathy with Evangelical Protestantism and Pietism, among whose circles the theological, ethical, and social views of Leo Tolstoi have not seldom found a place.

(3) *Other Oriental Churches.*—Outside the pale of the Orthodox Oriental Church, with its federated patriarchates of Constantinople, Alexandria, Antioch, Jerusalem, and Moscow, and National Churches of Russia, Servia, Rumania, Greece, Montenegro, and Bulgaria, there remain a number of Eastern National Churches, more or less attenuated by defections either to Greek or to Roman Catholicism, whose origin is very ancient, dating from successive doctrinal decisions of the Councils of the undivided Church. They are all loyal to the original Nicene doctrine, but are kept apart from the rest of Christendom by their rejection of subsequent additions to the accepted doctrine of Catholicism.

(a) The Armenian Church, the most powerful of the group, is the oldest existing National Church, dating as such from the 4th cent., though founded earlier. It was represented at the Council of Nicæa and accepted its Creed; though not a party to them, it recognized the subsequent decrees of 381 and 431, yet not as ecumenical; absent also from the Council of Chalcedon, it repudiated its

Symbol¹ (431), rejecting alike the Christology then affirmed and the Eutychian heresy then condemned, and holding an independent Monophysite view, viz. that Christ had neither two natures nor a Divine nature absorbing the human, but a single 'composite' or 'double' nature. Of its three liturgical Creeds for the Eucharistic, baptismal, and morning services, the first, and chief, which in its present form has been retained since the 6th cent., consists of the Nicene with modifications or additions directed against the earlier heresies of Apollinaris and Marcellus. Even in conjunction they fail to represent fully the doctrinal idiosyncrasies of the Church. From the 14th to the middle of the 19th cent. a composite Creed was in favour. Special professions of Armenian faith of an official though occasional character were presented to Western princes or popes or others in 1166, 1562, 1585, 1671 (see art. ARMENIA [Chr.] in vol. i. p. 803^b). There is a modern Catechism whose teaching betrays the influence of Græco-Russian orthodoxy.

(b) The Nestorian or Persian Church represents the persistence of an even earlier heresy than the Armenian, protesting against the Council of Ephesus (431) as having unjustly condemned Nestorius' doctrine of the two natures of Christ, according to which the human was marked off from the Divine so sharply that the title 'Mother of God' was refused to the Virgin Mary. Its baptismal confession is a pre-Chalcedonian variety of the Nicene.

(c) The Jacobite Churches, or Churches loyal to the tradition of Jacobus Baradaeus, Bishop of Edessa (543-578), are the ancient National Syrian, Coptic, and Abyssinian Churches. They also, with the Armenian, reject the Chalcedonian and later Creeds, and cherish a Monophysite Christology.

(d) The Christians of St. Thomas, a handful of survivors of the ancient native Church of Nestorian converts on the south-west coast of India, have since the 17th cent. conformed to the Monophysitism of the Jacobite Churches.

10. Confessions in the Roman and Old-Catholic Churches.—(1) *In the Church of Rome*.—From Nicæa (325) to the Vatican (1870) the Roman Catholic Church recognizes, in all, the decrees of twenty-one General Councils as in whole or part ecumenically binding. In the forefront of its doctrine stand the Apostles', the Nicæno-Constantinopolitan (with Eastern and Western additions from Ephesus, Chalcedon, and Toledo), and the Athanasian Creeds. Since the time of the final adjustment and adoption of these Symbols no

occasion for further Confession-making emerged until the era of the Reformation confronted the Church with numerous Protestant statements of doctrine, and elicited from it the *Canons and Decrees of the Council of Trent* (1545-1563), which consolidated and stereotyped its doctrine, weaving into its dogmatic system the results of mediæval Councils, of Papal decisions, and of Patristic and Scholastic thought in opposition to the Reformers' direct appeal to the spirit and letter of Scripture.

The Decrees and Canons of the Reforming or Counter-Reforming Council of Trent, which was convened at the instance principally of the Emperor, Charles v., in Dec. 1545, by Pope Paul III., to revise and codify the doctrine and discipline of the Church, and thus to confront, if not conciliate, the Protestants with a compact authoritative system, mark the close of mediæval confusion, and the deliberate transition towards the modern Curialism in faith, organization, and morals which was ultimately effected in the 19th century. Whatever hopes the Emperor and other Princes or Churchmen of reforming sympathies cherished of a formulation of doctrine in Augustinian terms which the Reformers might be expected to accept were for the most part disappointed, though the decree on Justification went far towards that goal. The perhaps inevitable exclusion of Protestants from all effective participation in the work of the Council combined with the influence of the Jesuit order and the natural self-interest of the Papal authority to make it practically impossible for the Council to do any substantial justice to the spiritual demands which Protestantism expressed. The Decrees are the utterance of jealous defence; the Canons with their anathemas are the challenge of proud defiance. The party which was sensible of the debt of the religious world to Protestant heroism was easily outnumbered and suppressed at every stage, and their sympathetic insight into the mind and heart of the Reformers found no expression in the resultant dogmas.

The constitution of the Council and its historical setting must be carefully taken into account if one would appreciate the language of its decisions (see art. COUNCILS [Christian, modern]). Throughout its 25 sessions—from 1545 to 1547 under Paul III. at Trent (sessions i.-viii.) and Bologna (sessions ix.-x.), from 1551 to 1552 under Julius III. at Trent (sessions xi.-xvi.), and from 1562 to 1563 under Pius IV. at Trent (sessions xvii.-xxv.)—its proceedings were one long and anxious tissue of ecclesiastical and theological diplomacy and strategy, and its declarations had necessarily to be in every case a well-weighed compromise, conciliating, through omissions or ambiguities of phrase, the conflicting rival interests and tendencies. If Augustinian thought seemed on the surface to dominate the findings, room was carefully found for Scotist and Jesuit views of a Pelagian or semi-Pelagian type in their ultimate form. The gifted Jesuit scholars, Lainez and Salmeron, with the dignity of Papal theologians, were the most influential and consistent force throughout the processes both of drafting and debate, and it is on the whole their doctrine, dexterously cloaked in the terminology of their opponents, which is represented in the propositions laid down. Inspiration or genius will hardly be looked for in a body of doctrine whose origin thus lay in compromise. The very title 'Decrees' is eloquent of its true nature as a work of legislation by majority. Anything like theological spontaneity was out of the question in a Pope-ridden conclave. Anything but a Pope-ridden conclave was out of the question in the unreformed mediæval Church. Whatever concessions in detail to the claims of doctrinal and disciplinary reform the

decrees might contain, the seal of reaction was stamped indelibly over them by the twofold proviso which overrules and virtually annuls them—that the Pope was to be sole exponent of the decrees henceforth, and that no one, on pain of anathema, was to impeach the accepted usages and order of the Church—a proviso made yet more exacting by the clause in the subsequent Profession of Tridentine Faith, in which all holders of ecclesiastical office swore truly to obey the Bishop of Rome (Art. X.) and to maintain 'entire and inviolate' the Tridentine Faith to the end of their life (Art. XII.). Thus, though a majority in the Council was unprepared to admit that bishops had their power from and through the Pope and not directly from Christ, the Council by its own ultimate submission prepared the way for the Papal action in the 19th century.

The Decrees and Canons which concern us in this connexion are those of Sessions III. on the Niceno-Constantinopolitan Creed accepted as basis; IV. on Canonical Scripture; V. on Original Sin; VI. on Justification; VII. on the Sacraments in General, Baptism, and Confirmation; XIII. on the Sacrament of the Eucharist; XIV. on the Sacraments of Penance and Extreme Unction; XXI. on Communion in both kinds, and Communion of Children; XXII. on the Sacrifice of the Mass; XXIII. on the Sacrament of Ordination; XXIV. on the Sacrament of Matrimony; XXV. on Purgatory, the Invocation, Veneration, and Relics of Saints, and Sacred Images, on Indulgences, Fodes, Fasts, Festivals, the Index, Catechism, Breviary, and Missal.

The Decrees proper are the positive statement of doctrine, the affirmative theses; the Canons, which follow the various decrees, are short statements and condemnations of contrary teachings, each concluding with an anathema. The later Syllabus of Errors in 1864 is thus a continuation of the dammnatory Canons of Trent.

Session III. declares that the 'sacred and holy, ecumenical and general Synod of Trent' ordains and decrees that a confession of faith be set forth, viz. 'the Symbol of faith which the holy Roman Church makes use of,—as being that principle wherein all who profess the faith of Christ necessarily agree,—the Creed of Nicea in the form of Constantinople, with the Western additions.

Session IV. treats of the bases of authoritative doctrine for the first time in conciliar history, and co-ordinates Holy Scripture, including the Apocrypha, in the Latin Vulgate alone, with 'unwritten traditions which, having been received from Christ's own lips by the Apostles, or transmitted, as it were, manually by the Apostles themselves, under the dictation of the Holy Spirit, have come down even to us' . . . 'preserved in continuous succession within the Catholic Church,' . . . which also it receives 'with an equal feeling of piety and reverence.' 'No one, relying on his own skill shall,—in matters of faith and of morals pertaining to the edification of Christian doctrine,—wresting the sacred Scripture to his own senses, presume to interpret it contrary to that sense which holy Mother Church . . . hath held and doth hold; or even contrary to the unanimous consent of the Fathers.'

Session V. condemns five erroneous opinions on Original Sin, of a Pelagian or semi-Pelagian type; but its apparent Augustinianism is so phrased as, e.g., to admit of the doctrine that what man lost through the Fall was the superadded *donum supernaturalis*, and nothing inherent in human nature as such; and it affirms that 'free will is not at all destroyed, but attenuated.' It ends by excluding the Virgin Mary from the operation of the taint—an anticipation of the Papal definition of 1854.

Session VI. contains the decree on Justification in 16 chapters, and concludes with no fewer than 33 canons. Chapter i. treats of the Inability of Nature and of the Law to justify man; ii. of the Dispensation and Mystery of the Advent of Christ; iii. states that, though Christ died for all, only

those receive the benefit of His death unto whom the merit of His Passion is communicated. As men not born of Adam do not share his sin, so men not born again in Christ cannot share His merit. iv. states that a man cannot be translated into the state of grace, since the promulgation of the gospel, without the laver of regeneration, or the desire thereof. v. declares that 'in adults the beginning of Justification is to be derived from the prevent grace of God, through Jesus Christ, i.e. through His calling, whereby without any merits on their part they are called, that so they who by sins were alienated from God may be disposed through His quickening and assisting grace to convert themselves to their own justification by freely assenting to and co-operating with that said grace: in such sort that, while God touches the heart of man by the illumination of the Holy Ghost, neither is man himself utterly inactive while he receives that inspiration, forasmuch as he is also able to reject it; nor yet is he able, by his own free will, without the grace of God, to move himself unto righteousness in His sight.' vi. sets forth the manner of preparation for justification. vii. affirms the characteristic Roman doctrine that Justification 'is not remission of sins merely, but also the sanctification and renewal of the inward man, through the voluntary reception of the grace, and of the gifts, whereby man from being unjust becomes just.' Its *final cause* is 'the glory of God and of Jesus Christ, and life everlasting.' Its *efficient cause* is 'a merciful God who washes and sanctifies gratuitously, signing and anointing with the holy Spirit of promise.' The *meritorious cause* is 'our Lord Jesus Christ, who, when we were enemies, merited justification for us by His most holy Passion on the wood of the Cross, and made satisfaction for us unto God the Father.' The *instrumental cause* is 'the sacrament of Baptism, which is the sacrament of that faith without which no man was ever justified.' The *alone formal cause* is 'the justice of God, not that whereby He Himself is just, but that whereby He maketh us just,' 'Man through Jesus Christ, in whom he is engrafted, receives in the said justification, together with the remission of sins, all these gifts infused at once—faith, hope, and charity: For faith, unless hope and charity be added thereto, neither unites man perfectly with Christ, nor makes him a living member of His body.' viii. states that the phrases 'justified by faith' and 'freely' are to be understood as meaning that faith is the beginning of human salvation, the foundation and root of all justification, but that faith is no more in itself able than good works to merit the grace of justification. ix. declaims against the vain confidence of heretics who rest in their personal assurance of justification apart from the Church and its ordinances; whereas 'no one can know with a certainty of faith which cannot be subject to error, that he has obtained the grace of God.' x. treats of the increase of Justification received; xi. of keeping the Commandments. xii. urges that 'no one, so long as he is in this mortal life, ought so far to presume, as regards the secret mystery of Divine predestination, as to determine for certain that he is assuredly in the number of the predestinate; as if it were true that he that is justified either cannot sin any more, or, if he do sin, that he ought to promise himself an assured repentance; for, except by special revelation, it cannot be known whom God hath chosen unto Himself.' xiii. deals similarly with the gift of Perseverance. xiv. sets forth the Sacrament of Penance, in the language of the Fathers 'a second plank after the shipwreck of grace lost,' as instituted by Christ when He said: 'Receive ye the Holy Ghost: whose sins ye shall forgive, they are forgiven them, and whose sins ye

shall retain, they are retained.' The penitence of a Christian after his fall is very different from that at baptism: in it are included not only a cessation from sins, and a detestation of them, but also the sacramental confession of them—at least in desire—and sacerdotal absolution; and likewise satisfaction by fasts, alms, prayers, and the other pious exercises of a spiritual life, not, indeed, for the eternal punishment which with the guilt is remitted by the sacrament or by the desire of it, but for the temporal punishment which, as the sacred writings teach, is not always wholly remitted as is done in baptism. xv. sets forth that by every mortal sin grace is lost, but not faith. xvi. treats of the fruit of justification, i.e. the merit of good works, and the nature of that merit. God is the rewarder of faithful labour: life eternal is set forth in Scripture 'both as a grace mercifully promised to the sons of God through Jesus Christ, and as a reward which is . . . to be faithfully rendered to their good works and merits.' Yet the Christian has no ground to glory, but justice is through Christ and of God throughout.

Session VII. sets forth the general doctrine of the Sacraments, 'through which all true justice either begins, or being begun is increased, or being lost is repaired,' in 13 canons, which condemn the denial that the sacraments were all instituted by Christ or are seven in number, that they differ from those of the Old Law, that they are of varying value, that they are necessary unto salvation, that they are for other ends than to nourish faith, that they contain and confer the grace they signify, that the grace is conferred through the act performed, that Baptism, Confirmation, and Ordination imprint an indelible character and therefore may not be repeated, that ministers alone may administer the word and sacraments, etc. Then follow 14 canons on Baptism, condemning, *inter alia*, the denial of the validity of baptism, 'even by heretics, in the name of the Father and of the Son and of the Holy Ghost, with the intention of doing what the Church doth,' and 3 canons on Confirmation.

Session XIII. treats of the Sacrament of the Eucharist in 8 chapters, followed by 11 canons. Chapter i., of the real presence of Christ in the sacrament, affirms that after the consecration of the elements, He, 'true God and man, is truly, really, and substantially contained under the species of those sensible things.' His continual presence at the right hand of the Father does not contradict in a Divine being His sacramental presence. 'It is indeed a crime the most unworthy that they [the words of institution] should be wrested, by certain contentious and wicked men, to fictitious and imaginary tropes, whereby the verity of the flesh and blood of Christ is denied, contrary to the universal sense of the Church, which, as the pillar and ground of truth, has detested, as satanical, these inventions devised by impious men.' ii. defines the reason of the institution as the commemoration of Christ's death, the nourishment of men's souls, a pledge of the glory to come, and a symbol of the one body of which Christ is the head. iii. affirms the superiority of this sacrament to the others as consisting of the very Author of sanctity Himself. iv. affirms the complete transubstantiation of the elements into the substance of Christ's body and blood. v. defines the veneration shown to the sacrament as Divine worship, the *latria* due to the living God alone, and approves of the Corpus Christi festival. vi. approves of the reservation of the sacrament, and bearing it to the sick. vii. requires sacramental confession in preparation for the Eucharist by celebrants when possible as well as by people. viii. distinguishes three modes of reception—sacramental only, spiritual only, and both sacramental

and spiritual, and appeals for Christian uniformity in the celebration of the rite.

Session XIV. treats of the Sacraments of Penance (9 chapters and 15 canons) and Extreme Unction (3 chapters and 4 canons). Of Penance, ch. i. sets forth its necessity and institution; ii. its difference from Baptism; iii. its parts and fruit; iv. contrition as containing cessation from sin, the purpose and beginning of a new life and hatred of the old, *attrition* being imperfect contrition, a sense of sin's baseness and dire consequences, a gift of God and impulse of His Spirit not yet resident but truly moving in the sinner; v. confession of venial and mortal sins; vi. the ministry of confession, and absolution; vii. reservation of special cases of heinous sin to be dealt with by higher clergy; viii. the necessity and fruit of satisfaction or amends; and ix. works of satisfaction. Of Extreme Unction, ch. i. treats of its institution by the Apostle James; ii. of its effect; iii. of the minister who should perform it, and the time.

Session XXI. treats of Communion under both Species, and Communion of little Children. Chapter i. sets forth that laymen, and clergy, when not celebrating, are not bound of Divine right to communion under both species; ii. that it is within the power of the Church to dispense with that practice; 'although the use of both species has from the beginning of the Christian religion not been infrequent,' the custom had been already widely changed, and the change for 'weighty and just reasons' (not specified) had been sanctioned; iii. that Christ whole and entire, and a true sacrament, are received under either species; iv. that little children before the age of reason are not obliged to the sacramental communion of the Eucharist, having been baptized and incorporated with Christ, and being at that age incapable of losing the grace of their adoption. Infant communion, however, had legitimately been practised in antiquity. Then follow 4 canons, and a reservation to a later date of the question whether particular individuals or nations were to be allowed communion in both kinds.

Session XXII. treats of the Sacrifice of the Mass in 9 chapters and 9 canons. Chapter i. sets forth its institution; ii. that it is propitiatory for both the living and the dead; iii. that Masses in honour of saints are addressed to God, with solicitations of their patronage; iv. the sanctity and uplifting character of the canon of the Mass, composed as it is of the very words of the Lord, the traditions of the Apostles, and the pious institutions also of holy Pontiffs; v. the purpose of the solemn ceremonies associated with the Mass, since 'such is the nature of man that without external helps he cannot easily be raised to the meditation of Divine things'—e.g. lower or higher tones of voice, lights, incense, vestments, etc., 'derived from an Apostolical discipline and tradition, whereby both the majesty of so great a sacrifice might be recommended, and the minds of the faithful be excited, by those visible signs of religion and piety, to the contemplation of those most sublime things which are hidden in this sacrifice'; vi. that Mass, wherein the priest alone communicates, is approved, being on behalf of all the Church, though the Council would fain that all present might communicate; vii. that the mixture of water with the wine is enjoined because it is believed that Christ did this, and because the practice commemorates the issue of blood and water from His side, and because in Rev 17¹⁰ the peoples are called waters, and the union of water with the wine represents their union with Christ; viii. that it is not expedient to celebrate Mass everywhere in the vulgar tongue; but, in order that the sheep of Christ may not suffer hunger, or the little ones ask for bread and there be none to

break it unto them, pastors are charged frequently to expound some portion of the things read at Mass, especially on Lord's days and festivals.

Session XXIII. treats of the Sacrament of Order in 4 chapters and 8 canons. Chapter i. sets forth the institution of the Priesthood of the New Law 'into which the old has been translated,' with the power of consecrating, offering, and administering Christ's body and blood, as also of forgiving and of retaining sins; ii. the Seven Orders—priest, deacon, subdeacon, acolyte, exorcist, lector, and doorkeeper—the four, or five, last being the inferior; iii. that Order is truly and properly a sacrament; iv. the indelibility of the higher orders, the falsehood of the claim of priesthood for all believers, the principal place of bishops in the hierarchical order as superior to priests, as entrusted exclusively with the Sacrament of Confirmation and Ordination of Priests, without any regard to consent of people or of rulers, whereas 'all those who, being only called and instituted by the people, or by the civil power and magistrate, ascend to the exercise of these ministrations, and those who of their own rashness assume them to themselves, are not ministers of the Church, but are to be looked upon as thieves and robbers who have not entered by the door.'

Session XXIV. treats of the Sacrament of Matrimony in 1 chapter and 12 canons, setting forth its institution by 'the first parent of the human race, under the influence of the Divine Spirit'; its confirmation by Christ; His purchase by death of the grace which should perfect natural love, and confirm that indissoluble union and sanctify the married. The canons condemn the denial of its sacramental character, of the right of the Church to dispense in some of the levitically prohibited degrees or to add to their number, and of the plea of heresy or desertion, or even adultery, as a warrant for divorce; deny the right of the innocent party to marry during the lifetime of the adulterous partner, and the right to break clerical vows of celibacy on any plea; deny the inferiority of celibacy or virginity to marriage, and affirm its superiority, and condemn those who characterize the prohibition of marriages at certain seasons as a tyrannical superstition derived from the superstition of the heathen, and those who say that matrimonial causes do not belong to ecclesiastical judges.

Session XXV. orders right and circumspect teaching regarding Purgatory, the Invocation, Veneration, and Relics of Saints, Sacred Images, and Indulgences. Abuses of a superstitious, unedifying, or mercenary nature are to be ended. Saints in heaven are to be invoked to intercede for men with God the Father through Jesus Christ His Son, who is our alone Redeemer and Saviour. No divinity or virtue is believed to reside in images of Christ, the Virgin Mother, and the other saints; but the honour which is shown to them is referred to the prototypes which they represent. In granting indulgences, moderation is to be observed, 'lest by excessive facility ecclesiastical discipline be enervated,' and 'all evil gains for the obtaining thereof,—whence a most prolific cause of abuses amongst the Christian people has been derived,' are to be 'wholly abolished.'

[Latin text and tr. in Schaff, *Creeeds of Gr. and Lat. Churches*, pp. 77-206; critical history in Lindsay, *Hist. of Reformation*, 1907, II. 564-596 (detailed biblog. in note, p. 564), and in Schaff, *Hist. of Creeeds*, pp. 90-99, with biblog.; theological analysis and criticism in Harnack, *Hist. of Dogma*, Eng. tr. VII. (1899) 35-72; art. in *PRE*.]

For the purposes of individual confession, the Council of Trent had declared the necessity of a binding 'formula of profession and oath' for all dignitaries and teachers of the Church. By order of Pius IV. the *Profession of the Tridentine Faith*, or *Creed of Pius IV.*, was prepared in 1564 by a com-

mission of Cardinals, and was at once made obligatory on the whole *ecclesia docens*. It passed also into general use for Protestant converts to Romanism. Obviously the decrees and canons of the Council were ill-suited for such uses. The *Profession* consists of 12 articles, the first containing in full the Nicæno-Constantinopolitan Creed with the Western changes (italicized in the text below), the next 8 containing a short summary of the Tridentine decrees, the last 3 containing new matter, acknowledging the Roman Church as the mother and mistress of all churches, promising, on oath, obedience to its Bishop as the successor of St. Peter and the vicar of Jesus Christ, accepting the canons and decrees of the Councils, including Trent, and promising lifelong adherence by God's help to 'this true Catholic faith without which no one can be saved.' The Creed is in the first person, and is as follows (tr. in Schaff, *Hist.*, pp. 98-99; also in his *Creeeds of Gr. and Lat. Churches*, pp. 207-210):

I. 'I . . . with a firm faith believe and profess all and every one of the things contained in the symbol of faith which the holy Roman Church makes use of, namely—

I believe in one God the Father Almighty, Maker of heaven and earth, and of all things visible and invisible;

And in one Lord Jesus Christ, the only-begotten Son of God, begotten of the Father before all worlds; *God of God, Light of Light, very God of very God, begotten not made, being of one substance with the Father; by whom all things were made; who for us men and for our salvation came down from heaven and was incarnate by the Holy Ghost of the Virgin Mary, and was made man;*

He was crucified for us under Pontius Pilate; suffered and was buried;

and the third day He rose again according to the Scriptures; and ascended into heaven; sitteth on the right hand of the Father;

and He shall come again with glory to judge the quick and the dead; whose kingdom shall have no end:

And in the Holy Ghost, the Lord, and Giver of life; who proceedeth from the Father and the Son; who with the Father and the Son together is worshipped and glorified; who spake by the prophets;

and one holy catholic and apostolic Church.

I acknowledge one baptism for the remission of sins:

and I look for the resurrection of the dead;

and the life of the world to come. Amen.'

II. 'I most steadfastly admit and embrace the apostolic and ecclesiastical traditions, and all other observances and constitutions of the same Church.'

III. 'I also admit the Holy Scriptures according to that sense which our holy Mother Church has held, and does hold, to which it belongs to judge of the true sense and interpretation of the Scriptures; neither will I ever take and interpret them otherwise than according to the unanimous consent of the Fathers.'

IV. 'I also profess that there are truly and properly seven sacraments of the new law, instituted by Jesus Christ our Lord, and necessary for the salvation of mankind, though not all for every one, to wit: baptism, confirmation, the eucharist, penance, extreme unction, holy orders, and matrimony; and that they confer grace; and that of these baptism, confirmation, and ordination cannot be reiterated without sacrilege. I also receive and admit the received and approved ceremonies of the Catholic Church used in the solemn administration of the aforesaid sacraments.'

V. 'I embrace and receive all and every one of the things which have been defined and declared in the holy Council of Trent concerning original sin and justification.'

VI. 'I profess likewise that in the Mass there is offered to God a true proper and propitiatory sacrifice for the living and the dead; and that in the most holy sacrament of the eucharist there is truly really and substantially the body and blood, together with the soul and divinity, of our Lord Jesus Christ; and that there is made a change of the whole essence of the bread into the body, and of the whole essence of the wine into the blood; which change the Catholic Church calls transubstantiation.'

VII. 'I also confess that under either kind alone Christ is received whole and entire, and a true sacrament.'

VIII. 'I firmly hold that there is a purgatory, and that the souls therein detained are helped by the suffrages of the faithful.'

Likewise that the saints reigning with Christ are to be honoured and invoked, and that they offer up prayers to God for us; and that their relics are to be held in veneration.'

IX. 'I most firmly assert that the images of Christ and of the perpetual Virgin, the Mother of God, and also of other saints, ought to be had and retained, and that due honour and veneration are to be given them.'

I also affirm that the power of indulgences was left by Christ in the Church, and that the use of them is most wholesome to Christian people.'

X. 'I acknowledge the holy catholic apostolic Roman Church as the mother and mistress of all churches, and I promise and swear true obedience to the Bishop of Rome as the successor of St. Peter, prince of the Apostles, and as the vicar of Jesus Christ.'

XI. 'I likewise undoubtedly receive and profess all other things delivered defined and declared by the sacred Canons and ecumenical Councils, and particularly by the holy Council of Trent; and I condemn reject and anathematize all things contrary thereto, and all heresies which the Church has condemned rejected and anathematized.'

XII. 'I do at this present freely profess and truly hold this true Catholic faith, without which no one can be saved (*salvus esse*); and I promise most constantly to retain and confess the same entire and inviolate, with God's assistance, to the end of my life. And I will take care, as far as in me lies, that it shall be held taught and preached by my subjects, or by those the care of whom shall appertain to me in my office. This I promise vow and swear:—so help me God, and these holy Gospels of God.'

The *Profession of the Tridentine Faith* was followed in 1566 by the elaborate *Roman Catechism*, the preparation of which the Council had at first essayed, but finally handed over to the Pope. In 1564, Pius IV., advised by Cardinal Borromeo of Milan, entrusted the work to a learned and distinguished Commission of four prelates under Borromeo's supervision—Marini, Foscarari, Calini, and the Portuguese Freire—who were assisted in matters of style and rendering by eminent Latin scholars. The teaching is Dominican (three of the four Commissioners belonging, as did the Pope, to that order) and Thomist—a feature which ensured for it the opposition of the Jesuit order. It is not meant for the young or for popular reading, but for the equipment of the teaching clergy. It is exceedingly long and comprehensive, but admirably arranged and lucidly expressed. It contains four parts, which follow a lengthy introductory treatment of preliminary topics, and treats successively of (1) the Apostles' Creed, (2) the Sacraments, (3) the Ten Commandments, and (4) the Lord's Prayer. It is noteworthy that, while it adds to the Tridentine teaching sections which deal with the *limbus patrum*, the Authority of the Church, and the doctrine of the Church, it omits all reference to Indulgences and the Rosary. Apart from its franker Augustinianism, the Catechism reproduces very faithfully the substance of the Decrees of Trent, whose circumspection and whose massiveness it reflects. (See, further, art. CATECHISMS, p. 252 f.; Schaff, *Hist.* pp. 100–102.)

In 1568 appeared, under similar auspices, and with similar authority, the *Breviarium*, and in 1572 the *Missale Romanum*, the devotional and liturgical standards of the Church, which had been preceded in 1564 by the *Index Librorum Prohibitorum* proclaiming the censure of the Church on literature heretical in doctrine or dangerous in tendency. A special *Confession of Urban VIII.*, under whose rule (1623–1644) Galileo was condemned, was prescribed for use at consecration by Greek and other Bishops in Eastern Churches united to Rome but retaining by special privilege their own rites and usages.

The long and chequered Papacy of Pius IX. brought with it a fresh stirring of polemic and dogmatic activity, which issued in a remarkable series of Papal publications. In 1854, after formal consultation by encyclical letter with the bishops on the propriety of satisfying the desire of the Catholic world for a solemn definition by the Apostolic See of the *Immaculate Conception* of the Virgin Mary, and on the completion of the labours of a special commission and a consistory of consultation, the Pope summoned a great assemblage of prelates to the Basilica of St. Peter, and in their presence, 'by authority of our Lord Jesus Christ, of the blessed Apostles Peter and Paul, and by our own,' personally proclaimed it to be a doctrine revealed by God 'that the most blessed Virgin Mary in the first moment of her conception, by a

special grace and privilege of Almighty God, out of regard to the merits of Jesus Christ the Saviour of the human race, was preserved immune from all stain of original sin.' By that declaration not only a long course of controversy throughout the history of the Church, but also a long continued devotional and doctrinal development, was brought to a close, and the silence or doubt of the Fathers and the caution of Trent were replaced by the voice of certainty. In 1864 a Papal *Syllabus of Errors*, eighty in number, was issued with an encyclical, summarizing in ten divisions modern opinions which at various times had been condemned by the Pope: (1) Pantheism, Naturalism, Absolute Rationalism; (2) Moderate Rationalism; (3) Indifferentism, Latitudinarianism; (4) Socialism, Communism, Secret Societies, Bible Societies, Clerico-liberal Societies; errors respecting (5) the Church and her Rights, (6) Civil Society, (7) Natural and Christian Ethics, (8) Christian Matrimony, (9) the Civil Primacy of the Roman Pontiff, (10) Modern Liberalism.

In 1870 the Vatican Council, convoked to promote the re-union of Christendom and to cope with modern errors and dangers, accepted and promulgated after revision two 'dogmatic' constitutions: (1) *on the Catholic Faith*, in four chapters, dealing with God as Creator, with Revelation, with Faith, and with Faith and Reason, condemning more fully than in the *Syllabus* errors of Pantheism, Naturalism, and Rationalism; (2) *on the Church of Christ*, also in four chapters, dealing with the institution of the Apostolic primacy in the blessed Peter, the perpetuity of St. Peter's primacy in the Roman Pontiff, the power and nature of the primacy of the Roman Pontiff, and the *infallibility of the Roman Pontiff*. In this second document the absolute finality of the Papal Jurisdiction is affirmed, on pain of anathema, in all matters pertaining alike to faith and morals and to the discipline and government of the Church, and in the form of a Papal decree it is solemnly declared a dogma Divinely revealed that

'the Roman Pontiff when he speaks *ex cathedra*, that is, when, in the exercise of his office as Pastor and Teacher of all Christians, by virtue of his supreme Apostolic authority he defines the doctrine on faith or morals to be held by the Universal Church, by the Divine assistance promised to him in the blessed Peter, possesses that power of infallibility with which the Divine Redeemer willed that His Church should be furnished in defining doctrine on faith or morals; and that accordingly such definitions of the Roman Pontiff are of themselves, not from consent of the Church, irreformable: but if, as may God forbid, any one shall presume to gainsay this our definition, let him be anathema.'

It was thus the work of Pio Nono to complete the long and patiently evolved system of a constitutional Papal infallibility and autocracy in all matters concerning Christian faith, morals, discipline, and government.

Beyond these determinations of the Pope in the Vatican Council it has not been necessary, even if possible, for the Church to proceed in matters of faith. They have been supplemented, however, in detail by the fresh *Papal Syllabus of Pius X.* in 1907, against all forms of Modernism, and by the labours of the Commission on Biblical Studies.

Although the Vatican Council refused by a large majority to accept the Catechism submitted to it, numerous authorized local catechisms are in circulation for popular use throughout the Roman Catholic world, more or less completely revised to bring them into harmony with the new decrees. Of the older catechisms, besides that of Trent, which was for clerical rather than popular use, those of the learned Jesuit Peter Canisius (1554 and 1566) and of Cardinal Bellarmine (1603) may be mentioned as having commended themselves especially to Papal as well as to clerical and popular acceptance. Among the most influential

and authoritative expositions of Roman Catholic doctrine with an apologetic or polemic purpose are the *Disputationes de Controversiis Christianæ fidei adversus huius Temporis hereticos* of Robert Bellarmine (1587-90), the *Exposition de la Doctrine de l'Eglise Catholique sur les matières de Controverse* of Bossuet (1671), the *Symbolik* of J. A. Möhler (1832), and the *Prælectiones theologicæ* of the Jesuit Perrone (1835 ff.).

(2) *In the Old-Catholic Church.*—To the rule of history that each great successive formulation of ecumenical doctrine has been the occasion of, or has perpetuated, a corresponding schism of the Church, the work of the latest Roman General Council of 1870 was no exception. Its distinctive decrees were received under protest by many of the participants (esp. German, French, English, and N. Amer. representatives), and led finally to the formation in Bavaria and elsewhere in Germany of the Old-Catholic Church, loyal to the doctrinal Canons of Trent and earlier standards, and occupying a position similar to that of the earlier secession of the Church of Utrecht which took place in protest against the Papal claims embodied in the bull *Unigenitus* condemning Jansenist views in 1713.

Reference has already been made to the Old-Catholic Conferences at Bonn in 1874 and 1875 between representatives of the Græco-Russian, Anglican, and Old-Catholic Churches, at the former of which *Fourteen Theses* were agreed upon as a possible basis of Catholic re-union, dealing with the Canon and Apocrypha, the Text and Translations of Scripture, the Use of the Vernacular in Scripture and in liturgy, Justification through Faith working by Love, Salvation not by Merit, Works of Supererogation, Number of Sacraments, Scripture and Tradition, Succession of Anglican Orders, Immaculate Conception of Mary, Public and Private Confession, Indulgences, Prayers for the Dead, the Mass; and at the latter, *Six Theses* accepting the ecumenical Symbols and decisions of the undivided Church of the first six centuries, and in particular the Eastern doctrine of the Procession of the Spirit.

Old-Catholic Churches also exist in Switzerland, Austria, France, and America, while in Mexico, in Spain and Portugal, and in Italy, 'Reformed Catholic' Churches have been established, in great measure by means of Anglican support and on the Anglican model, professing a markedly Protestant type of doctrine (see Loofs, i. 412 ff.).

LITERATURE.—For standards of Roman Catholic Church, and bibliography: Schaff, *History of Creeds*, pp. 83-151, *Creeds of Gr. and Lat. Churches*, pp. 76-271; Loofs, *Symbolik*, i. 187-216 (on Oriental Churches in communion with Rome, 393-399); Denzinger, *Enchiridion*¹⁰, 1908; artt. in *Addis-Arnold's Cathol. Dict.*, 1903, in *Wetzer-Welte*, in the *Cathol. Encycl.*, in *Vacant-Mangenot's Dict. de Théol. Cathol.*, in *PRE*³; cf. also Winer, *Confessions of Christendom*, Eng. tr. 1873; Butler, *Hist. and Lit. Account of the Formularies, etc., of the R.C., Greek, and principal Prot. Churches*, 1816. For critical account of the doctrine, see Harnack, *Hist. of Dogma*, Eng. tr. vol. vii., 1899.

For Old-Catholic doctrine: Schaff, *History of Creeds*, pp. 191-202, *Creeds of Gr. and Lat. Churches*, p. 645 ff.; Loofs, i. 407 ff.; *PRE*³, art. 'Aikatholizismus.'

II. Confessions in the Reformed Churches: General introduction: Early efforts.—Beneath the rigorously smoothed and levelled surface of mediæval Christendom there lay but thinly covered the fruitful seeds of the various outgrowths of the Reformation. It is easy now to discern how far-reaching was the doctrinal and practical preparation for the great movements. For centuries before the crisis was reached, over against the demand of the Roman Curia that all learning and all thought, as well as all political and ecclesiastical life, should be organized in subjection to it, influences had been at work to stimulate freedom of thought and action. Even Scholasticism, ready though it was to buttress up the Papal claims and

dogmas by propositions, argument, and learning, had its opposing schools, its heresies, its impulses to make men think. The guilds in the great industrial and commercial cities, and the growing national sentiment in many lands, fostered a sense of independence and of personal dignity. Here and there, though without authorization, the Scriptures had been turned into the vernacular and read with eager curiosity, provoking, as they have always done, personal reflexion and untrammelled conviction. The Mystics, with their personal intimacy with the Unseen and their devotional confidence and freedom, and, on the other hand, the Humanists, with their knowledge of an old world new found, pointed men in the same direction. It was inevitable that, together with the sensitive conscience's fierce revolt against ecclesiastical abuses and immoralities, there should also come into being an attitude of mind as critical towards those mediæval accretions to the Church's doctrine with which the abuses had been bound up.

Long before the Reformation crisis, particular current opinions extraneous to the great Creeds and to the general spirit of Scripture had been singled out or massed in groups for discussion and hostile criticism. There was no disposition to debate afresh the problems which had found dogmatic solution in the Ecumenical Councils. Not the Person and Work of Christ or of the Holy Spirit, not the doctrine of the Divine Trinity, but the doctrines of the means of grace, Church, Ministry, Sacraments, and Scripture, of the processes involved in personal salvation, and of the use of mediators other than the Son of God, were the themes at issue. With the old Creeds the new thinkers, almost without exception, had no controversy, but were amply satisfied; and when occasion arose for them to gather into Confessions the doctrine to which they adhered, it was their first care to express their loyalty to the ancient standards of Christendom. Both of the Reformation and of the pre-Reformation Confessions it is true that they were advanced for didactic and apologetic purposes rather than as Creeds, and that they were subordinated not only to the Word of God in Canonical Scripture, but also to the Catholic Creeds. According to the accepted academic procedure of the age, serious difference of theological opinion issued naturally in the formulation of a series of controversial propositions which embodied the moot points, and were flung out as a challenge to the champions of the learned world for debate in intellectual tournaments or disputations. Luther's Theses nailed upon the church-door at Wittenberg were only one in a long series, earlier and later, of academic invitations to serious argument; but to the pedantries of conventional disputation he brought a biting mother-wit and a passionate earnestness as well as a scholar's learning, and he was among the very first to discover and to wield the power of the pamphlet and the printing press in religious controversy. Both the Wyclifite and the Lutheran reformation-movements began with the fearless publication of propositions, theses, or 'places,' dealing not with the whole system of Christian doctrine, but with the topics involved in prevailing religious abuses. Only later, as the rift grew wider between the forces of reaction and reform, did it become necessary to round off in systematic form the theological opinions of Protestants; but rarely, if ever, was it the case that equal care and space were given to controversial and to non-controversial matter of faith. It is, in truth, a general defect in the Creeds and the Confessions of Christendom, viewed as systems of truth, that from the circumstances of their formation they have suffered distortion in varying degrees, and present a lack of internal pro-

portion and perspective which is due to polemical or other exigencies. They all bear the marks of their birth-time and birth-place, and it is to the distinctive and often transitory features in them that they draw our chief attention. It is unjust to judge them without regard to their origin and their purpose. Few, if any, of them were fair-weather or leisurely productions laid out for academic criticism or appreciation. Many of them were the work of hunted outlawed men, and were sealed with martyr blood. Viewed generally, they are seen to fall into groups: (1) before 1500, (2) in 16th cent., both directed against Roman Catholic abuses; (3) in 17th cent., the result of Protestant differences; and (4) in 19th cent., the age of increasing religious liberty resulting both in the multiplication of sects and in the simplification of Confessions. They are here considered according to an order partly chronological and partly based upon the varying degree of their divergence from the Roman system.

Pre-Reformation Articles, Confessions, and Catechisms.—Although it is scarcely possible to point to Confessions in the pre-Reformation centuries which correspond very closely to those of the succeeding age, it is abundantly evident that the leaven of reform in Church and doctrine was actively at work. Whether, as among the Albigenses and Cathari, the bounds of ancient Catholic orthodoxy were exceeded, or, as among the followers of Waldo, were observed, there was a wide-spread and steadily increasing reluctance from the 9th to the 15th cent. to acquiesce in the traditionalism, the Papal supremacy, and the crude sacramentalism of the Church. In the North of Italy, in the South of France, in Bohemia, and as far north as in Britain, there was a strong revulsion of feeling and interest towards a Scriptural simplicity in doctrine, worship, Church organization and life. Almost all the heresies and sects that disturbed the peace of Church and State appealed from Pope and Councils to Scripture and common sense, and advocated some form of Scriptural puritanism. Though reform within the Church was the invariable object of their protests, persecution and despair combined to drive them more or less out of the Roman communion, and their articles of reform became articles of schism and secession. From the 9th cent. onwards the sacraments, especially the Lord's Supper, were a continual subject of controversy: these or articles were unceasingly advanced and retracted or condemned, concerning their number, meaning, administration, and effect. Similarly, questions regarding Scripture, Church-government and authority, access of believers to God, the place of works in justification, were constantly agitating men's minds. It was an age of discussion and debate, and the same instinct which prompted the Papacy to assert itself and steadily aggrandize its own authority led national Churches and gifted individuals alike to resent it and proclaim their own mind in turn; but it was manifestly an age of strenuous search for truth in thought and right in life. Naturally, the same age that produced the Schoolmen called also for the Inquisition. Confessions of faith in such a time tended to be individual and partial; often they were drawn up by persecutors as counts of an indictment for heresy, and, when accepted by the accused, were sealed by condemnation and death. The articles of faith were articles of martyrdom. But, as the movement for reform gained adherents, the time approached when the work of Waldo, Wyclif, and Hus should issue not only in definite Church-formation, but also in the framing of extended Confessions.

12. Confessions in the Waldensian, Bohemian, and Moravian Churches.—The Confessional documents of the Waldensian, Bohemian, and Moravian fraternities are, like the societies themselves, so closely bound up that they may fitly be grouped together. They form a long series preceding as well as following the Reformation, and share with Baptist or Anabaptist documents the distinction of exhibiting the longest Protestant descent. How soon after the origination of the Waldensian movement in the 12th cent. definite Articles of Faith were current we cannot say, but already in the 14th cent. we find evidence of the use of Articles of Faith and a brief catechism of Christian doctrine and morals. Like other literary products of the movement, these seem to have been long preserved orally, and committed to writing in the 15th century. Of that date we possess copies of a group of seven Articles of Faith in God, and of a simple catechism current among the Old Waldensians of France and Spain, containing seven paragraphs on the Godhead, seven on Man, the

Ten Commandments, and the Seven Works of Mercy. During the 15th cent. the simpler Waldensian and the more theological Hussite movements coalesced, and gave rise to writings in the Romance and Bohemian languages, whose interrelations are difficult to analyze. To c. 1410, and to Hus himself, Palacky assigns an early Hussite Catechism. To 1431 belongs the *Confessio Tabornitarum* of the most resolute followers of Hus, who rejected all doctrine and usage not sanctioned in Scripture. Especially interesting are the kindred and much-used *Waldensian* and *Bohemian Catechisms*, vivid, shrewd, homely, and spiritual in their dialogue. The former, 'The Smaller Questions,' contains 57 questions and answers, is earlier than 1490, follows the division—Faith, Hope, and Love—adopted in Augustine's *Enchiridion*, and includes the Apostles' Creed, the Lord's Prayer, and the Ten Commandments; the latter, perhaps the work of Lucas of Prague, and first printed c. 1521, asks and answers 75 questions in very similar terms, adding the Beatitudes and other matter. While adhering to the simplicity of Scripture and the Apostles' Creed, and permeated by the reforming spirit, they come short of distinctive Reformation theology, e.g. in reference to the number of the sacraments (two 'necessary,' the other five 'less necessary'), and to justification. From 1467 to 1671 no fewer than 34 Bohemian Confessions are known to have been framed (Schaff, *Hist. Creeds*, p. 578). In 1503, just 50 years after the overthrow of the Hussites of Tabor, the rallied and reviving 'Unity of Brethren' (Bohemian, Moravian, and refugee Waldensian) submitted to Wladislaw II., king of Bohemia, a Confession of their Faith, rejecting the Worship of Saints, Purgatory, and Transubstantiation, and urging a symbolical doctrine of the Supper. In 1511 they submitted a Confession to Erasmus for his judgment, but without result. From the time of Luther's revolt they came in all their branches more and more into connexion and fellowship with the Reformers, Lutherans and Calvinists, and at last took their place in doctrine as in polity among the Protestant Churches. In 1532, under Lutheran influence, they tendered a Confession to George, Margrave of Brandenburg, with a preface by Luther himself commending their doctrine apart from certain aspects of their sacramental views. Their revised Confession to Ferdinand I. in 1535, purged of the obnoxious teaching on re-baptism, and modified in regard to justification and clerical celibacy, was cordially approved by Luther, and accepted as a basis of full fellowship. It contained an apologetic preface and 20 articles resembling the Augsburg Confession; it was issued in Bohemian and Latin, and is known as the *First Bohemian Confession*. In 1575 the Protestant Churches of Bohemia, whether Lutheran or Calvinist in sympathy, united by the common menace of Rome, drew up the *Second Bohemian Confession*, which, in conjunction with the *First*, superseded all the rest of the 34 Confessions credited to Bohemia during the two centuries after 1467. The *Second Bohemian Confession*, addressed to Maximilian II., contains 25 articles embodying the doctrine of the Augsburg Confession modified in harmony with the Calvinistic and Moravian teaching, and closely approximating to Melancthon's later sacramental theory.

In 1655, during the cruel massacre, the Piedmontese Waldensians adopted and sent out the *Waldensian Confession*, which is based upon, and in part abridged from, the French Reformed Confession of 1559 by Calvin. In 1855 the Confession was re-affirmed by the present Waldensian Church in Synod.

Although in Bohemia no resuscitation of the

ancient *national* Protestantism has been permitted, and the allegiance of Protestants is divided between Lutheranism and the Calvinism of the Heidelberg Catechism and the Second Helvetic Confession, the old *Unitas Fratrum* has been continuously represented on German soil by the Moravian Brethren, who own the authority of no Confession in a strict sense, and cherish a personal rather than a theological devotion, being ready to recognize and enter into fellowship with the devout of all denominations. They were able cordially to accept the Confession of Augsburg as in sufficient harmony with their own and the 'Reformed' doctrine, and, indeed, Spangenberg in the preface to his *Idea Fidei Fratrum* (Eng. ed. 1784), a weighty exposition of their belief, affirms that that Confession has been and will remain theirs. For light upon their doctrine one may with confidence turn to their impressive 'Easter Litany' (1749), and to the 'Summary' of their faith as centring in the Incarnation and Atonement of Christ in the 6 articles issued by the Synod of 1869. Reference may also be made to Bishop Schweinitz's 'Compendium of Doctrine,' in 17 articles drawn from the authorized 'Manual' of the Church, to the 'Catechism of Christian Doctrine for the Instruction of Youth in the Church of the United Brethren,' and the 'Epitome of Christian Doctrine for the Instruction of Candidates for Confirmation.'

LITERATURE.—Schaff, *Hist.*, pp. 665-680, 874-881, *Creeds of Evang. Prot. Churches*, pp. 757-770, 799-808; *PRE3*, artt. 'Waldenser,' 'Huss,' 'Böhmische Brüder,' 'Zinzendorf'; Kurtz, *Ch. Hist.*, Eng. tr. 1890, vols. II. and III.; works by Palacky, Loserth, C. U. Hahn, Dieckhoff, and von Zeechwitz.

13. Confessions in the Lutheran Churches.—Though not in themselves a Confession in any general sense, the 95 Theses of Martin Luther at Wittenberg in 1517 against the theory and practice of Indulgences co-operated with his famous disputations (e.g. at Heidelberg, 1518; at Leipzig, 1519), and with his powerful tracts, in precipitating Confessional formulations. Although the Theses, Disputations, and Tracts had reference to restricted doctrines, their immediate effect was to provoke heart-searching revision of the whole current system of doctrine in so far as it contained accretions to the ancient Catholic Creeds. In this revisory work Luther found in Philip Melancthon an invaluable and, indeed, an indispensable fellow-worker, one whose doctrinal system had found mature expression in the *Locci Communes* so early as 1521. If Luther's eagle eye pierced the forest of mediæval error, and if Luther's sinewy arms cleared the ground, it was Melancthon's gift and task to lay the foundations of Lutheran doctrine, massive, clear-cut, stable, and true. Each was the other's needed complement. Together they achieved a single work, than which a greater could hardly be conceived—the German Reformation. Their mutual understanding and their spiritual fellowship form one of the finest episodes and noblest features of that great movement.

It was in 1529 that Luther entered upon the work of doctrinal formulation. His first care was to provide for the spiritual wants of the neglected common people, especially for the young. A few catechetical works for the young and the unlearned had been prepared by monks in the Middle Ages. The Waldensian and Bohemian Reformers had made notable use of similar manuals prepared according to their distinctive views, and in 1523 a copy of one of these in Latin was presented to Luther. Luther himself had written a popular exposition of the Lord's Prayer and the Decalogue as early as 1518. Catechisms had been published by such Reformers as Urbanus Regius, Lonicus, Melancthon, Brentius, and Lachmann, between 1520 and 1528. But Luther's 'Smaller Catechism,' or *Enchiridion*, immediately attained a position

and acceptance which not only placed it far above all its forerunners, but entitled it to rank as a Confession. It was preceded in the same year, 1529, by the 'Larger Catechism,' a looser and less happy work, which was, indeed, not strictly a catechism at all, but an exposition too long for a popular manual—which served, however, to guide and prepare its author for his still more congenial task, the composition of the *Enchiridion*. In delightfully homely and yet impressive questions and answers it expounds (1) the Decalogue, (2) the Apostles' Creed, (3) the Lord's Prayer, (4) the Sacrament of Holy Baptism, (5) the Sacrament of the Altar—the same succession of subjects which the Bohemian Brethren had made familiar in their Catechisms. See, further, art. CATECHISMS (Lutheran).

The *Fifteen Articles of the Marburg Conference*, 1529, were drawn up by Luther after the memorable discussion in which Melancthon and he represented the German Reformers, Zwingli and Œcolampadius the Swiss, in an effort to establish a doctrinal understanding and concordat between the Reformed Churches. Articles i.-xiv. on the Trinity, Incarnation, Life of Christ, Original Sin (qualified agreement), Redemption, Justification by Faith, Work of the Holy Spirit by Word and Sacraments, Baptism, Good Works the Fruit of Faith, Confession and Absolution, Civil Authority, Tradition, Necessity of Infant Baptism, were agreed upon without difficulty. Article xv. was left incomplete, through disagreement on the meaning of the words 'Hoc est corpus meum,' in the form of three propositions: (1) the Eucharist ought to be received in both kinds; (2) the Sacrifice of the Mass is inadmissible; (3) the Sacrament of the Altar is a sacrament of the body and blood of Christ, and the partaking of it is salutary. It was a happier omen for the future of Protestantism, only now being realized, that the words were added: 'And, although we are not at this time agreed as to whether the true Body and Blood of Christ are physically present in the bread and wine, we recommend that either party manifest a Christian love to the other, so far as the conscience of every man shall permit, and that both parties entreat Almighty God to confirm us by His Spirit in the right doctrine. Amen.'

A fortnight later the Marburg Articles were revised and enlarged, and presented as the *Seventeen Articles of Schwabach* at a gathering of Lutheran princes and representatives in that town, and were followed by the supplementary *Articles of Torgau* (March 1530), drawn up by Luther, Melancthon, Jonas, and Bugenhagen, for the Elector of Saxony, with a view to presentation in the interests of Catholic re-union at the forthcoming Diet at Augsburg. The Articles of Marburg or Schwabach are pacific and positive, in accordance with the conciliatory purpose of the conference from which they issued; the Torgau Articles are polemical against abuses and controversial in tone, dealing with clerical marriage, communion in both kinds, the Mass, confession, invocation of saints, faith's superiority to works, etc.; together they form the basis of the first and second portions respectively of the great *Augsburg Confession* of 1530, the supreme declaration and literary monument of the Reformation.

The Augsburg Confession.—Luther's enforced absence, under ban, from the Diet, threw upon Melancthon the entire responsibility for the formal composition of the *Augsburg Confession*; but, apart from the fact that the constituent articles of Marburg and Torgau were essentially Luther's, Melancthon was fresh from prolonged conference with him, was in constant correspondence with him, and was by temper, scholarship, and

insight uniquely fitted to represent him. Luther inspired, if Melancthon arranged and wrote. The theology belongs to both. When a draft was submitted to Luther for revision, he could write to the Elector: 'It pleases me very well, and I know of nothing by which I could better it or change it, nor would it be becoming, for I cannot move so softly and gently.' Indeed, in a letter to Jonas he dubbed it 'the softly stepping Apology,' and was inclined to complain of its leniency or silence on the subject of purgatory, saint-worship, and the Papal antichrist. Apart from these matters, the 'Augustana' is the classical statement of Lutheran doctrine, and has remained to the present day the bond between all Lutheran Churches. Its dignified simplicity, its temperate tone, and its Christian spirit have endeared it to successive generations, and have made it the model as well as the mother of later Confessions. Portions of it have become obsolete. The piety and thought it has fostered have outgrown their original vestments. But its profound loyalty to the best traditions of the Catholic Church and the great Fathers, its faithfulness to Scripture, none the less impressive because it is unlaboured and unobtrusive, and its deep note of evangelical experience, have secured for it a sacred place, perhaps beyond all other Confessions, in the living faith of its ministers and people. The *twenty-one* Articles of its first part state the main doctrines held by Lutherans: (1) in common with Roman Catholics, the doctrine of the Catholic Creeds; (2) in common with Augustinians, against Pelagianism and Donatism; (3) in opposition to Rome, esp. on Justification by Faith, the exclusive mediatorship of Christ, Church, ministry, and rites; and (4) in distinction from Zwinglians and Anabaptists (the former are not named), upon the meaning and administration of the sacraments, on confession, and on the millennium. The *seven* articles of the second part condemn the chief Roman abuses: (1) withholding the cup; (2) compulsory celibacy of clergy; (3) the Mass a sacrifice; (4) compulsory confession; (5) festivals and fasts; (6) monastic vows; (7) secular domination by bishops to the spiritual disadvantage and corruption of the Church.

The motto of the Confession is Ps 119⁴⁵ (Vulg.), 'and I spake of thy testimonies in the sight of kings, and was not ashamed.' The Preface, a formal and wordy address to the Emperor, is not from the pen of Melancthon but from that of Brück, the Saxon Chancellor, who also composed the Epilogue.

Contents of Part I.—Art. i., of *God*, affirms the Nicene doctrine, explains that 'person' means, not a part or quality, but 'that which properly subsists,' and condemns ancient and recent heresies. Art. ii., of *Original Sin*, teaches that, 'since Adam's fall, all men begotten after the common course of nature are born with sin, that is, without the fear of God, without trust in Him, and with fleshly appetite; and that this disease or original fault is truly sin, condemning and bringing eternal death now also upon all that are not born again by baptism and the Holy Spirit'; and condemns 'the Pelagians and others who deny this original fault to be sin indeed, and who, to lessen the glory of the merits and benefits of Christ, argue that a man may by the strength of his own reason be justified before God.' Art. iii., of *the Son of God*, expands slightly the language of the Apostles' Creed. Art. iv. thus sets forth *Justification*:—'Men cannot be justified before God by their own powers, merits, or works, but are justified freely for Christ's sake through faith, when they believe that they are received into favour and their sins forgiven for Christ's sake, who by His death hath satisfied for our sins. This faith doth God impute for righteousness before Him (Ro 3 and 4).' Art. v. sets forth *the Ministry of the Church* for the securing of that faith through the Holy Spirit, and condemns the Anabaptists. Art. vi., of *New Obedience*, teaches that 'this faith should bring forth good fruits, and that men ought to do the good works commanded of God, because it is God's will, and not for any confidence of meriting justification before God by their works. For remission of sins and justification is apprehended by faith, as also the voice of Christ witnesseth: "when ye have done all these things, say, We are unprofitable servants."'

Art. vii. teaches that *the Church* 'is the congregation of saints, in which the Gospel is rightly taught, and the Sacraments rightly administered: unto the true unity of the Church it is sufficient to agree concerning the doctrine of the Gospel and the administration of the Sacraments: nor is it necessary that human traditions, rites, or ceremonies instituted by men

should be alike everywhere; as St. Paul saith: "There is one faith, one baptism, one God and Father of all." Art. viii., *What the Church is*, says: 'It is lawful to use the Sacraments administered by evil men, according to the voice of Christ (Mt 23), "The scribes and the Pharisees sit in Moses' seat," etc. The Sacraments and the Word are effectual by reason of the institution and commandment of Christ, though they be delivered by evil men.' Art. ix., of *Baptism*, teaches that it is necessary to salvation, and that children by it are offered to God and Christ into His favour; and condemns the Anabaptists. Art. x., of *the Lord's Supper*, affirms that 'the Body and Blood of Christ are truly present, and are communicated to those that eat in the Lord's Supper'; but makes no attempt to explain how they are related to the elements—a remarkable silence illustrative perhaps of the reluctance of the Lutheran leaders at this time to formulate any new doctrine which would make their breach with Rome irreparable. Art. xi., of *Confession*, teaches that 'private absolution be retained, though enumeration of all offences be not necessary in confession. For it is impossible, according to the Psalm, 19¹² "Who can understand his errors?" In Art. xii. *Repentance* is said to consist of these two parts—one is contrition, or terrors stricken into the conscience by the recognition of sin; the other is faith, which is conceived by the Gospel or by absolution, and doth believe that for Christ's sake sins be forgiven, and comforteth the conscience and freeth it from terrors. Then should follow good works, which are fruits of repentance.' Therefore the Anabaptists and the Novatians are condemned. According to Art. xiii., of *the Use of Sacraments*, they 'were ordained, not only to be marks of profession among men, but rather that they should be signs and testimonies of the will of God towards us, set forth unto us to stir up and confirm faith in such as use them': they do not justify *ex opere operato*. Art. xiv., of *Ecclesiastical Orders*, teaches 'that no man should publicly in the Church teach or administer the Sacraments, except he be duly called.' In Art. xv., of *Ecclesiastical Rites*, it is taught that 'those only are to be observed which may be observed without sin, and are profitable for tranquillity and good order in the Church; such as are set holidays, fasts, and such like. Yet concerning such things, men are to be admonished that consciences are not to be burdened as if such service were necessary to salvation. They are also to be admonished that human traditions, instituted to propitiate God, to merit grace, and to make satisfaction for sins, are opposed to the Gospel and the doctrine of faith. Wherefore vows and traditions concerning foods and days, and such like, instituted to merit grace and make satisfaction for sins, are useless and contrary to the Gospel.'

Art. xvi., of *Civil Affairs*, teaches that 'such civil ordinances as are lawful are good works of God; Christians may lawfully bear civil office, sit in judgments, determine matters by the imperial laws . . . appoint just punishments, engage in just war, act as soldiers, make legal bargains and contracts, hold property, take an oath when the magistrates require it, marry a wife or be given in marriage.' It condemns the Anabaptists who forbid Christians these civil offices, also 'those who place the perfection of the Gospel, not in the fear of God and in faith, but in forsaking civil offices, inasmuch as the Gospel teacheth an everlasting righteousness of the heart.' Christians must necessarily obey their magistrates and laws, save only when they command any sin; for then they must rather obey God than men (Ac 5²⁹). Art. xvii., of *Christ's Return to Judgment*, condemns 'the Anabaptists who think that to condemn men and devils there shall be an end of torments; others also who now scatter Jewish opinions that, before the resurrection of the dead, the godly shall occupy the kingdom of the world, the wicked being everywhere suppressed.' Art. xviii., of *Free Will*, affirms 'that man's will hath some liberty to work a civil righteousness, and to choose such things as reason can reach unto; but that it hath no power to work the righteousness of God, or a spiritual righteousness, without the Spirit of God; because the natural man receiveth not the things of the Spirit of God (1 Co 2:14). But this is wrought in the heart when men do receive the Spirit of God through the Word.' Augustine is quoted in support, and Pelagian opinions are condemned. Art. xix. teaches that 'although God doth create and preserve nature, the Cause of Sin is the will of the wicked, to wit, of the devil and ungodly men.'

Art. xx., of *Good Works*, repudiates the charge that Lutherans forbid good works: 'Their writings extant upon the Ten Commandments bear witness that they have taught to good purpose concerning every kind of life and its duties. . . . Of which things preachers in former times taught little or nothing; only they urged certain childish and needless works, as keeping of holidays, set fasts, fraternities, pilgrimages, worshippings of saints, rosaries, moneries, and such like things. Whereof our adversaries having had warning, they do now unlearn them, and do not preach concerning these unprofitable works as they were wont. Besides they begin now to make mention of faith, concerning which there was formerly a deep silence. They teach that we are not justified by works alone; but they conjoin faith and works, and say we are justified by faith and works. Which doctrine is more tolerable than the former one, and can afford more consolation. . . . Therefore our divines have thus admonished the churches:—(1) Our works cannot reconcile God, or deserve remission of sins, grace, and justification at His hands, but these we obtain by faith only, when we believe that we are received into favour for Christ's sake, who alone is appointed the Mediator and Propitiatory, by whom the Father is reconciled. He therefore that trusteth by his works to merit grace, doth despise the merit and grace of Christ, and seeketh by his own power to come to the Father without Christ;

whereas Christ hath expressly said of himself, "I am the way, the truth, and the life" (Jn 14th). This doctrine is handled by Paul almost everywhere:—"By grace ye are saved through faith, and that not of yourselves: it is the gift of God, not of works" (Eph 2nd 9). Augustine doth in many volumes defend grace, and the righteousness of faith, against the merit of works. The like doth Ambrose teach in his book, *de Vocations Gentilium*, and elsewhere. . . . Godly and trembling consciences find by experience that this doctrine bringeth very great comfort . . . as St. Paul teacheth, "being justified by faith, we have peace with God" (Ro 5th). This doctrine doth wholly belong to the conflict of a troubled conscience, and cannot be understood but where the conscience hath felt that conflict. Wherefore all such as have had no experience thereof, and all that are profane men, who dream that Christian righteousness is naught else but a civil and philosophical righteousness, are poor judges of this matter. Formerly men's consciences were vexed with the doctrine of works; they did not hear any comfort out of the Gospel. Whereupon conscience drove some into the desert, into monasteries, hoping there to merit grace by a monastical life. . . . There was very great need therefore to teach and renew this doctrine. . . . (2) The name of faith doth not only signify a knowledge of the history, which may be in the wicked, and in the devil, but a faith which believeth also the effect of the history, that by Christ we have grace, righteousness, and remission of sins. (3) It is necessary to do good works . . . because it is the will of God that we should do them. . . . And, because the Holy Spirit is received by faith, our hearts are now renewed, and so put on new affections that they are able to bring forth good works. . . . Without faith the nature of man can by no means perform the works of the First or Second Table. Without faith it cannot call upon God, hope in God, bear the Cross; but seeketh help from man, and trusteth in man's help. So it cometh to pass that all lusts and human counsels bear sway in the heart so long as faith and trust in God are absent. Wherefore also Christ saith, "Without me ye can do nothing" (Jn 15th), and the Church singeth, "Without thy power is naught in man, naught that is innocent."

Art. xxi., of the *Worship of Saints*, teaches 'that the memory of saints may be set before us, in order that we may follow their faith and good works according to our calling; as the Emperor may follow David's example in making war to drive away the Turks from his country; for both are kings. But the Scripture teacheth not to invoke saints . . . because it offereth unto us one Christ the Mediator, Propitiator, High-priest, and Intercessor. . . . "If any man sin, we have an advocate with God, Jesus Christ the righteous" (1 Jn 2nd). Art. xxii. sums up the case, claiming for the doctrine harmony with Scripture, with the Church Catholic, even with the Roman Church so far as known from the Fathers, and repudiating the charge of heresy. 'It is concerning traditional abuses introduced without any definite authority that the dissension has arisen. It would be a becoming lenity on the part of the Bishops that in view of the Confession now presented they should be patient, since not even the Canons are so severe as to demand the same rites everywhere, nor were the rites of all churches at any time the same. It is a calumnious falsehood that all the ceremonies, all the things instituted of old, are abolished in our churches.'

The whole Confession, or 'Apology,' as Melancthon called it, is eloquent of its author's yearning to promote the re-union of divided Christendom; it breathes the spirit of defence, not defiance. It emphasizes points of agreement before it affirms points of conscientious difference. To many Roman Catholics it was an amazing revelation of the essential Catholicism of Lutheran teaching. To all it was proffered as a *via media* between the paths of sharp divergence. It failed to achieve its pacific purpose. An official Confutation of it was issued, which, in turn, was answered by Melancthon's able and learned *Apology of the Augsburg Confession*, 1531, a lengthy and valuable exposition as well as vindication of the Confession, which came to be regarded and used itself as a standard in 1532 at Schweinfurt, and again at Schmalkald in 1537, and finally received a place among the classical Lutheran Symbols.

It was characteristic of the author of both Confession and Apology, and, indeed, characteristic of the spirit of the movement for which he laboured, that, as with Luther and the Schmalkald Articles, he did not regard either document as fixed and invariable, but took every opportunity of revising both, with the result that both in the printed and in the extant manuscript forms and in the early translations there are innumerable discrepancies, mostly minute, but in several instances serious and deliberate, and significant of the writer's open and changing mind. In accordance with the closing sentence, 'If aught shall be found wanting in this

Confession, we are ready, God willing, to set forth further truth in harmony with the Scriptures,' Melancthon made use of every call for a fresh issue to correct and modify and improve his views. In the edition of 1540, known as the *Variata*, this process reached its climax, when, as in the 1535 edition of his *Loci Communes*, a synergistic modification of his views on absolute predestination and human free-will, on repentance and good works, found expression; and instead of the clause, 'they teach that the body and blood of Christ are truly present and are distributed to those that eat in the Lord's Supper; and they disapprove of those that teach otherwise,' there appeared the milder words, 'they teach that with bread and wine are truly exhibited the body and blood of Christ to those that eat in the Lord's Supper'—a refusal to condemn divergent Protestant views, and an approximation towards those Calvinistic and Zwinglian opinions with which the Marburg Conference and personal interviews with Calvin and Bucer had made Melancthon familiar.

No one can read the Augsburg Confession without being deeply impressed by the sincerity of its effort to conserve the Scriptural and spiritual essentials of traditional Christianity, and by the utter absence of any traces of the spirit of wanton innovation. It is, we may add, significant of the occasion which evoked it, and of the enthusiasm which it inspired, that as presented to the Diet it bore the signatures, not of theologians and churchmen, as in the case of the earlier articles, but of the Saxon Elector and other princes and rulers of Germany. Though there is endless local variety in the terms and formulæ of subscription, it is still the historic standard round which the forces of Lutheranism rally throughout the world. No subsequent Confession has been drawn up without regard to its teaching, and beyond the circle of its direct or indirect influence.

The *Articles of Schmalkald* in Thuringia, 1537, form Luther's last contribution to the Confessions of Protestantism. Paul III. had at last agreed to summon a General Council to meet at Mantua in 1537, and Luther was instructed by the Elector of Saxony to prepare a series of articles embodying the Reformer's convictions, as a basis of discussion at the Council. These were submitted to a gathering of princes and theologians at Schmalkald. Their tone is resolutely and aggressively Protestant. It was resolved, accordingly, not to proceed to the Council. Signatures were appended by the theologians present. Melancthon, by request, contributed an appendix on the Papal authority and primacy, but characteristically qualified his signature to the Articles:

'I, Philip Melancthon, approve the foregoing Articles as pious and Christian. But in regard to the Pope I hold that if he would admit the Gospel, we might also permit him for the sake of peace and the common concord of Christendom to exercise by human right his present jurisdiction over the bishops who are now or may hereafter be under his authority.'

As a whole, the Articles supplement the Confession of Augsburg by defining the Protestant attitude to the Papacy, and as such they contributed towards the final separation.

In section i., the doctrine of the Apostles' and Athanasian Creeds is reaffirmed. In section ii., on 'the office and work of Christ, or our Redemption,' justification by faith is vigorously maintained against all ecclesiastical and superstitious encroachments: upon it 'depends all that we teach and do against the Pope, the Devil, and all the world'; the Mass is 'an unspeakable abomination,' purgatory a 'Satanic delusion,' and the Pope 'the veritable Antichrist,' inasmuch as 'he will not suffer Christians to be saved without his power.' In section iii., fifteen articles deal with sin, the law, repentance, the sacraments, and other matters which 'we are free to debate with men of learning or understanding or settle among ourselves, without appeal to the Pope and his subjects, who are not greatly concerned about them, for they are devoid of conscience, but are intent upon money, honour, and power.' Transubstantiation is denied in favour of consubstantiation in its extreme form—'the true body and blood of Christ are administered and received not

only by pious but also by impious Christians.' If Luther thought that Melancthon had stepped too softly in the Augustana, there was no mistaking his own heavy footfall in the Articles of Schmalkald.

Luther died early in 1546, soon after the opening of the Council of Trent. The controversy with Rome and discussion of terms of re-union dragged on. Numerous *Interims*, or working arrangements, doctrinal as well as ecclesiastical, sometimes voluntary, sometimes coercive, continued as before to swell the Confessional output. The *Augsburg Interim* of 1548 is a notable example. It was drawn up by three theologians of modest ability—the scholastic Michael Holding, the humanist Julius von Pflug, and the reactionary Lutheran Agricola, who were selected by the Emperor Charles v. As was inevitable, compromise was secured only by recourse to gross ambiguity and a clumsy combination of opposites. Roman doctrine and usage were retained in reference to Transubstantiation, the number of the Sacraments, adoration of Mary and of Saints, the sovereignty of the Pope; while a modified acceptance of Justification by Faith and of clerical marriage, permission to use the Cup, and a revision of the doctrine of the Mass, were a sop to Protestant feeling. In 1549, Melancthon, in his eagerness for peace, outraged Protestant feeling by framing, along with other Wittenberg theologians, a precisely similar compromise, the *Leipzig Interim*, in which most Roman usages were represented as things 'indifferent,' as 'open matters'; but neither persuasion nor persecution availed to enforce either Interim. Two years later, in 1551, as a basis for discussion in the resumed meetings of the Council of Trent, Melancthon drew up the *Confessio Saxonica*, or, as he called it, the *Repetitio Confessionis Augustanæ*, a re-statement of Reformed doctrine in conciliatory and moderate but firmly Protestant terms. In 1552, at the request of Duke Christopher of Württemberg, a similar statement was prepared for the same purpose by Brenz—the *Württemberg Confession*. Both statements were duly dispatched by the hands of Protestant representatives to the Council; but the unlooked-for military intervention of the Elector Maurice effectually prevented their discussion, and diverted the current of events towards the final issue of the Settlement and Peace of Augsburg, 1555.

From the date of that Settlement, the political and national frontier between Roman Catholicism and Protestantism was definitely fixed, and the controversy of Lutherans with Rome called for no further additions to the Augsburg Confession and Apology and the supplementary Articles of Schmalkald. Thenceforward, unhappily, the Lutheran Church turned its attention to internal differences upon minor points of doctrine. These controversies were the occasion of the later formulations between 1555 and 1592, the close of the Confessional epoch in Lutheran history.

In 1559 a large and important convention of Swabian theologians and pastors met at Stuttgart to discuss a number of questions bearing on the doctrine of the Lord's Supper, which had been raised by Hagen, a Württemberg minister who had become a disciple and follower of Calvin. The old hiatus in the Marburg Articles was now to be filled up. Under the leadership of John Brenz, the distinctively Lutheran doctrine of the sacramental presence of the body and blood of the Risen Christ with the elements was re-asserted in language so strong as to merit the repudiated title of 'ubiquitarianism,' and founded upon the teaching that in the ascended Lord the human and the Divine are eternally conjoined at the right hand of the Majesty on high, filling all things, so that the body as well as the spirit of Christ is omnipresent,

a spiritual body and real presence 'orally' and in actual substance to be partaken of by all believers, in sacred and impenetrable association with the elements. Unbelievers and godless people may receive it with the hallowed but unchanged elements, though without faith they do so to their condemnation. In the 6th article it is claimed that this doctrine is in harmony with Scripture, and with justice that it agrees also with the Augsburg and the Württemberg Confessions. Beyond question, Brenz was loyal in this position to the whole mind of Luther, and to the characteristic standpoint of the original Lutheran Reformation. But where even Luther, as at Marburg, hesitated to go in doctrinal definition, Brenz and his fellows might well have paused. Not only in Tübingen and the rest of Württemberg, but beyond, a serious menace to Protestant unity was proclaimed. It was much, no doubt, to side with Luther; but, with Calvin and Melancthon both upon the other side, the assurance requisite for Confessional legislation was surely gravely imperilled. For that reason the Stuttgart Articles, although they became binding in Württemberg, were declined by other Lutheran provinces. Melancthon lived just long enough to see them, and to deprecate their 'unseasonable' formulation.

After, as before, Melancthon's death, his open-minded, mediative, liberal spirit, sympathizing now with Roman Catholic, anon with Calvinistic elements of faith, operated as a speculative ferment in all Lutheran lands. Conservative resistance to his opinions and to those which sprang from them logically or by exaggeration led to that bitter and protracted series of doctrinal feuds concerning sin, salvation, and the Sacrament of the Supper, of which the chief were associated with the following names:

(1) John Agricola, who, in opposition to Luther and Melancthon, urged that the law should be set aside in favour of the exclusive preaching of the gospel, even contrition being the fruit of the latter. (2) Andrew Osiander, who, while devoted to the doctrine of justification by faith, preferred the moral and mystical to the forensic meaning of 'justification,' merging it in sanctification through the indwelling of the living Christ, and was opposed by Mörlin and Chemnitz, the joint authors of the Prussian Confession, *Corpus Doctrinae Pruthenicum*, 1567. (3) George Major, who maintained that good works are necessary to salvation, being met by the paradox of Amsdorf that they are injurious to salvation. (4) John Pfeffinger, who defended and developed the later teaching of Melancthon, that a certain remnant of freedom to co-operate with Divine grace in conversion and salvation remains to man, being opposed by Amsdorf, Flacius, and others, who urged Luther's affirmation of the impotence of the natural man to do more than oppose the will of God. (5) Numerous sympathizers with the views of Calvin and of Melancthon on the Lord's Supper, the Person and Natures of Christ, and Predestination—the 'Crypto-Calvinists,' whose views found expression in Saxony during their short-lived ascendancy in the *Corpus Doctrinae Philippticum* (1560), the Wittenberg Catechism of 1571, and the *Consensus Dresdenensis* (1571), but were condemned, as we have seen, at Stuttgart.

At length the tide turned, and set in the direction of compromise. The old Confession of Augsburg was at first the natural rallying-point for the scattered energies of Lutheranism. It was the work of Melancthon, inspired throughout by Luther, the source of the doctrine of all parties. But the question was inevitable—Was it to be the original Augustana, or the revised and seriously altered form of 1540, which had been accepted by all the German Reformers at Worms in that year, and which even Calvin had been able to sign? In 1561, at the *Naumburg Assembly of Princes*, it was agreed to recognize afresh the Augustana in both forms with the Apology. But the clamour against encroaching Calvinism continued. To James Andreæ, a Tübingen professor and pupil of Brenz, belongs the credit of successfully inaugurating the Concord movement. In 1573 he suggested, as a basis of agreement, the substance of six irenic lectures. Later he modified them in accordance

with the criticisms of Martin Chemnitz, the most distinguished pupil of Melancthon and the most eminent of Lutheran theologians. Thus emerged in 1575 the lengthy *Swabian and Saxon Formula of Concord*, followed immediately by the brief *Maulbronn Formula* by Luke Oslander and Balthasar Bidenbach. Both were superseded by the *Book of Torgau*, in twelve articles derived from them, mainly by Andreae and Chemnitz, which found such wide-spread acceptance among the Lutheran princes to whom it was submitted, that its two chief authors, along with four others—Senecker, Musculus, Körner, and Chytræus—were encouraged to re-cast it finally in 1577 as the memorable *Formula of Concord* at Bergen, near Magdeburg, where they met by instruction of the Saxon Elector Augustus, who from the first had been the unfailing patron and liberal promoter of the Concord movement. In 1580, the fiftieth anniversary of the Augsburg Confession, the chief Lutheran Symbols between 1530 and 1577 were recognized, collected, and published in one volume, the *Book of Concord*, at Dresden, a Latin version following the German original.

Though it never attained to an authority and acceptance comparable with those of the Augustana and Luther's Catechisms, the Formula of Concord is a dignified and high-toned utterance, and it played a truly great and timely part in the history of Lutheranism. The effort to produce it practically exhausted the main controversial energies of Lutheran scholasticism, and accentuated the need for rest and quiet. If religious truth must be drawn out in fine-spun thought and expressed through strenuous argument in subtle scholastic propositions, this Formula deserves our admiration and our gratitude. It can scarcely be said with justice that the issues were trivial, or irrelevant, or idle. There will probably always be minds that cannot rest in Christian dogma without re-traversing those old and once well-worn paths of speculation and deduction. It is to be feared that lack of mental courage and resource too often prompts our modern adverse judgments upon those stern debates. We are more willing to let sleeping dogs lie undisturbed; but sleep is not death, and they may awake at any time, as indeed they have often done. We are indisposed to stir the ashes of this 16th cent. conflagration, perhaps in part because we have reason to suspect that deep below their cold surface the ancient fire may lurk unseen. The ultimates of the passionate controversy of that age remain, though we choose not to face them. Difficulties are not annihilated by the mere closing of our eyes in weariness. The language and temper of discussion have undergone a happy change, but who shall say that in the modern Protestant world men think alike to-day upon the meaning of the Sacraments, the relation between the Divine will and foreknowledge and human freedom, sin and salvation, the relation between the human and Divine natures in Christ on earth and in heaven? It may be, however, that we owe it to the undaunted efforts of the men whom we lightly set aside as the post-Reformation scholastics and polemics that we have learned either to practise or at least to respect undogmatic silence upon sacred mysteries left undisclosed by Holy Writ itself, and beyond the reach of Christian experience. The very districts of Germany which in the 16th and 17th centuries were most controversial and most Confession-ridden were the first to turn either to Pietism or to Rationalism. The same Tübingen which later startled Europe with its wanton historical criticism had been a stronghold of Lutheran Conservatism.

The *Formula of Concord* is in two divisions, each containing the same twelve articles in shorter or longer form—the

Epitome and the *Solida Repetitio et Declaratio*. The 'Epitome,' though only a fifth of the dimension of the 'Repetitio' (which contains a fuller exposition, fortified by citations from Scripture, the Fathers, the works of Luther, and the foregoing Confessions), is itself a massive document, and contains a full statement of the preponderant doctrine of the Lutheran Churches set forth in each article according to a fixed scheme: (1) the controversial issue; (2) the affirmative statement of the true doctrine; (3) the negation or condemnation of the false, the whole being prefaced by a significant and, for a Lutheran standard, unusual statement 'of the compendious rule and norm according to which all dogmas ought to be judged and all controversies which have arisen ought to be piously set forth and settled.' That rule, as in Calvinism, is 'the Prophetic and Apostolic writings both of the Old and of the New Testament' alone. All other ancient and modern writings are in no wise to be counted equal to them, but are at most witnesses to later doctrine. Thereafter, as subordinate standards of right doctrine, the three 'primitive Church Symbols' are accepted, with the 'first, unaltered' Augsburg Confession, the Apology of the same, the Schmalkald Articles, and, 'inasmuch as this matter of religion appertains also to the laity, and their eternal salvation is at stake, Dr. Luther's Smaller and Larger Catechisms, because we judge them to be as it were the Bible of the laity.' Then follow the twelve successive articles on Original Sin, Free-will, Righteousness of Faith before God, Good Works, Law and Gospel, Third Use of the Law, Lord's Supper, Person of Christ, Descent of Christ into Hades, Ecclesiastical Ceremonies, Predestination and Election, other Heresies and Sects—Anabaptists, Schwendfeldians, New Arians, and Anti-trinitarians. In every article the conservative Lutheran position is maintained as against the Romanist and Melancthonian, not to say against the Calvinist and Zwinglian and Anabaptist, and the victorious conclusions of the antecedent Lutheran controversies are firmly embodied, sometimes with moderated phraseology.

Especially noteworthy are two groups of Articles. Article II. states that man's will since the Fall and apart from regenerating grace 'is not only averse from God but even hostile,' even as his 'understanding and reason are wholly blind in spiritual things'; and in conversion man is wholly passive. In Art. III. Justification, as 'absolution from sin,' is sharply distinguished from regeneration and sanctification, and Faith, the only 'means and instrument whereby we lay hold on Christ the Saviour, and so in Christ lay hold on that righteousness which is able to stand before the judgment of God,' 'is not a bare knowledge of the history of Christ, but such and so great a gift of God as that by it we rightly recognize Christ our Redeemer in the word of the Gospel and confide in Him.' Moreover, 'although they that truly believe in Christ and are born again are even to the hour of death subject to many infirmities and stains, yet they ought not to doubt either of the righteousness which is imputed to them through faith, or concerning their eternal salvation'; and, 'after man is justified by faith, then that true and living faith works by love, and good works always follow justifying faith.' In Art. XI. Predestination or Election is distinguished from mere foreknowledge which 'extends both to good and evil men' and is not an efficient cause either of good or of evil; it 'extends only to the good and beloved children of God,' and 'procures their salvation,' and appoints those things which pertain to it: it is not to be explored by reason in the hidden counsel of God, but 'sought in the Word of God in which it is revealed: God and His Christ desire and invite all men to turn from sin and be saved: He is not willing that any should perish, but rather that all should be converted and believe in Christ'; it is false 'that some men are destined to destruction not on account of their sins, but by the mere counsel purpose and will of God.' Thus room is found for no Melancthonian synergy with God in salvation, but only for a synergy with Satan in perdition, an exercise of human free-will about which all parties in Christendom were thoroughly agreed.

In the closely related Articles VII. and VIII. on the Lord's Supper and the Two Natures in Christ, while transubstantiation is denied, a purely spiritual presence independent of the elements is set aside: the actual body is partaken of along with the symbols, by virtue of its ubiquity, through suffusion of the human by the Divine in the one and eternally indivisible Lord. In heaven as on earth there has been and is a *communicatio idiomatum*: the right hand of God, the seat of Christ, is not a particular locality; His risen body fills all things, and may therefore be recognized as interpenetrating the consecrated elements. Romanism and Calvinism could equally refute this half-way view: it lost the advantages of both extremes; and it proved too much for its own purpose, for omnipresence of the Lord's body would hallow all objects and not alone or specially the memorial elements. Similarly, the Incarnation was evacuated of meaning, and the dogma of Chalcedon, that there is no confusion or conversion of the two natures in Christ, was inevitably infringed. Interpenetration, sacramental and hypostatic, was the besetting idea of Lutheranism. In both fields of thought, as also in matters of government and ritual, it lacked either courage or discernment to break entirely with Rome and go all the way with the Reformed doctrine of Switzerland. Perhaps, had Melancthon's genius been more decided and uncompromising, his influence upon purely Lutheran formulations would have been more instead of less; he might have overcome the opposition which doctrinal half-measures only served to intensify.

The Formula of Concord became authoritative in Saxony, Coburg, Weimar, Württemberg, Baden, Mecklenburg, Lübeck, Hamburg, and for a time in the Palatinate and Brandenburg.

In 1581 recognition was given by the Church of Anhalt to the *Anhalt Confession*, or *Repetition* of the Augsburg Confession, a purely Melancthonian statement of Lutheran doctrine, drawn up mainly by Superintendent Wolfgang Ameling, and submitted in 1579 to a conference with Hessian divines at Cassel. This Confession is sometimes reckoned among the *Reformed* Confessions; but it is not Calvinistic, recognizing as it does the *Variata* Confession of Augsburg, the *Corpus Doctrinae* of Melancthon, the Schmalkald Articles and Luther's Catechisms, and clinging to the Lutheran sacramental theory of a *manducatio oralis*, and therewith of a *manducatio indignorum*. A somewhat similar position was taken up about the same time by the *Nassau Confession* (1573), prepared by a Saxon Crypto-Calvinist, Pezel, which rests upon the *Variata* and the Saxon Articles, rejecting the ubiquitous doctrine of strict Lutheranism. On the other hand, in 1592, Melancthonian and Crypto-Calvinistic doctrine was roundly condemned afresh by the *Saxon Visitation Articles*, prepared on the basis of a discussion between Andree and Beza in 1586 by the Marburg theologian Hunnius and others. Four groups of brief uncompromising propositions re-assert the Concord teaching—(1) on the Lord's Supper, (2) on the Person of Christ, (3) on Holy Baptism, and (4) on Predestination and the Eternal Providence of God—as the 'pure and true' doctrine. A similar series of groups pillory the alleged 'false and erroneous' teachings of the Calvinists. In Saxony, conformity to these articles was rigorously and cruelly enforced. Notice may also be taken of the attempt made in 1655 by the rigid conservative Calovius to secure the condemnation of the so-called 'Syncretism' of the liberal and pacific George Calixtus of Helmstadt and his school, who gave expression to the feeling of reaction against Lutheran bigotry and exclusiveness, and desired a Catholic understanding between Lutherans, Calvinists, and Romanists on the basis of the creeds and consensus of the first five centuries, relegating to a secondary place all points of controversial difference. Calovius' counterblast took the form of a *Repeated Consensus of the truly Lutheran Faith*, but happily it never attained to Confessional authority. The movement it sought to arrest has continued unabated to the present time.

Lutheran Confessions outside Germany.—A brief reference must suffice for the little group of Confessions representing various stages of Lutheranism in other lands. In no case are they marked by original contributions of any theological moment.

(a) In Denmark, so early as 1530, when 21 Lutheran preachers were arraigned, at the instance of the bishops, before the National Assembly at Copenhagen, they drew up under the leadership of Hans Tausen, the 'Danish Luther,' *Forty-Three Articles*. These remained to proclaim the Danish Reformed Faith until set aside in favour of the Augsb. Conf. and Luther's Small Catechism.

(b) In Bohemia (as above mentioned, p. 844) a Lutheran type of faith found expression (1) in the *Bohemian Confession* of 1535, which closely adheres to the Augsburg Confession, and (2), in alliance with Calvinism and the Teaching of the Brethren, in the *Bohemian Confession* of 1575, which adheres to the altered or Melancthonian version of Augsburg doctrine.

(c) In Hungary, Lutheran doctrine was restricted mainly to German-speaking districts, the teaching of Melancthon and Calvin appealing to the Magyar people. *Twelve Articles at Erdöd*

were framed in 1545, in harmony with the Augsburg Confession. Three years later, a similar Lutheran statement issued from a Synod which met at Mediasch, representing five towns in Upper Hungary, the *Confession of the Five Cities*.

(d) In Poland, Lutherans took part in the making and acceptance of the *Consensus of Sendomir* (1570), which, like the Second Bohemian Confession, emanated from a joint-Synod of Lutherans, Calvinists, and Brethren. It follows Melancthon's Saxon Repetition of the Augustana, in essential harmony with the Calvinistic position regarding the Lord's Supper, avoiding extreme Lutheran tenets. On Predestination it is silent, no controversy having emerged thereupon. A notable feature is the complete mutual recognition of the Churches concerned, and the practical exhortation to avoid strife and promote fellowship by every possible means.

(e) In the United States of America the Lutheran Churches have contented themselves with subscribing to the Augsburg Confession (unaltered), or to the whole Book of Concord, without adding to the Corpus of Lutheran Confessions.

LITERATURE.—In addition to the standard Histories of the Reformation and of Christian Doctrine (among the latter, esp. Harnack, *Hist. of Dogma*, Eng. tr.), reference may be made to Schaff, *Hist. of Creeds* (ch. vi. with detailed authorities) and *Creeds of Evangelical Prot. Churches* (for most important texts, viz. Augustana, Luther's Small Catechism, Concord Formula [Epitome], and Saxon Visitation Articles); J. T. Müller, *Die symb. Bücher der evang. luth. Kirche*, Stuttgart, 1869; Hase, *Libri Symbolici Eccles. Evang.*, 1827, 1845, etc.; A. and S. Henkel, *The Christian Book of Concord*, 1854 (complete tr. from German); Köllner, *Symbolik der luth. Kirche*, 1837; Krauth, *The Conservative Reformation and its Theology*, 1871; Winer, *Confessions of Christendom*. Also valuable detailed articles in *PRE* on the various documents.

14. Confessions in the Anglican (Episcopalian) Churches.—Although England may claim through Wyclif to have been the chief contributor to the early Reformation movement, it was not until a century and a half after the publication of Wyclif's *Twelve Theses* against Transubstantiation that the formulation of new Articles of religion was set about. In the interval, however, the national mind was far from idle. Wyclif's thought was not allowed to perish in the Universities, and, later, Luther's works were freely read and pondered. Church and Crown were able long to restrain the rising tide of freedom, but, when they fell out, the Reformation burst over the land in overwhelming force. In England, as in Saxony, the new cause found its patrons not only in the Universities but among cultured princes—a fact which goes far to explain not only the Erastianism, but the doctrinal, ritual, and constitutional conservatism common to the Anglican and Lutheran Churches. No doubt, the outward Reformation owed much to the royal and the national self-assertion characteristic of the age; and it was a strange providence that linked it with the domestic and dynastic predicament of Henry VIII., whose reluctant marriage with his brother's widow was prescribed by Spanish statecraft and sanctioned by the Papacy in violation both of its own most sacred laws and of the conscience of Europe. But in fact it experienced at Henry's hands as much embarrassment as help, and, though his mind had many enlightened sympathies, the royal 'Defender of the Faith' was not the real inaugurator of Reform. The land of Magna Charta and of John Wyclif could not keep still while the rest of Northern Europe was in the throes of the struggle for religious liberty. It was not likely to submit for ever to an Italian Papacy in the realm of truth and order. The English was essentially a native Reformation, though assisted from abroad.

Much as the English articles, accordingly, owed to Wittenberg and Switzerland, they retained a

character of their own. Like the English Church organization, service, and traditions, they are not to be summarily described as Lutheran or Zwinglian or Calvinistic. Happily the story of the evolution of the Anglican formularies can be recounted without controversy, though the business of their detailed interpretation is involved in intricate and delicate questions. Even as standards of doctrine, they have from the first been inextricably associated with the Prayer Book: in the nature of the case an exclusive and obligatory manual of service must throw as much light upon the doctrinal *arcana* of a Church's faith as even a formal body of theological propositions. To ignore or to miss this fact is to deprive oneself of the necessary key to the understanding of the peculiar history and position of the great Anglican Church. Beyond all the other Reformed Churches, the Anglican and the Lutheran clung to every reputable relic of Roman Catholic tradition and custom. If in its articles the former Church went further apart than the latter from the parent Romanism, in its ritual and its government and its tone it was more conservative. The theology of Puritan Anglicanism is an episode of which the Church has far less cause to be ashamed than many of its sons are wont to suppose, but it is an episode whose influence, however powerful still in Church and in derived 'Dissent,' was never more than partial and limited. Both from the history of the successive Articles of Faith and from the history of that revision of the Roman Service Book which issued in the Prayer Book, it is abundantly clear that the Anglican Church, since its break with Rome, has been in profound sympathy with the great leaders of the Continental Reformation, both German and Swiss, but it is not hastily to be identified with either of the historic groups.

Early Articles (1536-1543).—Six years after the publication of the Augsburg Confession, and two years after the abjuration of Papal supremacy by Parliament and both convocations of clergy, in 1536 appeared the earliest English articles. *The Ten Articles*, 'devised by the King's Highness Majesty to stablyshen Christen quietnes and unitie among us, and to avoide contentious opinions, and ordered to be read in churches,' are eloquent of the divided state of religious thought in England. On account of their extreme conservatism, representing the standpoint of Gardiner, bishop of Winchester, rather than of Cranmer, archbishop of Canterbury, Foxe characterizes them as intended for 'weaklings newly weaned from their mother's milk of Rome.' In view of the statement in a royal letter that the king 'was constrained to put his own pen to the book, and to conceive certain Articles which were by all the bishops and whole clergy of the realm in convocation agreed on as catholic,' it seems certain that the king, whose learning was considerable, and whose theological interest was lively, had a personal share in the composition or revision of the Articles. Very probably his intervention sufficed to turn the scales on the side of the conservatives, whose concern was to ward off Papal intrusion and to leave doctrine and ritual severely alone; yet the Augsburg influence is unmistakable. The document was of substantial use in that transitional time, and could conscientiously be subscribed by men like Foxe and Cranmer, who were prepared at once to go far further in advance. Like the Augsburg Confession, it falls into two parts: the first five Articles deal with doctrine, the second five with ceremonies.

In the first part the three ancient Creeds are insisted upon in addition to 'the whole body and Canon of the Bible' as standards of doctrine according to their plain 'purport' and the mind of 'the holy approved doctors of the Church'; those who will not accept them are 'very infidels or heretics and

members of the Devil with whom they shall perpetually be damned' (Art. 1). Baptism is 'a thing necessary for the attaining of eternal life': original sin cannot be remitted except by it; infants dying shall undoubtedly be saved thereby, otherwise not; in the adult or in children having the use of reason it is conditional upon penitence and doctrinal faith, and is effective through 'renovation of the Holy Ghost' (Art. 2). Penance is a sacrament 'institute of Christ in the New Testament as a thing so necessary for man's salvation that no man which after his baptism is fallen again, and hath committed deadly sin, can without the same be saved,' and its constituents of contrition, auricular confession, and an amended life of good works are required: 'item, that by penance and such good works of the same we shall not only obtain everlasting life, but also we shall deserve remission or mitigation of these present pains and afflictions in this world' (Art. 3). 'As touching the Sacrament of the Altar . . . under the form and figure of bread and wine . . . is verily substantially and really contained and comprehended the very selfsame body and blood of our Saviour Jesus Christ, which was born of the Virgin Mary and suffered upon the cross for our redemption . . . and under the same form and figure of bread and wine the very selfsame body and blood of Christ is corporally really and in the very substance exhibited, distributed and received unto and of all them which receive the said sacrament' (Art. 4). Justification 'signifieth remission of our sins and our acceptation or reconciliation unto the grace and favour of God, that is to say, our perfect renovation in Christ'; it is attained 'by contrition and faith joined with charity'; . . . not as though our contrition or faith or any works proceeding thereof can worthily merit . . . Justification, but God also requireth good works to follow faith' (Art. 5).

According to the second part, images, especially of Christ and the Virgin, are to be retained, for their wholesome teaching and suggestion, but not for idolatry or ceremonial honour (Art. 6). Saints are to be honoured as elect of Christ, as having lived a godly life, and as reigning with Christ, also as 'advocates of our prayers and demands unto Christ,' but 'not with that confidence and honour which are only due unto God' (Art. 7). 'Albeit grace, remission of sin, and salvation cannot be obtained but of God only by the mediation of our Saviour Christ, . . . yet it is very laudable to pray to saints in heaven . . . to be intercessors and to pray for us and with us . . . so that it be done without any vain superstition as to think that any saint is more merciful, or will hear us sooner than Christ, or that any saint doth serve for one thing more than another, or is patron of the same' (Art. 8). Roman rites and ceremonies are 'good and laudable' and 'not to be contemned and cast away'; but they have no 'power to remit sin,' but only to stir and lift up our minds unto God (Art. 9). 'It is a very good and chitable deed to pray for souls departed and also to cause other to pray for them in masses and exequies . . . whereby they may be relieved and holpen of some part of their pain,—but forasmuch as the place where they be, the name thereof, and kind of pains there, also be to us uncertain by Scripture, therefore this with all other things we remit to Almighty God . . . wherefore it is much necessary that such abuses be clearly put away, which under the name of purgatory hath been advanced, as to make men believe that through the bishop of Rome's pardons souls might clearly be delivered out of purgatory and all the pains of it' (Art. 10).

Regarded both in themselves and in connexion with the 'Injunctions' issued in 1536 and 1538, these Articles, with all their caution, are unmistakably on the side of such reformation as Luther demanded. They were meant to unite old-school and new-school Christians, and to be tender towards everything hallowed by tradition, so long as superstition was not necessarily involved in it. Agreement on a more advanced basis of doctrine was at the time impossible. It is something that Transubstantiation was ignored, that the risks and fact of idolatry in Church observances were proclaimed, and that in the 'Injunctions' of 1538 a large public Bible was enjoined to be placed in every parish, within the reach of all. The Articles were followed up and superseded in 1537 by the *Institution of a Christian Man*, prepared by a committee of church dignitaries under Cranmer, and hence known as the *Bishops' Book*, which, though neither issued by Convocation nor revised by the king as purposed, nor issued by his authority, was published by the king's printer, and speedily became a practical formulary of Church doctrine. It contains an exposition of the Apostles' Creed, the seven Sacraments, the Ten Commandments, the Lord's Prayer, the Ave Maria, and a repetition, from the Ten Articles, of the sections on Justification and Purgatory; and, though it retains seven sacraments, it refers severely to their abuses, and distinguishes between the three in the Articles and the others. Its standpoint and teaching are like

those of the Articles. In 1543 it was revised at Gardiner's instance, in characteristic fashion, by Henry VIII. in a reactionary interest and in keeping with his harsh anti-Protestant Statute of the Six Articles, and was issued with his authority and that of Convocation as *The Necessary Doctrine and Erudition for any Christian Man*. It was known as the *King's Book*, and is notable as insisting on the doctrine of Transubstantiation: 'in this most high Sacrament of the Altar the creatures which be taken to the use thereof as bread and wine do not remain still in their own substance . . . but be changed and turned to be the very substance of the body and blood of our Saviour,' and as insisting upon clerical celibacy. With the Bishops' and the King's Books a *Catechism* was associated.

Evolution of the Thirty-nine Articles (1538-1562).—So early as 1538, conferences held between Anglican and Lutheran divines in Wittenberg and at Lambeth issued in the framing of *Thirteen Articles* towards a complete Confession of Faith. It was found impossible to reach agreement on disciplinary and ecclesiastical matters, and the project was abandoned, but the thirteen Articles on doctrinal subjects were retained by Cranmer, and in the succeeding reign of Edward they, not the Ten, became the basis of the final Articles of the Church.

They deal with (i.) the unity of God and Trinity of Persons, (ii.) original sin, (iii.) the two natures of Christ, (iv.) Justification, (v.) the Church, (vi.) Baptism, (vii.) the Eucharist, (viii.) Penance, (ix.) the use of sacraments, (x.) ministers of the Church, (xi.) rites of the Church, (xii.) civil affairs, (xiii.) the resurrection of bodies and final judgment. Throughout, the influence of the Augsburg Confession is paramount. Articles i.-iii. are almost identical with their prototype; others are largely in verbal, as well as entirely in theological, agreement with them; only on Baptism, the Eucharist, and Penance is there substantial variation or addition, the doctrine, even in them, remaining the same.

In 1547, Cranmer issued a *Catechism* translated from a Lutheran German original. In 1549 appeared the *First Prayer Book of King Edward VI.*, a Service Book in English, prepared under Cranmer from the Use of Sarum, from a recent revision of the Breviary by Cardinal Quignon, and from a recent adaptation by Melancthon and Bucer of the ancient offices of Nürnberg. It was studiously moderate in its reforming purpose (e.g. in reference to the Eucharist and the Sign of the Cross), in order that the most conservative might be able to use it. The issue of Articles of Faith was long delayed by Cranmer, who hoped to secure a common Confession with Lutherans and Swiss Reformed, and who corresponded with Melancthon, Calvin, and Bullinger, with a view to that great end first suggested by Melancthon in 1539. From the end of 1545 to 1547, and from 1551 to 1553, the Earlier Sessions of the Council of Trent were being held—a spur, as Cranmer wrote to Calvin, to Protestants to vindicate the truth as they conceived it. Of course, sacramental definition was the great obstacle to Protestant agreement, and political difficulties made any extensive conference hard to secure. Cranmer had not abandoned his honourable hope for that consummation when, in 1551, upon instructions received, he furnished the Privy Council and Bishops with a first draft of the *Forty-Two Articles*, which passed through repeated revisions by lay as well as clerical hands, and were given a final mandate for subscription in 1553. Though they bore the title 'Articles agreed on by the bishops and other learned men in the Synod at London in the year of our Lord MDLIII,' it is not certain that they were ever formally discussed and sanctioned by Convocation.

Dr. E. C. S. Gibson thinks, Principal Lindsay is sure, that they were not, and they incline to regard the claim of the title as due to the unscrupulous determination of the Privy Council to secure their operation at once; but there are serious difficulties in the evidence, as Gibson concedes, and, in spite of the absence of any record of them in the minutes of Convocation,

which were scandalously defective,—according to Fuller, 'but one degree above blanks . . . scarce affording the names of the clerks assembled therein,'—there is little reason to abandon Archdeacon Hardwick's contrary opinion.

A *Catechism*, which was frequently printed along with the Articles, and certainly lacked the authority of Convocation, had been prepared shortly before. As for the contents of these Forty-Two Articles, their foundation is unmistakably the *Thirteen Articles*, which are embodied in them and impart their character and standpoint to the whole. It is to those earlier Articles that they are chiefly indebted for their Lutheran elements; for, though natural affinity and political expediency originally dictated a close alliance with Lutheranism, the independence and the genius for practical compromise which are characteristic of the English mind asserted themselves with growing force, and prompted the Anglican Church to steer a course through the alternatives of Continental thought, now approaching one type, now another, but avoiding thoroughgoing agreement with any. The framers of the Forty-Two Articles had not only the earlier English attempts in mind, but also the partial Tridentine scheme of doctrine, the Lutheran, the Zwinglian (to which Cranmer leaned in regard to the Lord's Supper), the Calvinist, and, over against all these, the medley of eccentric or heretical opinions roughly classed as Anabaptist and Socinian. The makers of the Anglican Articles at every stage cherished a statesmanlike desire, fostered assiduously both by the political sagacity of successive sovereigns and by the balance of conservative and liberal theological parties in Church and State, to remain in touch with Catholic as distinct from Papist tradition, at every possible point, while keeping in line with the primary evangelical positions of the Reformed Churches. Theological initiative or originality was neither displayed nor coveted: problems were worked out to practical, not speculative, solutions; concord was a prior objective to truth. The Articles are scarcely a system of ordered doctrine: upon many important topics they are silent; they lean theologically upon the Prayer Book or upon the Scriptures; they deal merely with topics agitating the religious world at the time, and are content simply to distinguish authorized from unauthorized doctrine, without attempting a fresh re-statement of Christian truth. Their purpose and character are manifestly polemic or apologetic rather than critical and constructive.

Articles XII. XIII. XXIII. XXVI. XXIX. XXX. condemn the Roman errors on merit and works of supererogation, purgatory, *grace ex opere operato*, transubstantiation, and sacrificial Masses. Art. V. XX. XXI. XXII. XXV. XXXI. XXXIII. XXXV. XXXVI. assert the fallibility of the Church of Rome and of General Councils as proved by facts, the exclusive claim of Scripture as warrant of any article of faith, the duty of setting forth the Bible in the language of the people, the lawfulness of clerical marriage, the proper attitude to traditions and ceremonies, and, finally, that the King of England is supreme head on earth, next under Christ, of the Church of England. . . . 'the Bishop of Rome hath no jurisdiction in this realm of England.' Art. I.-IV. VI.-VIII. XIV. XV. XVIII. XIX. XXIV. XXVII. XXVIII. XXXII. XXXIII. XXXVI.-XLII. explicitly or implicitly condemn the varied opinions, classed as Anabaptist, which impugned the Creeds, Catholic Christology, faith in the Trinity, rights of individual property, the need of Scriptures, infant baptism, avoidance of excommunicated persons, reverence for traditions and ceremonies, obedience to magistrates, military service, taking of oaths, and which affirmed Christian perfection, inefficacy of services and sacraments conducted by unworthy ministers, ultimate universal salvation. While Art. I. II. XXIII. XXVI. XXVII. XXXII. reproduce the language of the Lutheran Confession on the Trinity, Incarnation, Ministry, Sacraments, and Church traditions, from the Thirteen Articles, there is no similar indebtedness in the Articles dealing with the characteristic Reformation topics bearing on the process of human salvation.

The following particulars may be noted: God is one, without bodily parts or passions, in three Persons of one substance, power, and eternity (I.); Christ has two whole and perfect natures, . . . suffered . . . to reconcile his Father to us and to be a sacrifice for all sin of man, both original and actual (II.),

went down into Hell, truly rose again, and took again his body, with flesh, bones, and all things . . . wherewith he ascended into heaven (IV.); Scripture contains all things necessary to salvation, so that whatsoever is neither read therein nor may be proved thereby, although it be sometime received of the faithful as godly and profitable for order and comeliness, yet no man ought to be constrained to believe it as an article of faith or reputed it requisite to the necessity of salvation (V.): Original sin is not the following of Adam's example, but a taint inherited, deserving God's wrath and damnation: it remains in the baptized, though not to condemnation if they are believers (VII.); We have no power to do good works pleasant and acceptable to God without the grace of God by Christ preventing us (IX.), yet no man's will is forced: his sin is his own (X.). Justification is by faith alone (XI.): works done before the grace of Christ and the inspiration of His Spirit do not please God or prepare for grace, but have the nature of sin (XII.); it is presumptuous arrogance to speak of human works of supererogation (XIII.); Christ alone is sinless (XIV.): Predestination to life is God's everlasting purpose and decree, secret to us, to deliver from curse and damnation those whom He hath chosen . . . such are called by His Spirit working in due season, through grace they obey the calling, are justified freely, made sons by adoption, made like the image of God's only-begotten Son; as the godly consideration of predestination and our election in Christ is full of sweet, pleasant, and unspeakable comfort to godly persons . . . as well because it doth greatly establish and confirm their faith of eternal salvation, as because it doth fervently kindle their love towards God, so, for curious and carnal persons lacking the Spirit of Christ, to have continually before their eyes the sentence of God's predestination is a most dangerous downfall whereby the Devil may thrust them either into desperation or into a recklessness of most unclean living no less perilous; although the decrees of predestination are unknown unto us, yet we must receive God's promises in such wise as they be universally set forth to us in holy Scripture, and in our doings that will of God is to be followed which we have expressly declared unto us in the word of God (XVII.): The visible Church of Christ is a congregation of faithful men, in which the pure word of God is preached, and the Sacraments duly ministered according to Christ's ordinance; the Churches of Jerusalem, Alexandria, Antioch, and Rome have alike erred not only in their living, but also in matters of their faith: it is not lawful for the Church to ordain anything contrary to God's written word, nor may it so expound one place of Scripture that it be repugnant to another. General Councils may not be gathered together without the commandment and will of princes; they may err in all manner of matters, and have no authority apart from Scripture (XX.-XXII.): The Scholastic doctrine of Purgatory, pardons, and worship of Saints, is a fond thing vainly feigned and unscriptural (XXIII.): The Sacraments are but two, were ordained by Christ to knit together His people, not to be paraded, but rightly used; are efficacious only to such as receive them rightly, not as ritual acts; are not only badges and tokens of Christian profession, but rather certain sure witnesses and effectual signs of grace and God's good will towards us, by which He doth work invisibly in us and doth not only quicken but also strengthen and confirm our faith in Him; they are not annulled by unworthy celebrants: Baptism is not only a sign of Christian profession, but also a sign and seal of our new birth, whereby, as by an instrument, right recipients are grafted in the Church, and the promises of forgiveness of sin and our adoption to be the sons of God are visibly signed and sealed; faith is confirmed and grace increased by virtue of prayer. The Lord's Supper is not only a sign of Christian charity, but is rather a Sacrament of our redemption by Christ's death, inasmuch that to such as rightly, worthily, and with faith receive the same, the bread which we break is a communion of the body of Christ; likewise the cup of blessing is a communion of the blood of Christ. Transubstantiation cannot be proved by Holy Writ, is repugnant to it, and hath given occasion to many superstitions; Christ's risen body cannot be present at one time in many and divers places; a believer ought not to believe or confess the real and bodily presence of Christ's flesh and blood in the Sacrament: the offering of the Cross was once for all (XXVI.-XXX.). The Prayer Book and ordinal of the English Church are godly and in no point repugnant to the wholesome doctrine of the Gospel (XXXV.): 'They are worthy of condemnation who endeavour to restore the dangerous opinion that all men, be they never so ungodly, shall at length be saved when they have suffered pains for their sins a certain time appointed by God's justice' (XLII.).

As a whole, it is clear that the Articles, in spite of their connexion with the Augsburg Confession, incline to the Reformed or Swiss rather than to the Lutheran type of doctrine. In reference to the doctrine of the Sacraments and of Scripture they are Reformed, not Lutheran, denying the ubiquity of the eternal body of Christ. On Justification and on the Church and observances they agree with both types, and are thoroughly Protestant. On Election and Predestination they occupy a prudent position, compatible with either type, passing over in silence the problems of the relation of God's all-embracing decree to the loss of

the non-elect or the reprobate. Earlier Lutheran Confessions had omitted the whole subject; Zwinglian Articles had merely touched upon it in a sentence Scripturally; the decrees of Trent in 1547 dismiss it in a cautious sentence without any definition (Sess. vi. can. 17); Calvinistic Confessions had treated it hitherto with even greater brevity and reserve than the English Articles themselves. It is absurd, with some Anglican writers, to deny the Calvinism of the Articles on this subject; but for Calvinistic influence and example they would not have discussed the subject at all. They go further than any contemporary formula, and much further than, e.g., the later *Scots Confession* of John Knox in 1560. They repudiate the opinion that all men shall ultimately be saved; they limit saving predestination to the 'Elect,' and affirm the total inability of natural man to save himself. It is surely a very negative virtue in the Articles, therefore, though common to all Confessions existing at the time, that they evade the problem why God has not predestined all equally to grace and salvation, if all alike have sinned and come short; it is hardly enough to say of Him that He elects to abandon some to their own courses, for surely it is as serious a reflexion upon the Divine perfection, love, and justice, to say that He fails to care for some as to say that He predestines some to reprobation and damnation. It is un-historical to deny the Calvinism of the English Articles, as distinct from the English Service Book to which they were added, merely because they do not, with later Calvinistic Confessions, endeavour to carry out the broad principles of election and grace to their narrowest ultimate conclusions. Anglican Puritanism might not be able to appeal for authority and vindication to the Prayer Book in its entirety, but to the Edwardine Articles it could legitimately look as to the rock whence in England it was hewn. These Articles are not developed, much less exaggerated, Calvinism. They are not Calvinistic in any partisan sense. But with Calvinistic doctrine, as already formulated, they are in unmistakable sympathy. It is not to be forgotten that Cranmer, their chief author, was partial to the Swiss type of doctrine, though personally well disposed to Lutheran divines and eagerly desirous of securing a doctrinal basis of re-union and harmony between all sections of the Reformed Church. The Articles of 1553 are a clear reflexion of that attitude.

While the discussion of the Forty-two Articles was in progress, and the simultaneous *Reformatio Legum Ecclesiasticarum* was being prepared for issue early in 1553 (a new Code of doctrine and usage, which never became authoritative, but is useful as a work by the authors of the Forty-two Articles, throwing light upon their meaning and purpose), the Prayer Book of 1549 was issued in 1552 in a substantially revised form—the *Second Prayer Book of Edward VI.* The chief changes were directed to the complete de-Romanizing of the Communion Service. The old sequence was altered; a large portion of the consecration prayer was transferred to another place, with a separate title, its petition for the departed being left out; everything that intervened between the consecration and the reception of the elements was dropped, in order to discourage their adoration; and, instead of the words which accompanied their delivery, 'The Body of our Lord Jesus Christ which was given for thee preserve thy body and soul unto everlasting life . . . The Blood of our Lord Jesus Christ which was shed for thee preserve thy body and soul unto everlasting life,' there were substituted, 'Take and eat this in remembrance that Christ died for thee, and feed on him in thy heart

by faith with thanksgiving. . . . Drink this in remembrance that Christ's blood was shed for thee, and be thankful'—a form upon which Zwinglians as well as Calvinists, Lutherans, and Romanists might agree. At the same time a number of anything but ultra-Protestant or Puritanic ritual changes were made, e.g. the insertion of the so-called 'black rubric'—objected to by John Knox, then one of the royal chaplains—which, in the interest of reverence and decorous uniformity, ordained a kneeling posture in the act of Communion.

During the reign of Mary there was drawn up in 1554 and issued for circulation a *Confession of Protestant faith by a group of prisoners*, including Bishops Ferrar, Hooper, and Coverdale, the martyr Rogers, and, among other signatories, John Bradford, who is credited with its composition. It set forth their loyalty to Scripture, to the ancient Creeds and the great Councils, and to the doctrine of Athanasius, Irenaeus, Tertullian, and Damascus; and in firm but moderate terms their adherence to Protestant opinions regarding faith, justification, public worship in the popular tongue, prayer to God alone, Purgatory, Masses for the dead, and the Sacraments. In 1555 a series of *Fifteen Test Articles of Bishop Gardiner* were thrust upon the University of Cambridge in the interests of the Roman Catholic reaction, followed by the *Five Articles* compiled by the latest Convocation of the reign in 1558: three on the Eucharist, the fourth on the supremacy of the Pope, and the fifth on the transference of ecclesiastical judgments from lay to clerical hands.

In the reign of Elizabeth, and under Archbishop Parker, the work of revision of the Service Book and Articles continued to be prosecuted, always with the consistent policy of safeguarding the Royal supremacy and a Protestant testimony to evangelical truth, and of retaining the ancient ritual and usage so far as innocent of idolatry and superstition—a policy which enabled the Crown to claim the privileges secured to a Lutheran, as distinct from a 'Reformed,' profession, by the Peace of Augsburg in 1555. The Elizabethan changes in Prayer Book and Articles in no wise impaired their essential Protestant testimony, but were intended to remove such elements in the Edwardine standards as were anti-Lutheran. In 1559 the new edition of the *Prayer Book* was issued in what was to prove substantially its permanent form, with the old delivery-sentences at the Communion restored and set in front of the corresponding sentences of Edward VI.—a monument of the spirit of mediation and doctrinal compromise characteristic of the Anglican Reformation. The Forty-two Articles were for a few years left unrevived and, as a test, at least, inoperative. In 1559 a short paraphrase of their doctrine in *Eleven Articles* was prepared and made obligatory by Parker and his associates, who at the same time drew up a tentative series of *Twenty-four Latin Articles*. The Eleven Articles were made binding only by episcopal authority, neither by Crown nor by Convocation, and were apparently intended to serve merely as a stop-gap; but in Ireland they became in 1563, by royal and episcopal ordinance, the accepted standard of doctrine along with the Irish Prayer Book, until replaced in 1815 by the Thirty-nine Articles.

At last, in January 1563, the revisory labours of Parker and his fellow-workers were brought to a close, when his draft of forty-two Articles was submitted to Convocation. These were by no means identical with the Forty-two of 1553. Their basis was the *Latin* issue of that formulary, varying in some particulars from the English.

They omitted the old articles on Grace (X), a part being transferred to the new X.; on Blasphemy against the Holy Ghost (XVI.); on the Obligation of the Moral Law (XIX.), part

being retained in the new VII.; and against the Millenarians (XLI.), who had been suppressed. On the Holy Scriptures they omitted the clause which conceded that what was neither read therein nor could be proved thereby might be sometime received of the faithful as godly and profitable for an order and comeliness though not made obligatory. On Predestination they omitted the statement 'the Divine decrees are unknown to us,' to which the Council of Trent had added 'except by special revelation'; and on the Sacraments the stricture upon the phrase *ex opere operato*. They borrowed largely, and in accordance with Elizabethan policy, from the most recent notable Lutheran Confession, the Confession of Württemberg (1552)—in particular the clause in Art. II. on the eternal generation and consubstantiality of the Divine Son, and the whole new article on the Holy Spirit, both *verbatim*, the appendix to the article on Scripture, the articles on Free-will and Good Works, and part of the articles on Justification and on the Judicial Authority of the Church. Besides the new articles on the Holy Spirit and on Good Works borrowed from the Lutheran Confession, they added two others—one affirming the Scriptural authority of Communion in both kinds (XXX.), the other denying that wicked or unbelieving persons are partakers of Christ in the Sacrament, and therefore condemning a Lutheran tenet, for which reason probably it was omitted as impolitic in all the printed copies until 1571. Other changes of addition or substitution, numerous, though small in bulk, strengthened without exception the Protestant character of the whole, reduced the number of the Sacraments explicitly to two, affirmed that Transubstantiation overthrows the nature of a Sacrament, but declared that the body of Christ is after a heavenly manner given, taken, and eaten in the Supper.

The forty-two Articles thus submitted to Convocation by Parker emerged ten days later reduced in number to *Thirty-nine*.

Three articles were omitted as no longer needed against Anabaptist errors (XXXIX., XL., XLII. of the Edwardine series), denying that the resurrection is already brought to pass, that the souls of the departed die with the bodies or sleep idly, and that all men shall be saved ultimately. Half of Art. III. on Christ's descent into Hell was omitted, including the reference to 1 P. 3:9; in the Article on the Lord's Supper the Zwinglian paragraph denying the ubiquity and the real and bodily presence of Christ's flesh and blood was left out in favour of the brief sentence—'The body of Christ is given, taken, and eaten in the Supper only after an heavenly and spiritual manner: and the means whereby the body of Christ is received and eaten in the Supper is faith'—a Lutheran-Calvinistic alternative. In Art. XX., on the Authority of the Church, the proposition, 'The Church hath power to decree rites or ceremonies, and authority in controversies of faith: and yet,' was prefaced to the existing words 'it is not lawful for the Church to ordain anything that is contrary to God's word'—an addition innocent enough, indeed implicit already and redundant, omitted in many unauthorized copies of the Articles, but later made the basis of furious controversy, and even credited to the interfering hand of Laud as a spurious interpolation.

Amid the alarms and difficulties caused by Romanist secessions, and the effects of the Bull of excommunication in 1570 upon timid or wavering spirits, the Houses of Parliament urged upon the Queen a bill to require subscription to the new Articles; but, jealous of her prerogative and resenting the initiative of the Commons, she declined until 1571, when the Articles assumed in Convocation their present form, including XXIX. and the preface to XX., and the bill became law. Changes urged by the growing Puritan party in Convocation, some of whom desired nothing less than a new Confession upon the Continental models, were not passed, and the Articles accordingly remained true to the moderate and mediating Reformed type which from the first had characterized the Anglican Reformation. The polemic of the Edwardine Articles against the Lutheran conception of the Supper and of the ubiquity of the actual body of Christ is laid aside, but Lutheran opinions are not set forth save upon less distinctive topics. Zwinglian conceptions are neither affirmed nor denied. Anabaptist heresies are ignored as no longer dangerous to the Church. Sympathy with moderate Calvinism (as expressed, e.g., in the Gallican and Belgic Confessions, 1559, 1561) remains unimpaired in the Articles on the Sacraments, on Scripture, and on Election and Predestination, though the ecclesiastical supremacy of the sovereign was anything but Calvinistic. Against the abuses and the errors of Rome there is no weakening or wavering of the Anglican protest. With all their halting between two opinions, their want

of theological originality, their intentional incompleteness, they have been a noble bulwark of Protestant conviction, and possess a simple dignity and catholicity of their own. Against their measured testimony, spoken with the formula of Trent as clearly in view as those of Lutheranism and Calvinism, even the interpretative casuistry and antiquarian imagination of the Oxford Movement urged their forces in vain. Their intention, their spirit, and their language are certainly Protestant. They stand, accordingly, in the closest affinity with the best work both of Wittenberg and of Geneva. They were made authoritative both in the original Latin and in the English of the Convocation of 1571, though, as Gibson points out (vol. i. p. 43 f.), the Act of the 13th of Elizabeth required subscription to the English edition of 1563, which was without Art. XXIX. and the first sentence of Art. XX., and exacted subscription only to the doctrinal as distinct from the disciplinary Articles—a concession to the Puritans; and the insistence upon subscription to *all* the Articles in the *final* form of 1571 prepared by Convocation rests upon ecclesiastical not parliamentary authority.

While the Prayer Book of 1559 underwent frequent revision in minor details by royal authority in Elizabeth's reign and later, losing the deprecation against the Bishop of Rome, reviving the use of such vestments as had been authorized under the First Prayer Book of Edward, and including a prayer that the sovereign might be kept 'in the true worshipping of' God (*i.e.* Protestant worship), it retained essentially the same doctrinal character both in the edition of James I. (1604) and in the revision effected by Convocation (1661) under Charles II. But the final permanence of the 39 Articles was not assured for some time. Subscription to all the Articles, first required by Convocation in 1571, was made precise in terms of the *Three Articles* of Archbishop Whitgift in 1583, to be signed by all candidates for orders and for office: (i.) acknowledging the Royal Supremacy in Church as well as State; (ii.) promising the exclusive use of the Prayer Book accepted as in harmony with the Word of God; and (iii.) allowing the 39 Articles, and believing them all to be agreeable to the Word of God. In 1604 these *Three Articles* of Subscription received synodal authorization, and were ordered to be signed in the explicit terms:

'I, N. N., do willingly and *ex animo* subscribe to these three Articles above mentioned, and to all things that are contained in them.'

Finally in 1865, by the Clerical Subscription Act, the formula became:

'I, A. B., do solemnly make the following declaration. I assent to the Thirty-nine Articles of Religion, and to the Book of Common Prayer, and of ordering of Bishops, Priests, and Deacons: I believe the doctrine of the Church of England as therein set forth to be agreeable to the Word of God; and in public prayer and administration of the Sacraments I will use the form in the said book prescribed, and none other, except so far as shall be ordered by lawful authority.'

The Prayer Book equally with the Articles is thus recognized as the standard of doctrine.

Puritan Articles.—The Marian persecution drove many of the English Reformers to seek refuge in Geneva, where they came under the influence of Calvin and his thought. Their return to England under Elizabeth introduced into English theology, previously dominated by Lutheran ideas, a new ferment. It was statecraft as much as conservatism that determined the public policy of adherence to the doctrine of Augsburg, which Calvinists could respect in spite of differences of opinion. Consideration for reactionaries restrained the hands that re-cast the Prayer Book. All Protestant parties, if possible, were to be able to agree upon the Articles. The strength of Cal-

vinistic sympathy prevailing in England during Elizabeth's reign is therefore in danger of being underrated by those who would estimate it by reference to such documents. Genevan ideas were not only a restraining influence in ritual matters, and a power behind both Articles and Service Book, but a force which from the first laid hold upon the Universities, especially Cambridge, the stronghold of Puritan culture and letters, where the *Institutes* of Calvin, based as it was upon the sanest exegesis of Scripture ever yet set forth by Christian scholarship, was long the favourite textbook of systematic theology.

It was from Cambridge and its Regius Professor of Divinity, Dr. Whitaker, an ardent and unflinching adherent of Calvin's system, eminent as the refuter of Bellarmine, that there emanated the *9 Lambeth Articles* of 1595. They were the outcome of a protracted controversy in the University, following an attack by a rising school of opinion, led by Peter Baro and William Barret, upon the current developed Calvinistic doctrine of the Divine decree as disloyal to the Thirty-nine Articles. They were drawn up by Whitaker at a conference convened at Lambeth by the primate, Dr. Whitgift, who 'agreed fully with them,' and wrote: 'I know them to be sound doctrines and uniformly professed in this Church of England, and agreeable to the Articles of Religion established by authority.' They never became statutory, and, indeed, were soon set aside even in Cambridge, where they were promptly imposed; but in the Anglican Church of Ireland they found an instant welcome, and in time passed bodily into the substance of the *19 Irish Articles* of 1615. They are nine in number and extremely brief, and their concern is with the Divine decree in relation to free will, faith, and unbelief. They affirm:

i. God from eternity hath predestined some to life, and hath reprobated some to death. ii. The moving or efficient cause of predestination unto life is not prevision of faith or perseverance, or of good works, or of anything that is in the predestinate, but solely the will of God's good pleasure. iii. Of the predestinate there is a prearranged and certain number which can neither be increased nor diminished. iv. Those who are not predestined to salvation shall of necessity be condemned on account of their sins. v. True, living, and justifying faith, and the sanctifying Spirit of God is not extinguished, doth not fall away, doth not vanish away in the elect either finally or totally. vi. A man truly faithful, that is, one endowed with justifying faith, is certain, with a full assurance of faith, of remission of his sins and everlasting salvation through Christ. vii. Saving grace is not assigned, communicated, granted to all men to enable them to be saved should they so have willed. viii. No one can come to Christ unless it shall have been given him, and unless the Father shall have drawn him; and not all men are drawn by the Father to come to the Son. ix. It is not set within the will or power of every human being to be saved.

The original form of these Articles was Latin. They plainly set forth the dark as well as the bright side of the elective decree, in terms which were derived from Calvin's developed theology, not from any Confession he ever drew up. They courageously grapple with the problem of the non-elect; for experience and fact show too plainly in this world that not all men are saved in Christ. All are called; not all enter in who hear the call. It is of grace that men are saved through faith. What, then, corresponds to that grace in the case of lost lives? They are not outside God's providence; they are subject to His will; He enables their every breath and act. His decree must embrace them in its all-pervasive sweep. Destiny is not arbitrary either for good or for evil; it makes room for freedom, and for faith when true free-will has been impaired. God reprobates, from eternity, human sin that is unrelieved by penitence and faith. If He foreknows the issues of our freedom to act and to believe, He may, He must, foreordain both judgment and forgiveness according to the measure of faith. Such is the position which

Calvinism, in harmony with a solemn vein of Scripture teaching in both Testaments, and in pursuance of Augustine's convictions, attempts to express. Probably no teaching has ever been more hideously caricatured or more deliberately misunderstood, partly because it probes deep things and taxes the intellect not less than the sentiment of men, partly because it was, in spite of explicit disavowal of God's authorship of sin, interpreted as making the Divine will responsible for sin, partly because it was thought to lend itself either to religious melancholy and despair or to presumption and hypocrisy. And, in truth, it is most seriously open to criticism precisely because it has been so persistently misunderstood. A doctrine that is apt to be distorted by its adherents not less than by its adversaries is a dangerous thing, and well deserves to be either set aside or hedged about, as in all Calvinistic Confessions, by grave warnings against its light or frequent handling. Its theory can be defended against all comers, from Scripture and from reason, but its use and publication in popular documents meant for ordinary minds has not unnaturally tended to discredit it.

At the Hampton Court Conference of 1604 a proposal to insert the Lambeth propositions in the Thirty-nine Articles failed. Though the two documents were in harmony, men might hold the received Articles without having either head or heart to acquiesce in the Lambeth addendum as a necessary or wholesome supplement. But in Ireland they were welcomed by the ascendant Puritanism of the Church, whose theological guiding-spirit was the learned Ussher, and were embodied by him in the *Irish Articles*, 'agreed upon by the Archbishops and Bishops and the rest of the clergy of Ireland in the Convocation holden at Dublin in 1615,' which replaced in Ireland the Eleven Articles of Parker as a standard of doctrine until 1635, when, through Laud's urgency, but with Ussher's consent, the Thirty-nine Articles of 1563 were also accepted as a standard, co-ordinate at first, but soon virtually to supplant the others.

Beginning in true Calvinistic fashion with 'the Holy Scripture and the Three Creeds,' the *Irish Articles* treat successively, in 104—for the most part brief—propositions, of Faith in the Holy Trinity, Predestination, the Creation and Government of all Things, the Fall and Original Sin, Christ the Mediator of the Second Covenant, the Communicating of the Grace of Christ, Justification and Faith, Sanctification and Good Works, the Service of God, the Civil Magistrate, Duty towards our Neighbours, the Church and Ministry, the Authority of the Church, General Councils, and Bishop of Rome, the State of the Old and New Testaments, the Sacraments of the New Testament, Baptism, the Lord's Supper, the State of Departed Souls, the General Resurrection, and Last Judgment. They weave together the doctrine and phraseology of the Crammer Articles with the Lambeth Supplement.

When the Westminster Assembly met, in the first instance, to revise the Thirty-nine Articles, and discontinued work upon that project in favour of a new Confession, it took the *Irish Articles* of Ussher as the basis of its own formulation, and adhered with close fidelity to the general sequence, doctrine, and language. Though Anglican representatives were invited by the Long Parliament to assist at the Westminster Assembly, their Royalism kept them away; but at least the work of Ussher was regarded with the utmost deference. At the Calvinistic Synod of Dort in 1619 the English Church was represented for a time by a group of distinguished theologians, who acted as advisory assessors without voting power, and endeavoured, to their credit, to mediate between the Remonstrants and their antagonists.

The Anglican Articles in America.—It only remains to be added that the Thirty-nine Articles have held their place throughout the whole Anglican Communion, in the missionary Churches of Italy, Spain, Portugal, and Mexico derived from it, in the Scottish Episcopal Church, as well as in

the British Colonies. In the Protestant Episcopal Church in the United States of America, however, changes became necessary alike in the Prayer Book and in the Articles. In 1786 a provisional revised Prayer Book was published, known subsequently as the '*Proposed Book*,' containing, *inter alia*, 'Twenty Articles of Religion,' in which the Thirty-nine appeared re-cast, with many alterations of a latitudinarian type, the Nicene and Athanasian Creeds being omitted, as also the clause in the *Apostolicum*, 'He descended into hell.' The Convention of 1786 restored the Nicene Creed and the discretionary use of the omitted clause in the Apostles' Creed, in compliance with the demand of the English Archbishops; but, while the House of Bishops was willing to restore the Athanasian Creed for permissory use, the House of Deputies 'would not allow of the Creed in any shape.' In 1799 a special Convention considered, without sanctioning, a Revision in *Seventeen Articles*. At last, in 1801, it was agreed to retain the Thirty-nine Articles, revised, with the sole theological change of the omission of the Athanasian Symbol, other changes being political.

Art. 21, *Of the Authority of General Councils*, was omitted, but its place and title retained for an explanatory note: 'The 21st of the former Articles is omitted, because it is partly of a local and civil nature, and is provided for as to the remaining parts of it in other Articles.' To Art. 35, *Of Homilies*, a note is added: 'This Article is received in this Church so far as it declares the Books of Homilies to be an explication of Christian doctrine and instructive in piety and morals. But all references to the constitution and laws of England are considered as inapplicable to the circumstances of this Church, which also suspends the order for the reading of said homilies in churches until a revision of them may conveniently be made, for the clearing of them as well from obsolete words and phrases, as from the local references.' The 36th Art., *Of Consecration of Bishops and Ministers*, reads thus: 'The Book of Consecration of Bishops and Ordering of Priests and Deacons, as set forth by the General Convention of this Church in 1792, doth contain all things necessary to such consecration and ordering: neither hath it anything that of itself is superstitious and ungodly. And therefore whosoever are consecrated or ordered according to said form, we decree all such to be rightly, orderly, and lawfully consecrated and ordered.' In place of the 37th Art., *Of the Civil Magistrate*, there appears *Of the Power of the Civil Magistrate*: 'The power of the Civil Magistrate extendeth to all men, as well Clergy as Laity, in all things temporal; but hath no authority in things purely spiritual. And we hold it to be the duty of all men who are professors of the Gospel to pay respectful obedience to the civil authority regularly and legitimately constituted.'

In the Prayer Book the Athanasian Creed was, of course, omitted, while the influence of Bishop Seabury, who had been consecrated at Aberdeen, secured the restoration of the Prayer of Oblation and Consecration from the Scottish and earlier Edwardine Prayer Books.

In 1873 there was prepared by the *Reformed Episcopal Church* of America, which, in protest against Anglican ritualism and exclusiveness, had seceded from the Protestant Episcopal Church, a *Declaration of Principles*:

'I. The Reformed Episcopal Church, holding "the faith once delivered unto the saints," declares its belief in the Holy Scriptures of the Old and New Testaments as the Word of God, and the sole rule of faith and practice: in the Creed "commonly called the Apostles' Creed": in the Divine institution of the Sacraments of Baptism and the Lord's Supper: and in the doctrines of grace substantially as they are set forth in the Thirty-nine Articles of Religion. II. This Church recognizes and adheres to Episcopacy, not as of Divine right, but as a very ancient and desirable form of Church polity. III. This Church, retaining a liturgy which shall not be imperative or repressive of freedom in prayer, accepts the Book of Common Prayer as it was revised, prepared, and recommended for use by the General Convention of the Protestant Episcopal Church, A.D. 1785, reserving full liberty to alter, abridge, enlarge, and amend the same as may seem most conducive to the edification of the people, provided that the substance of the faith be kept entire. IV. This Church condemns and rejects the following erroneous and strange doctrines as contrary to God's Word:—*first*: that the Church of Christ exists only in one order or form of ecclesiastical polity; *second*: that Christian ministers are "priests" in another sense than that in which all believers are "a royal priesthood"; *third*: that the Lord's Table is an altar on which the oblation of the body and blood of Christ is offered anew to the Father; *fourth*: that the Presence of Christ in the Lord's Supper is a presence in the elements of Bread and Wine; *fifth*: that Regeneration is inseparably connected with Baptism.'

These principles are obviously such as would form a basis of any re-union of Episcopal and Presbyterian and other evangelical Churches.

In 1874 the Prayer Book was revised along the lines of the 'Proposed Book' of 1786, with the omission of the Athanasian Creed, the clause 'He descended into hell,' and the thanksgiving at baptism for the child's regeneration, and with the substitution of 'minister' and 'Lord's table' for 'priest' and 'altar' throughout. In 1875 the *Thirty-five Articles* were approved—a series more closely parallel with the *Thirty-nine* than either the *Twenty* of 1785 or the *Seventeen* of 1799, giving effect to the modifications required by the Declaration of Principles.

Anglican Catechisms.—In 1548, three years after Henry VIII. issued his 'Primer,' or devotional manual of the familiar acts of worship, to replace similar Roman Catholic 'Primers,' Cranmer translated and issued, with modifications, the Wittenberg Catechism of Justus Jonas—the work known as *Cranmer's Catechism*. With the successive issues of the Prayer Book under Edward and Elizabeth, authoritative Catechisms appeared under the title 'Confirmation, wherein is contained a Catechism for Children.' In 1604, by authority of the king, the explanation of the Sacraments by Dean Overall of St. Paul's was added, and in the final revision of 1661 the title became simply 'The Catechism.' In this form practically it was received by the Protestant Episcopal Church in America, and also by the Catholic Apostolic or Irvingite Church.

It begins with the question, 'What is your name?' It discusses baptism and its meaning; the Apostles' Creed as implied in baptism; the commandments to be obeyed, and their summary in two; the Lord's Prayer; the Sacraments, the inward part or thing signified in the Lord's Supper being 'the body and blood of Christ, which are verily and indeed taken and received by the faithful in the Lord's Supper.' The last question, 'What is required of them who come to the Lord's Supper?' is answered thus: 'To examine themselves, whether they repent them truly of their former sins, steadfastly purposing to lead a new life; have a lively faith in God's mercy through Christ, with a thankful remembrance of His death; and be in charity with all men.'

Larger Catechisms for older minds were prepared, e.g. one by Bishop Poyntet of Winchester, issued in 1553 with the countenance of Cranmer and Convocation; and, on its model, one in three grades by Dean Nowell of St. Paul's in 1562. Perhaps the absence of any remarkable Anglican Catechisms may be explained in part by the wide and lasting currency of the approved Continental manuals, e.g. those of Luther, Jonas, Æcolampadius, Calvin, and Bullinger. See, further, CATECHISMS (Anglican).

LITERATURE.—The relevant portions of vols. I. and III. of Schaff, *Credentials of Christendom*; Hardwick, *Hist. of the Articles*, 1884; E. C. S. Gibson, *The Thirty-nine Articles of the Church of England*, 1896-7; Lindsay, *Hist. of the Reformation*, 1907, vol. II.; Maclear-Williams, *Intro. to the Articles of the Church of Eng.*, 1890; E. Tyrrell Green, *The Thirty-nine Articles and the Age of the Reformation*, 1896. The first two volumes enumerated reprint the most important documents and detail the older literature.

15. Confessions in the Zwinglian (Presbyterian) Churches.—Although, as we have seen, the influence of Ulrich Zwingli may be traced in Confessions beyond the pale of strictly Zwinglian Churches, the documents to be considered in this section form a compact group belonging to the forty years preceding 1566. They are practically contemporary with the earliest group of Lutheran documents, and are the true pioneers of the great Corpus of 'Reformed' standards, most of which reflect the views of Calvin. They belong to German Switzerland, and were formed in the cultured cities of Zürich, Bern, and Basel. They breathe the vigorous, independent, liberal, and devout atmosphere surrounding the personality of their chief inspirer, in whom, more than any other of the leaders of the Reformation, the instincts of Human-

ism were paramount. The characteristic views of Zwingli shocked contemporary Lutherans and Calvinists almost as violently as they startled Romanists, who, not unnaturally and perhaps not unjustly, represented them as the logical and inevitable outcome of the whole Reformation impulse. Happily much was done by mutual explanations and by fraternal intercourse to bring together Zwinglians and their co-Reformers, and at the present time there is a creditable and gratifying increase of readiness in Calvinistic and Lutheran lands to write and speak of Zwingli without caricature and misrepresentation. Beyond question, innumerable devout Christians who willingly conform to the Sacramental observances of the Lutheran, Calvinistic, Anglican, and even Roman Churches, cherish personally a conception of their meaning which approximates very closely to that of the undaunted chief pastor of Zürich.

The salient general features of Zwinglian doctrine comprise an absolute and exclusive reliance, in all matters of faith, organization, and usage, upon Scriptural warrant as distinct from ecclesiastical tradition, a confidence in common sense and historical perspective as means for the right interpretation of Scripture, an evangelic faith in the Fatherhood of God and the brotherhood of Christ and Christians, a sense of individual present-day responsibility and authority, and therewith of ministerial and indeed of general Christian parity natural to citizens in republican States, an emphasis upon practical morality springing from justifying faith, a scholarly openness of mind and an unpriestly dislike of mystery and circumstance, and, in reference to the Lord's Supper, a resting in its memorial aspect, explicitly set forth by Christ in the words 'in remembrance of me,' as sufficient definition of its purpose, without denying to the act of communion the spiritual presence of the risen Christ, who is in the midst of the two or three gathered together in His name, and who is with His people always, the elements and their appropriation being alike merely symbolic of corresponding spiritual realities. As one considers the remarkable anticipation by Zwingli of the modern tendencies of Reformed Christendom, in regard to Sacramental and Scriptural interpretation, the meaning of original sin, the union of Churches, the simplification of doctrine, parity of Christian members lay and clerical, and the happy fate of departed infants and heathen saints and sages, one is constrained to join in the chorus of regret that a mind so gifted, a character so disinterested, a will so courageous, a piety so profound, should have been cut off from earthly service so early in his career as a reformer and as a teacher.

The 67 Articles of Zürich were prepared for, and maintained at, the great public disputation held in that city in 1523, which virtually decided the repudiation of Rome. They thus correspond to Luther's Theses of six years before. Though not enforced as a standard, they were an epoch-making theological manifesto, and exercised a certain local normative function. They are a series of brief, trenchant, firm, and warm-toned sentences. They have the same shrewdness, picturesqueness, homeliness, impressiveness, and point, that arrest the mind and haunt the memory in Luther's sentences. As one reads them, one can readily appreciate the amazing freshness and the stirring power with which they appealed to the fettered minds of the prisoners of ecclesiastical tradition and sacerdotal tyranny. The Reformation produced no more impressive or thought-provoking document. Their scope, purport, and form may best be gathered from a few examples in their own words:

1. 'All who say that the Gospel is nothing without the approval of the Church err and cast reproach upon God.' 2.

The sum of the Gospel is that our Lord Jesus Christ, the true Son of God, has made known to us the will of His heavenly Father, and redeemed us by His innocence from eternal death and reconciled us to God.' 3. 'Therefore Christ is the only way to salvation for all who were, who are, and who shall be.' 7, 8. 'Christ is the Head of all believers. All who live in this Head are His members, and children of God. And this is the true Catholic Church, the Communion of saints.' 17. 'Christ is the one eternal High Priest. Therefore those who give themselves out as high priests are opposed to the glory and power of Christ and reject Christ.' 18. 'Christ, who offered Himself once on the Cross, is the sufficient and perpetual sacrifice for the sins of all believers. Therefore the Mass is no sacrifice, but a commemoration of the one sacrifice of the Cross and a seal of the redemption through Christ.' 22. 'Christ is our righteousness. Hence it follows that our works are good so far as they are Christ's, but not good so far as they are our own.' 24. 'No Christian is bound to works which Christ has not enjoined: he can eat when and what he pleases. It follows therefore that "cheese-and-butter letters" are Roman impositions.' 27. 'All Christians are brethren of Christ, and brethren one with another: therefore they ought not to call any one "father" upon earth. This does away with orders, sects, factions,' etc. 34. 'The so-called spiritual power has no ground for its display in the teaching of Christ.' 49. 'Greater scandal I know not than that priests should be forbidden lawful wedlock, but allowed for money to have concubines. Shame on it!' 50. 'God alone forgives sins, and that through Christ Jesus, our Lord, alone.' 52. 'Confession therefore to priest or neighbour ought not to be for remission of sins but for consultation.' 57. 'Holy Scripture knows of no purgatory after this life.' 58. 'The judgment of the deceased is known to God alone.' 59. 'The less that God reveals to us concerning these matters, the less ought they to be searched into by us.' 60. 'If any one in anxiety for the dead beseeches or prays for favour to them from God, I do not condemn him; but to appoint a time concerning it,—a seven-year for a mortal sin,—and to lie for profit, is not human but devilish.' 62. 'Scripture knows no other presbyters or priests than those who proclaim God's word.' 67. 'Should any one care to discuss with me interest, tithes, unbaptized children, confirmation, I profess myself ready to reply.'

In the same year a second public disputation was held in Zürich on Images and the Mass, and it was followed by the sending of an authoritative Instruction to the clergy of the Canton, written by Zwingli, with the title: '*A Brief Christian Introduction which the Honourable Council of the City of Zürich has sent to the pastors and preachers living in its cities, lands, and wherever its authority extends, so that they may henceforth in unison announce and preach the Gospel.*'

This important and by no means 'brief' declaration (printed, after the Theses, in the quaint original Swiss-German, by E. F. K. Müller, *Die Bekenntnisschriften der reformierten Kirche*, Leipzig, 1903, pp. 7-29), after a preliminary exhortation to pray earnestly for the light of God's word so that present troubles may be done away, discusses sin and repentance, the basis of Christ's teaching, the law as the opening of God's will, the Gospel the offer of His grace, the way of salvation by faith in Christ and the annulling of the law, the idolatrous results of the presence of images in churches, and finally the Mass as no sacrifice repeated, no offering and partaking of the physical body and blood, but grateful and believing commemoration of the living Saviour and communion with the living Lord.

In 1528 the magistrates of Bern followed the example of Zürich, and arranged for a public disputation upon Scriptural evidence. Berthold Haller, the local Reformer, with the aid of his colleague Francis Kolb and of Zwingli, drew up *The Ten Conclusions of Bern* as a basis of discussion, Zwingli turning them into Latin, Farel into French. Among the cities represented were Zürich, Basel, Constance, Strassburg, Augsburg, and Ulm; among the advocates of reform, Zwingli, Bucer, and Œcolampadius, in addition to Haller and Kolb. The conclusions were approved 'as Christian' by the great majority of the delegates, and accepted 'for ever,' to be observed 'at cost of life and property.' They became not only binding in Bern, but a manifesto respected over a wide area in and beyond Switzerland—the first more than cantonal definition of the Swiss type of Reformed faith.

Art. I. defines the holy Christian Church, whose only Head is Christ, as 'born of the Word,' as abiding in it, and not hearkening to the word of another. Art. II. states that 'the Church of Christ does not lay down laws and commandments beyond the Word of God: therefore all human traditions, called ecclesiastical, are only binding so far as they are founded and prescribed in the Word of God.' Art. III. 'Christ is our only wisdom, righteousness, redemption, and atonement for the sins of the whole world: therefore to acknowledge any other saving and atoning amends for sin is to deny Christ.' Art. IV. is the most

memorable; it says: 'That the body and blood of Christ is perceived essentially and corporeally in the Eucharistic bread, cannot be proved from Holy Scripture.' Art. V. 'The Mass, according to current usage, in which Christ is offered to God the Father for the sins of quick and dead, is contrary to Scripture, blasphemous the most holy sacrifice, passion, and death of Christ, and by reason of abuses is abominable in the sight of God.' Art. VI., on the ground of Christ's sole mediatorship, condemns the adoration and invocation of saints. Art. VII. sets aside as un-Scriptural the doctrine of purgatory, and all rites and practices based upon it. Art. VIII. declares the making of images for worship to be contrary to Old and New Testament Scripture. Where they are liable to be adored they must be abolished. Articles IX. and X. proclaim the lawfulness of marriage to all orders of men according to Scripture: fornication and iniquity are warrant for excommunication; to no class are they more pernicious than to the clergy.

Later controversy in Bern was brought to a close in 1532 by a Synod of 230 preachers, which issued with authority a lengthy series of doctrinal paragraphs introduced by an epistolary preface. These *Articles or Admonitions of the Synod of Bern* run to 45 substantial paragraphs abounding in Scripture citations, the whole taking the form of an instruction by pastors to pastors, practical theology being mingled throughout with Scriptural or doctrinal. (For full text of chief chapters, see Müller, *op. cit.* pp. 31-55.)

Two notable productions from Zwingli's own vigorous but hasty pen must be mentioned, though they were personal manifestos only, without Synodal authorization. He composed in 1530 a *Confession of Faith to the Emperor Charles V.*, for presentation at the great Diet at Augsburg. Though uninvited, and, like the Tetrapolitan Confession of Bucer and Capito, unwelcome and unheeded save for a virulent reply by the unresting Eck, spurned and resented not only by Romanists but by Lutherans, including even Melancthon, who abhorred its denial of the corporeal presence in the Sacrament, and were anxious to dissociate their cause before the Emperor from Zwinglian and Anabaptist extremists—it was a legitimate, timely, and dignified representation of the Swiss type of faith, and is justly praised by Müller for the transparent candour with which it avows its author's characteristic convictions on Divine Providence, Original Sin, and the Supper, for the judgment of the Church at large by Scripture standards.

The address of this *Fidei Ratio*, itself prefaced by the mottoes, 'Come unto me all ye that labour and are heavy laden, and I will give you rest,' and 'Let truth prevail,' is followed by twelve paragraphs, and terminates with a solemn undertaking to maintain the truth stated, not as his own, but as Scriptural, and an appeal to the princes met in council to weigh it well, and if it be from God not to fight against it, but to resist the tyranny of corrupt Rome. Persecution and excommunication have failed. Let another way be tried: 'Idcirco sinite verbum Dei libere et spargi et germinare, O filii hominum, quicunque estis, qui ne gramen quidem vetare ne adolescat potestis. Abunde videtis hanc frugem imbre coelesti rigari, nec ullo hominum calore compesci posse ut arescat. Considerate non quid vos maxime cupiatis, sed quid mundus in Evangelii negotio exigit. Boni consulite, quicquid hoc est, et filios Dei vos esse studiis vestris ostendite.'

The first chapter reaffirms the teaching of the Catholic Creeds on the Divine Trinity and on the Person of Christ. The second affirms the Divine freedom, foreknowledge, goodness, which includes mercy as well as justice, and predestination, which as Divine cannot be conditional on our faith, but precedes it, and disposes all things, good and evil, freely. The third describes Christ as the one way to reconciliation and happiness, election being election to salvation through faith in Him. The fourth discusses original sin as different in us from Adam's wilful transgression, as properly a taint or disease rather than a true sin, a condition. He, having become a slave through forfeit of his freedom, could only beget slaves. Yet it may be spoken of as sin, for it makes us natural enemies of God, and entails upon us inevitable death. Its effect is exactly annulled by the atonement of the Second Adam, so that (ch. 5) it is rash to speak of infants, even those of heathen parents, as ever damned. Chapter 6 defines the various uses of the term 'Church,' in particular the invisible or true and inward,—that is, elect believers and their children who constitute the Bride of Christ,—as distinct from the outward and visible,—that is, nominal Christians and their households, who correspond to the whole Ten Virgins in the Lord's Parable: the former alone is inerrant. Chapter 7 denies that sacraments have power to

confer grace apart either from faith in the recipient or from the antecedent influence of the Spirit, and discusses Baptism. Chapter 8, at great length and with extreme care and insight, treats of the Lord's Supper in the light of Scripture, reason, and the great Fathers, disproving the corporeal, and proving the spiritual, presence, the elements being symbols representative and commemorative of the atoning death of Christ, whose benefits are communicated to us through faith. Chapter 9 admits that ceremonies neither contrary to Scripture nor destructive of faith through superstition, may be tolerated for the sake of charity until the day spring brightens, though the existence of any such is doubtful; but, wherever possible without extreme offence, they are rigorously to be abolished. Images prostituted to worship are diametrically opposed to Scripture. Those, however, which are not exposed for worship, or liable to be future objects of worship, 'so far as I from condemning that I recognize both painting and sculpture to be gifts of God.' Chapters 10 and 11 treat respectively of the offices of the Preacher and the Civil Magistrate as necessary and Divinely appointed. Chapter 12 discredits belief in Purgatory.

In 1531, three months before his death, Zwingli, at the request of the French Ambassador, composed what Bullinger calls his swan-song, the *Brief and Clear Exposition of Christian Faith to Francis I. of France*, the monarch to whom he had previously dedicated his chief work, the *Commentarius de Vera et Falsa Religione*, and to whom Calvin five years later was to dedicate his *Institutes*. This vigorous document repeats, in somewhat varied order and at shorter length, the teaching of its predecessor.

Meanwhile two Confessions, composed outside Switzerland by other than Swiss theologians, gave evidence of the wide spread of Zwingli's teaching. In 1528 a conference of preachers adopted the *Confession of East Friesland*, prepared by the Reformer Aportanus, in which (Müller, pp. xxi, 930) thirty brief articles, followed by a summary, set forth pure Zwinglian doctrine concerning the Word of God and the Sacraments in sharp distinction from Romanist, and in tolerant discrimination from Lutheran, views. In 1530, still in Zwingli's lifetime, there was prepared by Bucer and Capito, for submission to the Emperor and Diet at Augsburg, the *Confession of Strassburg, or of the Four Cities (Tetrapolitana)*, inasmuch as Constance, Memmingen, and Lindau joined with Strassburg in accepting it (Müller, pp. xxiii, 55). Put together in some haste, and in part from pre-existing materials composed by Capito, it states and vindicates from Scripture characteristically Zwinglian ideas of Christian faith, life, and institutions, in 23 substantial paragraphs, marking itself sharply off from Lutheranism by its sacramental doctrine, its repudiation of images and pictures, and its exclusive appeal to Holy Writ.

After Zwingli's death, the continuation and development of his work is manifest in a series of Confessional documents emanating from other Swiss towns.

At Basel, where the Reformation was somewhat stormily introduced in 1529, a Confession of Faith was drafted in 1531 by Zwingli's friend and henchman Ecolampadius, shortly before his death. Revised by Myconius in 1532, it was adopted by the city authorities in 1534, and by the city of Mülhausen in Alsace soon afterwards. It is known as the *1st Confession of Basel*, or as the *Confession of Mülhausen*. Its twelve Articles form a brief, simple, dignified, and moderate statement of Zwinglian doctrine as distinguished both from Romanist and from Anabaptist teaching. Though it is an exception to the rule of 'Reformed' Confessions, in not starting with an appeal to Scripture as the sole rule of faith, it ends with the equivalent noteworthy declaration: 'We submit this our Confession to the judgment of the Divine Scriptures, and hold ourselves ready always thankfully to obey God and His Word if we should be corrected out of the said Holy Scriptures'—a declaration which may have inspired the similar

undertaking in the Scots Confession of 1560. This venerable document maintained its position in the Church of Basel down to our own time, succumbing only in 1872 to the modern anti-Confessional movement (Müller, pp. xxv, 95-100).

At Basel, also, there was composed in 1536 a still more notable document, the *1st Helvetic Confession, or 2nd Confession of Basel*. It owed its origination to the peace-making genius of the Strassburg theologians, Bucer and Capito, who made it their great aim to reconcile the Swiss and Lutheran schools of Protestant doctrine—and also to the prospect of an Ecumenical Council being convened at Mantua. Theological representatives were sent by the Reformed cities of Switzerland—Bucer and Capito by Strassburg—to a conference at Basel. Bullinger, Myconius, Grynaeus, Leo Judae, and Megander were instructed to prepare the Confession; Leo Judae prepared the free German version. Their work, after discussion, was unanimously accepted and subscribed by the delegates, and became the first general Swiss Confession, the first 'Reformed' Confession of national authority. It is longer than its forerunner, containing 27 short paragraphs.

The first five articles affirm that Holy Scripture alone contains all that promotes the true knowledge, love, and honouring of God, right and true piety, and a pious, honourable, and godly life; it is its own sole interpreter; the Fathers are to be received only so far as in harmony with that interpretation; human traditions, however specious, are vain; the aim and end of Scripture is to declare the grace and good-will of God to man in Christ, appropriated by faith alone, and evidenced through love to others. Art. 6 treats of God the Three in One. Art. 7-10 discuss man as God's most perfect image on earth, immortal in soul, mortal in body, noblest and highest of creatures, created faultless, but by his own fault fallen into sin; original sin; free-will; God's eternal plan of restoration. Art. 11 and 12 treat of Jesus Christ, and 'what we have through Him'; and of the true aim of evangelical teaching, to persuade that it is by God's mercy and Christ's merit alone that we are saved. Art. 13 and 14 expound faith in the grace of God as the means of salvation; without trusting to works, it is prolific of them. Art. 15-20 treat of the Church, built upon the rock of living faith; of the ministry of the Word; of ecclesiastical authority; of the election of ministers; of Christ the chief shepherd; of the office of the ministry. Art. 21-23 discuss the Sacraments in language obviously intended to re-assure Lutherans, and to vindicate Swiss-Reformed reverence: they are holy symbols of high mysteries, not mere or empty signs, but significant signs accompanying spiritual realities; in Baptism, water is the sign, regeneration and adoption the reality; in the Supper the bread and wine are the signs, communion of the body and blood of the Lord is the spiritual reality: as the senses and members of the body apprehend the signs, so the soul receives the realities in which the whole fruit of the ordinance resides: the sacraments, therefore, are not only emblems of Christian membership in the Church, but symbols of Divine grace; the body and blood of Christ means Himself, His life, received and appropriated so that more and more He lives in us, and we in Him; the Sacraments are to be revered exceedingly for their significance, and for their sanctity as coming from the Lord's hands, but they owe their power and sacredness solely to Him, the Life. Art. 24-28 deal with public worship and ceremonies; with things neither commanded nor forbidden; with heretics and schismatics; with the civil magistrate; and with holy marriage.

Though the Confession was not destined to fulfil its purpose by being submitted to a General Council at Mantua, and, at the desire of the Strassburg delegates, long remained unprinted (Bullinger and Leo Judae, indeed, are said to have desired the insertion of a clause deprecating its use as a rule of faith, lest it should usurp the place of Holy Writ, the only true and sufficient bond of evangelical union), it continued for long to be the acknowledged embodiment of the faith of the Swiss Reformers. Alike in its Latin and in its fuller and more vigorous German form, both of which were authoritative, it is an attractive and impressive product of Swiss thought.

At Lausanne, later in the same year 1536, the military victory of the Reformation cause was followed up, under Bernese influences, by a theological disputation upon Theses prepared by Farel, in which the youthful Calvin took part. These *10 Theses of Lausanne* (given by Müller, p. 110) form a very brief outline of doctrine, echoing the *1st Helvetic*

Confession. Re-cast, or expanded, they were made officially binding in the same year.

At Zürich, in 1545, Bullinger was constrained to vindicate his Zwinglian colleagues against the persistent polemic of Luther, which had found expression that year in a 'Short Confession on the Holy Sacrament,' by issuing a *True Confession of the Ministers of the Church in Zürich . . . in particular on the Supper of our Lord Jesus Christ* (extract in Müller, pp. 153-159). Neither in form nor in authority is the work a Confession. It is a theological manifesto or argument, firmly and unmistakably Zwinglian in character, and it prepared the way for the *Consensus of Zürich* of 1549, in which Bullinger and Calvin expressed their agreement on the Lord's Supper over against Lutheran influences and Swiss divisive tendencies. Calvin had taken exception to the extremer positions maintained by Bullinger in his last Confession. His objections were accepted in a friendly spirit. A fresh treatise was submitted to him in 1546. The outcome of his judgment on it was the formulation of a series of propositions, which Bullinger in turn divided into 26 Articles, and which contained the substance of the *Consensus* of 1549 (Müller, pp. 159-163). If Calvin was the author of this *Consensus*, which linked together the Churches of Zürich and Geneva and found acceptance in other countries, the influence of Bullinger pervades it, and it served as a welcome proof of the essential kinship of the two schools. Henceforward there was theological harmony in Protestant Switzerland; and Melancthon, though he rejected the clauses which made election the condition of the efficacy of the sacraments, abandoned all suspicion and hostility towards the Swiss.

The 26 Articles are brief, lucid, consistent. They repudiate Lutheran not less than Romanist conceptions of the Presence. The Lord's body is not locally on earth, but in heaven. The elements are not to be adored. The Spirit of God is the active energy; His grace and the communion of Christ are essentially independent of the elements and the partaking, for it is antecedent faith that appropriates—'fideles ante et extra sacramentorum usum Christo quoque communicant'; transubstantiation and consubstantiation are equally absurd.

At a Synod of the Reformed Churches in the Rhetian Alps, approval was given in 1552 to a Confession—the *Confessio Rhetica*—drawn up by Saluz Gallicius, and intended to establish a uniform system of doctrine in place of the existing theological chaos, in which Anabaptist, Lutheran, Zwinglian, Romanist, Socinian, and Pantheistic teachings mingled. In 1553 it was submitted to Bullinger, who cordially approved of it; and thereafter for centuries, in spite of the subsequent local recognition of the Second Helvetic Confession, it remained the authoritative Rhetian formula (Müller, pp. 163-170, where the doctrinal portions are given in full).

It opens with a tribute of loyalty to the three ancient Creeds; condemns the vanities of human learning and wisdom and contentions about words; asserts Christ crucified, risen, and ascended, to be the one foundation, and faith in Him to be the one means of salvation for fallen humanity. At greater length it affirms God's sovereignty, denies His responsibility for sin, and urges sobriety and caution in speaking of His predestination. Most fully and interestingly it sets forth, with illustrations from the Gospels and Epistles, the Zwinglian conception of the Sacraments, citing, in support of a metaphorical interpretation of the words 'This is my body,' similar figures from the teachings of Christ and of Paul, where a literal sense is out of the question; it proves from the Gospels the physical absence of Christ from earth, but asserts His spiritual presence; it recognizes a spiritual eating and drinking of His body and blood, in the sense of Jn 6; it acknowledges the Sacraments to be 'symbola, adeoque obligationes divinas gratiae et donorum Dei.' Finally, it deprecates any comparison between the authority of the Bible and its own; and it undertakes, in the most emphatic and in repeated terms, to welcome correction and amendment wherever it may be found unfaithful to the Scriptures, 'for we well remember that we are but men, and are therefore prone to error, ignorance, and deception.' Throughout, its language is popular, its arguments are shrewd and well-informed, and its desire to maintain a Scriptural simplicity is obvious and sincere.

Last and greatest in the Zwinglian series is the

Second Helvetic Confession, the *magnum opus* of Henry Bullinger. If the Confession of 1531 was Zwingli's 'swan-song,' this was Bullinger's own; for it was in 1562, while awaiting the expected call of death, that he gave the hours of his enforced leisure to its composition. It is the quiet overflow of his mature conviction, put in writing without polemical occasion and without ecclesiastical requisition, the last and private confession of a scholar and churchman who had been called to assist in the preparation of many public Confessions. Two years later, during the ravages of the plague at Zürich, he conceived the idea of leaving it to the chief magistrate after his death, as a testimony and guide to faith. But in the end of 1565 he received a request for such a statement from Frederick III., the Elector Palatine, who was desirous of proving, before the forthcoming Diet at Augsburg, that his Reformed profession was no merely individual or local faith, but a system of doctrine held in common by evangelical believers in Switzerland, Holland, France, and Britain also. The Confession was dispatched with the assurance that it was 'in harmony with the confession of the ancient Apostolic orthodox catholic Church, and likewise with all the faithful who with pure faith profess Christ throughout the churches of Germany, France, England, and other kingdoms and lands'; and it was received with enthusiasm, and ordered to be published in a German version, with a view to promoting common action among the Reformed Churches. In Switzerland, except at Basel, it was, with slight modifications, at once approved universally, and accordingly the Elector could present it to the Diet of 1566 as an already authoritative document. In the same year it was accepted by the Reformed Church in Scotland, in 1567 in Hungary, in 1571 in France and in Poland, and it was approved in many other lands, without superseding the local standards. No other Confession, save its immediate predecessor, the Heidelberg Catechism of 1563, has ever rivalled it in popularity or in authority among the Reformed Churches of the Continent. In theological ability and in doctrinal interest few Confessions can bear comparison with it. Objection may well be taken to it as an official document, on the ground of its great length and its combination of comprehensiveness and detail; but it would be difficult to conceive of a theological manifesto, or compendium of doctrine, more attractive in form and matter, more lucid, effective, and shrewd, more loyal to Scripture, or more instinct with common sense. It is no small tribute to its merits that its appearance was the signal for the cessation of theological controversy and unrest in Switzerland, and that it enjoyed, during so many centuries of eager thought and change, an unchallenged authority.

It consists of 80 chapters (printed in full, in Latin, by Müller, pp. 170-221, and by Schaaf, *Evang. Prot. Credo*, pp. 233-306, including prefaces; and in an elaborate English summary by Schaaf, *Hist.* pp. 396-420). The chapters vary in length from one or two pages upwards, and treat in succession of Holy Scripture, of its interpretation, the Fathers, Councils, and Traditions; of God, His unity and trinity; of idols or images of God, Christ, and of deities; of the adoration, worship, and invocation of God through the only mediator Jesus Christ; of the providence of God; of creation, angels, the devil, and man; of the Fall, of sin, and its cause; of free-will and human power; of predestination and the election of saints; of Jesus Christ, true God and man, the only Saviour of the world; of the Law of God; of the Gospel, its promises, spirit, and letter; of repentance and conversion; of the true justification of believers; of faith and good works and their rewards, and human merit; of the Catholic and holy Church of God and its only Head; of ministers of the Church, and their institution and duties; of the Sacraments; of Baptism; of the Lord's Supper; of religious meetings; of prayers, praise, and appointed times of worship; of festivals, fasts, and meats; of catechizing; of consolation and visitation of the sick; of Christian burial, care for the dead, purgatory, apparitions of spirits; of rites, ceremonies, and things indifferent; of church property; of celibacy and marriage; of the civil magistrate.

Its doctrinal standpoint is characteristic of the author and the time—a combination of the positions of Zwingli and Calvin, with an unbending attitude towards Rome, whose Tridentine Confession was being formulated at the selfsame time; with a courteous tone towards Lutheranism; with a firm adherence to the ancient Catholic Creeds, which are printed in the preface as authoritative; and with an underlying conviction that the doctrinal re-union of Christendom was possible upon a Scriptural basis alone, Confessional revision and re-adjustment being a Christian duty as better knowledge of the Word of God was attained.

The opening two chapters accordingly deal with the doctrine of Scripture as the supreme authority, being God's Word, as their own interpreter in the light of context and kindred passages, as God's normal means of revelation and edification, and as setting aside all other authority,—traditional, Patristic, or even Apostolic,—the Apocrypha being for the first time in Confessional history expressly excluded from the Canon. The third chapter affirms the unity and Trinity of God, accepts the Apostles' Creed, condemns Jews and Mohammedans and all who blaspheme this holy and adorable Trinity, and 'all heretics who deny the deity of Christ and the Holy Ghost.' The fourth condemns images, since God is a spirit and cannot be represented by an image; though Christ assumed man's nature, it was not to pose for sculptors and painters. The fifth condemns adoration or invocation of saints: 'nevertheless we neither despise nor undervalue the saints, but honour them as the members of Christ and the friends of God who have gloriously overcome the flesh and the world; we love them as brethren and hold them up as examples of faith and virtue, desiring to dwell with them eternally in heaven and to rejoice with them in Christ.' God's providence (ch. 6) is over all, operating through means to ends; 'we disapprove of the rash words of those who say that our efforts and endeavours are vain.' Man (chs. 7-8) consists of two diverse substances in one person—of an immortal soul, which, when separated from the body, neither sleeps nor dies, and of a mortal body, which at the last judgment shall be raised again from the dead. 'We condemn those who deny the immortality, or affirm the sleep of the soul, or teach that it is a part of God.' Man was created in true righteousness, good and upright, but of his own guilt fell; sin is our inborn corruption; as years roll on, we bring forth evil thoughts, words, and deeds, as corrupt trees corrupt fruits; only the regenerate can think or do good; only the regenerate and converted are truly free; they are not passive but active, 'being moved by the Spirit of God to do of themselves what they do'; yet the unregenerate are *telling* slaves to sin, they are not as mere stones or stones, utterly devoid of will and responsibility. The 10th chapter, on Predestination and Election, is especially interesting: it is frankly and simply Scriptural in its terms; it has been claimed alike as Calvinistic, Arminian, and Melancthonian, and could be approved by each type of theologian, for it is a moderate Calvinism or Augustinianism that it expresses: election and predestination is wholly of grace, it is in Christ and for His sake; though 'a small number of the elect' is spoken of, we ought to think well of all, and not seek out of Christ whether we are chosen, or count particular persons reprobate; we are to listen to the offers of grace undoubtedly, and trust God's love in Christ who is to be the 'mirror in which we behold our predestination'; 'we shall have a sufficient testimony of being written in the book of life if we live in communion with Christ, and if in true faith He is ours and we are His'; so are we to 'work out our own salvation with fear and trembling, for it is God who worketh in us both to will and to do according to His good pleasure.' Chapter 11, defining the Person of Christ and distinguishing the two natures, accepts 'believingly and reverently the communication of properties, which is deduced from Scripture and employed by the universal ancient Church in explaining and reconciling passages apparently in contradiction.' In ch. 12 the citation of NT illustrations of penitence is followed by a typical passage: 'It is sufficient to confess our sins to God in private and in the public service; it is not necessary to confess to a priest, for this is nowhere commanded in the Scriptures; although we may seek counsel and comfort from a minister of the gospel in time of distress and trial (cf. Ja 5:16). The keys of the Kingdom of heaven, out of which the Papists forge swords, scythes, and crooks, are given to all legitimate ministers of the Church in the preaching of the Gospel and the maintenance of discipline (Mt 16:19, Jn 20:23, Mk 16:15, 2 Co 6:18-19). We condemn the lucrative Popish doctrines of penance and indulgences, and apply to them Peter's word to Simon Magus, 'Thy money perish with thee.' Ch. 13 distinguishes faith from human opinion and persuasion, describes it as a free gift of God through the Spirit and the means of grace, as capable of increase, and as the source of good works whose motives are gratitude and a desire to glorify God. Ch. 17, on the Church, vindicates its NT constitution, deprecates the divisions which have never been absent since Apostolic times but have been overruled for good, denies that its true unity resides in rites or ceremonies: 'the Church may be called *invisible*, not that the men composing it are invisible, but because they are known only to God, while we are often mistaken in our judgment: those who separate from that true Church cannot live before God'; 'as there was

no salvation out of the ark of Noah, so there is no certain salvation out of Christ, who exhibits Himself to the elect in the Church for their nourishment.' Ch. 18 affirms the sufficiency of the offices in the ministry in use in the Apostolic Church, without condemning later offices and titles; presbyters and bishops were one; the minister must be duly ordained by presbyters with prayer and the laying on of hands; ministers are equal in power and commission, and are not sacrificing priests; they ought to be learned as well as pious, but 'innocent simplicity may be more useful than haughty learning'; their unworthiness cannot impugn the efficacy of God's word and Sacraments which they are called to dispense. Ch. 19 defines the Sacraments as 'sacred rites instituted by God as signs and seals of His promises for the strengthening of our faith, and as pledges on our part for our consecration to Him'; they are two, not seven; of the five Roman additions, confirmation and extreme unction are human inventions and may be abolished without loss, while repentance, ordination, and marriage are valuable Divine institutions not sacramental; the supreme benefit of the sacraments is Christ Himself; they consist of the Word, the sign, and the thing signified; the sign could not pass into the thing signified without ceasing to be a sign; not the worthiness of the dispenser or of the recipient, but the faithfulness of God is the guarantee of their efficacy; unbelievers do not receive the reality with the sign, for the reality is not mechanically linked to the sign; in particular (ch. 21) the body of Christ is in heaven, whither our hearts must be raised, though He is present with all who communicate with Him, a veritable Sun of Righteousness shining upon us; 'the Mass, whatever it may have been in ancient times—has been turned from a salutary institution into a vain show and surrounded with various abuses which justify its abolition.' According to ch. 24, the Lord's day is 'observed in Christian freedom, not with Jewish superstition'; one day is not in itself holier than another; 'if congregations also commemorate the Lord's nativity, circumcision, crucifixion, resurrection, ascension, and the outpouring of the Holy Spirit, we greatly approve of it, but feasts in honour of saints we reject.' Fasting and self-denial, if prompted by humility, and spontaneous and not aiming at merit or reward, may be a help to prayer and virtue, and should be used alike by Churches and individuals upon suitable occasions for spiritual profit. 'The more that human rites are accumulated in the Church (ch. 27), the more it is drawn away from Christian liberty and from Christ himself, while the ignorant seek in ceremonies what they should seek in Christ through faith.' The slighting or forbidding of marriage, unclean celibacy, and pretended continence, are condemned (ch. 29). The civil magistrate (ch. 30) is of God's own appointment, and may be a useful servant or a serious enemy of the Church: he is 'to preserve peace and public order, to promote and protect religion and good morals . . . to punish offenders against society, such as thieves, murderers, oppressors, blasphemers, and incorrigible heretics (if they are really heretics).' Wars are only justifiable in self-defence and after all efforts at peace have been exhausted. 'We condemn the Anabaptists who maintain that a Christian should not hold a civil office, that the magistrate has no right to punish any one by death, or to make war or to demand an oath.'

LITERATURE. The relevant portions of Schaff, *Creeds of Christendom*, vols. I and III; Müller, *Die Bekenntnisschriften der reformierten Kirche*; Lindsay, *Hist. of Reformation*, vol. II; PRE³, the relevant articles. The first two works in conjunction leave little to be desired in regard either to the history or to the contents of the Zwinglian documents.

16. Confessions in the Calvinist (Presbyterian) Churches.—Between the Calvinist and the Zwinglian Confessions there was an intimate connexion—historical, geographical, and theological. Switzerland was their common birthplace. Unlike Luther, both Zwingli and Calvin were Humanists before they were Reformers, men of learning as well as statesmen, equally at home in the library and in the council chamber; but, like him, they found their peace and their inspiration in Holy Scripture, they had a rational, linguistic, and historical insight into the natural and true meaning of the Bible, and they gave Christ the central and dominating position in their doctrinal thought as well as in their Biblical exegesis. Zwingli gave expression to the reforming instinct of German Switzerland; Calvin, preceded by Farel and Viret, appealed not only to the French Cantons of his adopted land and to the Protestant Christians in France and Belgium, but to their brethren in many other lands. Without any propaganda, Calvin's influence spread instantaneously throughout the countries where German, Dutch, English, Bohemian, and Hungarian were spoken, reaching even Constantinople. More than any other form of Reformed doctrine—far more than Lutheran and Anglican—it proved itself catholic under the test of history, rising above racial differences, everywhere raising

the tone of life, and quickening zeal for religious and general culture. It is no mean testimony also to the original attractiveness and power of Calvin's system, that it not only gave rise to a scholasticism of its own which dominated at least two centuries, but was the parent of an unparalleled series of Confessional statements which bore a strong family resemblance to one another as well as to it. Ideas have altered, and instincts changed, but he would be a poor theologian and a narrow critic who could read for himself these documents without being profoundly impressed by the high order of their Scriptural learning and their logic and by their virile spirit, and without being moved to cherish a deeper respect for the exiled French theologian, the peer of Augustine and Aquinas, whose theological and religious genius was their immediate inspiration.

The Calvinist Confessions retain as doctrinal systems most of the features which broadly distinguished their Zwinglian forerunners from Romanism and from Lutheranism. In a small group of Confessions we have seen the outcome of harmonious co-operation between Zwinglian and Calvinist leaders, and an evidence of their kinship. If the three great leaders—Luther, Zwingli, and Calvin—were constrained, with the urgency of genius, to emphasize their distinctive tenets, it is a remarkable fact that each had a trusted lieutenant capable of appreciating and emphasizing the underlying unities, viz. Melancthon, Bullinger, and Beza—men who, had they been permitted, would have brought about a harmony of Protestant faith if not of polity. The specially Calvinistic features are four.

(1) In the forefront the primary and basal position of canonical and non-apocryphal Scripture as God's Word kept pure and inerrant, conformity to which, and sanction by which, are the only warrants of Christian belief and usage. The Bible is to be its own aid to interpretation, one passage assisting another, and none to be regarded in isolation.

(2) The eternal and absolute decree of God, whereby in His freedom and for His glory He has foreordained some portion of the human race, in spite of their sin, and not of their merit, to eternal salvation, and others, for their sins, to eternal damnation. This twofold decree, of election, in spite of sin, to forgiveness and blessedness, and of reprobation, for sin, to punishment and loss, drawn sternly from Old and New Testament Scripture and from Augustine, and faced unflinchingly, rests upon a dogmatic basis, including such elements as that God must have foreseen and foreknown the Fall and all its consequences, else His wisdom and omniscience are denied. He must therefore have permitted it under His all-ruling providence, for righteous ends and for merciful purposes, and to His glory. While all are called to repent and to have saving faith, not all respond, not all are *effectually* called, elect in *fact*; some—God alone knows who or how many (God also foreknows)—thus justly perish for their sins and for the sins of their fallen progenitors. Salvation is of grace, not for the sake of good works or of faith regarded as a merit; grace is in the nature of things liable to be deemed arbitrary, since it is not mechanical or forensic, but the eternal decree, which permitted the Fall and its transmitted consequences, is the unswerving embodiment of the immutable principle of grace in God. Human freedom, fettered in some measure now invariably, but originally intact, is alone responsible for sin and death, which even God could not have prevented without doing violence to the freedom of the creature whom He had made in His own image. Grace is open to all; none but

the impenitent and acquiescent sinner dares count himself lost; Divine predestination in Christ ought to be the ground of Christian confidence; the believer must make his calling sure, for God never does for man what He has given man power to do for himself.

(3) In the Sacrament of the Lord's Supper, the elements and their consumption are signs or symbols of spiritual realities, of the spiritual presence of Christ and of His incorporation in the believer's life; participation and communion seal to men the benefits of Christ's life and death; the presence is real but not local; it is spiritual; it is the presence of the Lord not only in His Divinity but in His humanity; 'this is my body' are figurative words; faith is, as it were, the organ that partakes and assimilates, through the aid of the Holy Spirit, the spiritual body of the glorified Lord; there is no change in the elements, no transfusion of them with the flesh and blood of the Lord in a physical and local consubstantiation (the unbeliever receives nothing but mere bread and wine); it is a special sacramental presence, transcending the Saviour's wonted presence with His people, only vouchsafed to faith when the memorial rite is duly celebrated. Thus the Zwinglian view, not less than the Romanist and Lutheran, is set aside.

(4) In regard to the Church, Calvinism affirms the parity of presbyters, government by presbyterian courts, the association of lay or ruling elders with duly ordained or teaching elders in that government, the necessity of thoroughgoing discipline as to doctrine and morals, the absolute independence of the spiritual courts in matters spiritual, and the duty of the civil authorities to carry out their spiritual sentences to their appointed civil consequences.

It is characteristic of the Calvinistic Confessions that with singular unanimity they maintain, throughout their long history, these distinctive traits. So uniform are they, and so consistent in their adherence to the fundamental tenets of Calvin, that in most cases a bare historical reference will suffice, indicating their occasions and their inter-relations. It may be remarked, however, of the above four elements of the doctrine, that each was animated by an intensely practical motive, and prompted by an exact acquaintance with the teaching of the Bible as a *whole*, for Calvin had no peer as a student of Holy Writ. Calvinistic scholarship in Scripture, fortified by a practical religious experience not to be judged apart from the stern character of the troubled century in which through blood and groans it was gained, was the warrant for the system, some elements of which, especially (2), were only acquiesced in under submission to plain Scripture warrant. A later scholasticism degraded the Scripturalism of Zwingli and Calvin into literalism, and provoked popular nausea in more fastidious and critical times, and it was perhaps the one defect of Calvin's own outlook that he could not detach at any point the Old and New Testaments from each other. Having committed himself wholeheartedly to a system, purely Biblical in character, resting on non-Apocryphal Scripture as the unadulterated Word of God revealing all needed truth to man, Calvin could not discriminate between the Old and New, but read each in terms of the other, reaching a system of doctrine which was at least as faithful in form and contents to the Old Testament revelation as to the New. Only thus can one suggest an explanation for the amazing fact that the first Biblical interpreter of his age should, in full view of the teaching of Christ, leave out of his own doctrinal scheme all mention of the universal Fatherhood of God—an omission which not only came to deepen the

apparent gloom of the reverse side of his predestinarian teaching, but in the end has been responsible in every Christian country for the modern defection from his views. To him and to his fellows, Scripture was a new world with green pastures threaded by quiet waters, to which a tide of God's spirit had borne them beyond the reach of the dictation and tyranny of the Roman Church; and in the OT history there were innumerable episodes full of suggestive analogy for their unquiet era: there was the spectacle of theocracy embodied in a Church-bound State, and surrounded by pagan adversaries; of prophecy overpowering priesthood; of stern Divine retribution; of the vocation and endowment of elect individuals. Similarly, the doctrine of the comprehensive eternal decree, based on the OT as much as on the Epistle to the Romans and occasional passages in the Gospels, was but a re-statement of the sovereignty of God and the completeness of His prescient providence, and naturally seemed inevitable to the vigorous interpreter of non-Apocryphal Scripture, for whom no purgatory was conceivable, and to whom the Pauline conception of the completeness of human depravity and guilt, original and transmitted, was an axiom of thought. In an age of stern struggle, when men knew no outer calm but faced each day's emergencies with military decision and resource, the conscience-prompted confidence of election—first realized in the less invidious form of vocation, perhaps—was a thrilling power for good to resolute souls in touch with God's Word and the living Spirit it exhaled. The stories of Islam and of Israel are sufficient disproof of the benumbing influence which a more peaceful and leisurely and sceptical age is prone to ascribe to the faith which rests on a predestinatory decree. It is to disqualify oneself as a historian or critic of the Calvinistic Confessions, to start with the assumptions that it is presumptuous for any son of man to believe himself an elect instrument for the Kingdom of God; that faith in the eternal decree must breed either hypocrisy, blasphemy, or utter pessimism; or (failing to distinguish between predestination and pre-caution) that that faith necessarily makes God the author of evil and obliterates both human responsibility and all secondary causes. Though Beza and a number of lesser Calvinists carried the doctrine to *supralapsarian* extremities, Calvin's own position—Augustinian's, only more sharply defined—of *infralapsarianism* (in his own words, 'Adam fell, God's providence having so ordained it; yet he fell by his own guilt') was without exception adopted by the whole family of Calvinistic Confessions and Catechisms. If it be said that the motley predestination of some to bliss and others to woe leaves God guilty, before human conscience, of favouritism or respect of persons,—an impression which the popular mind can scarcely escape,—the Calvinist could appeal to Scripture (his final witness), and to everyday observation (his living commentary on Scripture), in proof that some are so chosen and endowed apart from any antecedent merit in themselves or their ancestors, the store of merit and the condition of the grace, in his judgment, being the work and offering of the blameless Son of God. Grace can never be earned or deserved, yet it need not be unrighteous or arbitrary, and it can descend only upon fit recipients, whom God alone can judge and know.

What the Theses of Wittenberg and Zürich were to Lutheran and Zwinglian Confessions, the immortal *Institutio Religionis Christianæ* was, and more, to the Calvinistic Confessions—more, for the work, even in its briefest and earliest form of 1536, but especially in the final edition, five

times longer, of 1559, contained not only the anticipation but the finished form of their doctrinal system. It was, indeed, not only a manual for students (as the preface modestly declares) and a scholar's summary of Biblical doctrine, but at the same time, as the noble epistle dedicatory to Francis I. avows, a literal confession of evangelical faith, an apology or positive vindication of the new teaching. If it inspired instant alarm in Romanist quarters, or won converts from them, if its pellucid Latinity and its masterly theology won admiration alike from foes and from rivals, it became for Protestants of well-nigh every type a veritable oracle, a source from which confessional, catechetical, and homiletic wants were unfailingly supplied. In diction, in structure, in comprehensiveness, in sheer mass and weight, in unflagging interest and power, in dignity and severe simplicity, it has all the characteristics of a classic, and, while recognizing that it can never be for us what it was to earlier centuries, we cannot but lament that, in an age which so freely proclaims its emancipation from its spell, so few should read it for themselves, so many should condemn it cheaply and at second hand. Signs are not wanting that at no distant time justice will be more generally done to Calvin as a prince among systematic theologians not less than a prince among Christian exegetes.

In the first edition of the *Institutes*—whose successive chapters deal with (1) the Law, the Ten Commandments; (2) Faith, the Apostles' Creed; (3) Prayer, the Lord's Prayer; (4) the Sacraments of Baptism and the Lord's Supper; (5) the five other reputed Sacraments, their true character; and (6) Christian Liberty, Ecclesiastical Power, and Political Administration—little is said of predestination, though it is not overlooked, but the other traits of Calvinism are in evidence. In the final edition that doctrine is fully developed, and the system is complete in four massive books: i. in 18 chapters, of the Knowledge of God the Creator, including Scripture and Man's original estate; ii. in 17 chapters, of the Knowledge of God the Redeemer in Christ, as first manifested to the Fathers under the Law, and thereafter to us under the Gospel, including Sin, Freedom, the Law, the Person and Offices of Christ; iii. in 25 chapters, of the mode of obtaining (*percipiendæ*) the Grace of Christ, the benefits it confers, and the effects resulting from it; and iv. in 20 chapters, of the external Means or Helps by which God allures us into fellowship with Christ and keeps us in it, including the Church, Ministry, Sacraments, and Civil Government. Without trace of ostentation or any self-obtrusion, the book breathes an air of mature and settled conviction, almost confessional and dogmatic in its grave and well-weighed sentences, whose familiar words so tenaciously arrested the minds and the memories of their disciples as to force their way, directly or indirectly, into the Confessions and Catechisms of the adhering Churches. We may feel sure that, in the study or in the debating-hall of the Calvinistic formulators, no book lay so near the well-worn Bible as the *Institutes*, and none bore such evident marks of incessant use and affectionate deference.

It will be convenient to review the Confessions belonging to this family according to the countries of their origin—Switzerland, France, Germany, Belgium, Holland, Hungary, Poland, and the rest of the Continent of Europe; then, in the British Isles—Scotland, England, Wales, and Ireland—and their dependencies; and finally in America.

A. SWITZERLAND AND FRANCE.—(1) The *Geneva Catechism* was first prepared by Calvin in 1536, on the publication of the *Institutes*, not in catechetical but in propositional form, and appeared in French

It is a popular abstract of his systematic work in 58 sections, and terminates with a brief *Confession of Faith*, in 21 articles, to be signed by all the townsmen, affording, as Schaff puts it, 'probably the first instance of a formal pledge to a symbolical book in the history of the Reformed Church' (*Hist. of Creeds*, p. 468 [text in Müller, p. 111 ff.]). The Confession, whose opening words are 'Premièrement, nous protestons,' treats of the Word of God, the One God, God's Law, Man in his Nature, Man condemned in himself, Salvation, Justification, and Regeneration in Jesus, Remission of Sins always necessary for Believers, our whole Good in the Grace of God, Faith, Invocation of God alone and Christ's intercession, intelligent Prayer, the two Sacraments, human Traditions, Church, Excommunication, Ministers of the Word, Magistrates. The Catechism was re-cast in French, 1541, in 55 lessons, one for each Sunday in the year, and three for the great festivals; and in Latin, 1545 (text in Müller, p. 117 ff.). In this revised form it consisted of four parts—of Faith, the Apostles' Creed; of the Law, the Ten Commandments; of Prayer, the Lord's Prayer; of the Word of God and the Sacraments, as means of grace.

The opening and closing words are alike characteristic. The former are, indeed, memorable: 'What is the chief end of human life?—That men should know God, by whom they have been formed. What reason have you for saying that?—Since He hath made us, and placed us in this world, that He may be glorified in us: and in truth it is meet that our life, of which He is Himself the beginning, should be turned to His glory. What is the chief good of man?—The same. Wherefore dost thou hold it the chief good?—Because, apart from it, our lot is more unhappy than that of any of the brutes.' The closing words are: 'and that the elders should reject from communion those whom they have recognized to be by no means fit to receive the Supper and to be incapable of being admitted without pollution of the Sacrament.'

The Catechism long enjoyed extreme popularity, and was translated into many languages. In Scotland it was in regular use, being prescribed by the First Book of Discipline for Sabbath catechizing, as 'the most perfect that ever yet was used in the Kirk.' It is clear without being superficial, simple without being childish, lacking in the picturesque, but well arranged, comprehensive, and dignified. If it was excelled, it was only by its own offspring, the Heidelberg Catechism and the Westminster Shorter Catechism. Luther's can scarcely be made a basis of comparison; it is so much less comprehensive in contents.

(2) The *Zürich Confession* (1545), the *Zürich Consensus* (1549), and the *Rhatian Confession* (1552) form a group by themselves, as noticed above (p. 860), containing a harmony of Zwinglian and Calvinistic doctrine.

(3) The *Consensus of Geneva* (1552), though it received the signatures of the pastorate, was a controversial treatise rather than a Confession. It formed, in fact, the second portion of Calvin's answer to the strictures passed by the Romanist theologian Pighius, and the ex-Carmelite physician Bolsec, upon his doctrine of predestination. A somewhat harsh polemic, it is interesting as an exposition of the grounds on which Calvin persisted in maintaining the doctrine in its fullest form, in face of caricature and argument alike, and, in spite of the hesitation and defection of his friends, as a comfort and stay to the believer.

(4) The *French Confession*, or *Confessio Gallica*, appeared in 1559 (the date of Calvin's final edition of the *Institutes*), and marks the close of his theological activity. In spite of persecution and obloquy, a group of important Protestant congregations had been formed in various parts of France in the years 1555 to 1558. In 1558 doctrinal differences arose at Poitiers, and the visit of one of the Paris pastors to that town seems to have first suggested a conference with a view to a Confession and a Book of Discipline. Calvin was not in

favour of the project, but in 1559 the first Synod of the French Reformed Church met in Paris, and both documents took shape. The Confession is in 40 articles, based upon a draft prepared by Calvin in 1557 for the congregation in Paris to be presented with a letter to the King of France in vindication of their principles. It was drawn up by Antoine de la Roche Chandon, a pupil of Calvin, and slightly modified and enlarged by the Synod. It has been re-affirmed again and again as the national standard of the French Church. The revision of 1571 by the Synod of La Rochelle gave it the name of the 'Confession of La Rochelle,' by which it is also known. A variant form, in 35 articles, before 1571, is supposed by Müller to consist of Calvin's draft, concerning which Morel, the Chairman of the Synod, wrote to Calvin: 'It has been decided to add some things to your Confession, but to change very few.' Calvin's desire that the Confession should not be made public and reach the eyes of the civil authorities was deferred to, but its privacy was extremely short-lived. It was prepared for immediate signature by all ministers. In its doctrine and in the arrangement of its short articles it is normally Calvinist.

[Schaff, *Hist.* p. 490, *Evang. Prot. Creeds*, p. 356 ff., for text French and English; Müller, p. xxxii ff.; text, p. 221 ff.]

(5) The *Helvetic Consensus Formula* (1675) was the counterblast of orthodox Swiss Calvinism, especially in German Switzerland, centring in Zürich and Basel, to the innovations of the Saumur theologians, Amyraut, de La Place, and Cappel, Calvinist professors untouched by Arminianism. These taught, at variance from accepted views on 'particular' Predestination, the imputation of Adam's sin, and the literal inspiration of the Scriptures, maintaining that the decree of Divine grace was of conditional universality, that the guilt of Adam must be re-incurred by his descendants on their own responsibility to warrant condemnation, that the vowel-system in Biblical Hebrew was the invention of an age long subsequent to the composition and canonization of Scripture, and that in the Hebrew, as in the Greek, Bible the existence of variant readings and textual corruptions and lacunæ disproved the claim of literal or verbal inspiration and infallibility. The Saumur theologians, who thus seemed to abandon the outworks of the strict Calvinist position, acted in an apologetic as well as a scientific interest, in order to strengthen their system by the timely evacuation of fortifications which were sure to be turned or taken by Romanist and other adversaries. They fell back, in part, upon Lutheran and Zwinglian forms of thought. While maintaining the double decree based on God's providence and foreknowledge, they made it universal in intent, faith being the pre-ordained condition of its operation in grace; even the heathen, like young children, might be beneficiaries of the merit of Christ just as they are of God's universal providence, through a faith answering, however faintly, to that of Christians within the visible Church. Yet in the result none but the elect are saved. The decree is universal in intent, but man makes it particular in effect.

Amyraldism (*q.v.*) was, after continued debate, permitted by French Synods, but condemned nearly a generation later by the Swiss Reformed theologians. The Consensus Formula was prepared by John Henry Heidegger, Professor at Zürich, assisted by Lucas Gernler of Basel, and Francis Turretin of Geneva, all men of theological distinction and of eminently Christian spirit. Though polemical in purpose, its tone is courteous, and it rejects rather than condemns. It was intended to be an appendix to the accepted Calvinistic standards, not strictly

a fresh Symbol, and as such it exercised a local authority by order of Church and State in Zürich, Basel, and Geneva, and other Reformed Cantons, for half a century.

Articles 1-8 treat of biblical Inspiration, 4-6 of Predestination, 7-9 of the Covenant of Works before the Fall, 10-12 of the immediate Imputation of Adam's Sin to his Posterity, 13-16 of the Limitation of the Atonement to the elect alone in purpose as in effect, 17-22 of particular election, and of the insufficiency for salvation of the Divine revelation in nature and in providence, 23-25 of the two covenants,—against Amyraut's *three* of nature, law, and grace,—even Old Testament saints having been saved by faith in the earlier revelation of the Lamb of God and of the Divine Trinity, and 26 forbids teaching any doctrine extraneous or contrary to the Scriptures and such received standards as the Second Helvetic Confession and the Canons of Dort.

[Schaff, *Hist.* pp. 477-489; Müller, pp. lxix, lxx, *Lat. text*, pp. 861-870.]

(6) *The Confession of the Free Evangelical Church of the Canton de Vaud* (1847), at Lausanne, was the Confessional firstfruits of the Revival of Evangelicalism in the Swiss and French Churches in the fifth decade of last century, which led to the disruption of the Established Churches and the formation, after the Scottish model, of Free denominations. Six articles in the first section of the Constitution, 'Of the Free Church in General,' define in simple terms the loyal adherence of the Church to Scripture, and to the 16th cent. evangelical doctrinal tradition as embodied, *e.g.*, in the Helvetic Confession; its intention of fraternizing with other evangelical bodies and recognizing their membership; and its claim to spiritual autonomy.

[French text in Müller, p. 903. Full particulars of the doctrinal standards of the Swiss Free Churches in detail will be found in the *Report of the Second General Council of the Presbyterian Alliance*, Philadelphia, U.S.A., 1880, pp. 1081-1093.]

(7) *The Confession of the Free Church of Geneva* (1848) embodies the same spirit in more precise doctrinal terms. Its 17 short Articles state the substance of evangelical doctrine on Scripture, God, Christ, the Incarnation and Atonement, Regeneration, Justification, Sanctification, Judgment, the Church Invisible hidden in the Church Visible, the Sacraments as symbols and pledges of salvation, ecclesiastical fellowship. Salvation in all its phases is the gift of Divine Grace; true believers, its recipients, are elect in Christ from before the world's foundation, according to the foreknowledge of God the Father; God, who so loved the world as to give His only Son, ordains in this life that all men in all places should be converted, that each is responsible for his sin and unbelief, that Jesus repulses none who turns to Him, and that every sinner who sincerely invokes His name will be saved.

[French text in Müller, p. 905.]

(8) *The Constitution of the French Free Churches* (1849) includes a briefer and even simpler and more Scriptural statement of faith and principles, warmly evangelical in its terms, graceful and gracious in its language. Its clauses declare the faith that rests on Scripture, on God the Father, the Son, and the Holy Spirit, the universal call to repentance and salvation, the resurrection and judgment to come; and close with a doxology.

[French text in Müller, p. 907. Full particulars of the doctrinal standards of the French Free Churches in detail will be found in the *Report of the Second General Council of the Presbyterian Alliance*, Philadelphia, U.S.A., 1880, pp. 1068-1081.]

(9) *The Declaration of Faith of the Reformed Church of France* (1872) was the work of the first Synod that met since the suspension by Louis XIV. in 1660. Venerable as was the French Confession of La Rochelle, and sacred in its associations, it could not be re-affirmed without modification so late in the 19th century. Its authorization of the power of the magistrate to punish heresy by the sword was an article long since unlearned through bitter experience of its practical operation. But, even on the cardinal tenets of French Calvinistic tradition, unanimity and even substantial agreement were soon found to have passed away. The

Declaration, liberal and moderate as it is, was adopted only by a small majority and at the price of ultimate schism, the minority being averse to creed subscription. It was proposed by Charles Bois, professor at Montauban; affirms the fidelity of the Church to her original principles of faith and freedom; proclaims 'the sovereign authority of the Holy Scriptures in matters of faith, and salvation by faith in Jesus Christ, the only-begotten Son of God, who died for our sins, and was raised again for our justification'; and maintains, as the basis of the Church's teaching, 'the grand Christian facts represented in her religious solemnities, and set forth in her liturgies, especially in the Confession of Sins, the Apostles' Creed, and the order for the administration of the Lord's Supper.'

[Schaff, *Hist.* p. 498 ff. incl. text; Müller, p. lxxix, and text p. 910.]

(10) *The Constitution of the Free Church of Neuchâtel* (1874) briefly sets forth in three articles of its first chapter its faith in Holy Scripture, and in the great facts contained in the Apostles' Creed, and its devotion to the good of the people at large.

[Müller, p. lxx; text, p. 911.]

B. GERMANY.—The German Reformed Confessions—a considerable group in themselves—profess a moderate Calvinism, in touch with the Lutheranism of Melancthon, chary, on the one hand, of referring to the decree of reprobation, but, on the other, faithful to the Genevan sacramental doctrine. Only one of them, the Heidelberg Catechism, attained to an international currency and authority.

(1) *The Confession of the Frankfort Community of Foreigners* (1554) was called for by popular hostility to their sacramental ideas, and was intended by them to rebut the charge of Anabaptism. The exiles included a portion of the fugitives from Continental persecution, many of them from Holland, who had taken refuge in London under Edward VI., but were compelled to disperse on Mary's accession. In 1551 they had presented to Edward a statement and vindication of their tenets, in the *Compendium Doctrinæ* by Martin Micron, which in a Dutch version was long cherished in Holland as an authoritative symbol. The Confession of 1554 was embodied in a Book of Church Order, 'Liturgia Sacra,' and is a revision of the earlier compendium under the influence of John à Lasco, their leader in England, and of Calvin. Its preface undertakes to show what constitutes a true Christian, and what the chief good of man, and bases faith on the Scriptures and their summary in the Apostles' Creed.

Part I treats of God, His attributes, and work, His Fatherhood to men not simply as creator, nor (as of Christ) their begotter, but as having elected them to adoptive sonship; and of man's creation and fall into sin. Part 2 treats of Jesus Christ, part 3 of the Holy Spirit. Part 4, 'of the Church,' ends with a repudiation of the Pope and of Roman Catholic errors.

[Müller, p. xlix; Latin text, pp. 667-686.]

(2) *The Emden Catechism* (1554) is closely connected with the Frankfort Confession. A Lasco was its author. It took the place of a larger Catechism for children based on Micron's *Compendium* and also of a Lutherizing substitute which an Emden pastor had prepared on his own authority. It became the recognized text-book and doctrinal norm of East Friesland, in whose dialect it is written. (Text in Müller, pp. 686-682.)

Its 94 questions deal simply and concisely with the Commandments, the Lord's Prayer, the Plan of Salvation, the difference between Law and Gospel, the Apostles' Creed, the Sacraments, the Church, and Prayer. The opening question is, 'Wherefore art thou created a human being?—That I should be an image of God, and should know, love, and serve my God.' The second asks, 'Wherefore art thou become a Christian?' The third, 'How art thou sure that thou art a true Christian?' (Müller, p. li.)

(3) *The Heidelberg Catechism* (1563), the most popular, able, and authoritative of the German Reformed Confessions, was prepared on the basis

of earlier Catechisms, by two young Calvinist theologians in sympathy with Melancthon's standpoint—Zacharias Baer or Ursinus, and Caspar Olevig or Olevianus, professors at Heidelberg, who had had distinguished academic careers, had enjoyed friendly intercourse with the chief teachers of Germany and Switzerland, and had undergone privation and persecution for their views. Enjoying the entire confidence of the noble Elector Palatine, Frederick III., the first German prince to profess the Reformed doctrine, and so forfeit the political amnesty guaranteed only to Lutherans by the Augsburg Interim, they received from him the commission to prepare a manual which should serve alike for teaching the young and for settling the constant differences in doctrine between Lutherans, of both schools, and Calvinists, of which Heidelberg had become the continual scene. No commission was ever better justified. The Catechism, though it had detractors, soon established itself in every Reformed land and language. The Elector (whose interest in such work was later to be shown, in 1577, by a testamentary Confession left in his own writing) watched over its progress, and made frequent suggestions, one of which added to the second and later editions the sole polemic question and answer, no. 80, containing the clause, 'And thus the Mass at bottom is nothing else than a denial of the one sacrifice and passion of Jesus Christ, and an accursed idolatry.'

The Catechism opens with the question: 'What is thine only comfort in life and in death?—That I, with body and soul, both in life and in death, am not my own, but belong to my faithful Saviour Jesus Christ, who with His precious blood has fully satisfied for all my sins, and redeemed me from all the power of the devil; and so preserves me that without the will of my Father in heaven not a hair can fall from my head; yea, and that all things must work together for my salvation. Wherefore by His Holy Spirit He also assures me of eternal life, and makes me heartily willing and ready henceforth to live unto Him.' The second question is, 'How many things are necessary for thee to know that thou in this comfort mayest live and die happily?—Three things: First, the greatness of my sin and misery. Second, how I am redeemed from all my sins and misery. Third, how I am to be thankful to God for such redemption.' Its last question completes the exposition of the Lord's Prayer: 'What is the meaning of the word Amen?—Amen means, So shall it truly and surely be. For my prayer is much more certainly heard of God than I feel in my heart that I desire these things of Him.'

After the first two preface questions, the Catechism falls into three parts. Part I, 'Of Man's Misery,' questions 3-11, traces the knowledge of sin to God's Law, gives Christ's summary of the Law in two great commandments, affirms man's creation after God's image 'in righteousness and true holiness; that he might rightly know God his Creator, heartily love Him and live with Him in eternal blessedness, to praise and glorify Him,' traces sin to Adam's fall, and warns of God's wrath. Part II, 'Of Man's Redemption,' questions 12-85, expounds Anselm's view of the atonement in Christ, shows how the plan of grace was foreshadowed in the OT, how it is appropriated by faith which is 'not only a certain knowledge whereby I hold for truth all that God has revealed to us in His Word, but also a hearty trust which the Holy Ghost works in me by the Gospel that not only to others, but to me also, forgiveness of sins, everlasting righteousness and salvation are freely given by God, merely of grace, only for the sake of Christ's merits'; it then expounds the faith embodied in the Apostles' Creed in three divisions: of God the Father in Christ and our creation, of God the Son and our redemption, and of God the Holy Ghost and our sanctification—the Trinity revealed by God's Word; especially admirable being the questions on Providence, on the names of Christ and Christian, on the benefits of Christ's Ascension, on the Church and Communion of Saints, on Baptism and the Lord's Supper, though those on the Supper are very long and full; and on the office of the Keys. Part III, 'Of Thankfulness,' questions 86-129, sets forth Christian duty as the fruits of grateful penitence and faith, to the glory of God and the help of our neighbours, according to the Ten Commandments, which are expounded, in positive as well as negative terms, with a wealth of shrewd Christian wisdom and practical good sense, as, e.g., where the Fifth is made to teach not only obedience to parents and those in authority, and submission to their good instruction and correction, but that we 'bear patiently with their infirmities, since it is God's will to govern us by their hand.' Finally, with a view to obedience to God's will, the need of the aids of prayer is urged, and the successive clauses of the Lord's prayer are expounded.

No praise is too great for the simplicity of language, the accord with Scripture, the natural order, the theological restraint, and the devout tone

which characterize this Catechism. The excessive length of many of its answers militates against literal memorization, but the excellence of their contents goes far to atone for their length. It is a happy blend of Calvinist precision and comprehensiveness with Lutheran warmth and humanity. It is a miracle of unity and continuity, as wise in its omissions as in its contents. Predestination is not mentioned, save in the guise of election to good. It is Zwinglio-Calvinist on the Sacraments and on the natures of Christ, Luther-Calvinist in its anti-synergism, Melancthonian in its key-note of warm personal trust and in its mediative genius. It is, as Olevig from the first acknowledged, profoundly indebted to its forerunners. Their contributions and their influence on style, thought, and arrangement are patent. The Catechisms of Luther, Calvin, a Lasco, and Leo Judae were not only as familiar to the authors as Baer's own earlier products, but were freely used. Yet the workmanship never betrays patchwork, or suggests diversity of hands or heterogeneity of materials. By sheer worth it has won a high place for itself among the classics of religious instruction. It was adopted throughout every part of Reformed Germany, in Holland and its colonies, in Scotland, in Hungary, in Poland, Moravia, Bohemia. With German and Dutch colonists it crossed the seas, and it remains the standard of the Reformed Churches, German and Dutch, in America. It was authorized by the Presbyterian Church in the United States so recently as 1870. See also art. CATECHISMS (Heidelberg).

[Schaff, *Hist.* pp. 529-554 (on hist., contents, and bibliog.), *Evang. Prot. Creeds*, pp. 307-355 (text in Germ. and Eng.); Müller, pp. i-iii, 682-719 (Germ. text and proofs); *PRE3*; J. W. Nevin, *Hist. and Genius of the Heidelb. Catech.*, Chambersburg, Pennsylvania, U.S.A., 1847.]

(4) The *Nassau Confession* (1578) belongs to the Reformed group more than to the Lutheran, unlike the contemporary Repetition of Anhalt (see on both, p. 850* above). Its author was the Saxon divine, Christopher Pezel, exiled for his Calvinistic sympathies. It was prepared by the order of Count John, in answer to the Formula of Concord, and sanctioned by the Synod of Dillenbourg.

[Schaff, *Hist.* p. 564; Müller, pp. liii-liv, *Germ. text*, pp. 720-739.]

(5) The *Bremen Consensus* (1595), preceded in 1572 by a 'Declaration,' marks the establishment of Calvinism in that city. Its author was Pezel, and its doctrine is distinguished from that of his earlier work only by the sections on Predestination and the Communion of the Sick. It definitely associates as manuals of pastoral instruction the works of the Swiss Reformers with those of Melancthon. Till 1784, all pastors were required to sign it.

[Schaff, *Hist.* p. 564; Müller, p. liv, *Germ. text*, pp. 739-799.]

(6) The *Confession of Anhalt* (1597) was introduced, on the temporary overthrow of Lutheranism, by the Prince Regent, John George. It contained 28 Calvinistic Articles, and upheld a moderate theory of Predestination (see Kurtz, *Ch. Hist.* § 144).

(7) The *Book of Stafford* (1599) was composed by the Margrave of Baden-Durlach, one of the many German nobles who busied themselves with theology and asserted themselves as doctrinal dictators. It was imposed upon a none too receptive clergy and people while the Margrave lived.

[Müller, pp. liv-lv; *Germ. text*, pp. 799-816.]

(8) The *Hessian Confession and Catechism* (1607) were moderate Calvinist re-statements of Lutheran standards, prompted by the Landgrave, and sanctioned by the Synod at Cassel. The Confession, while retaining its Lutheran basis, expresses the Reformed views on the Person of Christ and the Sacraments, and consists of five paragraphs on the Ten Commandments, on the abolition of images and pictures, on the Articles of the Faith and

the Person of Christ, on Election by Grace, on the Lord's Supper. Along with the Heidelberg Catechism, a modified form of Luther's Small Catechism, still in use, was authorized.

The latter begins: 'Art thou a Christian?—Yes, Sir. How dost thou know it?—Because I have been baptized in the name of our Lord Jesus Christ, and know and believe the Christian teaching. . . . How many chief portions has the Christian teaching?—Five: the Ten Commandments, the ten Articles of the Christian Faith, the Lord's Prayer, the Sacrament of Holy Baptism, and the Lord's Supper, or the Sacrament of the Body and Blood of our Lord Jesus Christ.'

[Schaff, *Hist.* p. 564; Müller, pp. lv, lvi, Germ. texts, pp. 817-833.]

(9) The *Confession of the Heidelberg Theologians* (1607) is a manifesto of the Reformed Church doctrine, in its affirmative and negative aspects.

[Schaff, *Hist.* p. 565; Heppel, *Die Bekenntnisschriften der reform. Kirchen Deutschlands*, Elberteld, 1860, p. 250 ff.]

(10) The *Bentheim Confession* (1613), which is still authoritative, was drawn up by authority of the ruling Count, a convinced Presbyterian. It has 12 Articles, each a sentence long, in the form of questions, e.g.—'Quæritur 1. De essentia divinae Unitate: an credas unam et individuum esse divinam essentiam. . . .' The topics are the Unity of the Divine Being, the Trinity of Persons, the Person of Jesus Christ, the Threefold Office of Christ, the Efficacy of His Death, Infant Baptism, Election in Christ, Salvation, the Means of Salvation. It declares the Divine will that all should be saved, but that persistent unbelievers and impenitents should be damned eternally. No Confession in the long series is less controversial and partisan, more simple and charitable.

[Müller, pp. lvi, Lat. text, pp. 833-834.]

(11) The *Confession of Sigismund, Elector of Brandenburg* (1614), is the first of a group of three Confessions recognized in Brandenburg, the central and dominant province of Prussia, whose ruling house became Reformed, though the population mostly remained Lutheran. Though brought up in uncompromising Lutheranism, and indeed pledged to it, Sigismund's social intimacy with Calvinistic Holland and the Palatinate led him to become a close student of Reformed doctrine; and in 1613, five years after his accession, he openly professed his convinced adherence to it. Next year he vindicated the step by publishing his personal Confession of Faith, the fruit of personal study, assisted by Dr. Füßel, Superintendent of Zerbst.

In addition to the Word of God, 'the only rule of the pious which is perfect, sufficient for salvation, and abides for ever,' he recognizes the whole series of Ecumenical Creeds and decisions to A. D. 451, and the Augsburg Confession in both forms. The Confession opens with a reference to Biblical passages in which the duty of princes and kings to religion is set forth, and declares the Elector's sense of obligation to further the teaching of God's pure Word in school and church, and to abolish human ceremonies and superstitions. It rejects the Lutheran doctrine of Christ's bodily ubiquity, the practice of baptismal exorcism, and the use of the consecrated wafer; it sets forth the Calvinist doctrine of the Sacraments and Election, expressly adding that God sincerely desires the salvation of all, and is not responsible for sin; and it declares the Elector's purpose of religious toleration, God alone being judge of each man's faith. Later, however, Sigismund put down extreme Lutheran teaching in Church and Universities, and removed the Formula of Concord from the authorized standards of his Church.

[Schaff, *Hist.* pp. 554-557; Müller, pp. lvi-lviii, Germ. text, pp. 835-848.]

(12) The *Leipzig Colloquy* (1631) was the outcome of a conference arranged by the Electors of Brandenburg and Saxony, in which, with the Landgrave of Hesse and three representative theologians of each communion, Reformed and Lutheran, they met to consolidate the Protestant forces in doctrinal alliance against the menace of Roman Catholicism. The basis of discussion was the Augsburg Confession. Substantial agreement was easily reached, except on the Lord's Supper and Body of Christ; on Predestination little more than verbal difference remained. Unhappily, the times were not ripe for a real understanding. The Colloquy was recognized, however, as having a certain authority in

Brandenburg, as explanatory of the Confession of Sigismund.

[Schaff, *Hist.* pp. 558-560.]

(13) The *Declaration of Thorn* (1645) occupied a somewhat similar position among the Brandenburg Symbols, or *Confessiones Marchicae*. It was the Statement of Reformed Doctrine submitted to a Conference of Lutheran, Reformed, and Roman Catholic representatives, convened by the King of Poland, Wladislaw IV., himself a Roman Catholic, in hope to allay his subjects' religious dissensions. Among the delegates were Amos Comenius, the Moravian bishop; George Calixtus of Helmstädt, the mild Lutheran; and Calovius, the uncompromising Lutheran. Little or nothing came of the meeting, which, as Calixtus laments, proved an 'irritativum' instead of a 'caritativum' colloquium, as intended.

The Reformed Declaration in its first part, 'Professio Generalis,' affirms Scripture as the sole rule of faith, and the Ecumenical Creeds and decisions as subordinate and explanatory authorities, and accepts the Variata Augsburg Confession and the Consensus of Sendomir (1570) as essentially equivalent statements of Protestant doctrine. In the second part, 'Declaratio Specialis,' it states the Reformed system in its points of agreement with, and difference from, Lutheranism and Roman Catholicism respectively.

[Schaff, *Hist.* pp. 560-563.]

(14) The *Articles of the Palatine Union of 1818* are an apparent exception to the general rule that the Union of Lutheran and Reformed Churches throughout Germany in 1817 and thereafter rested upon no new Confessional basis, but upon the formal recognition of the historical standards of both, many of whose doctrinal angularities and differences had been rubbed away by the hand of time. Yet in reality they simply express the universal basis of the union movement—honour to the ancient standards but not strict obligation, submission to Scripture alone, certainty that the offer of grace is free to all men, recognition of the Lord's Supper as a memorial feast and act of personal communion with Christ as Redeemer.

[Müller, pp. lxx-lxvi, Germ. text, p. 870 f.]

C. BELGIUM AND HOLLAND.—(1) The *Belgic Confession* (1561) took the place of Micon's *Compendium Doctrinae*, translated into Dutch in 1551, which along with kindred catechisms of à Lasco and others had been current in the Low Countries as a norm and manual of doctrine (cf. p. 865^b above). It was composed by Guy de Bray, pastor at Tournay, whose career as a Reformer had begun in exile in England and was to end in 1567 in martyrdom. De Bray submitted his work to a number of scholars and divines for suggestions and revision—among them Adrien de Saravia, a Leyden professor—and addressed it to Philip II. in the faint hope of mitigating his persecuting frenzy against the Reformation. The Confession, written in French originally, follows closely in contents and order the French or Gallic Confession of 1559, avoiding all provocative references, however, to Romanism, expanding the doctrines of the Trinity, Incarnation, Church, and Sacraments, and expressly dissociating itself from Anabaptism. It has 37 Articles, which Schaff adjudges, 'upon the whole, the best symbolical statement of the Calvinistic system of doctrine, with the exception of the Westminster Confession.' The main variant recensions were those of the Synod of Antwerp, 1566, in Latin, the reviser being Francis Junius, a pupil of Calvin and later a professor at Leyden; and, in French, Latin, and Dutch, of the Synod of Dort in 1619. The Confession, associated with the Heidelberg Catechism and the Canons of Dort, has been the accepted Reformed Symbol of Belgium and Holland, and of the kindred Colonial Churches.

[Schaff, *Hist.* pp. 502-508, *Evang. Prot. Creeds* (Fr. text of Dort, and Eng. of Dutch Ref. Ch. of America), pp. 383-430; Müller, p. xxiv, Lat. text, pp. 283-249.]

(2) The *Dutch Confession of 1566* is a compara-

tively obscure work of uncertain origin, of a milder Calvinism, Zwinglian indeed in character, reflecting in its 18 Articles the apologetic purpose of the Belgic Confession, but sharper in its anti-Romanist polemic.

[Müller, p. xxxv, Dutch text, pp. 935-940.]

(3) The *Remonstrance* of 1610 summed up in 5 Articles the Arminian modifications of orthodox Calvinism. James Arminius had died in 1609. His views were maintained by Episcopius (Bisschop), his successor at Leyden, and by the preacher Uytenbogaert, and were supported by such eminent jurist-statesmen as Barneveldt and Grotius. The 'Remonstrance' was drawn up by Uytenbogaert for presentation to the Estates of Holland and West Friesland, and was signed by 46 pastors. It represented an even more serious and determined attempt than Amyraldism—its kindred though independent French counterpart—to break down the rigour of supralapsarian and infralapsarian Calvinism. Though condemned by the weighty, if one-sided, Synod of Dort, and driven by force from Holland or suppressed for a time, it exerted an extremely wide-spread influence, especially throughout the English-speaking world, pervading the Anglican Church and its great Methodist offshoot. It represents the recoil of the human heart from the stern inferences of the head, from the darker aspects of Scripture teaching and of everyday observation of life. Its weapons against scholastic logic and learning are sentiment and humane feeling. It first denies five current propositions, then affirms five others, ending with the claim that the latter are 'agreeable to the word of God, tending to edification, and, as regards this argument, sufficient for salvation, so that it is not necessary or edifying to rise higher or to descend deeper.'

The first article affirms that election is conditional upon, and inseparable from, Divine foreknowledge of faith and perseverance, and reprobation upon foreknowledge of unbelief and sin persisted in. The second affirms that the atonement through Christ's death is universal and sufficient for all, though not necessarily accepted and actually effective in every case, denying any *a priori* limitation of it to elect persons. The third affirms that fallen man cannot accomplish good or attain to saving faith unless regenerated through the Holy Spirit; but the fourth denies that grace is irresistible, compelling the elect though withheld from the reprobate. The fifth denies that recipients of irresistible grace, those who through faith are 'Christo insit ac proinde Spiritus eius vivificantis participes,' are unable to fall away and necessarily persevere to the end, and affirms that it is impossible to say from Scripture whether the regenerate can ever fall away.

[Schaff, *Hist.* p. 508 ff., text of positive artt. in Dutch, Lat., and Eng. in *Evang. Prot. Creeds*, pp. 545-549; Müller, p. lviii; *PRE*³, art. 'Remonstranten'; in Dutch the series of works by Joannes Tiedeman, 1847-1872.]

(4) The *Canons of the Synod of Dort* (1619) are the final answer of orthodox Calvinism to the Remonstrants, accepted unanimously by a convention of 84 Reformed divines, 58 of whom were Dutch, and 18 lay assessors. The foreign representatives came at the request of the States-General from almost every 'Reformed' country. James I. of England sent Carleton, bishop of Llandaff, Davenant, bishop of Salisbury, Ward, professor at Cambridge, Joseph Hall (afterwards bishop of Norwich), replaced later by Thomas Goad, and one of his chaplains, Walter Balcanquhal, a Scot by birth, afterwards dean of Durham—with the shrewd advice to 'mitigate the heat on both sides,' and to urge the Dutch clergy 'not to deliver in the pulpit to the people those things for ordinary doctrines which are the highest points of schools and not fit for vulgar capacity, but disputable on both sides.' Distinguished French delegates were prevented from attending by the veto of the Crown. In addition to the flower of Dutch learning and piety, then at their highest, representatives, similarly distinguished, from Great Britain, the Palatinate, Hesse, the

chief Churches of Switzerland, Nassau, Bremen, and Emden, were present to deliberate and append their signatures to the findings of the Synod. One-sided though the assembly necessarily was, the Arminians being everywhere in a minority, no more learned or respectable Synod was ever convened, and no body more representative of the Reformed Protestant world ever met. The result of their discussions was a foregone conclusion; but, apart from special meetings, 154 regular sittings were held, and the whole subject under debate was examined and analyzed and set forth in dogmatic form with unexampled dialectic thoroughness and theological precision, and with an unmistakably reverent tone. Beyond question, the outcome is strictly loyal to the tradition of infralapsarian Calvinism at all points. Alike in logic and in Scripture-learning the new positions failed to win conviction. Consistency seemed to reside with their opponents. The Arminian theses were so largely based on the older doctrine that a more radical departure from the presuppositions of Calvinism would have been needed to substantiate their case. At this distance of time it is not easy to discover in them a very profound relief from the burdens under which they chafed. Where the difference between the two parties is not sentimental, it is apt to appear merely scholastic. Wesley in England was a convinced Arminian, Whitefield a Calvinist as convinced, so that they parted for ever as workers in the visible Church; but were the spirit and the outcome of their work as preachers not identical, were they not equally rewarded and equally 'owned'? Is it possible to believe that a world of thought really parted them or the communions which gathered round them? Would many among their vast audiences have recognized that between them there could yawn the theological abyss which the debates and canons of Dordrecht laboriously located and surveyed? The method rather than the practical outcome of their thought was at variance. Each could find warrant in formal Scriptures of the highest authority.

The Canons are arranged in four chapters corresponding to the Arminian re-statement (given in Müller, p. lix ff.) of the Remonstrance in four chapters, the third containing Articles 3 and 4 of the original Remonstrance. Each chapter affirms a group of theses, rejects a group of errors, and closes with the signatures of the Synod.

Ch. I., of *Divine Predestination*, affirms 18 propositions. 'As all men have sinned in Adam. . . God would have done no injustice by leaving them all to perish' (Art. 1). 'But in this the love of God was manifested, that He sent His only-begotten Son. . . that whosoever believeth on Him should not perish but have everlasting life' (Art. 2). 'And that men may be brought to believe, God mercifully sends the messengers of these most joyful tidings to whom He will and at what time He pleaseth; by whose ministry men are called to repentance and faith in Christ crucified' (Art. 3). 'The wrath of God abideth on those who believe not this Gospel; but such as receive it, and embrace Jesus the Saviour by a true and living faith, are delivered' (Art. 4). 'The cause or guilt of this unbelief, as well as of all other sins, is nowise in God but in man himself: whereas faith in Jesus Christ and salvation through Him is the free gift of God' (Art. 5). 'That some receive the gift, and others not, proceeds from God's decree, according to which He graciously softens the hearts of the elect, however obstinate, and inclines them to believe: while He leaves the non-elect in His last judgment to their own wickedness and obduracy. And herein is especially displayed the profound, the merciful, and at the same time the righteous discrimination between men equally involved in ruin' (Art. 6). Election is of mere grace, sovereign good pleasure, is of a certain number of persons by nature neither better nor more deserving than others (cf. Eph 1:4, Ro 8:30). There are not various decrees of election, but one and the same. It was not founded upon foreseen faith and the obedience of faith or any other good quality or disposition in man as the pre-requisite cause or condition on which it depended but men are chosen to faith and to the obedience of faith. Election is the fountain of every saving good, Eph 1:4 (Art. 7-9). 'The elect cannot be cast away nor their number diminished. In due time (though in various degrees and in different measures) they attain the assurance of their election, not by inquisitively prying into the secret and deep things of God, but by observing in themselves with a spiritual joy and holy pleasure the infallible fruits of election pointed out in the word of God; such as a true faith in Christ, filial fear, a godly sorrow for sin, a hungering and thirsting after righteousness' (Artt. 11-13).

'The sense and certainty of this election afford additional matter . . . for daily humiliation before God . . . and rendering grateful returns of ardent love. The consideration of this doctrine is so far from encouraging remissness . . . or carnal security, that these in the just judgment of God are the usual effects of rash presumption, or of idle and wanton trifling with the grace of election, in those who refuse to walk in the ways of the elect' (Art. 13). This doctrine is to be 'published in the Church of God for which it was peculiarly designed, provided it be done with reverence, in the spirit of discretion and piety, for the glory of God's most holy name, and for enlivening and comforting His people, without vainly attempting to investigate the secret way of the Most High' (Art. 14). 'What peculiarly tends to illustrate and recommend the grace of election to us is the express testimony of Holy Scripture, that not all but some only are elected, while others are passed by in the eternal decree' (Art. 15). 'Those who do not yet experience a lively faith in Christ, an assured confidence of soul, peace of conscience, an earnest endeavour after filial obedience, and glorying in God through Christ, efficaciously wrought in them, and do nevertheless persist in the use of the means which God hath appointed for working these graces in us, ought not to be alarmed at the mention of reprobation, nor rank themselves among the reprobate, but diligently persevere in the use of means, and with ardent desires devoutly and humbly wait for a season of richer grace. . . . But this doctrine is justly terrible to those who, regardless of God and of the Saviour Jesus Christ, have wholly given themselves up to the cares of the world . . . so long as they are not seriously converted to God' (Art. 16). 'Since the Word of God testifies that the children of believers are holy, not by nature, but in virtue of the covenant of grace . . . godly parents have no reason to doubt of the election and salvation of their children whom it pleases God to call out of this life in their infancy' (Art. 17). 'To those who murmur at the free grace of election, and just severity of reprobation, we answer with the Apostle, " . . . who art thou that repliest against God?" and quote the language of our Saviour, "Is it not lawful for me to do what I will with mine own?" And therefore, with holy adoration of these mysteries, we exclaim in the words of the Apostle, "O the depth of the riches both of the wisdom and knowledge of God! how unsearchable are his judgments, and his ways past finding out! For who hath known the mind of the Lord? . . . or who hath first given to him, and it shall be recompensed unto him again? For of him and through him and to him are all things: to whom be glory for ever. Amen." (Art. 18).

Ch. II., of the Death of Christ and the Redemption of Man thereby, affirms 9 propositions, setting forth an atonement limited to the elect. 'The death of the Son of God is the only and most perfect sacrifice and satisfaction for sin; is of infinite worth and value, abundantly sufficient to expiate the sins of the whole world' (Art. 3). It is so for these reasons: 'because He was not only really man and perfectly holy, but also the only-begotten Son of God . . . and because His death was attended with a sense of the wrath and curse of God due to us for sin' (Art. 4). 'Moreover, the promise of the Gospel is that whosoever believeth in Christ crucified shall not perish but have everlasting life. This promise, together with the command to repent and believe, ought to be declared and published to all nations, and to all persons promiscuously and without distinction, to whom God out of His good pleasure sends the Gospel' (Art. 5). 'And, whereas many who are called by the Gospel do not repent nor believe in Christ but perish in unbelief, this is not owing to any defect or insufficiency in the sacrifice offered by Christ upon the cross, but is wholly to be imputed to themselves' (Art. 6). 'But as many as truly believe and are delivered and saved from sin and destruction through the death of Christ, are indebted for this benefit solely to the grace of God given them in Christ from everlasting, and not to any merit of their own. For this was the sovereign counsel and most gracious will and purpose of God the Father, that the quickening and saving efficacy of the most precious death of His Son should extend to all the elect, for the bestowal upon them of the gift of justifying faith thereby to bring them infallibly to salvation . . . that Christ should effectually redeem out of every people, tribe, nation and language, all those, and those only, who were from eternity chosen . . . and given to Him by the Father'—a 'promise proceeding from everlasting love towards the elect' (Art. 7-9).

Ch. III., of the Corruption of Man, his Conversion to God, and the Manner thereof, affirms 17 propositions. 'Man was originally formed after the image of God. His understanding was adorned with a true and saving knowledge of his Creator and of spiritual things; his heart and will were upright, all his affections pure, the whole man holy. Tempted by the Devil, he fell; and begat children, corrupt not by imitation merely, but by the propagation of a vicious nature in consequence of a just judgment of God' (Art. 1 and 2). 'All men are thus children of wrath, incapable of any saving good; without regenerating grace neither able nor willing to return to God, to reform the depravity of their nature, nor to dispose themselves to reformation. . . . There remain, however, the glimmerings of natural light, whereby man retains some knowledge of God, of natural things and of the difference between good and evil. But so far is this light of nature from being sufficient to bring him to a saving knowledge of God . . . that he is incapable of using it aright even in things natural and civil' (Art. 3-4). The Law slightly failed, accusing, not sufficing to save. The Holy Spirit, through the word or ministry of reconciliation, alone can suffice (Art. 5-6). Israel was not chosen for its own merit or use of nature's light, but of God's free choice. 'All who are

called by the Gospel are unfeignedly called. Eternal life and rest are seriously promised to all who shall come to Him and believe on Him' (Art. 7-8). 'The fault lies in men themselves, who refuse to come and be converted. . . . But that others obey and are converted is not to be ascribed to the proper exercise of free will whereby one distinguishes himself above others equally furnished with grace sufficient for faith, but it must be wholly ascribed to God, who calls effectually in time the elect from eternity, confers upon them faith and repentance. . . . that they may glory not in themselves but in the Lord' (Art. 9-10). In conversion, God uses His appointed means, and sends His Spirit to soften and regenerate the heart, working a new creation, a resurrection from the dead—a supernatural work, most delightful, astonishing, mysterious, ineffable (Art. 11-12). 'The manner of this operation cannot be fully comprehended by believers in this life. Notwithstanding, they rest satisfied with knowing and experiencing that by this grace of God, they are enabled to believe with the heart and to love their Saviour. Faith is therefore to be considered as the gift of God, not as offered to man, to be accepted or rejected at his pleasure, but because it is in reality conferred, breathed and infused into him, and because he who works in man both to will and to do, produces both the will to believe and the act of believing also' (Art. 13-14). 'Recipients of this grace owe eternal gratitude to God. Whoever is not made partaker thereof is either altogether regardless of these spiritual gifts and satisfied with his own condition, or is in no apprehension of danger, and vainly boasts the possession of that which he has not. As for those who make an external profession of faith and live regular lives, we are bound after the example of the Apostle to judge and speak of them in the most favourable manner; for the secret recesses of the heart are unknown to us. And as to others who have not yet been called, it is our duty to pray for them to God. But we are in no wise to conduct ourselves towards them with haughtiness, as if we had made ourselves to differ' (Art. 15). 'This grace of regeneration does not treat men as senseless stocks and blocks, nor take away their will and its properties, neither does violence thereto; but spiritually quickens, heals, corrects, and at the same time sweetly and powerfully bends it to a true obedience in which true freedom resides. . . . It also in no wise excludes or subverts the use of the gospel which God has ordained to be the seed of regeneration and food of the soul' (Art. 16 and 17).

Ch. IV., of the Perseverance of the Saints, affirms 16 propositions. The elect are delivered 'from the dominion of sin in this life, though not altogether from the body of sin and from the infirmities of the flesh, so long as they continue in this world. Hence spring daily sins of infirmity, and hence spots adhere to the best works of the saints. But God is faithful, who, having conferred grace, mercifully confirms and powerfully preserves them therein, even to the end' (Art. 1-3). 'Converts are not always so influenced and actuated by the Spirit of God as not in some particular instances sinfully to deviate. They must be constant in watching and prayer. By such sins they very deeply offend God, incur a deadly guilt, grieve the Holy Spirit, . . . wound their consciences, and sometimes lose the sense of God's favour, for a time, until on their return into the right way by serious repentance, the light of God's fatherly countenance again shines upon them. . . . God does not permit them to be totally deserted and to plunge themselves into everlasting destruction' (Art. 4-8). 'Of this preservation and perseverance, assurance may be obtained according to the varying proportion of faith, not of revelation apart from, or contrary to God's Word, but from faith in God's promises, from the testimony of the Holy Spirit witnessing with our spirit that we are children and heirs of God, and from a serious and holy desire to preserve a good conscience and to perform good works. If the elect were deprived of this solid comfort, that they shall finally obtain the victory, and of this infallible pledge or earnest of eternal glory, they would be of all men the most miserable. This certainty of perseverance produces no spirit of pride or carnal security, but grateful humility and circumspection, lest God's fatherly countenance should be averted, and more grievous torment of conscience be incurred' (Art. 9-13). 'The carnal mind is unable to comprehend this doctrine and the certainty thereof which God hath most abundantly revealed in His Word. . . . Satan abhors it; the world ridicules it; the ignorant and hypocritical abuse it; and heretics oppose it. But the Spouse of Christ hath always most tenderly loved and constantly defended it, as an inestimable treasure; and God, against whom neither counsel nor strength can prevail, will dispose her to continue this conduct to the end' (Art. 15).

The Canons conclude with a solemn protest, declaration, and admonition. The protest discloses the urgency of their work in view of current representations 'that the doctrine of the Reformed Churches concerning predestination . . . by its own genius and necessary tendency, leads off the minds of men from all piety and religion; that it is an opiate administered by the flesh and the devil; and the stronghold of Satan, where he lies in wait for all, and from which he wounds multitudes, and mortally strikes through many with the darts both of despair and of security; that it makes God the author of sin, unjust tyrannical, hypocritical; that it is nothing more than an interpolated Stoicism, Manichæism, Libertinism, Muhammadanism; that it renders men carnally secure, since they are persuaded by it that nothing can hinder the salvation of the elect, let them live as they please; . . . and that if the reprobate should even perform truly all the works of the saints, their obedience would not in the least contribute to their salvation; that the same doctrine teaches that God by a mere arbitrary act of His will, without the least respect or view to any sin, has predestinated the

greatest part of the world to eternal damnation, and has created them for this very purpose; that in the same manner in which election is the fountain and cause of faith and good works, reprobation is the cause of unbelief and impiety; that many children of the faithful are torn, guiltless, from their mothers' breasts and tyrannically plunged into hell: so that neither baptism, nor the prayers of the Church at their baptism, can at all profit them.' These and 'many other things of the same kind the Reformed Churches not only do not acknowledge, but even detest with their whole soul.' Christians, therefore, are solemnly urged to judge of the Reformed faith from the authorized Confessions, and not from particular utterances of a few ancient and modern teachers, often wrested from their true sense and context, and to beware of the judgment which awaits false witnesses and calumniators. Preachers of this doctrine are to handle it with modesty, reverence, and caution, for comfort and assurance, not for despair, or pride, or controversy.

The Canons of Dort represent the last effort of rigid Calvinistic orthodoxy to meet the difficulties and objections besetting their system, both from a popular and from a theological point of view. Later formulation simply rests upon their conclusions. Beyond question, they are a completely consistent expansion of Calvin's theory. Subsequent history has not shown that they succeeded in their ulterior object of silencing objections or reassuring doubters. But their tone is as admirable as their eloquence is noble and sustained. Their ethical sensitiveness and zeal for the Divine glory, even at the cost of man's dignity, are manifest. Their courage in facing the problems of election and sin in the light of Scriptural revelation—problems which practically all non-Calvinistic systems discreetly elude or ignore—is worthy of the high spirit and noble ardour of the Dutch nation then emerging from their long struggle for independence. Their only polemic is against detractors; their attitude towards Arminianism is marred by no offence against charity or good taste. To read their stately sentences is to be disabused of prejudice and suspicion, and to understand the chorus of relief and praise that greeted their publication. The contradictions which they contain, and make no effort to reduce, are the irreducible antinomies of every honest system—analogue to those of miracle and law, and related intimately to the moral problems of heredity and environment, of freedom and limitation, of Divine foreknowledge of the actions of free agents. It is a great mistake to describe them as speculative, inquisitive, or presumptuous. They spring from a self-effacing desire to systematize and harmonize the teaching of Scripture, to promote assurance of ultimate salvation in Christians without self-trust yet without slavish impotence, to combine the energy of striving against sin with trust and rest in God, to justify forgiveness by its results, not by the deserts of its recipients. To the question, Why has not God conferred saving grace *effectually* upon all, since all alike are sinners and undeserving?—they either have no answer, or confess they cannot understand, implicitly appealing to godlessness and persistent impenitence as an observed fact in life, or lay the blame upon men who are already from their birth hopelessly under blame. They both assert and deny man's individual freedom since Adam. They leave inevitably upon the human mind an impression of arbitrariness in God. He might have elected and saved all, but for reasons of His own, good, no doubt, though inscrutable and seeming harsh, reasons not connected with the particular sins of individuals, He has not done so. His action appears un-ethical according to our standards of Christian judgment. To be able to save and not to do so, to be free to elect all sinners and not to do so, when all alike have come short, whether it be true to life's experience or not, is a painful character to attribute to the God and Father of Jesus Christ. Technical or formal safeguards or reservations, counter-assertions like afterthoughts at the close or the canons, will not avail to dispel from the

popular mind, however serious, the impression of Divine cruelty. This is enough in itself to discredit any religious manifesto, however guarded or studied in its phraseology. Where the divines of Dordrecht failed, others may well pause.

Along with the Belgic Confession and the Heidelberg Catechism, which the Synod of Dort reaffirmed, the Canons of Dort have remained the formal standard of the group of Dutch Reformed Churches in Holland and in the lands of its emigrant children. In the National Church of Holland, however, as distinct from the conservative secessions, they are no longer held as strictly binding. Their influence upon subsequent Calvinistic Confessions is obvious even to the superficial reader.

Church of America, positive articles only, *ib.* pp. 581-597; Eng. text of positive and negative canons in Hall, *Harmony of Prot. Confessions*, 1842, pp. 539-573; Müller, pp. lviii-lxiv; full Lat. text, pp. 843-861.]

D. HUNGARY, POLAND, AND THE REST OF THE CONTINENT OF EUROPE.—i. HUNGARY.—In Hungary the Reformation movement, originated from Wittenberg, was promoted by a numerous group of native workers, at their head Matthias Dévay, and was consolidated by the acceptance in 1545 of the Augsburg Confession. But with remarkable rapidity the Saxon gave place to the Swiss influence. Dévay and his successors passed over, in spite of personal ties to Wittenberg, to Zwinglian and Calvinistic views, the phrase '*corde, non ore*' in relation to the communion of the Lord's body becoming a watchword in the Magyar Church. The native Confessions belong to the years 1559-70, and to the lifetime and ascendancy of Peter Melius, the 'Hungarian Calvin,' teacher and pastor in Debreczen. They have all given place, however, since 1626 or 1646, to the Heidelberg Catechism and the Second Helvetic Confession.

(1) The *Confession of Kolosvar* (*Claudiopolis*), 1559, is a brief '*Sententia*' on the Lord's Supper drawn up by Melius (Iuhasz), David, and seven colleagues met in synod; it was followed in the same year by a *Defensio*, or vindication, by David, both maintaining the Calvinist and rejecting the Lutheran doctrine. The *Confession of Vasarahely*, 1559, in Hungarian, reproduces its teaching.

(2) The *Confession of Debreczen* (1560-2) is the first general Calvinist Confession of the Church, dealing with election and other topics, doctrinal and ecclesiastical. It is based on the Fathers and on the Genevan teachers, was prepared by Melius, and was ratified by Synod. It is also known as *Confessio Agriavallensis*, or *Conf. Hungarorum*, or *Conf. Catholica*. Melius at the same time introduced into school and general use a *Catechism*, modelled upon and inspired throughout by Calvin's Catechism.

(3) The *Confession of Tarcsal and Torda*, adopted by the successive synods of those places in 1562 and 1563, is a shortened form of Beza's Compendium of Reformed Doctrine, the *Confessio Christianæ Fidei* of 1560. It incorporates the Ecumenical Creeds, and treats in six parts of the Holy Trinity, of God the Father, of Jesus Christ, of the Holy Spirit, of the Church, and of final Judgment.

(4) The *Confession of Czenger* (1570), or *Confessio Hungarica*, is the last and most important of a series of Synodic Declarations against the Unitarian movement in Hungary, earlier examples being the *Brief Confession of Pastors at Debreczen* (1567), the *Confession of Kassa* (1568), and the *Confession of Várad* (1569).

The Confession of the Synod of Czenger, at which Melius was the guiding mind, but from which the pastors who sympathized with Socinus and Servetus absented themselves, contains 11 chapters dealing with the One and Only God,—the only-begotten Son of God from eternity,—the Holy Spirit, as true and only God and Lord, having life in Himself,—the Words and Expres-

sions employed by the Holy Spirit concerning God through the Prophets and Apostles,—the Rules for the interpretation of expressions concerning God,—the Law and the Gospel in the Church,—the Rites and Sacraments of the Church, Infant Baptism and the Lord's Supper,—Christian liberty in food, drink, clothing, and ecclesiastical places of meeting,—Divine freedom from respect of persons in saving some and hardening others,—the Cause of Sin, and the Mediator the Son of God,—the removal of obnoxious heretics and antichrists. The Confession is less pleasing in tone than its predecessors, being burdened with polemic and controversy.

[On the Hungarian Confessions, see *Report of Second General Council of Presbyterian Alliance*, Philadelphia, 1880 (for a full account, though marred by misprints and unfamiliarity with English on the part of the Hungarian contributor, Francis Balogh, Prof. of Ch. Hist. at Debreczen), pp. 1099-1120; also Müller, *op. cit.* pp. xxxvi-xxxix, Latin texts of 2, 3, and 4, pp. 265-468; Schaff, *Hist.* p. 591f.]

ii. **BOHEMIA.**—In Bohemia, apart from the native Utraquism, whose standards have been discussed (p. 844^b), there was also, as in Hungary, a division of Protestant sympathies between Lutheranism and Calvinism. Reference has already (p. 844^b) been made to Calvinistic influence in the unionist Confession of 1575. But the outstanding Calvinist Bohemian Confession is the little known *Confession of 1609*, containing 20 chapters, almost catechetical in form, which had been presented to King Ferdinand, to the Emperor Maximilian II., and to King Sigismund Augustus II. of Poland—a revision and expansion of older documents of 1535 and 1564, retaining not a little of the native pre-Reformation type of teaching. The Reformed Church of Bohemia and Moravia recognizes the Heidelberg Catechism and the Second Helvetic Confession.

[Müller, *op. cit.* pp. xxxix-xl, text in Latin, pp. 458-500.]

iii. **PIEDMONT.**—In Piedmont there was drawn up, as mentioned above (p. 844^b), the Calvinistic *Waldensian Confession of 1655*, in 33 propositions with an appendix repudiating 14 Romanist accusations—based upon the French Confession of Calvin.

[French text in Müller, *op. cit.* pp. 500-505; French and English in Schaff, *Evang. Prot. Creeds*, pp. 757-770.]

iv. **POLAND.**—In Poland, apart from the *Declaration of Thorn*, mentioned above (p. 867) as a Confession recognized in Brandenburg, there needs only to be made a reference to the *Consensus of Sendomir* (1570). The death of John à Lasco and of Prince Radziwill, the leaders of the Polish Reformation, and the pressure of Roman propaganda, led to the meeting and Confederation of Lutherans, Calvinists, and Bohemian Brethren at Sendomir in 1570, and to the issue of a joint-Confession setting forth their agreement on the fundamental Articles of Protestant faith embodied in their standards, and their compromise on the Lord's Supper, in Melancthonian or Calvinist terms, affirming the substantial presence of Christ (not of His body and blood), denying that the elements are mere symbols, avoiding technical Lutheran language, and omitting all reference to the doctrine of Predestination. The Confession contains a lengthy passage on the Sacraments from Melancthon's 'Repetition' of the Augsburg Confession, drawn up in 1551 for the Council of Trent, and in Melancthon's spirit it acknowledges the Christian soundness of all three parties, and enjoins the cultivation of good relations between them. In 1570, at Posen, a series of 20 short supplementary Articles were adopted in confirmation of the Consensus. The Consensus was repeatedly ratified by Polish Synods.

[Schaff, *Hist.* pp. 581-588; art. 'Sendomir,' in *PRE*; Niemeyer, *Collectio Confessionum*, Leipzig, 1840, p. 551 ff. (Lat. text); Beck, *Die symbolischen Bücher* 2, 1845, vol. ii. p. 87 ff. (Germ. text).]

v. **CONSTANTINOPLE.**—In Constantinople, Calvinism found an exponent in so exalted a personage as the Patriarch, Cyril Lucar, who was a life-long correspondent with the Genevan Reformers (see above, p. 837). His *Confession of Faith* (1631) went further than that of his suc-

cessor at Alexandria, Metrophanes (1625), who, while not openly espousing Protestant views, refrained from polemic against them, though opposing Roman Catholic tenets. It was supplemented by various *Catechisms*. The earliest form, of 1629, was in Latin. The edition of 1631 contained four added questions and answers, and was in Greek. The edition of 1633, at Geneva, was in both languages.

Of the 18 chapters, 1, 4, 5, 6, 7, 8, 9, and 16 are Catholic and uncontroversial—on the doctrines of the Trinity, Creation and Providence, the Fall, the Incarnation and Glory of Christ, Faith, and Baptismal Regeneration, the Procession of the Spirit being expressed in terms of the phrasing of the mediating Council of Florence, 'proceeding from the Father through the Son.' In the other 10 chapters, the teaching is unmistakably Reformed and Calvinistic. The authority of Scripture is supreme as the infallible Word of God, and the Apocrypha are excluded from canonical authority (ch. 2 and appendix). The Church may err and sin, and needs the grace of the Holy Spirit and His teaching rather than that of any mortal man (ch. 12). On Predestination, Cyril agrees with Dort against the Arminians (ch. 3). He sets forth Justification in ch. 13 in these terms: 'We believe that man is justified by faith, not by works. But when we say "by faith," we understand its correlative, the righteousness of Christ, which faith, performing the office of the hand, apprehends and applies to us for salvation. And this . . . in no wise to the prejudice of works . . . they are by no means to be neglected, they are necessary means and evidences of our faith and a confirmation of our calling. . . . They are of themselves by no means sufficient to save man. The righteousness of Christ, applied to the penitent, alone justifies and saves the believer' (after Schaff). There are but two Sacraments instituted by Christ; both require faith for their efficacy (ch. 15). Transubstantiation and oral manducation are alike erroneous doctrines, and are to be replaced by Calvin's teaching on the real but spiritual presence and reception of the body and blood of Christ (ch. 17). Purgatory and post-mortem repentance are denied (ch. 18). The Confession, of course, never became authoritative, but it is a significant evidence of the influence of the Genevan School.

[Schaff, *Hist.* pp. 54-57; art. 'Lukaris,' in *PRE*.]

vi. **SPAIN.**—In Spain three Calvinistic Confessions have been recognized:

(1) *Confession of 1559* of Spanish refugees from the Inquisition, in London. It is believed to have been very moderately Calvinistic in type, and contained 21 Articles.

(2) *Confession of Seville* (1869), on the basis of an earlier draft prepared at Gibraltar, accepted by the Churches of Seville, Cordova, Granada, Malaga, Cadiz, and Huelva. It contains 25 chapters with proof-texts. It is largely a reproduction of the Westminster Confession, in parts a translation of it.

(3) *Confession of Madrid* (1872), prepared and authorized by the Assembly of the Reformed Church of Spain, the 'Spanish Christian Church.' It contains 25 chapters, and is similar in character to that of 1869, the occasion for its preparation being the union of the Andalusian Churches forming the Spanish Reformed Church, which had recognized the earlier standard of doctrine, with a number of other congregations, some of which had been fostered by missions from Protestant countries.

[*Report of Second Gen. Council of Presbyterian Alliance*, Philad., 1880, pp. 1121-1123.]

vii. **ITALY.**—The *Confession of the Evangelical Church of Italy* (1870) is a very short statement in 8 Articles, adopted at Milan by a group of Free Churches met in Assembly, 'simply as the outward bond of unity in the faith and the banner of the Church.'

The Articles refer to (1) Scripture; (2) Man's original state, the Fall, and its result; (3) God's desire to save; (4) Salvation, its source, means, vehicle, and results; (5) the life of the Redeemed, and the source of its strength; (6) the Church; (7) Ministries in the Church; (8) the Second Advent of Christ, and Judgment.

[Schaff, *Evang. Prot. Creeds*, pp. 787-788.]

E. THE BRITISH ISLANDS AND EMPIRE.—i. **ENGLAND.**—In Episcopalian England, as we have seen (pp. 851-857 above), Calvinism early made its presence felt, at first by reason of political exigencies under the cloak of Melancthonian Lutheranism, later with unmistakable clearness in the accepted Articles (1549-1563), though never in its extremer forms, and finally in the *Lambeth*

(1595) and *Irish* (1615) Articles, with sharp decision and without compromise.

ii. SCOTLAND.—In Presbyterian Scotland, Geneva teaching was dominant from the first, alike in Confessions and in Catechisms. Apart from the articles of belief or 'places' of the early Protestant teachers and martyrs, and the vernacular Catechism expounding the Apostles' Creed prepared by Archbishop Hamilton for priests and people on the eve of the Reformation in 1552, and the contemporary versified Creed of the 'Gude and Godlie Ballates,' (1) the first Confessional utterance of Scottish faith is the *Confession of the English Congregation at Geneva* (1556), which, along with forms of prayer, had been framed on the teaching of Calvin's 1536 Catechism and Forms of Prayer, for the congregation at Frankfort in 1555 by Knox and four others commissioned to do the work—Whittingham, Gilby, Foxe, and Cole. When part of the Frankfort congregation migrated to Geneva, they took with them this 'Forme of Prayers, etc.' The brief Confession is the first among its contents. It is a running paraphrase and expansion of the Apostles' Creed, whose clauses were printed as insets on the margin of the successive paragraphs. On Scripture, on the two-fold Decree, and on the Sacraments, it is completely loyal to Calvin, with whose approval, indeed, it was issued. On Knox's return to Scotland the 'Forme of Prayers' was speedily 'approved and received by the Church,' and issued, practically without change, for common use.

[Text in Dunlop's *Collection of Confessions of Faith, Catechisms, etc., of Public Authority in the Church of Scotland*, 1719, 1722, vol. ii. pp. 1-12; also, with introduction, in Laing's *Works of John Knox*, 1846-64, vol. iv. pp. 143-173.]

(2) The *Scots Confession* of 1560 marks the consummation of the Reformation in Scotland. It was drawn up in four days, by instruction of the Estates of Parliament, by Knox with the assistance of five others—Winram, Spottiswoode, Hillock, Douglas, and Rowe—and, after private revision by Lethington and Lord James Stewart, who tempered its language and secured the omission of an article on the 'dysobediens that subjects owe unto their magistrats,' it was approved by Parliament as 'hailsome and sound doctrine.' It is substantially the work of Knox himself, who had not only prepared the Geneva Confession with full knowledge of its Swiss counterparts, but had been consulted regarding the English Articles of Edward VI.

The Preface is a striking introduction, vivid, picturesque, and vigorous, and has often been the subject of well-deserved encomium. Like the First Confession of Basel (1534), it invites correction on the basis of Scripture, and disclaims inerrancy, 'protestand that gif onie man will note in this our Confessioun onie Article or sentence repugnant to Gods hailie word, that it wald please him of his gentleness and for christian charities sake to admonish us of the same in writing; and we upon our honoures and fidelitie, be Gods grace do promise unto him satisfaction fra the mouth of God, that is, fra his haly scriptures, or else reformation of that quhilk he sal prove to be amisse.' Opening with the words, 'Lang have we thirsted, dear Brethren, to have notified to the world the Sum of that Doctrine quhilk we professe, and for quhilk we have sustained Infamie and Danger,' it ends—'be the assistance of the mightie Spirit of the same our Lord Jesus Christ, we firmly purpose to abide to the end in the Confessioun of this our faith, as be Articles followis.'

Its 26 Articles treat of 'God, the Creation of Man, Original Sin, the Revelation of the Promise, the Continuance . . . of the Kirk, the Incarnation, why it behooved the Mediator to be very God and very Man, Election, Christ's Death, Passion and Burial, the Resurrection, the Ascension, Faith in the Holy Goste, the Cause of Gude Warkis, what Warkis are reputit Gude befor God, the Perfection of the Law and the Imperfection of Man, the Kirk, the Immortalitie of the Soules, the Notis be the quhilk the Trewe Kirk is decernit fra the false, and quha sall be Judge of the Doctrine, the Authoritie of the Scriptures, Generall Councilis, the Sacramentis, their Right Administration, to whom they appertaine, the Civile Magistrate, the Guiltis freel' given to the Kirk.' In common with the other standards of the Reformation, it deprecates heresy from the Catholic Creeds. The articles on Election (VII. and VIII.) are characteristic: the conjunction of Godhead and man-

hood in Christ proceeded from the eternal decree; for the same eternal God and Father who of mere grace elected us in Christ Jesus His Son before the foundation of the world appointed Him to be our Head, our Brother, our Pastor . . . giving power to believers to be the sons of God . . . by which holy fraternity 'quhatsever wee have tynt in Adam is restored unto us agayne.' Nothing is said of a decree of reprobation, save that 'the reprobate' are mentioned as a class distinct from the elect (of the English Articles). Those who lack the Spirit of sanctification, and live in sin, cannot have Christ living in their hearts till they repent and are changed (XIII.). Good works are the fruit of faith, and faith the gift of the Spirit (XII. and XIII.). The true Church is invisible, known only to God, who knows His elect; it includes the children of true believers, saints in glory and saints who yet live and fight against sin; out of that true Church, as without Christ, there is no salvation, howsoever men may live according to equity and justice (XVI.). The notes of the true Church are three—the true preaching of the Word of God, the right administration of the Sacraments, discipline uprightly administered; the interpretation of Scripture belongs to no private or public person, to no Church by reason of any earthly pre-eminence, but to the Spirit of God by whom it was written; when in doubt we are to look to the utterance of the Spirit within the body of Scripture, to Christ's own example and commandment; by Scripture all teachers and Councils are to be judged (Art. XVIII.-XX.). Councils are fallible at the best. 'Not that we think that any policie and an ordour in ceremonies can be appointed for all ages, times, and places. For, as ceremonies sik as men have devised, are bot temporal; so may and aucht they to be changed when they rather foster superstition then that they edifie the Kirk using the same' (Art. XX.). The Two Sacraments of the New Testament correspond to Circumcision and Passover in the Old: they are not only to distinguish visibly God's people from others, but to exercise their faith, and seal in their hearts the assurance of His promise and of their union with Christ: they are not 'naked and baire signes': by them we are truly engrafted in and fed by Christ; the signs are neither to be worshipped nor handled lightly, but revered; the very body and blood of Christ are by virtue of His Godhead communicated to us, distant though He is in heaven, not by any transubstantiation, but through faith by the power of the Holy Spirit, so that we become flesh of His flesh, bone of His bone, and receive 'life and immortalitie. . . quhilk, albeit we confesse are nether given unto us at that time onelie, nether zit be the proper power and vertue of the Sacrament onelie; zit we affirme that the faithfull, in the right use of the Lords Table has conjunction with Christ Jesus as the natural man can not apprehend' (Art. XXI.; cf. Eng. Art.). Papists have corrupted, profaned, and adulterated the Sacraments: their stealing of the cup from God's people is sacrilege (Art. XXII.). The civil magistrate is ordained of God, and to be honoured and obeyed accordingly as the 'Lieu-tenants of God in whose Sessions God himself dois sit and judge'; to kings and magistrates the conservation and purgation of religion chiefly belong: 'Sik as resist the supreme power, doing that thing quhilk appertains to his charge do resist Goddis ordinance, and therefore cannot be guilties' (Art. XXIV.). Finally, though a Church have all the true notes, 'we meane not that everie particular person joyned with sik company be an elect member of Christ Jesus: For we acknowledge and confess that Dornell, Cockell, and Caffie may be saven, grow, and in great abundance lie in the middis of the wheit.' After a doxology, the Confession finely closes: 'Arise, O Lord, and let thy enemies be confounded; let them flee from thy presence that hate thy godlie name. Give thy servants strenth to speake thy word in bauldnesse, and let all Nations cleave to thy trew knowlege. Amen.'

It is the national and the native Confession of Scotland, exhaling the spirit of the thrilling times that brought it into being. It is practical rather than theological in its terms and purpose, keenly alive to the needs of the hour—persuasion rather than controversy. If the language of the preface is stern and harsh towards Roman Catholics, it is never mere abuse or caricature; it is the plain truthful speech of men who had seen and suffered, whose revered friends and teachers had been torn from their side and murdered for the truth. Though Edward Irving was less than fair to the Westminster Confession,—its supplanter, as he deemed it,—his often quoted words cannot be improved upon: 'The Scottish Confession was the banner of the Church in all her wrestlings and conflicts, the Westminster Confession but as the camp-colours which she hath used during her days of peace—the one for battle, the other for fair appearance and good order. This document . . . is written in a most honest, straightforward, manly style, without compliment or flattery, without affectation of logical precision and learned accuracy, as if it came fresh from the heart of laborious workmen, all the day long busy with the preaching of the truth, and sitting down at night to embody

the heads of what was continually taught. There is a freshness of life about it which no frequency of reading wears off (*Collected Writings*, Lond. 1864, i. 601).

M'Crie, *Confessions of the Church of Scotland*, 1907, pp. 14-21; Edward Irving, *Confessions, etc., of the Church of Scotland*, 1831; Mitchell, *Scottish Reformation*, 1900, p. 99 ff.; Lindsay, *Hist. of Reformation*, vol. II. p. 300 ff., and the Standard Scottish Church Histories.]

(3) The *Scottish National Covenants of 1581, 1638, and 1643* bridge the interval between the Scots and the Westminster Confessions. They are not technically Confessional in form, but they call themselves Confessions, and contain matter of the nature of doctrinal manifestos, and therefore claim a place in this review. They are a special feature of Scottish religion in arms against 'Popery' and 'Prelacy' in succession, and they expressly model themselves on such OT Covenants as those of Joshua and Jehoiada, witnessing to the genuinely national character of the Reform movement in that country.

The *National Covenant*, or *Second Scots Confession*, also called the *King's Confession* (1581), was in Scots and in Latin, the work of Knox's friend and colleague, John Craig. It solemnly reaffirms the Scots Confession, strengthening its condemnation of Roman usurpations

'upon the scriptures of God, the Kirk, the Civill Magistrate and consciences of men; all his tyrannous lawes made upon indifferent things againis our Christian libertie; . . . his fyve bastard sacraments . . . his cruell Judgement against infants departing without the Sacrament, his absolute necessitie of baptisme . . . his warldlie monarchie and wicked hierarchie . . . his erroneous and bloodie decreets made at Trente.'

Schaff describes it as the most fiercely anti-Popish of all Confessions, and notes that its reference to infant salvation, corresponding to the private view of Zwingli and Bullinger, is the first Confessional utterance of the kind. The closing sentences will serve as an example of its contents. In view of the existence of veiled Romanism and outward conformity in hope of the overthrow of the reformed faith,

'We theirow, willing to take away all suspicion of hypocrisie, and of sic double dealing with God and his Kirk, protest and call the Searcher of all heartis for witness, that our mindis and heartis do fullilie agree with this our Confession, promeis, aith and subscription: sa that we ar not movit with any warldlie respect, but ar perswadit onlie in our conscience, through the knowledge and love of Godis trew Religion prented in our heartis be the Holie Spreit, as we sal answer to him in the day when the secrets of heartis sal be disclosed. And because we perceive that the quyetness and stabilitie of our Religion and Kirk doth depend upon the safety and good behaviour of the Kingis Majestie . . . We protest and promeis solemmetlie . . . that we sall defend his personne and authoritie with our gearre, bodies, and lyves, in the defence of Christis Evangell, libertie of our cuntry . . . as we desire our God to be a strong and mercifull defender to us in the day of our death, and coming of our Lord Jesus Christ, to whom, with the Father and the Holie Spreit, be all honour and glorie eternallie. Amen.'

The Covenant was signed by King James VI., and his household, nobles, and ministers; later in the same year by the General Assembly of the Church, and by all ranks and classes; later still in 1590 with additions.

The *Renewed National Covenant* of 1638 includes the first, with additions by Alexander Henderson and Johnston of Warriston, occasioned by the attempt of Charles I. and Archbishop Laud to force the Scottish Church to accept the Royal Supremacy, with a hierarchy, and an elaborate Anglican service approximating to the Roman.

The *Solemn League and Covenant* of 1643 is also 'anti-episcopal as well as anti-papal'—the connecting link between Scotch Presbyterianism and English Puritanism, between the General Assembly and the Westminster Assembly, between the Scotch Parliament and the Long Parliament. It aimed to secure uniformity of religion in the united realms' (Schaff, *Hist.* p. 689).

Its occasion was an appeal by the English Long Parliament and by the Westminster Assembly of Divines to the Scots for aid against Charles I. It

was drawn up by Alexander Henderson, then Rector of Edinburgh University and Moderator of the General Assembly, and was enthusiastically adopted by the Assembly and the Scottish Convention. It is not a theological but a politico-religious document.

[Schaff, *Hist.* pp. 685-694, *Evang. Prot. Creeds*, pp. 480-485; Dunlop, *Collection*, pp. 99-137; M'Crie, *Confessions of Church of Scotland*, pp. 21-27; Scottish Church Histories.]

(4) The *Aberdeen Confession* (1616), though the work of the Episcopalian party during its ascendancy, and accordingly linked with the Five Articles of Perth (1618) and the Laudian Service Book in popular dislike, is not a whit less Calvinistic in its Predestinarian or Sacramental or Scriptural doctrine than the Scots Confession, or indeed the subsequent Confession of Westminster. Its language is naturally free from the violence of 1560. Though approved by the Assembly of 1616, it had but a short-lived authority. It had been previously drafted (by Hall and Adamson, according to Scot of Cupar), and during the Assembly was revised by Robert Howie of St. Andrews, Forbes of Corse, Hay, Struthers, and Cowper (Calderwood, *History*, 1842-9, vii. 233-242). M'Crie credits it as a whole mainly to Howie.

[M'Crie, *Confessions*, pp. 27-35. Text in the *Bookes of the Universall Kirk of Scotland*, 1839, pp. 1132-1139, as 'The New Confession of Faith'; Macpherson, *Hist. of Ch. in Scotland*, 1901, pp. 170-171; Mitchell, *Scottish Reformation*, 1900, p. 118; Grub, *Ecclies. History*, 1861, ii. 306.]

(5) *Catechisms authorized in Scotland before 1646*.—In no country was catechetical instruction of young and adult more prized or practised than in Scotland during the century after the Reformation. According to the First Book of Discipline (ch. 11, paragraph 3),

'After noone must the young children be publickly examined in their Catechism, in the Audience of the People; in doing whereof the Minister must take great diligence as well to cause the people understand the Questions proponed as the Answers, and the Doctrine that may be collected thereof: the order to be kept in teaching the Catechism, and how much of it is appointed for every Sunday is already distinguished in the Catechism printed with the Book of our Common Order; which Catechism [sc. Calvin's] is the most perfect that ever yet was used in the Kirk.'

A very large number of manuals were in circulation. At the Hampton Court Conference, King James complained that in Scotland every good mother's son counted himself fit to write a catechism. One of the earliest to secure currency was a *Metricall Catechism* by the Wedderburns, corresponding to metrical forms of the Psalter and Apostles' Creed. In Latin, or in translation, the *Geneva Catechism* of Calvin and the *Heidelberg* or *Palatine Catechism* were authoritative. Admirable native products were the *Larger* and the *Shorter* (abridged) *Catechisms* of John Craig, the author of the First Covenant. The former appeared in 1581, was authorized in 1590, abridged by order of Assembly, and issued afresh in the shorter form which was the standard of instruction till superseded by the Westminster Catechism.

Craig's *Larger Catechism* begins: 'Who made man and woman?—The eternal God of his goodness. Whereof made he them?—Of an earthly body and an heavenly spirit. To whose image made he them?—To his own image.' The *Shorter*, used for examination before Communion, begins: 'What are we by nature?—The children of God's wrath,' and contains 90 questions in 12 groups: of our bondage through Adam, our redemption by Christ, our Participation with Christ, the Word, our Liberty to serve God, the Sacraments, Baptism, the Supper, Discipline the Magistrate, 'the Table in special,' and the end of our Redemption.

In both works question and answer are uniquely brief and pithy, many of the answers being models of lucidity and effectiveness. The same may also be said of the Latin *Summula Catechismi* or *Elementa Pietatis* long used in higher schools, ascribed to Andrew Simpson of Perth—a little manual in 41 questions based on the 'Threefold State of Man,' (1) in sanctitate et sanitate, (2) sub peccato et morte, (3) sub Christi gratia.

[Horatius Bonar, *Catechisms of the Scottish Reformation*, London, 1866; Dunlop, *Collection*, II. 139-382; Schaff, *Hist.* pp. 696-701.]

(6) The *Westminster Confession and Catechisms* (1646-7) were the work of a memorable Assembly of Divines, selected, appointed, and maintained by the Long Parliament, 'to be consulted with by the Parliament for the settling of the government and liturgy of the Church of England; and for vindicating and clearing of the doctrine of the said Church from false aspersions and interpretations.' In 1640, Commissioners from Scotland had brought representations that 'it is to be wished that there were one Confession of Faith, one form of Catechism, one Directory for all the parts of the public worship of God . . . in all the churches of his majesty's dominions,' and the English Parliament reciprocated the desire. The Assembly was constituted in 1643, both Houses of Parliament without the Royal consent having condemned the episcopal hierarchy as 'evil, offensive, and burdensome to the kingdom,' and resolved to set up a government 'most agreeable to God's word, most apt to procure and preserve the peace of the Church at home, and in nearer agreement with the Church of Scotland, and other Reformed Churches abroad.' The Assembly was to be composed of 151 members, 30 of whom were eminent laymen (10 Lords, and 20 Commons), among them Selden, Pym, St. John, and Vane, and the rest divines representative of the English counties—a group of moderate Episcopalians, including the learned James Ussher, Archbishop of Armagh, the Bishops of Exeter, Bristol, and Worcester, and five doctors of divinity from the Universities, a group of about a dozen learned Independents headed by Thomas Goodwin and Philip Nye, an influential Erastian group, including Lightfoot, Selden, and Coleman, all distinguished Hebrew scholars, and representing the mind of Parliament, and a group, by far the largest, of Presbyterians, either, like Twisse the Prolocutor, Gataker, Reynolds, and Palmer, maintaining the *jus humanum* of Presbytery as consistent with Scripture, or insisting on its *jus divinum* as commanded by Scripture. A group of Scottish Commissioners, five ministers, including Alexander Henderson, Rector of the University of Edinburgh, Robert Baillie, Principal and Professor of Divinity in the University of Glasgow, Samuel Rutherford of the same office at St. Andrews, and George Gillespie, a youthful Edinburgh minister of unusual talent, and three covenanting laymen, the martyr Marquis of Argyle, Lord Maitland, afterwards the persecuting Earl of Lauderdale, and Sir Archibald Johnston of Warriston, uncle of Bishop Burnet, were associated with the Assembly throughout, acting on all its committees, and by force of character, scholarship, and debating power exercising an influence out of all proportion to their number. King Charles's veto and the troubles of the Civil War prevented the Episcopalian divines, with one or two exceptions, from attending, but Ussher's absence with the King at Oxford failed to prejudice his theological influence in the proceedings, for his Confessional work was their basis, and, after all, the Assembly, though Puritan, was Anglican in its orders. The members were without exception convinced Calvinists of the orthodox type, without even a tinge of Arminianism. They debated in perfect personal freedom, without haste or interference, under the common vow which was read at the beginning of each week's labours:

'I do seriously promise and vow, in the presence of Almighty God, that in this Assembly, whereof I am a member, I will maintain nothing in point of doctrine but what I believe to be most agreeable to the Word of God; nor in point of discipline, but what may make most for God's glory and the peace and good of His Church.'

The meetings were held first in the chapel of Henry VII. in Westminster, then in the historic Jerusalem Chamber in the Deanery. Ten weeks were devoted to the revision of the Thirty-nine Articles to bring them into unequivocally Calvinistic form on the lines of the Lambeth Articles and of Ussher's Irish Articles, and the first fifteen were finished, and supplied with Scripture proofs (for text, see Hall, *Harmony of Prot. Confessions*, pp. 505-512, where they are printed 'just as a matter of curiosity').

By order of Parliament the Assembly then turned its attention to the preparation of a Confession of Faith, Catechisms, and Book of Discipline, for use throughout the three kingdoms. The Confession was ready after two years and a quarter of unremitting work, the Catechisms and Book of Order taking shape simultaneously. It was submitted in print to Parliament in Dec. 1646, and again in April 1647, when furnished by order with Scripture proofs, which, it appears, the divines had not been desirous of incorporating with it. The chief responsibility for the authorship may be assigned to Drs. Twisse, Tuckney, Arrowsmith, Reynolds, Temple, Hoyle, Palmer, Herle, and the Scottish Commissioners, though every sentence was openly debated with freedom and deliberation. Parliament carefully considered the successive Articles, and omitted XXX. and XXXI., on Church Censures, and on Synods and Councils, with parts of XX., XXIII., and XXIV., on Christian Liberty, on the Civil Magistrate, and on Marriage. The work was then issued in 1648 in English and Latin by Parliamentary authority, and enjoyed, until the Restoration, the unique distinction of being the Confessional standard of the whole United Kingdom. It first received Royal Sanction in 1690 under William and Mary. In Scotland the Assembly of 1647 approved of it in its complete form as 'most agreeable to the Word of God, and in nothing contrary to the received doctrine, worship, discipline, and government of this Kirk.' In 1649 the Scottish Parliament also approved of it, and the Assembly ordained that 'in every house where there is any who can read, there be at least one copy of the Shorter and Larger Catechism, Confession of Faith, and Directory for family worship.' Though not intended by its English authors to be imposed on the individual conscience as a document for subscription, it was promptly so used in Scotland.

In its complete form, as still current, the Confession extends to 33 chapters, each containing a small group of articulate propositions. The chapters treat of Scripture, the Trinity, God's Decree, Creation, Providence, the Fall, Sin and its Punishment, God's Covenant with Man, Christ the Mediator, Free-will, Effectual Calling, Justification, Adoption, Sanctification, Saving Faith, Repentance unto Life, Good Works, the Perseverance of Saints, Assurance of Grace and Salvation, the Law, Christian Liberty and Liberty of Conscience, Worship and the Sabbath, Lawful Oaths and Vows, the Civil Magistrate, Marriage and Divorce, the Church, the Communion of Saints, the Sacraments, Baptism, the Lord's Supper, Church Censures, Synods and Councils, the State after Death and the Resurrection, and the Last Judgment. This is the order throughout, with slight additions and subtractions and divisions, of the 19 Irish Articles of 1615 (see above, p. 855 f.), which begin with Scripture and end with the Last Judgment, and, much less closely, the order of the more theological portion of the 39 English Articles. It thus anticipates one of the most generally accepted modern divisions of Christian doctrine, viz. the sequence, after a preface on Scripture,

of God, Man, Christ, Salvation, Church, and Last Things.

The Doctrine of Scripture in ch. I. is a theological classic, and its contents deserve to be quoted not only as representative of the genius and spirit of the Westminster Assembly, but for their own dignity, comprehensiveness, and worth:

'I. Although the light of nature, and the works of Creation and Providence, do so far manifest the goodness, wisdom, and power of God as to leave men inexcusable; yet are they not sufficient to give that knowledge of God and of his will which is necessary unto salvation; therefore it pleased the Lord at sundry times and in divers manners to reveal himself and to declare that his will unto his Church; and afterwards for the better preserving and propagating of the truth, and for the more sure establishment and comfort of the Church against the corruption of the flesh and the malice of Satan and of the world, to commit the same wholly unto writing; which maketh the Holy Scripture to be most necessary; those former ways of God's revealing his will unto his people being now ceased.'

Sec. II. enumerates the Canonical Books of Scripture 'as given by inspiration of God to be the rule of faith and life,' omitting all reference to the Apocrypha, and placing the Epistle to the Hebrews after the list of Paul's Epistles as an anonymous book. Sec. III. runs: 'The books commonly called Apocrypha, not being of divine inspiration, are no part of the Canon of Scripture; and therefore are of no authority in the Church of God, nor to be any otherwise approved, or made use of, than other human writings.'—iv. 'The authority of the holy Scripture, for which it ought to be believed and obeyed, dependeth not upon the testimony of any man or church, but wholly upon God (who is truth itself), the Author thereof; and therefore it is to be received, because it is the Word of God.'—v. 'We may be moved and induced by the testimony of the Church to an high and reverent esteem of the holy Scripture; and the heavenliness of the matter, the efficacy of the doctrine, the majesty of the style, the consent of all the parts, the scope of the whole (which is to give all glory to God), the full discovery it makes of the only way of man's salvation, the many other incomparable excellencies, and the entire perfection thereof, are arguments whereby it doth abundantly evidence itself to be the Word of God; yet, notwithstanding, our full persuasion and assurance of the infallible truth, and divine authority thereof, is from the inward work of the Holy Spirit, bearing witness by and with the Word in our hearts.'—vi. 'The whole counsel of God, concerning all things necessary for his own glory, man's salvation, faith, and life, is either expressly set down in Scripture, or by good and necessary consequence may be deduced from Scripture: unto which nothing at any time is to be added, whether by new revelations of the Spirit, or traditions of men. Nevertheless we acknowledge the inward illumination of the Spirit of God to be necessary for the saving understanding of such things as are revealed in the Word; and that there are some circumstances concerning the worship of God and government of the Church, common to human actions and societies, which are to be ordered by the light of nature and Christian prudence according to the general rules of the Word, which are always to be observed.'—vii. 'All things in Scripture are not alike plain in themselves, nor alike clear unto all; yet those things which are necessary to be known, believed, and observed for salvation, are so clearly propounded and opened in some place of Scripture or other, that not only the learned but the unlearned, in a due use of the ordinary means, may attain unto a sufficient understanding of them.'—viii. 'The Old Testament in Hebrew (which was the native language of the people of God of old), and the New Testament in Greek (which at the time of the writing of it was most generally known to the nations), being immediately inspired by God, and by his singular care and providence kept pure in all ages, are therefore authentic; so as in all controversies of religion the Church is finally to appeal unto them. But because these original tongues are not known to all the people of God who have right unto and interest in the Scriptures, and are commanded in the fear of God to read and search them, therefore they are to be translated into the vulgar language of every nation unto which they come, that the Word of God dwelling plentifully in all, they may worship him in an acceptable manner, and through patience and comfort of the Scriptures may have hope.'—ix. 'The infallible rule of interpretation of Scripture is the Scripture itself; and therefore, when there is a question about the true and full sense of any Scripture (which is not manifold but one), it must be searched and known by other places that speak more clearly.'—x. 'The supreme Judge, by which all controversies of religion are to be determined, and all decrees of councils, opinions of ancient writers, doctrines of men, and private spirits, are to be examined, and in whose sentence we are to rest, can be no other but the Holy Spirit speaking in the Scripture.'

Chs. III., v., IX., and XVII., on the Divine Decree, Providence, Free-will, and the Perseverance of the Saints, present a firm but far from extreme type of Calvinism. Written in full view of the great Reformed Confessions, they go beyond the 39 Articles, the Scots Confession, the Heidel-

berg Catechism, and the Helvetic Confessions, in emphasizing the darker side of the Decree; but, like the Canons of Dort and the Irish Articles, they are strictly infralapsarian, though eminent members of the Assembly like Twisse were supralapsarian Calvinists. The Fall and its havoc are under a permissive, not a causal or effective, decree. The term 'reprobation' is not used: 'preterition, passing by,' has replaced it as a milder expression, perhaps through the influence of men on the drafting committee like Calamy and Arrowsmith, who sympathized with the Amyraldist 'hypothetical universalism.' Human freedom is affirmed, and 'the liberty or contingency of second causes,' as compatible with the Divine sovereignty. Between 'particular election' and 'hypothetical universalism,' each of which found supporters in the debates, the Confession seems to halt.

Chs. VI.—IX., on Man, contain a development of the covenant-idea present in the Irish Articles: two Covenants with parallel ordinances, of Works in Adam, of Grace in Christ, are distinguished—a theological scheme, traceable perhaps to Bullinger, which emphasizes human freedom, and which had been taught on Biblical authority by Rollock in Scotland, by Cartwright in England, by Olevianus in Germany, and by Cocceius in Holland. Chs. X.—XVIII. are an exceptionally full and careful statement of the doctrines bound up with Justification. Ch. XXI., of Religious Worship and the Sabbath Day, affirms the Puritan view of worship and of Sabbath-observance, the Hebrew Sabbath being a perpetual commandment, 'changed' since the Resurrection of Christ to the first day of the week, the Lord's Day, so to be observed for ever. Ch. XXV., on the Church, distinguishes the Invisible Church, the whole number of the Elect, from the visible Catholic Church, all who

'profess the true religion, together with their children... the kingdom of the Lord Jesus Christ, the house and family of God, out of which there is no ordinary possibility of salvation.' 'This Catholic Church hath been sometimes more, sometimes less visible.' 'The purest churches under heaven are subject both to mixture and error; and some have so degenerated as to become no churches of Christ but synagogues of Satan.' 'There is no other head of the Church but the Lord Jesus Christ; nor can the Pope of Rome in any sense be head thereof, but is that Antichrist, that man of sin, and son of perdition, that exalteth himself in the Church against Christ and all that is called God.'

Ch. XXVI. deals with the heavenly and the earthly Communion of Saints, and the sacred obligations involved, in admirable terms. Chs. XXVII.—XXIX. set forth searchingly the full Calvinistic doctrine of the Sacraments in general and in particular, in terms which might satisfy every section of the Reformed Church apart from the Lutheran. Ch. XXX., of Church Censures, provides for discipline through the officers appointed by authority of Christ to hold the keys of the Kingdom, or visible Church. Ch. XXXI., of Synods and Councils, affirms their legitimate convocation either by authority of civil rulers or by their own, their right 'ministerially' to determine controversies of faith and cases of conscience, etc., the authority of their decrees on spiritual matters if in harmony with God's Word, and declares, in words which necessarily apply to the Assembly itself and its articles:

'All Synods or Councils since the Apostles' times, whether general or particular, may err, and many have erred; therefore they are not to be made the rule of faith or practice, but to be used as an help in both. (Of. xx. sec. II.: "God alone is lord of the conscience, and hath left it free from the doctrines and commandments of men which are in anything contrary to his word, or beside it, in matters of faith or worship, so that to believe such doctrines, or to obey such commandments out of conscience, is to betray true liberty of conscience, and the requiring of an implicit faith and an absolute and blind obedience is to destroy liberty of conscience and reason also.") Synods and Councils are to handle or conclude nothing but that which is ecclesiastical, and are not to intermeddle with civil affairs, which concern the Commonwealth, unless by way of humble

petition in cases extraordinary; or by way of advice for satisfaction of conscience, if they be thereunto required by the civil magistrate.'

Ch. XXXII. declares that

'the bodies of men after death return to dust and see corruption, but their souls (which neither die nor sleep), having an immortal subsistence, immediately return to God who gave them. The souls of the righteous, being then made perfect in holiness, are received into the highest heavens, where they behold the face of God in light and glory, waiting for the full redemption of their bodies; and the souls of the wicked are cast into hell, where they remain in torments and utter darkness, reserved to the judgment of the great day. Besides these two places for souls separated from their bodies, the Scripture acknowledgeth none. At the last day such as are found alive shall not die, but be changed; and all the dead shall be raised up with the selfsame bodies, and none other, although with different qualities, which shall be united again to their souls for ever. The bodies of the unjust shall by the power of Christ be raised to dishonour: the bodies of the just by his Spirit unto honour, and be made conformable to his own glorious body.'

Ch. XXXIII. sets forth the nature of the Last Judgment, and its end

'for the manifestation of the glory of his [God's] mercy in the eternal salvation of the elect, and of his justice in the damnation of the reprobate, who are wicked and disobedient. . . . As Christ would have us to be certainly persuaded that there shall be a day of judgment, both to deter all men from sin, and for the greater consolation of the godly in their adversity; so will he have that day unknown to men, that they may shake off all carnal security, and be always watchful, because they know not at what hour the Lord will come; and may be ever prepared to say, "Come, Lord Jesus, come quickly. Amen."'

Two portions of the Confession which have been the subject of ecclesiastical heart-searching or misgiving are those in chs. III. and X. concerning Predestination and Election, and in ch. XXIII. on the Civil Magistrate. The former, after stating that

'God from all eternity did, by the most wise and holy counsel of his own will, freely and unchangeably ordain whatsoever comes to pass: yet so as thereby neither is God the author of sin, nor is violence offered to the will of the creatures, nor is the liberty or contingency of second causes taken away, but rather established,'

proceeds to affirm that some men and angels are predestinated, out of God's mere free grace and love without any foresight of faith or good works or any other thing in the creature, unto everlasting life, whose number is certain and definite, whereas the rest of mankind are foreordained to be passed by unto everlasting death for their sin, to the praise of God's glorious justice. Similarly—

'Elect infants, dying in infancy, are regenerated and saved by Christ through the Spirit, who worketh when and where and how he pleaseth. So also are all other elect persons who are incapable of being outwardly called by the ministry of the word. Others not elected, although they may be called by the ministry of the word, and may have some common operations of the Spirit, yet they never truly come unto Christ, and therefore cannot be saved: much less can men not professing the Christian religion be saved in any other way whatsoever, be they ever so diligent to frame their lives according to the light of nature, and the law of that religion they do profess; and to assert and maintain that they may, is very pernicious and to be detested' (x. sect. iii.).

These are essentially the positions of the Synod of Dort of 1619, subject to the same criticisms or misunderstandings. Nothing is said of the elect being few; no certain external or internal means for the recognition of the elect is indicated; the 'rest of mankind' may be few or many; it is not definitely affirmed that any infants die inelect, though the natural suggestion is that some, if not indeed many, do, especially as election even of adults is without regard to future merit or worth in them. It is not wonderful that the divines of Westminster, like their kinsmen and forerunners at Dort, should have felt it their duty to say:

'The doctrine of this high mystery of predestination is to be handled with special prudence and care, that men attending the will of God revealed in his word and yielding obedience thereunto, may from the certainty of their effectual vocation be assured of their eternal election. So shall this doctrine afford matter of praise, reverence, and admiration of God, and of humility, diligence, and abundant consolation to all that sincerely obey the Gospel' (in. sect. viii.).

The other passage, on the Civil Magistrate, acknowledges the Divine origin and claims of his authority, his duty of taking

'order that unity and peace be preserved in the Church, that

the truth of God be kept pure and entire, that all blasphemies and heresies be suppressed, all corruptions and abuses in worship and discipline prevented or reformed, and all the ordinances of God duly settled, administered, and observed'; but continues:

'For the better effecting whereof he hath power to call Synods, to be present at them, and to provide that whatsoever is transacted in them be according to the mind of God'; yet he 'may not assume to himself the administration of the word and sacraments, or the power of the keys of the kingdom of heaven.'

the conception apparently being that he is not to interfere with spiritual things so long as they are Scripturally transacted by the Church, whose courts and decisions his strong arm is to enforce. Here also it may be admitted that the Confession did not succeed in foreclosing future embarrassment.

The Westminster Confession, then, does for the whole system of Calvinistic doctrine what the Canons of Dort did for one doctrine: it marks the maturest and most deliberate formulation of the scheme of Biblical revelation as it appeared to the most cultured and the most devout Puritan minds. It was the last great Creed-utterance of Calvinism, and intellectually and theologically it is a worthy child of the *Institutes*, a stately and noble standard for Bible-loving men. While influenced necessarily by Continental learning and controversy, it is essentially British, as well by heredity as by environment; for not only is it based upon the Thirty-nine Articles, modified and supplemented in a definitely Calvinistic sense at Lambeth and at Dublin, but it literally incorporates Ussher's Irish Articles, accepting their order and titles, and using, often without a word of change, whole sentences and paragraphs. To the reader of both documents the debt is patent on the surface, and the obligation goes down to the very heart of the thought. Ussher could not have secured more of his own way had he deserted the King and taken his seat in the Jerusalem Chamber. Only Laudian Anglicans could seriously have dissented from the doctrine laid down. Born on the Thames, in the capital of the southern kingdom, the Confession, itself a painful reminder to the revellers of the Restoration of the sternness of the Long Parliament, soon was discarded by the national Church for which it was primarily prepared; it found a home and instant welcome in Scotland, to pass out thence into all the world with the strenuous and hardy emigrants who planted their faith wherever they sought to make their way in life. It still remains, in spite of changing times and altered formulæ of adherence, the honoured symbol of a great group of powerful Churches throughout the British Empire and the great American Republic, embracing within their membership a large proportion of the foremost representatives of the world's highest material, social, educational, moral, and religious interests. The English-speaking Presbyterian Churches throughout the world without exception adhere either to it or to some comparatively slight modification of it; while its hold, direct or indirect, upon Congregationalists and Baptists and others, is a further tribute to its power both of education and of revival.

The *Larger Catechism of the Westminster Divines*, composed in 1647 simultaneously with the Confession and before the Shorter Catechism, was drafted mainly by Herbert Palmer, the author of a 'Catechism' in high repute, published in 1640, with a distinctive method of its own, and by Anthony Tackney, the learned Professor of Divinity at Cambridge, and, like those other documents, furnished with carefully collected Scripture proofs. The basis of doctrine was Palmer's Catechism and Ussher's 'Body of Divinity,' and, of course, the debated conclusions of the Confession itself (Briggs, *Presbyterian Review*, Jan. 1880). The Scottish

Assembly of 1648 approved of it as a 'Directory for catechizing such as have made some proficiency in the knowledge of the grounds of Religion,' and it is not to be judged as a manual for the young. It contains 196 questions with answers that are not seldom very long, though admirably clear, because intended to be comprehensive.

It begins: 'What is the chief and highest end of man?—Man's chief and highest end is to glorify God and fully to enjoy him for ever. How doth it appear that there is a God?—The very light of nature in man, and the works of God declare plainly that there is a God; but his Word and Spirit only do sufficiently and effectually reveal him unto men for their salvation.' And it ends: 'What doth the conclusion of the Lord's Prayer teach us?' after setting forth the doctrines of God, His decrees, Creation, the Fall, Sin and its Punishment, the Covenant of Grace, Christ the Mediator, His Offices, Humiliation, and Exaltation, and Eternal Work, the Church, Membership in Christ, the Experience and Contents of Salvation, Future Judgment, the Commandments as Christian Duties, man's inability to keep them, the special aggravations of Sin, the Means of Grace—the Word, the Sacraments, and Prayer, with the proper meaning and use of each, the Lord's Prayer being expounded at the close.

The Larger Catechism, though too elaborate to be popular, is historically of service as a supplement and commentary on the Confession, and as the basis of the popular 'Shorter Catechism.'

The 'Shorter Catechism,' prepared immediately after the other documents by a small committee, and likewise approved in 1648 by the Church of Scotland as a 'Directory for catechizing such as are of weaker capacity,' is an acknowledged masterpiece, a triumph of happy arrangement, of condensed and comprehensive instruction, of lucid and forceful expression. While Tuckney was in the later stages of convener of the committee entrusted with its composition, and may have been largely responsible for its final phrasing, the brilliant Cambridge mathematician and divine, the secretary, John Wallis, Palmer's intimate friend, is believed to have taken a very large share in the work. Materials were drawn not only from the Confession and Larger Catechism and their sources, but from other Catechisms among the large number current at the time, e.g., besides Palmer's, those of Ezekiel Rogers, Matthew Newcomen, Gouge, and Ball (see A. F. Mitchell, *Westm. Assembly*, Lect. xii.; also *Catechisms of the Second Reformation*, 1886, by the same author, pp. 3-39, where the chief parallels to each question and answer are printed). The Scottish Commissioners cannot have had much to do with its preparation, as most of them had departed home before its compilation was materially advanced; but in Scotland it became at once, and has remained, a household book, a Bible in miniature, and the working Creed of the nation. If its teaching seems difficult and exacting for 'such as are of weaker capacity' in our time, the fault may lie with our modern education, which so diffuses the interest and attention of the young over many subjects, mostly secular, that the concentration, formerly possible to all, upon religious and theological concerns, is hard to secure. No more successful compendium of Christian doctrine, arranged according to a theological scheme for practical instruction and for memorizing, has ever been published. Its theological terms, Pauline in their origin for the most part, sit far from easily upon the lips of children; but they aid the memory, condense the truth, and are, as they were intended to be, fit and stimulating matter for exposition by the teacher. It is probable that we are apt to exaggerate the value of self-explanatory simplicity in such a manual. The Catechism was not meant to be learned without a teacher, and the teacher certainly cannot complain that he has platitudes to teach who has its questions and answers to expound. While the Shorter Catechism's relation to the Longer is described by a Scottish Commissioner as that of milk to meat, there was no idea of diluting the milk for the young and weak; for it was a

recognized principle with the Assembly 'that the greatest care should be taken to frame the answer, not according to the model of the knowledge the child hath, but according to that the child ought to have.'

The Shorter Catechism contains 107 questions, the first and the last being the same as in the Larger Manual, with even simpler and happier answers. Many of the answers are classic utterances, and haunt both memory and intelligence. 'Man's chief end is to glorify God, and to enjoy Him for ever.' 'The Scriptures principally teach what man is to believe concerning God, and what duty God requires of man.' 'God is a Spirit, infinite, eternal, and unchangeable, in His being, wisdom, power, holiness, justice, goodness, and truth' (an answer ascribed by tradition to Gillespie, but at least anticipated in its terms in *A Compendious Catechism*, by J. F., published in London, 1655 (see Schaff, *Hist.* p. 787, footnote on A. F. Mitchell's authority)). 'Sin is any want of conformity unto, or transgression of, the law of God.' 'Christ as our Redeemer executeth the offices of a Prophet, of a Priest, and of a King, both in His estate of Humiliation and Exaltation.' 'Christ executeth the office of a Prophet in revealing to us by His Word and Spirit the will of God for our salvation.' 'Christ executeth the office of a Priest in His once offering up of Himself a sacrifice to satisfy Divine justice, and reconcile us to God, and in making continual intercession for us.' 'Christ executeth the office of a King in subduing us to Himself, in ruling and defending us, and in restraining and conquering all His and our enemies.' 'The Spirit applyeth to us the Redemption purchased by Christ, by working faith in us, and thereby uniting us to Christ in His effectual calling.' 'Effectual calling is the work of God's Spirit, whereby, convincing us of our sin and misery, enlightening our minds in the knowledge of Christ, and renewing our wills, He doth persuade and enable us to embrace Jesus Christ freely offered to us in the Gospel.' 'Justification is an act of God's free grace, wherein He pardoneth all our sins, and accepteth us as righteous in His sight, only for the righteousness of Christ imputed to us and received by faith alone.' 'Adoption is an act of God's free grace, whereby we are received into the number, and have a right to all the privileges, of the sons of God.' 'Sanctification is the work of God's free grace whereby we are renewed in the whole man after the image of God, and are enabled more and more to die unto sin, and live unto righteousness.' 'The benefits which in this life do accompany or flow from justification, adoption, and sanctification, are assurance of God's love, peace of conscience, joy in the Holy Ghost, increase of grace, and perseverance therein to the end.' 'The souls of believers are at their death made perfect in holiness, and do immediately pass into glory, and their bodies, being still united to Christ, do rest in their graves till the resurrection.' 'No mere man since the fall is able in this life perfectly to keep the commandments of God, but doth daily break them in thought, word, and deed.' 'Faith in Jesus Christ is a saving grace whereby we receive and rest upon Him alone for salvation, as He is offered to us in the Gospel.' 'The outward and ordinary means whereby Christ communicateth to us the benefits of redemption are His ordinances, especially the Word, Sacraments, and Prayer, all which are made effectual to the elect for salvation.' 'That the Word may become effectual to salvation, we must attend thereto with diligence, preparation, and prayer, receive it with faith and love, lay it up in our hearts, and practise it in our lives.' 'A sacrament is an holy ordinance, instituted by Christ, wherein, by sensible signs, Christ and the benefits of the New Covenant are represented, sealed, and applied to Believers.' The Apostles' Creed, though not formally incorporated or expounded in the body of the Catechism, is printed at the close with the judicious note:

'Albeit the substance of the doctrine comprised in that abridgment commonly called the *Apostles' Creed* be fully set forth in each of the Catechisms, so as there is no necessity of inserting the Creed itself, yet it is here annexed, not as though it were composed by the Apostles, or ought to be esteemed canonical Scripture as the Ten Commandments and the Lord's Prayer (much less a prayer, as ignorant people have been apt to make both it and the Decalogue), but because it is a brief sum of the Christian Faith, agreeable to the Word of God, and anciently received in the Churches of Christ.'

A catechism containing sentences like the answers quoted, prepared with such fidelity to Holy Writ, and couched in language so dignified and unaffected, is in every way worthy of the authors of the Westminster Confession, and of the devoted acceptance of the Churches whose young life it has nourished in spiritual truth throughout the subsequent generations, and whose ageing members its well remembered lessons have supported and solaced.

[The text of the Westminster Standards is printed in full in Dunlop's *Collection*, vol. I. pp. 1-444, and in Müller's *Bekenntnisschriften* (pp. 542-652); the Confession and Shorter Catechism in Schaff, *Catechisms of Evang. Prot. Churches*, pp. 600-704. For history, see Schaff, *Hist.* pp. 701-804, a valuable account with comparisons and criticisms and useful bibliography of older works in general and special literature. The *Minutes of the Sessions of the Westm. Assembly (1644-1649)* are edited by Alex. F. Mitchell and John Struthers, Edin. 1874; cf. Hethering-

ton, *History of the Assembly*⁴, 1878: A. F. Mitchell, *Westminster Assembly* (rev. ed. Philad. 1897). *The Westminster Conf.*⁵ 1887; Warfield, 'The Making of the Westminster Conf.', in *PRR*, Apr. 1901, p. 226 ff.; cf. also Beveridge, *Hist. of the Westminster Assembly*, Edin. 1904, an accurate popular summary of the matter contained in the earlier works; A. F. Mitchell, *Catechisms of the Second Reformation* (an invaluable study); H. Bonar, *Catechisms of the Scottish Reformation*. On the doctrine of the Confession a recent work, *Theology of the Westminster Symbols*, by Edw. D. Morris, Columbus, Ohio, U.S.A., 1900, pp. 868, is one of the most complete and well informed.]

(7) *Modifications of the Westminster Confession in British Presbyterian Churches* have not been wanting, but the changes hitherto effected have not been very substantial, though the attitude of the Churches to it has been unmistakably altered.

In Scotland, the adoptive home of the Confession, the forces of religious conservatism have combined with an intelligent appreciation of its solid worth and Scriptural foundation to retain it well-nigh inviolate as the symbol of every branch of the divided Church. By varying formulæ of subscription in the National Church, and by declaratory acts or statements in the Free Churches, a modicum of relief has been sought for tender consciences. In the Church of Scotland the earlier formulæ of 1694 and 1711, which declared the signatory's belief in the whole doctrine of the Confession, and that of 1889, which omitted the word 'whole,' were mitigated by a declaration appointed in 1903 to be read publicly before subscription, to the effect that the Confession 'is to be regarded as an infallible rule of faith and worship only in so far as it accords with Holy Scripture interpreted by the Holy Spirit,' replaced in 1910 by a formula framed with the concurrent authority of Parliament: 'I hereby subscribe the Confession of Faith, declaring that I accept it as the Confession of this Church, and that I believe the fundamental doctrines of the Christian faith contained therein.' In the United Presbyterian Church and in the Free Church, Declaratory Acts were passed in 1879 and 1892 to define on certain points the sense in which the Confession was to be understood, disowning the view that the Confession inculcated persecuting principles in relation to the duties of the Civil Magistrate, and the view that its doctrine of sin and grace taught that human corruption has destroyed human responsibility and the power to do virtuous actions, or that some infants are eternally lost, or that men are foreordained to death irrespective of their sin, or that Divine grace is not extended to any who are out of reach of its ordinary means.

In England a similar course was taken by the Presbyterian Church, but abandoned in 1888, and in 1890 *The Articles of the Faith*, 24 in number, were drawn up by a committee presided over by Principal Oswald Dykes, in order to define the doctrines in the Westminster Confession which were counted *de fide* and vital. These Articles briefly set forth a moderately conservative statement, influenced by the other standard Confessional utterances of Protestant Christianity, on God, the Trinity, Creation, Providence, the Fall, Saving Grace, the Lord Jesus Christ, the Work of Christ, the Exaltation of Christ, the Gospel, the Holy Spirit, Election and Regeneration, Justification by Faith, Sonship in Christ, the Law and New Obedience, Sanctification and Perseverance, the Church, Church Order and Fellowship, Holy Scripture, the Sacraments, the Second Advent, the Resurrection, the Last Judgment, and the Life Everlasting. Comparison of these titles with those of the Confession at once reveals many of the doctrinal omissions. In the article on Election nothing is said of reprobation or preterition; it is as follows:

'We humbly own and believe that God the Father, before the foundation of the world, was pleased of His sovereign grace to choose unto Himself in Christ a people, whom He gave to the Son, and to whom the Holy Spirit imparts spiritual life by a

secret and wonderful operation of His power, using as His ordinary means, where years of understanding have been reached, the truths of His Word in ways agreeable to the nature of man: so that being born from above they are the children of God, created in Christ Jesus unto good works.'

Elsewhere the language of election is avoided; instead of 'the elect' we read of 'Christ's people,' 'every one who repents and believes,' and so on. A noteworthy feature of the articles is their use of the proper language of a Creed: 'we believe,' 'we acknowledge,' 'we adore,' 'we own,' etc.

[*The Articles of the Faith*, issued by Publication Committee of the Presbyterian Church of England, 1890. There is also a small account of their scope, etc., pub. by Donald Fraser, one of the framers.]

In China (1890) and in India (South, 1901; all, 1904), unions of the Presbyterian Mission Churches have been consummated upon the bases of 11 and of 12 short Articles epitomizing the doctrine of the Westminster Confession along similar lines, positive, Scriptural, and non-controversial, emphasizing the particular doctrines most required by missionary circumstances, and expressly affirming their loyalty to the standards of the parent Churches, the Westminster Confession and Catechisms, the Heidelberg Catechism, and the Canons of Dort, 'as worthy exponents of the Word of God, and as systems of doctrine to be taught in our churches and seminaries.'

The 12 Indian Presbyterian Articles were adopted at Allahabad in Dec. 1904 (printed at the Allahabad Mission Press in 1905). I. affirms the Scriptures to be the 'Word of God, and the only infallible rule of faith and duty.' II. defines God as 'a Spirit, self-existent, omnipresent, yet distinct from all other spirits and from all material things: infinite, eternal, and unchangeable in His being, wisdom, power, holiness, justice, goodness, truth, and love.' III. affirms the Trinity. IV. affirms Divine creation, providence, and government, without responsibility for sin. V. describes man's original estate as in God's image: 'all men have the same origin, and are brethren.' VI. describes the Fall, affirms the sin of all Adam's descendants in him, their addition of actual sin to original guilt and corruption, their desert of punishment. VII. affirms God's gift of Christ, the only-begotten Son of God, as Saviour; His two distinct natures as true God and true man; His conception and birth, perfect obedience and sacrifice, 'to satisfy Divine justice and reconcile men to God'; His death, burial, resurrection, ascension, intercession, and future coming, 'to raise the dead and judge the world.' VIII. treats of the Holy Spirit, who 'maketh men partakers of salvation.' IX. sets forth God's saving purpose and method of grace: 'While God chose a people in Christ before the foundation of the world, that they should be holy and without blemish before Him in love; having foreordained them unto adoption as sons through Jesus Christ, unto Himself, according to the good pleasure of His will, to the praise of the glory of His grace, which He freely bestowed on them in the beloved; He maketh a full and free offer of salvation to all men, and commandeth them to repent of their sins, to believe in the Lord Jesus Christ as their Saviour, and to live a humble and holy life after His example, and in obedience to God's revealed will. Those who believe in Christ and obey Him are saved, the chief benefits which they receive being justification, adoption into the number of the sons of God, sanctification through the indwelling of the Spirit, and eternal glory. Believers may also in this life enjoy assurance of their salvation. In His gracious work the Holy Spirit useth the means of grace, especially the Word, Sacraments, and Prayer.' X. treats simply of the Sacraments, and their significance as signs and seals. XI. sets forth Christian duties. XII. affirms resurrection, judgment to come, reward and punishment: 'Those who have believed in Christ and obeyed Him shall be openly acquitted and received into glory; but the unbelieving and wicked, being condemned, shall suffer the punishment due to their sins.' There follow—*The Acts of acceptance*: 'I receive and adopt the Confession of Faith of this Church, as based on and in accord with the Word of God; and I declare it to be the Confession of my faith'; a *declaratory note*: 'In administering this test, the Courts of the Church exercise the discretion and charity that are required by the Word of God, and demanded by the interests of the Church'; the *Constitution of the Church*, in 15 Articles; the *27 Canons*, or *Standing Orders*; and the *Local Organization*. The whole work impresses the outside reader as wise, guarded, practical, well-conceived, and well-expressed, and admirably suited to the needs of the Indian Church. The echoes of Western controversy are as subdued as possible within it.

In Wales, the native Calvinistic-Methodist or Presbyterian Church, which formerly professed the 39 English Articles understood in a Calvinistic sense, adheres to the *Welsh Confession of 1823*, published also in English in 1827, which was authorized by the 'Associations' of Bala and Aberystwyth in 1823.

The Confession contains 44 Articles treating of God's Being, the Scriptures, the Attributes of God, the Persons of the Trinity, God's Decree, Creation, Providence, Man's Original State, the Covenant of Works, the Fall and Original Sin, the State of Man by Nature, the Election of Grace, the Covenant of Grace, the Person of the Father and His work in Salvation, the Person of Christ the Mediator, His Offices, His Humiliation and Exaltation, Redemption, Christ's Intercession, the Person and Work of the Holy Ghost, the Necessity for His work to apply the Plan of Salvation, the Call of the Gospel, Union with Christ, Justification, Adoption, Regeneration, Sanctification, Saving Faith and its Fruits, Repentance unto Life, the Moral Law, Good Works, Peace of Conscience, Assurance of Hope, Perseverance in Grace, the Church, Church Fellowship, the Ordinances of the Gospel, Baptism, the Lord's Supper, Obedience to the Civil Government, Death and the State after Death, the Resurrection, General Judgment, the Eternal State of the Wicked and the Godly.

It is in all essentials a statement of the Westminster doctrine, whose general order, and whose language, with Methodist variations, it adopts. On the problems of election, and the asperities of Calvinistic doctrine on reprobation and the non-elect, it is discreetly silent. Kings and civil authorities are ordained of God; are to be honoured for the sake of their office, and not merely for personal virtues; and are to be obeyed in all things that are in accordance with the Word of God, the taxes they impose being paid without murmur, concealment, or fraud. In its English form it lacks the vigour of style and the dignity of its source—a loss natural in a paraphrase.

[Full text in Müller, *op. cit.*, and in publications of the Church. Brief reference in Schaff, *Hist.* p. 903.]

(8) In the *Presbyterian Church in America*, the Westminster Confession, after being subscribed and accepted *simpliciter* for a time as in Britain, experienced similar modifications and qualifications. The Synod of Philadelphia in 1729 declared: 'We do therefore agree that all the ministers of this Synod . . . shall declare their agreement in and approbation of the Confession of Faith, with the Larger and Shorter Catechisms . . . as being in all the essential and necessary articles good forms of sound words and systems of Christian doctrine, and do also adopt the said Confession and Catechisms as the Confession of our faith,' adding later that some clauses in the twentieth and twenty-third chapters were not received 'in any such sense as to suppose the civil magistrate hath a controlling power over Synods with respect to the exercise of their ministerial authority, or power to persecute any for their religion . . .'

The Union of the Synods of Philadelphia and New York in 1758 adopted a similar declaration. The United Synod in 1787 amended the third section of ch. XXIII, 'Of the Civil Magistrate,' so as to exclude all interference with matters of faith, and to enjoin equal protection of all Churches and of the liberty of all men; ch. XXXI, so as to set aside the right of the Civil Ruler to call councils or assemblies; the last sentence of ch. XX. sect. iv., so as to omit the words 'and by the power of the Civil Magistrate' in reference to Church discipline and censures; and omitted 'tolerating a false religion' from the enumeration of sins against the Second Commandment in the Larger Catechism. At the re-union in 1869 of the 'Old School' and 'New School' sections of the Church, divided since 1837, the basis affirmed consisted of the 'common standards; the Scriptures of the Old and New Testaments shall be acknowledged to be the inspired Word of God, and the only infallible rule of faith and practice; the Confession of Faith shall continue to be sincerely received and adopted, as containing the system of doctrine taught in the holy Scriptures.' The same Church, 'The Presbyterian Church in the United States of America,' felt it necessary in 1902—(a) to pass a Declaratory Statement defining the sense in which ch. III, 'Of God's Eternal Decree,' was held as—

'concerning those who are saved in Christ, in harmony with the doctrine of His love to all mankind, His gift of His Son to be the propitiation for the sins of the whole world, and His readiness to bestow His saving grace on all who seek it;—concerning those who perish, as in harmony with the doctrine that God desires not the death of any sinner, but has provided in Christ a salvation sufficient for all, adapted to all, and freely offered in the Gospel to all; that men are fully responsible for their treatment of God's gracious offer; that His decree hinders no man from

accepting that offer; and that no man is condemned, (except on the ground of his sin)';

and declaring that ch. X. sect. iii.,

'is not to be regarded as teaching that any who die in infancy are lost; we believe that all dying in infancy are included in the election of grace, and are regenerated and saved by Christ through the Spirit, who works when and where and how He pleases.'

(b) to amend ch. XVI. sect. vii. to read:

'Works done by unregenerate men, although for the matter of them they may be things which God commands, and in themselves praiseworthy and useful, and although the neglect of such things is sinful and displeasing unto God; yet, because they proceed not from a heart purified by faith, nor are done in a right manner, according to His Word, nor to a right end, the glory of God, they come short of what God requires, and do not make any man meet to receive the grace of God';

to omit ch. XXII. sect. iii., the last sentence:

'yet it is a sin to refuse an oath touching anything that is good and just, being imposed by lawful authority';

and to amend ch. XXV. sect. vi. to read:

'The Lord Jesus Christ is the only head of the Church, and the claim of any man to be the vicar of Christ and the head of the Church is unscriptural, without warrant in fact, and is a usurpation dishonouring to the Lord Jesus Christ.'

(c) 'to express more fully the doctrine of the Church concerning the Holy Spirit, Missions, and the Love of God for all men,' by adding two new chapters to the Confession, viz.

XXXIV. 'Of the Holy Spirit' as (a) the Third Person in the Trinity, proceeding from the Father and the Son, of the same substance, equal in power and glory; (b) the omnipresent Lord and Giver of life, source of all good thoughts, pure desires, and holy counsels, inspirer of Prophecy and Scripture, dispenser of the Gospel; (c) the only efficient agent in the application of redemption; (d) the bond of communion, the mover and enabler of officers and members of the Church, the preserver and increaser of the Church.

XXXV. 'Of the Love of God, and Missions': that (a) God freely offers His salvation to all men in the Gospel; (b) in the Gospel, God declares His love for the world and desire that all men should be saved, reveals fully the only way, promises eternal life to all who repent and believe in Christ, invites and commands all to embrace the offered mercy; and, by His Spirit accompanying the Word, pleads with men to accept His gracious invitation; (c) it is the duty and privilege of all immediately to accept, otherwise they incur aggravated guilt, and perish by their own fault; (d) since there is no other way of salvation than that revealed in the Gospel, and faith ordinarily comes by hearing the Word of God, Christ has commissioned His Church to go into all the world, and to make disciples of all nations. All believers are under obligation to sustain established ordinances of religion, and to contribute, by prayer, gifts, and personal efforts, to the extension of the Kingdom of Christ throughout the whole earth.

(d) to publish a *Brief Statement of the Reformed Faith* in 16 Articles: Of God, Revelation, the Eternal Purpose, Creation, the Sin of Man, the Grace of God, Election, Our Lord Jesus Christ, Faith and Repentance, the Holy Spirit, the New Birth and the New Life, the Resurrection and the Life to Come, the Law of God, the Church and Sacraments, the Last Judgment, Christian Service and the Final Triumph. Each Article is brief, uncontroversial, and well expressed, beginning, as in the English Presbyterian Articles of 1890, of which they bear signs of close and appreciative study, with the words 'we believe,' and passing in many instances to such cognate phrases as 'we rejoice,' 'we confidently look for,' 'we joyfully receive.' The Articles, as a whole, rank very high among such statements. Their tone and language are unexceptionable. True to their time, they do not wrestle with difficulties; they show no concern about the points which sundered Calvinist, or rather 'Gomarist,' and Arminian; they are as though the Synod of Dort had never been. But there is every likelihood that, in producing them, the powerful 'Presbyterian Church in America,' like its namesake in England, has done a pioneer work, in which it will ere long be followed by many other kindred bodies. More than any other Confession, perhaps, it speaks in modern language, such as the pulpit may utter frankly and without alteration or paraphrase. It is perhaps not an exaggeration to say that every Protestant Church might cheerfully and heartily accept it for use both at home and in the mission field. Time alone can

disclose whether its avoidance of the controversial will secure a permanent concord. The Federation of the four main Presbyterian Churches in the United States, at present being consummated, is perhaps an augury of the early adoption of a similar document, or perhaps the document itself.

[Full text in Müller, pp. 941-946, where also the Declaration is printed; earlier history in Schaff, *Hist.* pp. 804-810.]

(9) *The Westminster Confession in the United Presbyterian Church in America.*—The 'Associate' and 'Associate Reformed' Churches, which united in 1858 to form the 'United Presbyterian Church in America,' had held the Confession much more rigorously than the 'Presbyterian Church' just discussed. The former had not at any time altered the text of the Confession, but had contented itself with issuing in 1784 a *Testimony*, five of whose articles refer to the Civil Magistrate, and deny that he is a ruler in the Church, or may grant privileges to those whom he considers true believers to the hurt of the natural rights of others, or has to do with other than civil and social obligations. The latter had in 1799 modified ch. XX. sect. iv., XXIII. sect. iii., and XXXI. sect. ii., safeguarding the autonomy of the Church, affirming the duty of the magistrate to protect it and enforce its lawful censures, and to further it without encroaching on the civil rights of others, and allowing him in special cases the right of calling an ecclesiastical synod to consult and advise about matters of religion; and in the Larger Catechism had changed 'tolerating' into 'authorizing a false religion' among sins against the Second Commandment. At the union of 1858 the word 'tolerating' was restored in the Catechism, and modifications of the same three chapters were agreed upon. They affirmed the autonomy of the Church, the right and duty of the magistrate to punish those whose principles and practices, whether religious or political, openly propagated and maintained, were, in his judgment, subversive of the foundations of properly constituted society, but not to presume to judge heresy or schism; nothing being said of his right to summon ecclesiastical synods. Throughout its history, and all its divisions, this branch of the Presbyterian Church maintained the rest of the Westminster doctrine without dubiety or hesitation.

[Schaff, *Hist.* pp. 810-813.]

(10) *The Cumberland Presbyterian Church*, another large Presbyterian body in the United States, sprung from a revival in Kentucky and Tennessee at the close of the 18th cent., in which Methodists assisted Presbyterians, so early as 1813 adopted a Confession prepared by a Committee directed by Finis Ewing, and in 1829 ratified it after a final revision. The *Cumberland Confession* consists of the Westminster Confession with the American amendments of chs. XXIII. and XXXI. (see (8) above), with the teaching on Perseverance in ch. XVII. substantially retained, but with the doctrine of unconditional election and preterition in ch. III. cut out as seeming to encourage fatalism, and with the change of 'elect infants' in ch. X. sect. iii. into 'all infants.' A like Arminian change was made in the Shorter Catechism, so that to Qn. 7 the Answer runs:

'The decrees of God are his purpose according to the counsel of his own will, whereby he hath foreordained to bring to pass what shall be for his own glory: sin not being for God's glory, therefore he hath not decreed it.'

In Answer 20, 'God having elected some' is changed to 'God did provide salvation for all mankind'; and Qn. 31 runs, not 'What is effectual calling?', but 'What is the work of the Spirit?'

[Schaff, *Hist.* pp. 813-816.]

In 1881 the Cumberland Church appointed a Committee to prepare a new Confession. In 1883 it was finished, and unanimously adopted. It contains 36 chapters, with 115 consecutively num-

bered sections, following the general outline and order of the Westminster Confession, though with characteristic alterations and additions. The topics are: Holy Scriptures, Holy Trinity, Decrees of God, Creation, Providence, Fall of Man, God's Covenant with Man, Christ the Mediator, Free-will, Divine Influence (in place of Effectual Calling), Repentance unto Life, Saving Faith, Justification, Regeneration, Adoption, Sanctification, Growth in Grace [order of last group of seven is changed], Good Works, Preservation of Believers, Christian Assurance, the Law of God, Christian Liberty, Religious Worship, Sabbath-day, Lawful Oaths and Vows, Civil Government, Marriage and Divorce, the Church, Christian Communion, the Sacraments, Baptism, the Lord's Supper, Church Authority, Church Courts, Death and Resurrection, the Judgment. The diction of the Articles cannot be compared with the Westminster sentences, beside which they sound conversational and spasmodic or halting. The chapter on the Decrees is completely given as follows:

'God, for the manifestation of his glory and goodness, by the most wise and holy counsel of his own will, freely and unchangeably ordained or determined what he himself would do, what he would require his intelligent creatures to do, and what should be the awards, respectively, of the obedient and the disobedient. Though all Divine decrees may not be revealed to men, yet it is certain that God has decreed nothing contrary to his revealed will or written word.'

The doctrine corresponds in every respect with the earlier revision of the Westminster Confession by the same Church, whose principles and chief ideas it consistently applies throughout.

[Text in Müller, pp. 912-927.]

(11) *In Canada.*—The doctrinal changes effected by the Presbyterian Churches in the United States go far to explain the unparalleled step which in Canada the Presbyterian, Congregationalist, and Methodist Churches are seriously contemplating in their proposed union. In truth, those alterations leave no standing ground for the traditional differences between Arminian and Conservative Calvinists. After four years of conference (1904-8), agreement has been reached in Committee regarding 19 Articles as the doctrine which the Churches, if ultimately united, would profess. The Baptist and Anglican Churches did not see their way to participate, as invited, in the unrestricted conference and negotiation. With its great home-mission problem, Canada, though little affected by theological laxity or indifference, has been driven by practical necessities to rise above all minor doctrinal differences. In it, both Methodists and Presbyterians have set their brethren in other lands a wise example in ending schism among themselves, and closing their own ranks. It will be a new day for Protestant Christianity, if three such denominations as Presbyterians, Methodists, and Congregationalists should find it feasible to unite their forces, whether for home or foreign missionary enterprise.

The Preamble runs: 'We . . . do hereby set forth the substance of the Christian faith as commonly held among us. In doing so, we build upon the foundation laid by the Apostles and Prophets, confessing that Jesus Christ Himself is the cornerstone. We affirm our belief in the Scriptures of the Old and New Testaments as the primary source and ultimate standard of Christian faith and life. We acknowledge the teaching of the great Creeds of the ancient Church. We further maintain our allegiance to the Evangelical doctrines of the Reformation as set forth in common in the doctrinal standards adopted by the Presbyterian Church in Canada, by the Congregational Union of Ontario and Quebec, and by the Methodist Church. We present the accompanying statement as a brief summary of our common faith, and commend it to the studious attention of the members and adherents of the negotiating Churches, as in substance agreeable to the teaching of the Holy Scriptures.'

Art. I. is of God; II., of Revelation; III., of the Divine Purpose: 'We believe that the eternal, wise, holy, and loving purpose of God embraces all events, so that, while the freedom of man is not taken away, nor is God the author of sin, yet in His providence He makes all things work together in the fulfilment of His sovereign design and the manifestation of His glory': IV., of Creation and Providence; V., of the Sin of

Man: 'We believe that our first parents being tempted chose evil, and so fell away from God, and came under the power of sin, the penalty of which is eternal death; and that, by reason of this disobedience, all men are born with a sinful nature, that we have broken God's law, and that no man can be saved but by His grace'; VI., of the Grace of God; '... God ... in the Gospel freely offers His all-sufficient salvation to all men. ... also that God, in His own good pleasure, gave to His Son a people, an innumerable multitude, chosen in Christ unto holiness, service, and salvation'; VII., of the Lord Jesus Christ: VIII., of the Holy Spirit; IX., of Regeneration; X., of Faith and Repentance; XI., of Justification and Sonship; XII., of Sanctification; XIII., of the Law of God; XIV., of the Church; XV., of the Sacraments; XVI., of the Ministry; XVII., of Church Order and Fellowship; XVIII., of the Resurrection, the Last Judgment, and the Future Life; XIX., of Christian Service and the Final Triumph.

Candidates for ordination must be 'in essential agreement' with the doctrine of the Church, and accept the Statement above 'as in substance agreeable to the teaching of the Holy Scriptures,' and must answer three questions affirmatively, viz. (1) 'Do you believe yourself to be a child of God, through faith in our Lord Jesus Christ?' (2) 'Do you believe yourself to be called to the office of the Christian ministry, and that your chief motives are zeal for the glory of God, love for the Lord Jesus Christ, and desire for the salvation of men?' (3) 'Are you persuaded that the Holy Scriptures contain sufficiently all doctrines required for eternal salvation in our Lord Jesus Christ? And are you resolved out of the said Scriptures to instruct the people committed to your charge, and to teach nothing which is not agreeable thereto?'

[Proceedings of the Fifth Conference of the Joint Committee on Church Union, etc., Toronto, Dec. 1908.]

(12) In *South Africa* a basis of union between the Presbyterian, Wesleyan Methodist, Congregational, and Baptist Churches was drawn up and recommended in 1909 by a Conference at Bloemfontein, on Presbyterian initiative, the Dutch Reformed Church not seeing its way to co-operate in the movement. *Inter alia*, 5 somewhat slight and loosely-drafted clauses set forth the simple evangelical basis of doctrine proposed. The Churches have not as yet assented to the proposed basis, the last three named having decided adversely meanwhile.

[Draft Constitution, etc., issued by order of Conference, 1909.]

(13) In *Southern India*, in July 1908 the first General Assembly of the 'South India United Church,' representing Congregationalists, Methodists, and Presbyterians, met and adopted a basis of union, including a Confession in 5 Articles: of God; of Revelation and Scripture; of Man's Creation in God's Image, Common Brotherhood, Sin and Helplessness; of God's Salvation through Jesus Christ and the Holy Spirit; and of the Church, Ministry, Sacraments, and Things to come. There is a prefatory and a concluding note affirming:

(1) 'As the Confession is a human instrument, it is understood that persons assenting to it do not commit themselves to every word or phrase, but accept it as a basis of union, and as embodying substantially the vital truths held in common by the uniting churches'; (2) 'the church reserves to itself the right to revise its general Confession of Faith whenever the consensus of opinion of the United Body demands it.'

Other unions and federations elsewhere in the world, accomplished or being negotiated, involve no new standards, but rest on those already recognized.

17. Confessions in the Baptist Churches.—The 16th cent. revolt against the superstition, formalism, corruption, and hierarchic tyranny of the Roman Church, which in the Lutheran, Anglican, Zwinglian, and Calvinist Churches proceeded on strictly ecclesiastical lines, assumed a more radical form in the Anabaptist societies which sprang up throughout Europe. Their rise and their doctrines have been amply described in an earlier article (see ANABAPTISM in vol. i. p. 406). In worship they observed a puritan simplicity and fervour. In polity they inclined to presbyterian or congregational organization. In doctrine they cherished no artificial or coercive unity, being kept together by common revulsion from traditionalism, by common persecution, and by a common quest after a simpler Biblical piety and personal experience. Towards the State as towards the Church they looked with suspicion and distrust, dreading its

worldliness, its appeal to force, its reliance on oaths, and in return they were hated as its subverters. They deserve honour as the pioneers of religious toleration—a principle always more easily mastered by the persecuted than by the persecutor. Much that is best in Quaker and in Baptist thought and life they anticipated, as they themselves had been anticipated by the Brethren, their namesakes, of earlier centuries in Bohemia and in the Alpine Valleys. They had a lively appreciation of the doctrinal and ethical superiority of the New to the Old Testament, a vivid sense of individual responsibility and relationship to God, a reliance on the direct leading of the Holy Spirit. In their doctrine, as in their life, they strove to reproduce the NT ideal, demanding literal obedience to Christian precepts at their hardest, and in all things sincerity and simplicity. In an age like theirs it was inevitable that their attitude towards the Sacraments, especially Baptism, should arouse the keenest attention and lead to the fiercest antagonism and obloquy. Their free-thought on Baptism, their faith in the universal salvation of departed infants, their disbelief in infant-baptism as the degradation of the Sacrament to a meaningless or superstitious form, and their consequent insistence on adult re-baptism, seemed to be their crowning heresy, or blasphemy, or sacrilege, and won for them the name of 'Anabaptist.' Among their number were outstanding Humanists as well as illiterate peasants, well-balanced minds as well as crazy enthusiasts. Scorned, hated, reviled, and tormented by Romanist and orthodox Protestant alike, they were in innumerable instances the salt of their age. It was their misfortune to live before their time; it was their lot to suffer for its coming. With better information about their character and views, history at last is making a tardy reparation to their memory. The chapter on Anabaptism in a modern Church History is a strange and welcome contrast to its older counterpart (e.g. Lindsay, *Hist. of Reform.* ii. 430-469).

(1) *Anabaptist Confessions.*—Even before 1500, a simple *Catechism*, printed in many languages, was in current use, along with early versions of the Bible, among the Anabaptist societies. In the third decade of the 16th cent. conferences are known to have taken place with a view to their closer union—in 1524 at Waldshut in the house of their scholarly and eloquent leader Balthasar Hübmaier, when a statement of principles, in particular against the miraculous efficacy of Sacraments, was prepared, and separation from the Roman Church resolved upon; in 1526 at Augsburg; and in 1527 also at Augsburg, where a General Synod representative of widely scattered cities 'drew up a statement of doctrinal truth, which is very simple, and corresponds intimately with what is now taught among the Moravian Brethren' (Lindsay, *op. cit.* ii. 435). The tragic Münster episode, which did so much to bring discredit upon the Anabaptist name, gave to the world *Bernhard Rothmann's Theses and Confession of Faith*, 1532 (summary in Detmer's work on him, Münster, 1904; Lindsay, *Hist.* ii. 452, 456), the *21 Articles*, or *Rules*, of Jan Matthys, the Melchiorite Dutch visionary (1533), and an *Apology*, or *Confession of the Faith and Life of the Christian Society at Münster* (Lindsay, ii. 464 and footnote).

(2) *Mennonite Confessions.*—Under the apostolic influence of the devoted Menno Simons, a Dutch priest who joined the Anabaptist movement in 1536 and gave the last twenty-five years of his martyr life to the cause, the scattered and dispirited congregations revived and, in spite of persecution, were organized into a church, in which baptism, though conditional upon profession of faith spontaneously made, was still for the most part

administered by sprinkling, not immersion. Winer (*Comparative View of Doctrines and Confessions*, Introd. § 5) enumerates a group of Mennonite documents as follows:

The *Confession of Waterland* (1580), the most important, drawn up in Dutch by Ris and Gerardi, represents the Waterland division of the Church, which was more liberal in its discipline, but contains the characteristic doctrine of all sections. It consists of 40 Articles, which deny the guilt of original or transmitted sin; affirm the conditional election of all, and universal atonement; condemn oaths, war, civil office, litigation, revenge, worldly amusements, and infant baptism as unscriptural; approve of obedience to civil magistrates in all things not contrary to conscience and God's word; but on other points conform to the normal tenets of Protestantism.

Confessions were also published in 1591; in 1628 *Ontermann's Confession of the One God*; in 1629 *the Confession of the Olive Branch*; in 1630 *the Short Confession of the United Frisian and German Baptists*, and *Cornelis' 15 Principal Articles*; in 1664 *a Leyden Confession*; and in 1766 *Ris' Doctrine of the True Mennonites*, sanctioned by many churches. *Catechisms* widely used were those of 1697 by Dooregest, Beets, and Schyn, of 1743 by Baudouin, and of 1783.

[Winer, *op. cit.* pp. 29-31, with bibliog. and further details.]

(3) *Calvinistic Baptist Confessions in Britain and America*.—The great majority of modern Baptists belong to the 'Regular' or 'Particular' denomination, and are, apart from the mode and age or condition and theory of baptism, Calvinists in doctrine, Voluntaries and Congregationalists in polity. They believe in the salvation of all who die before attaining to years of discretion, and hold that baptism is simply an outward sign and profession of grace already received, of faith in Christ, and membership in His Church. Their Confessions, in harmony with their Congregationalist polity, are not so much obligatory standards as manifestos of prevailing doctrine, issued often with an apologetic purpose.

The *Confession of Seven Churches in London* (1644) was published during the sitting of the Westminster Assembly, from whose deliberations Baptist divines were excluded, 'for the vindication of the truth and information of the ignorant: likewise for the taking off of those aspersions which are frequently both in pulpit and print unjustly cast upon them.' Its 52 Articles are Calvinistic throughout, apart from the Sacraments and Church polity. Its closing paragraph, like the *Scots Confession*, disclaims infallibility:

'We confess that we know but in part, and that we are ignorant of many things which we desire and seek to know; and if any shall do us that friendly part to show us from the Word of God that we see not, we shall have cause to be thankful to God and them. But if any man shall impose upon us anything that we see not to be commanded by our Lord Jesus Christ, we should in His strength rather embrace all reproaching and tortures of men . . . than do anything against the least title of the Truth of God. . . . And if any shall call what we have said heresy, then do we with the Apostle acknowledge that after the way they call heresy worship we the God of our fathers, disclaiming all heresies (rightly so called). . . .'

[Text in Underhill's *Collection of Baptist Confessions*, pub. by Hanserd Knollys Society; Schaff, *Hist.* p. 854; Green, *Christian Creed and the Creeds of Christendom*, Lond. 1898, p. 150 f.]

The 46 Articles of Somerset were adopted by sixteen churches in that county and neighbourhood in 1656.

The *Confession of 1677*, re-issued in 1688 and again in 1689 with the approval of the representatives of a hundred congregations met in London, became at once the recognized standard, and has remained the historic manifesto of the Particular Baptists not only in Britain but in America, where it received the sanction of the Association of 1742 at Philadelphia, and the title *Confession of Philadel-*

phia. Its 32 chapters are simply a Baptist recension of the Westminster Confession, altered only in the chapters dealing with the Church and the Sacraments. It thus corresponds to the Congregational Savoy Declaration of 1658, and in fact professes to have for its aim, in adhering to the Westminster Confession, to 'show the agreement of Baptists with the Presbyterians and Congregationalists' in all the fundamental Articles of the Christian Religion, and to demonstrate that they have 'no itch to clog religion with new words.'

From the Savoy Declaration ch. xx. is inserted, 'of the Gospel and the Extent of Grace thereof' (see p. 884f, below). In ch. xx. of the Westminster Confession Art. 4 is omitted respecting resistance to the Civil Magistrate and punishment of heretics by the same power. In ch. xxiii., 'of the Civil Magistrate,' Artt. 3 and 4 are omitted, which admit the power of magistrates to take order to maintain the purity of the Church and to summon councils, and their right to be obeyed by all notwithstanding evil character or unbelief, and a short sentence is inserted enjoining 'subjection in all lawful things . . . to be yielded . . . in the Lord,' and prayers to be offered on their behalf. In ch. xxv., 'of the Church,' the six articles are re-cast, modified, and expanded into fifteen—enjoining communion in the visible Church, defining membership in Baptist terms, recognizing bishops or elders and deacons as office-bearers, appointing their election to be by congregational suffrage and their ordination to be by prayer and fasting and the imposition of hands, urging fellowship between congregations, and the holding of assemblies to advise and counsel, not to exercise jurisdiction. In place of ch. xxvii., 'of the Sacraments,' two articles stand: '1. Baptism and the Lord's Supper are ordinances of positive and sovereign institution, appointed by the Lord Jesus, the only Lawgiver, to be continued in His Church to the end of the world. 2. These holy appointments are to be administered by those only who are qualified, and thereunto called, according to the commission of Christ.' In place of ch. xxviii., 'of Baptism,' four articles stand: '1. Baptism is an ordinance of the New Testament ordained by Jesus Christ to be unto the party baptized a sign of his fellowship with Him in His death and resurrection; of his being engrafted into Him; of remission of sins; and of his giving up unto God, through Jesus Christ, to live and walk in newness of life. 2. Those who do actually profess repentance towards God, faith in and obedience to our Lord Jesus, are the only proper subjects of this ordinance. 3. The outward element to be used in this ordinance is water, wherein the party is to be baptized in the name of the Father, and of the Son, and of the Holy Spirit. 4. Immersion, or dipping of the person in water, is necessary to the due administration of this ordinance.' Ch. xxx., 'of Church Censures,' and ch. xxxi., 'of Synods and Councils,' are omitted wholly.

The *Baptist Catechism commonly called Keach's Catechism*, which bears the same relation to the Westminster Shorter Catechism as the Baptist Confession of 1677 to that of Westminster, was prepared in 1693 by William Collins, by instruction of the Assembly of that year in London. Benjamin Keach had been associated with Collins in the re-issue of the Confession in 1688, and is credited with a considerable share in the work. Underhill, who gives it in his *Collection* (pp. 247-270), describes it as 'the only Catechism of value among Baptists.'

The *New Hampshire Confession* (1833) is the work of J. Newton Brown of New Hampshire, a theological author and editor. It has been accepted generally by American Baptists, especially in the Northern and Western States, since its adoption by the New Hampshire Convention. Its 18 Articles (text in Schaff, *Evang. Prot. Creeds*, pp. 742-748), each of which begins with the words 'We believe . . .,' treat very briefly of the Scriptures, the True God, the Fall of Man, the Way of Salvation, Justification, the Freedom of Salvation, Grace in Regeneration, Repentance and Faith, God's Purpose of Grace, Sanctification, the Perseverance of Saints, the Harmony of the Law and the Gospel, a Gospel Church, Baptism and the Lord's Supper, the Christian Sabbath, Civil Government, the Righteous and the Wicked, and the World to come. The language is often felicitous in its attempt to express the essence of Calvinism in terms which shall not repel.

Three articles may serve as specimens of the work. Art. VI., 'of the Freedom of Salvation,' runs: 'We believe that the blessings of salvation are made free to all by the Gospel; that it is the immediate duty of all to accept them by a cordial, penitent, and obedient faith: and that nothing prevents the

salvation of the greatest sinner on earth but his own inherent depravity and voluntary rejection of the Gospel; which rejection involves him in an aggravated condemnation.' Art. IX., 'of God's Purpose of Grace,' runs: 'We believe that election is the eternal purpose of God, according to which He graciously regenerates, sanctifies, and saves sinners; that, being perfectly consistent with the free agency of man, it comprehends all the means in connection with the end; that it is a most glorious display of God's sovereign goodness, being infinitely free, wise, holy, and unchangeable; that it utterly excludes boasting, and promotes humility, love, prayer, praise, trust in God, and active imitation of His free mercy; that it encourages the use of means in the highest degree; that it may be ascertained by its effects in all who truly believe the Gospel; that it is the foundation of Christian assurance; and that to ascertain it with regard to ourselves demands and deserves the utmost diligence.' Art. XIV., 'of Baptism and the Lord's Supper,' runs: 'We believe that Christian Baptism is the immersion in water of a believer, into the name of the Father and Son and Holy Ghost; to show forth in a solemn and beautiful emblem our faith in the crucified, buried, and risen Saviour, with its effect in our death to sin and resurrection to a new life; that it is pre-requisite to the privileges of a church relation, and to the Lord's Supper, in which the members of the Church, by the sacred use of bread and wine, are to commemorate together the dying love of Christ; preceded always by solemn self-examination.'

(4) *Arminian Baptist Confessions in Britain and America*.—The Free-will, or General, or Arminian Baptists, like the Mennonites, affirm conditional election, the freedom of the human will, and the possibility of falling away from grace. They also diverge somewhat from Congregationalism in retaining a form of episcopate with pastors and deacons, and in assigning more authority to their General Assemblies. Their earliest confession is the *Declaration of Faith of English People remaining at Amsterdam in Holland*, drawn up in 1611, in 100 Articles (based on 37 prepared in Dutch by two Mennonite Pastors, De Ries and Gerrits, in 1609), by John Smyth for his congregation of English refugees, and, after controversy, re-cast in rival form by his colleague Helwys in 27 Articles in the same year.

Of the latter form Art. V. says: 'God before the foundation of the world hath predestinated that all that believe in Him shall be saved, and all that believe not shall be damned; all which He knew before, not that God hath predestinated men to be wicked, and so be damned, but that men being wicked shall be damned.' Art. VII. denies the necessary 'perseverance' of Saints: 'men may fall away from the grace of God, and from the truths which they have received and acknowledged.' Art. X. defines the Church as the company of believers baptized upon their own confession of faith, without requiring immersion. Art. XXIV. enjoins obedience to magistrates.

[Text in Underhill's *Collection*, pp. 1-10.]

The *London Confession*, in 25 Articles, was presented to Charles II. in 1660.

[Text in Underhill, pp. 107-120.]

The *Orthodox Creed of 1678* emanated from the Free-will Baptists of Oxfordshire. According to Schaff, 'it makes a near approach to Calvinism, with a view to unite Protestants in the fundamental articles against the errors of Rome' (*Hist.* p. 858).

[Text in Underhill, pp. 120-168.]

The *Confession of the American Free-will Baptists*, approved by Conference in 1834, revised in 1848, 1865, and 1868, is the most important and authoritative statement of Arminian Baptist views. Its 21 brief chapters, some but a sentence long, treat of Scripture, the Being and Attributes of God, Divine Government and Providence, Creation, Primitive State of Man and Fall, Christ, the Holy Spirit, the Atonement and Mediation of Christ, the Gospel Call (as 'co-extensive with the atonement to all men both by the word and by the strivings of the Spirit; so that salvation is rendered equally possible to all; and if any fail of eternal life the fault is wholly their own'), Repentance, Faith, Regeneration, Justification and Sanctification, Perseverance of the Saints ('there are strong grounds to hope that the truly regenerate will persevere unto the end and be saved, through the power of Divine grace which is pledged for their support; but their future obedience and final salvation are neither deter-

mined nor certain; since through infirmity and manifold temptations they are in danger of falling; and they ought therefore to watch and pray, lest they make shipwreck of faith and be lost'), the Sabbath, the Church, the Gospel Ministry, Ordinances of the Gospel, Death and the Intermediate State, the Second Coming of Christ, the Resurrection, the General Judgment, and Future Retributions.

[Text in Schaff, *Evang. Prot. Creeds*, pp. 749-756.]

LITERATURE.—Schaff, *Hist.*, and *Evang. Prot. Creeds*; Underhill, *Confessions of Faith*, etc., 1864, for the 17th century; Crosby, *History of the English Baptists*, Lond. 1788-40; Cramp, *Baptist History*, Philadelphia, 1871; T. Armitage, *History of the Baptists*, N.Y. 1887; H. C. Vedder, *Short History of the Baptists*, Philadelphia, 1891; Newman, *History of the Baptists of the U.S.*, N.Y. 1894; art. in *PRE*³ and Schaff-Herzog ('Anabaptists,' 'Baptists,' 'Mennonites'), and art. ANABAPTISM in vol. I.

18. *Confessions in the Independent or Congregational Churches*.—Congregationalism in Britain and America, a product of the English Puritanism of Elizabeth's reign, stands related historically to Calvinism very much as the Baptist movement, whose congregational form of polity and whose free attitude to Confessions of Faith it shares. Without Confessional coercion, and without any reliance upon the ecclesiastical authority of high courts or assemblies, Congregationalism has grown up and flourished, like Baptist Calvinism, under the shadow and dominant influence of the Westminster Standards. It acknowledges no binding Confession. The particular or local congregation is a doctrinal law to itself, bound only by such doctrinal restrictions as may be embodied in its own constitution or charter or deed of trust. Particular congregations are bound to one another by the simple tie of fellowship, doctrinal sympathy, and affinity—a tie terminable at any time should egregious departure from type take place. Till recently, Congregationalists, like Baptists, have maintained a remarkable homogeneity in spite of their freedom—a testimony to their loyalty to the traditions not less than to the congregational charters of the body. They have steadfastly resisted all tendencies to elevate common doctrinal statements into obligatory Confessions (preferring to call them declarations or 'platforms'), and every temptation to form Presbyterian federations with legislative and jurisdictional courts. Neither civil nor ecclesiastical authority or dignity is allowed to exercise power over a local congregation. For the rest, their history has run parallel with that of Presbyterianism, their re-adjustments of the Westminster type of doctrine proceeding on similar lines.

Robert Browne's *Statement of Congregational Principles*, published in 1582 at Middelburg in Holland, was the pioneer declaration. It is in the form of an elaborate Catechism of 185 questions, each supplied with an answer, a counter-question and its answer, definitions of the terms employed, and an analytic division. Its doctrine is orthodox Calvinism, but questions 35-127 develop the characteristics of Congregational polity under the doctrine of the Church. Though Browne, after years of courageous propaganda, ultimately abandoned his own cause and returned to the Church of England, the movement was long associated with his name as 'Brownism.' It was in Holland where Anabaptism prepared the way for it, and in New England that it first found a refuge.

[Walker, *The Creeds and Platforms of Congregationalism*, New York, 1893, pp. 1-27, where full citations of the relevant literature are made.]

The *London Confession of 1589* was prepared for the struggling congregation in that city by Henry Barrowe and John Greenwood, its two leading members, then imprisoned for their separatist

teaching and afterwards martyred. It was entitled 'A True Description out of the Word of God of the Visible Church,' and was printed at Dort. Less democratic than Browne's work in its view of the authority of the elders, it makes the same claim to NT warrant for the free election of pastors and teachers, elders, deacons, and widows, by the congregation. It is silent on the system of doctrine, being in complete sympathy with the ruling Calvinism.

[Walker, *op. cit.* pp. 22-40, including the text.]

The *London-Amsterdam True Confession* of 1596 was published to vindicate the London fugitives resident in and near Amsterdam from the odium of wilful schism and of heresy. It seems to have been the work chiefly of the gifted Henry Ainsworth. Its 45 Articles deal with doctrine, in which they are in harmony with Continental and Anglican Calvinism; and with Church government, in which they carry further the Congregational principles of the Confession of 1589, tightening discipline through provision for the deposition and even excommunication of unworthy ministers, and through the requirement of transference certificates from one congregation to another, urging complete separation from the Established Church, and calmly contemplating the use of civil power to reform it in harmony with their principles.

[Walker, *op. cit.* pp. 41-74, incl. text and bibliog.]

The *Points of Difference between Congregationalism and the Church of England* were submitted by the same body of exiles to James I. on his accession, in 1603. Of the 14 points the following may be quoted as representative:

1. 'That Christ the Lord hath by His last Testament given to His Church, and set therein, sufficient ordinary Offices, with the manner of calling or Entrance, Works, and Maintenance, for the administration of His holy things, and for the sufficient ordinary instruction guidance and service of His Church, to the end of the world.' 2. 'That every particular Church hath like and full interest and power to enjoy and practise all the ordinances of Christ. . . . 3. 'That every true visible Church is a company of people called and separated from the world by the word of God, and joyned together by voluntary profession of the faith of Christ, in the fellowship of the Gospel. And that therefore no knowne Atheist, unbeliever, Heretique, or wicked liver be received or retained a member. . . . 5. 'That being thus joyned, every Church hath power in Christ to chuse and take unto themselves meet and sufficient persons into the Offices and functions of Pastors, Teachers, Elders, Deacons and Helpers. . . . and that no Antichristian Hierarchie, or Ministerie, of Popes, Archbishops, Lord-bishops, Suffraganes, Deanes, Archdeacons, Chancellors, Parsons, Vicars, Priests, Dumb-ministers, nor any such like be set over the Spouse and Church of Christ. . . .

[Walker, *op. cit.* pp. 75-80, incl. text.]

Between 1617 and 1647, Walker (*op. cit.* pp. 81-156) details a group of minor documents illustrating the spread of Congregational principles, especially in New England—the *Seven Articles of 1617*, a minimum statement, almost an abnegation, of Congregational views submitted on behalf of the English refugees in Leyden in support of their application to the Virginia Colonizing Company for a grant of land in America on which to settle; the *Mayflower Compact*, a civil covenant of the Congregational type, in 1620; the *Covenants and Creeds of Salem Church*, 1629-1665; the *Covenant of the Charlestown-Boston Church*, 1630; Hooker's *Summary of Congregational Principles* (1645), a learned but discursive American reply to Samuel Rutherford's searching criticism of Congregationalism in his *Due Right of Presbyteries* (1644); and the *Creed-Covenant of the Church at Windsor, Connecticut* (1647).

The *Cambridge (New England) Platform of Church Discipline* (1648), following upon the *Tentative Conclusions* of the Cambridge Synod of 1646, is a supplement to the Westminster Confession of 1646, which the Synod, having perused and considered it 'with much gladness of heart, and thankfulness to God,' judged 'to be very holy,

orthodox, and judicious in all matters of faith,' and therefore freely and fully consented thereunto 'for the substance thereof.' The Synod acknowledged that the sections bearing on Vocation were not passed without debate or in their stricter sense. The Westminster doctrine of Church government and discipline in chs. xxv., xxx., and xxxi. was to be replaced by the new Platform. The Synod hoped that by this 'professed consent and free concurrence' with the Westminster Divines it would appear to the world that, as they were 'a remnant of the people of the same nation with them,' so they were 'professors of the same common faith, and fellow-heirs of the same common salvation.' The Platform is credited to Richard Mather, and contains 17 substantial chapters, after a lengthy preface. It is a careful and minute application of Congregational principles to the details of the Puritan doctrine of the Church.

[Walker, pp. 180-237; Schaff, *Hist.* p. 886.]

The *Savoy Declaration* (1658) did for the English Churches what the Cambridge Platform did for the American; it has been the historical basis of their teaching. With some reluctance Cromwell had agreed to act upon the advice and request of certain influential Independents in Parliament to arrange for the publication of a Confession of Faith for the whole realm, differences of opinion being tolerated except in the cases of Popery and Prelacy. Representatives were sent by 120 Congregational Churches in and near London, in response to a circular addressed to them by the Clerk of the Council of State, to a Conference in the Savoy Palace in London. The Conference did not meet till nearly four weeks after the Great Protector's death. It elected to prepare a new Confession, and authorized a committee of six—Drs. Goodwin, Owen, Nye, Bridge, Caryl, and Greenhill (all save Owen members of the Westminster Assembly)—to prepare the draft. Within a fortnight the work was done and unanimously accepted. It consists of a very lengthy 'Preface,' descriptive of the work, deprecating coercion in the use of Confessions, which thereby became 'Impositions' and 'Exactions' of Faith, and urging toleration in matters non-essential among Churches that held the necessary foundations of faith and holiness; a 'Declaration of Faith,' consisting of the doctrinal matter of the Westminster Confession slightly modified, and a System of Polity, or 'Institution of Churches.'

The 'Declaration of Faith' is in 32 chapters, two of the Westminster Confession being omitted, as they had previously been by the Long Parliament, viz. xxx. and xxxi., 'of Church Censures' and 'of Synods and Councils,' one, viz. xx., being added, 'of the Gospel, and of the Extent of the Grace thereof.' Ch. xxi., 'of Christian Liberty and Liberty of Conscience,' is slightly modified. Ch. xxiv., 'of the Civil Magistrate,' is altered to exclude the civil punishment of heresy, though 'blasphemy and errors subverting the faith and inevitably destroying the souls of them that receive them' are to be prevented. Ch. xxv., 'of Marriage,' is shortened by omissions. Ch. xxvi., 'of the Church,' is modified by omissions and additions. The 'Institution of Churches' sets forth Congregationalism in 30 propositions providing for constitution, government, discipline, organization, and fellowship.

[Walker, pp. 240-408, where the Savoy changes are indicated by black type in the text; Schaff, *Hist.* pp. 829-833, *Evang. Prot. Creeds*, pp. 707-729.]

In Britain, since 1658, the following have been the chief products of Confessional activity. In 1691 there were published *Nine Heads of Agreement* between Congregationalists and Presbyterians in and near London, who had been drawn together by the persecution associated with the Act of Uniformity in 1662. They are more Congregationalist than Presbyterian, anything like a Presbyterian system of courts being an impossibility at the time. Their acceptance in England, like the union they accompanied, was short-lived, but they found favour and exerted

influence in America. In 1833 appeared the *Declaration of the Congregational Union of England and Wales*, setting forth the 'Faith, Church Order, and Discipline of the Congregational or Independent Dissenters.' It was composed by Dr. Redford of Worcester, was unanimously adopted, after revision, by the Union, and has maintained its place as its official manifesto. It is prefaced by 7 preliminary notes which disclaim for it technical or critical precision, deny the utility of creeds as bonds of union, admit the existence of differences of opinion within the Union, but claim a greater harmony than among Churches requiring subscription. Its 'Principles of Religion,' in 20 propositions, are a moderate popular statement of Calvinistic doctrine. Its concluding 'Principles of Church Order and Discipline' are 13 in number, and claim Divine sanction for the polity they outline.

[Schaff, *Hist.* pp. 833-836, *Evang. Prot. Creeds*, pp. 730-734; Walker, pp. 440-462, 542-552.]

In America, since 1648, the following documents have emerged: The *Boston Declaration* of 1680, approved by the Synod of the New England Churches, is simply the Savoy Confession with the Cambridge Platform. The *Saybrook Platform* (1708) marked the adoption by the Connecticut Churches of the Boston Declaration with the English Heads of Agreement of 1691. In 1801 the same sympathy with Presbyterians, deepened by common home-missionary problems, led to the adoption of a *Plan of Union*, in 4 sections, by the Connecticut Churches. In 1865 the National Council of Congregational Churches in the United States, which met at Boston, emitted a *Declaration of Faith*, of which the first draft was prepared by Drs. Joseph P. Thomson, Edward A. Lawrence, and George P. Fisher, followed by a second and a third, the third being adopted on Burial Hill, Plymouth, where the earliest meeting-house of the Pilgrim Fathers had stood. This *Burial Hill Declaration* impressively affirms the Synod's adherence to the faith and order of the Apostolic and Primitive Churches held by their fathers, and substantially as embodied in the Confessions and Platforms which the Synods of 1648 and 1680 set forth or re-affirmed. The last five paragraphs briefly summarize 'the great fundamental truths in which all Christians should agree,' and which should be a basis of fellowship.—God the Triune, Jesus Christ the Incarnate Word, the Holy Comforter, Sin, Atonement, Sanctification, Church, Ministry, Sacraments, Judgment to come,—state the testimony on which these doctrines rest, and close with a proffer of fellowship with all who hold them and with an avowal of missionary purpose.

The *Obertin Declaration* of 1871 is a more matter-of-fact re-affirmation, without any doctrinal detail. In 1883, in response to long-continued demands for a Declaration which should be less superficial than those of 1865 and 1871, and more suitable both for use in private and public instruction, and for use in the trust-deeds of local churches, a body of twenty-five representative commissioners completed a Creed of 12 Articles subscribed by all but three of their number. This *Commission Creed*, which was duly authorized as a common manifesto, has found wide acceptance. Congregationalism apart, it is on the same lines as the modern Presbyterian statements. It is cast in true creed form, each article beginning, 'We believe.' It is catholic and evangelical in its doctrine; the historic difficulties in Calvinism are passed over; the language is simple, vigorous, and appropriate; even the doctrine of the Church in Art. X. is in such terms as would commend it to others than Congregationalists. Altogether it is one of the most successful modern Declarations.

The *Union Statement*, issued by a joint-Committee at Dayton, O., in Feb. 1906, with a view to union between Congregationalists, Methodist Protestants, and United Brethren, bears the same character and has gained similar approval. It affirms 'consent to the teaching of the Ancient Symbols of the undivided Church, and to that substance of Christian doctrine which is common to the Creeds and Confessions which we have inherited from the past,' though attention has been drawn to the significance of its omissions from the traditional system.

[Schaff, *Hist.* pp. 835-840, *Evang. Prot. Creeds*, pp. 734-737; Walker, pp. 238-582, Incl. texts of all documents down to 1883; art. 'Congregationalists' in Schaff-Herzog by Morton Dexter.]

GENERAL LITERATURE.—The works cited will be found sufficient, Williston Walker's *Creeds and Platforms of Congregationalism*, New York, 1893, being especially full and reliable. In Schaff, Walker, and the art. in Schaff-Herzog a full statement of the relevant literature will be obtained.

19. Confessions in the Arminian and Methodist Churches.—Originally a spiritual and ethical revival within the Church of England, Methodism grew up under the Thirty-nine Articles and never formally renounced its allegiance to them. But from the first, except in Whitefield's following, it objected resolutely to the distinctively Calvinistic elements in them, and avowed its acceptance of them as in harmony with the Five Points of Arminianism (given above, p. 868*). From the Wesleys to William Booth, Wesleyan teachers have 'abhorred' the Calvinistic doctrine of the Divine decrees as subversive of Divine justice and love, and of human freedom, responsibility, activity, and hope, though, as intensely practical and empiric thinkers, it might have occurred to them as a paradox, on that view, that Whitefield and countless other preachers and teachers in the orthodox Calvinistic succession had never been conscious of any such pernicious results of their views. But, if Methodism be guilty of exaggeration and misrepresentation in its conception of the signification and implications of the Calvinistic doctrine, as when it makes it teach that God passed over or damned the 'rest of mankind' *irrespective of their sin*, its motive is of the highest, its purpose is intensely practical, and its own phenomenal success has vindicated it. In polity, at least, it has borrowed from Calvinism, not only in its practically presbyterian organization in Britain, but in its conception of the episcopate as a superintending presbyterate in America. Practical elasticity and adaptability characterize its polity, just as spiritual impressiveness and emotional effectiveness mark its theology, common sense rather than abstract consistency being the principle of both, and appealing peculiarly to the English mind. Not historical learning, not even conformity to Scripture, not outward continuity with the past, not intellectual perfection, is the final test of a Church and system, but practical efficacy in the supreme work of reaching the heart, curbing the passions, converting the soul, and transforming the character. Clerical privilege and pedantry must bow to the prophetic necessities of the Spirit of God and His saving work. More than any other system, save that of the Friends, with which it has not a little in common, Wesleyan Methodism enthrones the doctrine of the Holy Spirit, testing all doctrines and all work by His felt presence and power. It has thus addressed itself with peculiar success to the practical and empiric instincts of the 19th cent., of whose religious history it has been, next to Christian missions, the outstanding phenomenon. In an age which worships power and has faith in success, it has wielded an unprecedented influence and achieved an unparalleled success. The revival of which it was the leading force has affected almost every other Church for

good, it has stimulated the thought of every other system, and it has transformed the world's conception of the nature and basis of religion.

However the Methodist Churches may differ from one another, in Britain and America, in reference to organization, government, and discipline, they are at one in regard to doctrine, maintaining unaltered Wesley's own position. They have no formally complete, distinctive Confession, but, instead, a certain relation to the Anglican Articles defined by Wesley himself, and the basis of doctrine supplied by Wesley's notes on the New Testament which rest on Bengel's admirable *Gnomon*, or Commentary, and by his 58 published sermons down to 1771. The basis is thus threefold.

(1) *Methodism and the 39 Articles.*—In England, Wesley left the Articles formally undisturbed, in conformity with his scrupulous loyalty to Anglican order, contenting himself with disavowing their predestinarian and allied elements, and interpreting them in an Arminian sense. In America, however, in doctrine as in polity and orders, he felt himself less fettered. He gave the Methodist Episcopal Church, which he founded there, a recension of the 39 Articles suited to its special circumstances, and so abbreviated as to eliminate their obnoxious Calvinism and, negatively at least, to conform to his views. The 25 Articles, as they are called, adopted by Conference in Baltimore in 1784 (except XXIII., recognizing the independence of the United States, which was not approved till 1804), reveal Wesley's precise attitude to the 39.

He omitted the political articles applicable only to England, the strongly Augustinian articles (XVII., of Predestination, as teaching unconditional election and the necessary perseverance of the elect; XIII., of Works before Justification, as having the nature of sins) and Art. VIII., which re-affirms the three Ecumenical Creeds. Art. X., of Free-will, he retained, though it teaches, with Augustine and Calvin, man's natural inability since the Fall to do good works without the grace of God, inasmuch as it was his view that of God's free grace free-will is supernaturally restored to all men universally. From Art. II. he omitted the clauses 'begotten from everlasting of the Father' and 'of His substance,' from IX. the clauses which affirm the persistence of original sin in the regenerate and so conflict with his doctrine of Christian Perfection. In XVI. the words 'sin after baptism' are altered to 'sin after justification,' to exclude the doctrine of baptismal regeneration; and in XXV., of the Sacraments, before 'signs of grace' the words 'sure witnesses and effectual' are omitted. But there is no positive addition of Arminian teaching to the Articles.

(2) *Methodism and Arminianism.*—Wesley made no secret of his entire concurrence with the five cardinal points of Arminianism. They are embodied in his discourses. Human free-will retained in some measure in spite of the Fall, as the basis of individual as distinct from racial responsibility; the voluntary self-limitation of the sovereign will of God in its relations to free agents; foreknowledge of free actions and character as the ground of Divine predestination; the universal extent of the Atonement; the resistibleness of Divine grace, and the possibility of final falling away from the regenerate and sanctified state—these are fundamental Wesleyan as well as Arminian tenets, plausible and common-sense on the face of them, raising no popular difficulties such as beset the antagonistic Calvinistic definitions, and thus avoiding the tendency to morbidity, make-believe, and paralysis not always erroneously attributed to them. In reality the two systems are not diametrically opposed, if the common terms be used in a common sense; but Wesleyan thought, urged by a practical impulse, did not scruple over metaphysical difficulties whether latent in Scripture or in reason, but fastened upon the form of doctrine which appealed most directly to the heart and conscience. Thus Arminianism, which failed to maintain itself in Holland or to win a settlement in Scotland, found a home in England and among English settlers across the Atlantic. Indeed, it must be

added that recent changes in the thought and standards of Calvinism have for the most part been in the direction of a tacit compromise with Arminian doctrine, if not of surrender to it. But Methodism does not share the Pelagian sympathies of Arminianism, takes a darker view of original sin as more than a disease, as complete depravity, attributes human freedom since the Fall not to any partial survival of original freedom, but to the direct prevenient grace of the Spirit of God in the individual soul, and lays far greater stress upon definite conversion and regeneration as a necessary subjective experience for every man.

(3) *The Original Element in Methodism.*—The sermons bring to light three distinctive doctrines which are fundamental in the Methodist system. i. *The Universality of the Offer of Saving Grace.*—All men are born into an order not only of sin through Adam, but of saving grace through Christ, by whose righteousness the free gift came upon all men unto justification. They are thus held guiltless through Christ's atoning merit until personal responsibility in the years of discretion is attained. 'Christ's atonement covers the deficiency of ability in the case of infants, and the deficiency of opportunity in the case of the heathen.' Three dispensations embrace the whole race of men: that of the Father—the heathen and Muhammadans who know God only through nature, providence, and conscience; that of the Son—all who are born and brought up in Christian lands; and that of the Holy Spirit—those who have experienced for themselves the saving grace of the Spirit. ii. *The present Assurance of Salvation.*—The Spirit of God witnesses with our own spirits that we are children of grace, that we are accepted now and shall be saved hereafter if we persevere. iii. *Perfectionism.*—If apostasy be always possible, Christian perfection is also ever in prospect as the grand incentive to effort, perfection not beyond the reach either of enhancement or of loss, but thorough and all-pervading sanctification, the state in which deliberate sin is left behind, love to God is supreme, and every true faculty of human life fully enjoyed.

Calvinistic Methodism in Wales has already been treated under Calvinism (see above, p. 878 f.), and *Baptist Arminianism* in § 17 (4).

[Schaff, *Hist.* pp. 882-900, *Evang. Prot. Creeds*, pp. 807-813; *Intro.* to *Winer's Confessions of Christendom*, Eng. tr. pp. lxxvi-lxxviii; Works by John Wesley, Richard Watson, W. B. Pope; *Doctrines and Discipline of Meth. Episc. Church*, ed. Bishop Harris, N.Y. 1872; *A New History of Methodism* by W. J. Townsend and others, 2 vols., London, 1909; art. in *McClintock-Strong's Cyclopedia*, a Methodist publication, etc.]

20. *Confessions in the Salvation Army.*—Offspring of Methodism as it is, with many marks of its parentage, the Salvation Army occupies ground of its own Confessionally. In creed as in organization, it prides itself on its combination of freedom with authority, of simplicity with elasticity and practical effectiveness. Its doctrines are set forth authoritatively by the founder and General, William Booth, in a variety of manuals prepared for children and adults, phrased in language of admirable directness and lucidity. There is a series of *Directories*, or Catechisms, graded for children under 10 years of age, and from 10 to 14 years, and for parents and workers, based on a threefold scheme: Revelation (God, Creation, the four Last Things, Christ, the Bible), Experience (Sin, Forgiveness, the Conditions of Salvation), and Obedience (How to keep Saved, Faith, Prayer, Duty, the Army). *Orders and Regulations for Soldiers of the Salvation Army* is a little treatise discussing in 12 chapters: Salvation, How to keep Religion, Character, the Care of the Body, Improvement of the Mind, Home Life, in the World, the Army, Fighting, Giving and Collecting Money, Personal Dealing, Sickness, and Bereavement. *The*

Doctrines of the Salvation Army, a catechetical manual 'prepared for the use of Cadets in training for officership,' contains in its latest form 29 chapters which discuss with incisive vigour, if often narrowly, the Doctrines (a Creed), God, Jesus Christ is God, How we became Sinners, Redemption, the Extent of the Atonement, the Finished Work of Christ, Election, the Holy Ghost, the Conditions of Salvation, the Forgiveness of Sins, Conversion, the Two Natures, Assurance, Sanctification (7 chapters), Backsliding, Final Perseverance, Death and After, Hell, the Bible, Getting Men Saved, Woman's Right to preach, the Government of the Army. In the last-named work, whose brevity and comprehensiveness perhaps render a certain unfairness to other types of doctrine unavoidable, the chapter on election and its alleged basis in Scripture is a deliberate and express onslaught upon Calvinism, which is represented as teaching 'that God has from all eternity, of His own good pleasure, and without any regard to their conduct, reprobated or left the remainder of mankind to everlasting damnation,' whereas Calvinists have always taught that it is for sin inherited and committed that men are condemned. It will also be observed that there is no doctrine of the Sacraments, neither Baptism nor the Lord's Supper having any place in the Army.

Two documents embedded in the manuals mentioned stand out as having symbolic authority: the 'Articles of War' (1878) in the *Orders and Regulations* (ch. ix. § 3), and the Creed (1872), which forms the first chapter, and the Answer to the first Question, in *The Doctrines of the Salvation Army* (9th ed. 1908).

(a) The 'Articles of War' are 16 in number—8 doctrinal affirmations of personal belief, and 8 solemn vows of personal conduct. They are as follows:

'(1) Having received with all my heart the salvation offered to me by the tender mercy of Jehovah, I do here and now publicly acknowledge God to be my Father and King, Jesus Christ to be my Saviour, and the Holy Spirit to be my Guide, Comforter, and Strength; and that I will, by His help, love, serve, worship, and obey this glorious God through all time and through all eternity. (2) Believing solemnly that the Salvation Army has been raised up by God, and is sustained and directed by Him, I do hereby declare my full determination, by God's help, to be a true soldier of the Army till I die. (3) I am thoroughly convinced of the truth of the Army's teaching. (4) I believe that repentance towards God, faith in our Lord Jesus Christ, and conversion by the Holy Spirit, are necessary to salvation, and that all men may be saved. (5) I believe that we are saved by grace, through faith in our Lord Jesus Christ, and he that believeth hath the witness of it in himself. I have got it. Thank God! (6) I believe that the Scriptures were given by inspiration of God, and that they teach that not only does continuance in the favour of God depend upon increased faith in and obedience to Christ, but that it is possible for those who have been truly converted to fall away and be eternally lost. (7) I believe that it is the privilege of all God's people to be "wholly sanctified," and that "their whole spirit and soul and body" may "be preserved blameless unto the coming of our Lord Jesus Christ." That is to say, I believe that after conversion there remain in the heart of the believer inclinations to evil, or roots of bitterness, which, unless overpowered by Divine grace, produce actual sin; but these evil tendencies can be entirely taken away by the Spirit of God; and the whole heart, thus cleansed from anything contrary to the will of God, or entirely sanctified, will then produce the fruit of the Spirit only. And I believe that persons thus entirely sanctified may, by the power of God, be kept unblamable and unprovable before Him. (8) I believe in the immortality of the soul; in the resurrection of the body; in the general judgment at the end of the world; in the eternal happiness of the righteous; and in the everlasting punishment of the wicked.' Art. 9 declares renunciation of the world for service in Christ's Army, cost what it may. Art. 10 promises abstinence from intoxicants and narcotics save when medically prescribed; (11) from profanity and obscenity; (12) from dishonesty, unfairness, and deceit; (13) from oppressive, cruel, or cowardly treatment of those who are in one's power or are dependent on one. Art. 14 promises the spending of time, strength, money, and influence for the War, and the endeavour to induce one's friends and others to do the same; and (15) obedience to the lawful orders of one's Officers. Art. 16 declares: 'I do here and now call upon all present to witness that I enter into this undertaking, and sign these Articles of War of my own free will, feeling that the love of Christ, who died to save me, requires from me this devotion of my life to His service for the salvation of the whole world, and

therefore wish now to be enrolled as a Soldier of the Salvation Army.'

(b) The principal *Doctrines* are:

'(1) We believe that the Scriptures of the Old and New Testaments were given by the inspiration of God, and that they only constitute the Divine rule of Christian faith and practice. (2) We believe that there is only one God, who is infinitely perfect, the Creator, Preserver, and Governor of all things. (3) We believe that there are three persons in the Godhead—the Father, the Son, and the Holy Ghost—undivided in essence, co-equal in power and glory, and the only proper object of religious worship. (4) We believe that in the person of Jesus Christ the Divine and human natures are united, so that He is truly and properly God, and truly and properly man. (5) We believe that our first parents were created in a state of innocence, but by their disobedience they lost their purity and happiness; and that, in consequence of their fall, all men have become sinners, totally depraved, and as such are justly exposed to the wrath of God. (6) We believe that the Lord Jesus Christ has, by His suffering and death, made an atonement for the whole world, so that whosoever will may be saved. (7) We believe that repentance towards God, faith in our Lord Jesus Christ, and regeneration by the Holy Spirit, are necessary to salvation. (8) We believe that we are justified by grace, through faith in our Lord Jesus Christ, and he that believeth hath the witness in himself. (9) We believe that the Scriptures teach that not only does continuance in the favour of God depend upon continued faith in and obedience to Christ, but that it is possible for those who have been truly converted to fall away and be eternally lost. (10) We believe that it is the privilege of all believers to be "wholly sanctified," etc. (as 'Articles of War,' no. 7). (11) We believe in the immortality of the soul, etc. (as *ib.* no. 8).'

From these two Creeds, the Fighting and the Teaching Faith of the Army, which to some slight extent supplement one another, the doctrinal basis of the Army in a Methodist Arminianism is evident. For the militant mission on which it has set out it has reduced its orthodox Wesleyanism to the smallest possible compass. Even in doctrine its impedimenta must go into the smallest of knapsacks, but in its essentials the body of Ecumenical doctrine on God, Christ, the Spirit, of evangelical doctrine on Scripture, on the saving work of Christ and the life to come, of Arminian doctrine on the extent of the Atonement, and of Methodist doctrine on sin, conversion, assurance, the universality of grace, and possible perfection—is included in the bundle. The metaphysics of doctrine, whether suggested by Scripture or not, is left alone. Common sense and immediate emotional power are the criteria of the truth found in Scripture which is essential for the campaign against sin. For scholarship and afterthought there is no place or time. No room is found even for those most compact of Christian treasures, the two great Sacraments, which are 'not essential to salvation,' which have been occasions of continual division and endless controversy, and whose efficacy, it is claimed, can better be secured by signing the Articles of War, by wearing uniform and bearing testimony, and by dedicatory solemnities for children or for adults.

21. *Confessions in the Society of Friends, or Quakers.*—The Confessional attitude of the Quakers is in evident affinity with that of Baptists, Congregationalists, Methodists, and Salvationists, at many points; but it represents a more radical breach with Christian convention. They renounce all external authority in matters spiritual, the letter of Scripture not less than subordinate standards, in favour of the direct and inward guidance of the illuminant Spirit of God, the Inner Light. Ceremonies and sacraments, traditions and conventions, organizations and official teachers, are set aside. Yet history repeated itself in their experience, apologetic statements of their teaching being necessitated by popular caricature and theological misrepresentation. These often took the form of condensed summaries, catechetical or propositional in structure. Among those enumerated by Thomas Evans in his *Exposition of the Faith of the Religious Society of Friends* (Philad. 1828, and later reprints) are a *Confession and Profession of Faith in God* by Richard Farnsworth (1658), and similar statements by George Fox the younger

(1659 and 1661), by John Crook in 1662, by William Smith in 1664, by William Penn in 1668, by Whitehead and Penn in 1671, by Penn and others in 1698, and by George Fox, the founder himself, in 1671, 1675, and 1682. The nearest approach to an authoritative Confession is supplied by the works of Robert Barclay, the proprietor of Ury, in Kincardineshire, Scotland, the theologian of the movement, and an untiring propagator of its doctrine. He wrote a *Catechism* in 1673, the answers consisting of judiciously selected passages of Scripture, and the questions containing a good deal of polemical and didactic matter, a brief *Confession of Faith* of 23 Articles in Scriptural language being added at the close. In 1675 appeared his *magnum opus*, the *Apology*, whose central 15 *Theses* have obtained a wide independent circulation as a reliable statement of Quaker principles.

The *Theses* are addressed or dedicated 'to the Clergy, of what sort soever, unto whose hands they may come; but more particularly to the Doctors, Professors, and Students of Divinity in the Universities and Schools of Great Britain, whether Prelatical, Presbyterian, or any other, to whom the Author wisheth unfeigned repentance, unto the acknowledgment of the Truth, with the uncompromising and not very conciliatory remark upon their great learning: 'Your school divinity, which taketh up almost a man's whole lifetime to learn, brings not a whit nearer to God, neither makes any man less wicked, or more righteous, than he was. Therefore hath God laid aside the wise and learned, and the disputers of this world; and hath chosen a few despicable and unlearned instruments, as to letter-learning, as he did fishermen of old, to publish his pure and naked truth, and to free it of those mists and fogs wherewith the clergy hath clouded it that the people might admire and maintain them.'

Proposition (1) '*Concerning the true Foundation of Knowledge*,' affirms it to be the knowledge of God. (2) '*Concerning Immediate Revelation*,' declares the 'testimony of the Spirit of God' to be in all generations the true revelation: Divine inward revelations neither do nor can contradict Scripture or Reason, but are not to be subjected to either as to a higher authority or standard. (3) '*Concerning the Scriptures*,' describes them as a record of historical fact and of prophetic truth and principles, as only a declaration of the fountain, not the fountain itself; 'nevertheless as that which giveth a true and faithful testimony of the first foundation, they are and may be esteemed a secondary rule, subordinate to the Spirit . . . by the inward testimony of the Spirit we do alone truly know them.' (4) '*Concerning the Condition of Man in the Fall*,' affirms the utterly 'fallen, degenerate, and dead' condition of all Adam's posterity, deprived of the sensation of the inward testimony or seed of God, and their inability to know anything aright unless 'united to the Divine Light'; yet the evil seed is not imputed to infants till by transgression they actually join themselves therewith. (5) and (6) '*Concerning the Universal Redemption by Christ and also the Saving and Spiritual Light, wherewith every man is enlightened*,' treat of Christ, the Son of God, sent in His Infinite love and universal purpose of Redemption, as the Light that enlighteneth every man that cometh into the world, a light as universal as the seed of sin, being the purchase of His death who tasted death for every man; all men, heathen or infant, receive that benefit and inward Light which is not the mere light of Nature, even though they are without knowledge of the outward history of Christ's life, 'which knowledge we willingly confess to be very profitable and comfortable, but not absolutely needful unto such, from whom God Himself hath withheld it; yet they may be made partakers of the mystery of His death if they suffer His seed and light—enlightening their hearts—to take place.' (7) '*Concerning Justification*,' states that those who do not resist this light have produced in them 'a spiritual birth bringing forth holiness,' 'by which holy birth, to wit, Jesus Christ formed within us, and working His works in us, as we are sanctified so we are justified in the sight of God.' (8) '*Concerning Perfection*,' affirms that in the regenerate 'the body of death and sin comes to be crucified and removed, and their hearts united and subjected unto the truth, so as not to obey any suggestion of the evil one, but to be free from actual sinning . . . and in that respect perfect; yet doth this perfection still admit of a growth; and there remaineth a possibility of sinning.' . . . (9) '*Concerning Perseverance, and the Possibility of Falling from Grace*,' affirms that Divine grace resisted becomes man's condemnation; even when it has been accepted, shipwreck may be made of faith; those who have 'tasted of the heavenly gift and been made partakers of the Holy Ghost' may fall away; yet others may in this life attain such an increase and stability in the truth as to be beyond the reach of total apostasy. (10) '*Concerning the Ministry*,' affirms that it is this gift or light that constitutes a minister or pastor, not any human commission or literature; without it a ministry is deception: it is to be exercised without hire or bargaining, yet 'if God hath called any from their employments . . . it may be lawful for such, according to the liberty which they feel given them in the Lord, to receive such temporals—to wit, what may be needful to them for meat and clothing—as are freely given them by those to whom they have communicated spirituals.' (11) '*Concerning Worship*,' declares

that 'all true and acceptable worship to God is offered in the inward and immediate moving and drawing of his own Spirit, which is neither limited to places, times, nor persons: . . . all other worship then, both praises, prayers, and preachings, which man sets about in his own will and at his own appointment, which he can both begin and end at his pleasure, do or leave undone, as himself sees meet, whether they be a prescribed form, as a liturgy, or prayers conceived extemporarily, by the natural strength and faculty of the mind, they are all but superstitious, will-worship, and abominable idolatry in the sight of God.' (12) '*Concerning Baptism*,' states that it is 'not the putting away the filth of the flesh, but the answer of a good conscience before God, by the resurrection of Jesus Christ': it is 'a pure and spiritual thing, to wit, the baptism of the Spirit and Fire, by which we are buried with him, that being washed and purged from our sins we may walk in newness of life': the baptism of infants 'is a mere human tradition for which neither precept nor practice is to be found in all the Scripture.' (13) '*Concerning the Communion, or Participation of the Body and Blood of Christ*,' affirms it also to be spiritual and symbolic. (14) '*Concerning the Power of the Civil Magistrate, in matters purely religious, and pertaining to the conscience*,' affirms God's sole lordship over the conscience: 'all killing, banishing, fining, imprisoning . . . which men are afflicted with, for the alone exercise of their conscience, or difference in worship or opinion, proceedeth from the spirit of Cain, the murderer, and is contrary to the truth; provided always that no man, under the pretence of conscience, prejudice his neighbour in life or estate, or do anything destructive to, or inconsistent with, human society.' (15) '*Concerning Salutations and Recreations, etc.*,' declares that, since 'the chief end of all religion is to redeem man from the spirit and vain conversation of this world,' 'therefore all the vain customs and habits thereof, both in word and deed, are to be rejected . . . such as the taking off the hat to a man, the bowings and orings of the body, and such other salutations of that kind, with all the foolish and superstitious formalities attending them, . . . as also the unprofitable plays, frivolous recreations, sportings and gamings, which are invented to pass away the precious time, and divert the mind from the witness of God in the heart.'

Quakerism is thus a protest against ecclesiasticism, sacramentarianism, biblicism, sacerdotalism, traditionalism, and rationalism alike, a rigorous and consistent reaction against every element of dangerous formalism and literalism in Christianity; spiritual to the core, mystic and intuitional, individualistic. It subordinates, to the point of sacrifice, the letter to the spirit, the form or symbol to the substance. It assumes a spiritual advancement or education possessed only by the few, and underestimates the use of letter and symbol because of their abuse. If 'their oddities in dress and habits are the shadows of virtues' (Schaff, *Hist.* p. 866), their idiosyncrasies in doctrine are at worst the exaggeration of truths, thought-compelling, impressive, and searching distillations of Scripture teaching and of sanctified common sense. They had their anticipators in this or that peculiarity of their life and teaching, though they are not indebted to them. They have, beyond question, prepared the way for much that is characteristic in Methodism and Salvationism, particularly. They represent Puritanism puritanized, a sublimation of prophetic Christianity, a spiritual outgrowth from a highly developed type of popular religion. More than is generally appreciated, their conceptions of Scripture, the Sacraments, Spiritual Liberty, the Inward Light, the Indwelling Christ, the Essence of Worship and of Ministry, and the Meaning of Justification, have led the way to views now widely entertained by the most thoughtful Christians in all the Churches and outside them. What Mysticism has been in general Religion, or Quietism in Roman Catholicism, Quakerism has been in Protestantism. Its very exaggerations and crudities were deliberate—arresting symbols and advertisements of its essential message. It has given silence a place in worship, and it has exercised the universal conscience by its Socratic demand for perfect sincerity and consistency. If it can be the religion only of a few, the world may be grateful to have contained those few. If it has given no criterion to distinguish the true from spurious movings of the Spirit, and lends itself to subtle or crude individualisms and egotistic whims and conventional make-believes peculiar to itself, it has a page of Christian history devoted to it whose

freedom from serious blemish most other branches of the Church might wistfully envy.

[Schaff, *Hist.* pp. 859-873, *Evang. Prot. Creeds*, pp. 789-798; Barclay's Works; Evans, *op. cit. supra*; artt. in various Encyclopedias.]

22. Confessions in Socinian and Unitarian Churches, and in the rest of Christendom.—The independent attitude to doctrinal standards adopted by the Churches discussed in the last five divisions prepares us for the completely anti-Confessional and negative position of present-day Unitarianism, which has for its sole distinctive dogma the humanity, the non-divinity, of Jesus Christ, but refuses to fortify even that residuum of historical Christian doctrine behind Confessional bulwarks. But in the Reformation era, Unitarian Christianity was far from entertaining such doctrinal self-restraint. It did not even dethrone the miraculous and supernatural in the person and history of Jesus. It uttered its theological convictions in Confessional and catechetical form in the Socinian standards, not as binding creeds, of course, but as didactic manifestos. These reveal its origin in a Humanistic rationalism, which regards Christ simply as a revealer or teacher of moral and religious truth, His death as a prophet's martyrdom, and the Church as a school. Not the needs of the heart and the conscience, but those of the intellect, were paramount in its rise. Its conception of sin and its cause and its seriousness was very different from that which dominated Luther and the other orthodox Reformers, and led to its complete divergence from them. It denied original sin and guilt, vicarious atonement, the Incarnation and eternal Divinity of Christ, and the Trinity; and it discounted the inspiration of a great part of Scripture, especially the Old Testament.

An early *Catechism and Confession* in Scriptural language was published at Cracow by the preacher Schomann in 1574. A *Smaller Catechism* for children followed in 1605. The *Larger or Racovian Catechism*, by Schmalz and Moscorovius, based on a fragmentary Catechism by Fausto Sozzini, was published at Rakau, a small town in Poland which was the centre of the movement, first in Polish in 1605, then in German in 1608, and finally in the standard Latin form, with modifications, in 1609. The *Confession of 1642* by Schlichting, of which the Confession of the Prussian Socinians in 1666 is simply an extract, took the form of an exposition of the Apostles' Creed, with numerous Scripture citations, and adopted an attitude of less acute antagonism to orthodoxy than the Catechism of 1605-9.

The Racovian Catechism of 1605-9 is the standard expression of Socinian doctrine. It is essentially theological rather than religious, rationalistic yet also supernaturalistic, controversial and argumentative. It begins: 'Tell me what is the Christian Religion?' and answers, 'It is the way pointed out and revealed to men by God to obtain eternal life.' 'Where is that way pointed out and revealed?—In Holy Scripture, but chiefly in the New Testament.' The Catechism contains 8 sections of varying length. Section I. treats of Religion and Holy Scripture in general, containing four chapters on Holy Scripture (4 qns.), its Certitude (26 qns.), its Perfection (5 qns.), its Perspicuity (4 qns.). Section II. treats of the Way of Salvation and the Reasons for Revelation (10 qns.). Section III. treats of the Knowledge of God as the Supreme Lord of all things, in three scholastic chapters on the Knowledge, Being, and Will of God (44 qns.). Section IV. at great length treats of the Person of Christ, the first step in the discussion of the general knowledge of Christ (97 qns.). Section V. treats of the Prophetic Office of Christ, the Central and Supreme doctrine in the System, in an opening chapter (8 qns.),

followed by supplementary chapters on the Teachings He added to the Law (108 qns.), the Teachings He handed down under Seal (8 qns.), the Lord's Supper (11 qns.), Water-baptism (5 qns.), the Promises of Eternal Life (9 qns.), and of the Holy Spirit (14 qns.), the Confirmation of the Divine Will (3 qns.), the Death of Christ (39 qns.), Faith (7 qns.), Free-will (30 qns.), Justification (4 qns.). Section VI. treats of Christ's Priestly office (11 qns.), and VII. of His Kingly Office (20 qns.). The closing Section VIII. treats of the Church of Christ, as the body of His disciples, in four chapters, on the Visible Church (3 qns.), the Government of the Church (17 qns.), Ecclesiastical Discipline (13 qns.), and the Church Invisible (4 qns.).

[For discussion of the various editions and of the early sources in the private cathisms of Gregory Paul Schomann, and Fausto Sozzini, see Thomas Rees, *Racovian Catechism*, Lond. 1818, Introd. p. lxxii ff. For Latin text of Sozzini's *Christianæ Religionis Brevis Institutio*, and of another unfinished catechism by the same writer, see 'Fausti Socini Senensis Opera Omnia,' in the *Bibliotheca Fratrum Polonorum quos Unitarios vocant*, Irenopoli post annum Domini 1656, vol. i. pp. 651-676 and 677-689. For text of the Catech. of 1609, see edition Irenopoli post annum 1659. For Eng. tr. of completed edition of 1659, see Rees, *op. cit.* pp. 1-383 (a serviceable work). Cf. Winer, *Confessions*, Introd. pp. 31-34 (a somewhat confused account); Lindsay, *Hist. of Reformation*, vol. ii. pp. 470-483; Fock, *Der Socinianismus*, 1847. Harnack, *Hist. of Dogma*, Eng. tr. vii. 137 ff., gives a very full and searching critical analysis of the Racovian Catechism.]

Confessional documents can hardly be said to exist in the remaining organizations within, or on the frontier of, the Christian world, whose name is legion. Original and more or less authoritative books or groups of writings exist for many of them, or statements of their salient features emanating from their apostles or preachers, but authoritative Confessions in any strict sense they do not possess. Irvingism and Darbyism on the one hand, and on the other Christian Science, Swedenborgianism, and Mormonism, not to mention lesser sects, are systems with distinctive doctrines, but without documents which would bring them under the present survey. It may be of interest, however, to quote a group of Articles, as a summary of Mormon doctrine, by its Apostle and Prophet, Joseph Smith, written soon after the constitution of 'the Church of Jesus Christ of Latter-day Saints,' at New York in 1840:

'1. We believe in God the Eternal Father, and in His Son Jesus Christ, and in the Holy Ghost. 2. We believe that men will be punished for their own sins, and not for Adam's transgression. 3. We believe that through the atonement of Christ all mankind may be saved, by obedience to the laws and ordinances of the Gospel. 4. We believe that these ordinances are: (i.) Faith in the Lord Jesus Christ; (ii.) Repentance; (iii.) Baptism by immersion for the remission of sins; (iv.) Laying on of hands for the gift of the Holy Ghost. 5. We believe that a man must be called of God, by "prophecy and by the laying on of hands," by those who are in authority, to preach the Gospel and administer in the ordinances thereof. 6. We believe in the same organization that existed in the primitive Church, viz. apostles, prophets, pastors, teachers, evangelists, etc. 7. We believe in the gift of tongues, prophecy, revelation, visions, healing, interpretation of tongues, etc. 8. We believe the Bible to be the word of God, as far as it is translated correctly; we also believe the Book of Mormon to be the word of God. 9. We believe all that God has revealed, all that He does now reveal, and we believe that He will yet reveal many great and important things pertaining to the Kingdom of God. 10. We believe in the literal gathering of Israel, and in the restoration of the Ten Tribes; that Zion will be built upon this Continent; that Christ will reign personally upon the earth, and that the earth will be renewed and receive its paradisaic glory. 11. We claim the privilege of worshipping Almighty God according to the dictates of our conscience, and allow all men the same privilege, let them worship how, where, or what they may. 12. We believe in being subject to kings, presidents, rulers, magistrates, in obeying, honouring, and sustaining the law. 13. We believe in being honest, true, chaste, benevolent, virtuous, and in doing good to all men; indeed, we may say that we follow the admonition of Paul: "We believe all things, we hope all things"; we have endured many things, and hope to be able to endure all things. If there is anything virtuous, lovely, or of good report, or praiseworthy, we seek after these things' (quoted in *Religious Systems of the World*, 1901, p. 668 f.).

It will be observed that the practice of polygamy had no sanction in the Articles of the Mormon Faith.

CONCLUSION: THE PAST, PRESENT, AND FUTURE OF CONFESSIONS.—A survey of the Confessions of Christendom, living or dead, cannot fail to leave on the student of religious history a deep impression. (1) They constitute a stupendous fact, a phenomenon quite unparalleled in the religious world, a striking evidence of the unique power of the personality, life, and teaching of Christ, through Scripture and the Church, to stir the human intellect to its depths. Divided as Christendom is, and honeycombed by different opinions, dogmatic differences are a proof of the grasp of its great facts upon different types of mind. Other religions have their sects and their internal dissensions, but none of them has made any such appeal to the mind and the imagination of the human race, stimulating it to its loftiest efforts and educating it to its highest truths. (2) They proclaim the universal fact of doctrinal change as well as of mental and spiritual variety. *πύρρα βίη* is the burden of one aspect of their history. The Church, obsessed, rightly or wrongly, by the ideal of doctrinal uniformity, has been unable, either by the aid of temporal authority or by means of excommunication or by appeal to superstitious fear, to maintain its unity. It is destined, it may be, to attain to the unity of the Spirit and the bond of peace only through infinite and harrowing division, provoked and anon repented, and therewith to learn that persuasion and conviction are the only worthy instruments for the spread of truth, and that even among Christian dogmas the struggle to survive must inevitably in God's providence eliminate the unfit. (3) They suggest that in the intelligence and scholarship of Christendom, conscience is far from slumbering; that the very diversity of historical opinion, acquired not without heart-searching and solemnly professed, is an evidence of the existence of that intense seriousness and love of truth without which a final harmony would be impossible. Beneath the obvious dissensus of the Confessions there is in truth a consensus, felt at least in presence of rival systems of religion and in face of the common enemies of faith. No student can peruse Schaff's admirable concluding conspectus of the doctrinal agreements and differences between the various Church-communions (*Hist. of Creeds*, pp. 919-930), or the careful pages and Tables of Winer's *Comparative View of the Doctrines and Confessions of the Various Communities of Christendom*, without being deeply impressed by the subtle interpenetration of great ideas and deep-seated instincts through groups of Churches outwardly far removed from one another. It is a wholesome experience to find, even in sects whose names have become bywords of oddity and even absurdity, a staunch adherence, in standards and in practice, to great principles of religious truth and life; and it suggests to the student of history that in many cases these systems have been adopted for the sake of those principles and in spite of their eccentricities. The debt of the world to thinking minorities is nowhere more clearly expressed than in the successive rise of the great Protestant denominations whose standards have been reviewed. Each stands for an idea or a group of ideas whose life was in danger of being strangled in the meshes of convention. However we may deplore the divisions of Christendom, signs are now abundant that the age of schism is over, and that, for the great mass of Christians throughout the world, catholicity is no longer synonymous with external or even intellectual uniformity. Some of the smallest sects have been most catholic in spirit because most tolerant by serious conviction. Union movements among Presbyterians, among Baptists, among Methodists, and among Congregationalists, movements even between the groups, Protestant

and Evangelical Alliances in face of common adversaries, World Conferences and International Councils of kindred communions, Anglican, Presbyterian, Baptist, Congregationalist, or others, overtures for an ecclesiastical understanding between Anglicans and Greek Catholics, or between Presbyterians and Anglicans, the ebb and flow of converts from one Church to another from which no communion is immune—these are features of the age in which we live, attesting the facts that the lessons of history are being widely learned, that the struggles of the past for liberty and charity have not been in vain, that other than doctrinal elements of religion are having justice done to them, that temperamental as well as intellectual differences between men and peoples are being allowed for and respected.

It is often said that the day of Confessions is past, and that the Christian world as a whole has become, or is fast becoming, anti-Confessional. It is certain that in all the Churches, Roman Catholic and even Greek Catholic included, an attitude of quiet personal independence, reverent but firm, towards the historic symbols of faith is increasingly being adopted, alike by clergy and by people, in spite of every effort to arrest the movement. Unless some world-catastrophe sets back the standard of clerical and popular education, this attitude will certainly continue and spread. Adherence to historic dogmas is valueless, and indeed pernicious, if it be not intelligent and spontaneous. Assent, ignorant or constrained, is not consent. If it is death to a Creed to be exposed to the storms of free thought, it ought to die. It is such buffeting by the elements of experience, it is such conflict with the ravaging forces of time and change, that reveals with unrivalled impressiveness and certainty the faith that can dare to call itself eternal. Constitutional change, as distinct from the revolutionary alterations by passing impulse which only provoke reaction, is legitimate, and ought to be provided for without prejudice or craven fear, for a creed that is not believed to be true is not worthy of the name. No system deserves the name of faith which rests on mistrust of God and doubt of His providential guidance. No Confession can be spiritual or safe which has to be safeguarded by the whip of discipline, or by measures which disclose an ignoble despair of God's Holy Spirit. Doctrinal understandings or declarations which are maintained by Church Courts and Authorities through precarious or narrow majorities involve in every case a painful loss of prestige. The Creed which has not in it the note of triumphal assurance, carrying the hearts of all its adherents with it in a gush of emotion, ought not to rush into publicity, or pretend to an authority which in reality it does not possess. How to change without loss of continuity, how to grow without loss of identity, how to be free in doctrine while clinging to a sacred past, how to meet the protean spirit of the times without bowing down to it, yet without alienating its rightful instincts and flouting its proper needs—these are the practical difficulties to the mind of a Church which would be true to the past, honest with the present, and helpful to the future; and there has never been an age in human history so keenly alive to them as the present, so eager and so anxious to deal with them, so capable of appreciating and handling them aright. The experience of creedless Churches, like the Unitarian, helped though they have been during a century of unparalleled research, scientific attainment, and intellectual liberty, by the prestige of almost complete doctrinal freedom, and influential as they have been in stimulating the thought of the Christian world at large, in promoting scholarship, and in correcting tritheistic and superstitious tendencies in ortho-

dox Church life, has not been such as to prove that there is in Christendom in general any wide-spread dislike or distrust of creeds as creeds.

Particular Confessions, among them the most time-honoured, even the Ecumenical Creeds themselves, whose evolution has become matter of common knowledge, are accepted with reserve, are studied and appreciated in the light of their age, their antecedent controversies, the limitations of the scholarship of their day and of the minds that framed them. The 'higher criticism' of Holy Scripture was bound to be accompanied by a historical and critical study of the very documents which were intended to serve as determinants of the sense in which Scripture was to be accepted and believed. And just as 'adherence to Scripture' has lost throughout the great evangelical Protestant communions the meaning of literal in favour of spiritual acceptance in the light of history and learning, so adherence to a particular Creed or Confession must needs be effected by an accurate acquaintance with the circumstances of its origin, which in some instances at least reveal a hitherto unsuspected liberalism of purpose in their authors.

Hence it has come about, in Churches so inherently conservative as the Presbyterian, that throughout the whole world their devotion to theological, historical, and Scriptural scholarship has brought about a complete change of attitude towards Scripture and their 'subordinate standards.' By Declaratory Statements, or modified formulæ of subscription, or even by the formulation of new Confessions, they have endeavoured to be true to the new knowledge, to ease the conscience of those who have already subscribed their historic standards, and to facilitate the entrance of recruits fresh from the new school-training to the none too crowded ranks of the ministry, and to the rank and file of the general membership. If they adhere to the old standards, as for the most part they sincerely do, it is with express reservations, binding themselves to their 'substance' or their 'essentials,' or 'the fundamentals of Reformed Doctrine,' whether these are defined or not. The individual conscience and intellect are considered in a manner hitherto unknown, and a liberty of private judgment formerly undreamt of is tacitly assumed. The indignity and scandal of 'discipline' for breach of minute fidelity to documents three centuries old is too acutely felt to permit of its ready exercise. For once an age of intense missionary purpose has been an age of open mind, and the *odium theologicum* has been assigned a definite place in the catalogue of un-Christian failings. In presence of the appalling spectacle of crime and unbelief and ignorance and misery in the world's great centres of population, and in presence of the awe-inspiring spectacle of the world's great systems of non-Christian faith, even the gravest doctrinal differences have shrunk perceptibly, though it would be ridiculous to say that they are likely ever to disappear. Men are constrained to co-operate and combine when confronted by common foes. And at last there is being established throughout the Christian world that atmosphere of fraternal interest and mutual trust which is an absolute pre-requisite of any doctrinal consensus or harmony to come.

Creeds and Confessions there must be. Faith, though it embraces more than intellect, cannot renounce the intellect, or dispense with words and forms of uttered thought. There cannot be a gospel, or preacher's tidings for the saving of mankind, without an antecedent creed or body of belief, articulate or inarticulate. Preaching is the utterance of belief, as well as of experience; and, if men are to speak from a common platform, within a common organization, for the propaga-

tion and increase of religion, they must have a common basis of faith, which may well be expressed in some form of public Creed. It is unthinkable that the vast aggregate of doctrinal symbols evolved by the Christian Church in all lands during nineteen centuries of intense activity should have proceeded from any but a profoundly natural and honourable instinct in the soul of faith. But it is also now unthinkable that any one type of doctrine should claim, without self-discrediting presumption, to have a monopoly of Divine and saving truth entrusted to it. It is not more certain that a branch of the Church ought to publish the faith which animates it, so far as words can do so, than that it ought to publish such changes in that faith as time under the Spirit of Truth brings with it. The obligation is identical. Faith, though it changes, remains faith notwithstanding, and, when it regains a position of stable equilibrium, it ought not to be hid, but expressed in public as a fresh message of goodness for the world. If Christianity be true, and Christ the Truth, new knowledge should be welcome to all Christians as an increase to their heritage of truth. Obscurantism in every form, suspicion of fresh light however betrayed, is fatal to the good name of a Church and to the reputation of the religion it would protect. It is treachery to faith to suggest that it can be preserved only by enclosure within fences, or by isolation from contagion in the stir of science and of life. Religion can have few deadlier foes than the man who thinks that its influence or future can really be destroyed by tampering with a particular Creed.

What of the *ethics of subscription*? If Creeds are believed, they may as well be signed as repeated. But, as the years advance, and thought moves forward on unresting feet, is it right to ask men still to assent to them? The terms they employ may grow obsolete, or convey new meanings. Particular tenets, few or many, may recede from the foreground of interest, become open questions, or even become discredited. Between the period of complete faith and the period of discrediting, there must have passed years of transition and uncertainty. What could subscription possibly mean then? Again, few doctrinal standards have been drawn up by unanimous consent. From the first a minority has doubted some particulars in them. Their assent was general, or at least incomplete, given for the sake of peace and harmony. Allowance, therefore, must be made for the element of legitimate compromise inseparable from all social organizations. Loyalty to the spirit and general tenor of the teaching, not to the letter, alone can be fairly expected in public as distinct from private standards. If the society or corporation adjudges the individual to have seriously transgressed the common understanding, it may excommunicate him, or he may withdraw himself and renounce communion if he is conscious that he has overstepped the reasonable limits of variation. Each must decide for himself or itself on such a question. But at least it seems unethical, especially in periods of acknowledged transition, to lay it down that formal subscription to historical Confessions implies literal and complete acceptance of their details. There must be some play where public and private faith are linked together. The Member of Parliament, the political holder of office, who swears to uphold the Constitution, is expected to amend it if the people or his own judgment so decide. The men whose task it is to repeal old laws and enact new laws share with all others the duty of obedience to law. So, in every Church which believes that its preachers have in some measure a prophetic vocation, liberty must needs be conceded to them to defy

the popular mind if it seems to them that God so wills. As Churches may change yet remain themselves, may alter their Confessions yet retain their identity, so in such cases the individual who subscribes and finds that he outgrows the system to which he has subscribed is not therefore bound to withdraw from the communion unless he judges his breach with its standards to be radical, fundamental. No rule can be laid down which will cover all cases equitably. A sense of honour in the individual, a sense of chivalry in the community, and patient consideration on the part of both, must in each particular instance decide, in the light of all the circumstances. It should be remembered that there is no evidence that Christ exacted or expected any identity of belief from His disciples, or equipped His Apostles with any precisely uniform message to the world. It is certain that the Apostles were never confronted with documents or declarations in any sense analogous to the Confessions of modern Christendom, or even to the Creeds of the ancient Church. Their faith was personal and in a Person. Whenever we are assured that the faith of a fellow

Christian is also personal and directed towards the same Person, we should beware of withholding fellowship from him because of minor differences.

GENERAL LITERATURE. — Indispensable general works are Philip Schaff, 8 vols. entitled *A History of the Creeds of Christendom*; *The Creeds of the Greek and Latin Churches*; *The Creeds of the Evangelical Protestant Churches*, New York, 1876, Lond. 1877 (5th ed., New York, 1887, with few changes), by far the most valuable work on the whole subject; G. B. Winer, *Comparative View of the Doctrines and Confessions of the Various Communities of Christendom* (Eng. tr., W. B. Pope), Edinb. 1873; P. Hall, *Harmony of Prot. Confessions*, Lond. 1842; S. G. Green, *The Christian Creed and the Creeds of Christendom*, Lond. 1898 (an admirable general survey, with careful discussion of related topics); E. F. Karl Müller, *Symbolik*, Leipzig, 1896; G. F. Oehler, *Lehrbuch der Symbolik*, 2nd ed. by Hermann, 1891; H. Schmidt, *Handbuch der Symbolik*, Berlin, 1890; and the partial works on 'Symbolik,' by Loofs (Leipzig, 1902) and Kattenbusch (Freiburg, 1892), with their admirable series of articles in *PRE3*, including a gen. art. 'Symbole, Symbolik,' in that work. The Croall Lectures of 1902, on 'Creeds and Churches,' by A. Stewart, are in course of preparation for publication. For a theological discussion of the chief dogmatic utterances and tendencies down to the Reformation era, and in the Roman Church to the 19th cent., Harnack, *Hist. of Dogma*, Eng. tr. from 3rd ed., 7 vols., 1894-1899, is of supreme value.

[Many of the translations in this article are taken from or based on the rendering given by Schaff—in all cases revised.]

CONFIRMATION.—**1. Names.**—The word 'confirmation,' as used in this article, indicates an act, closely connected with baptism, in which prayer for the Holy Spirit is joined with some ceremony, such as the laying on of hands or anointing, through which the gift of the Spirit is believed to be conferred. So long as confirmation continued to be administered at the same time as baptism, the two forming a single rite, the need of a special name for the former was not much felt. The rite as a whole was known as baptism, and the part of it which was associated with the gift of the Spirit was designated by terms derived from its most prominent ceremony, such as 'laying on of hands' (*ἐπιθεῖς χερῶν*, He 6²; ἡ χειροθεσία, Clem. Alex. *Exc. Th.* 22; *Const. Ap.* ii. 32, iii. 16, vii. 44; cf. Firmilian, *ap. Cyp. Ep.* 75; *impositio manus*) and 'chrism.' The word 'seal' (*σφραγίς*), originally, it seems, applied to baptism (Hermas, *Sim.* ix. xvi. 2-4; Iren. *Dem.* 3), was early used of confirmation, with reference to the signing of the baptized with the cross (Clem. Alex. *Strom.* ii. 3; Cornelius, *ap. Eus. HE* vi. xliii. 14f.; cf. *Const. Ap.* iii. 17). 'Confirmation,' now universally accepted as the name of the rite in the West, does not appear to have been so used before the 5th century. It occurs in Faustus, Bishop of Riez, formerly Abbot of Lérins, *de Sp. S.* ii. 4 (ed. Engelbrecht, Vienna, 1889, p. 143), *hom. in die Pent.* (Bigne, *Max. Bib. Pat.*, Paris, 1677, vi. 649), and the cognate verb is similarly applied by St. Patrick (*Ep.* 2), who spent some years at Lérins. It appears, therefore, to have originated in Gaul, and probably at Lérins, though it was perhaps not fully established as a name of the rite at Lérins when St. Patrick left that monastery c. A.D. 415 (Bury, *Life of St. Patr.*, 1905, pp. 294, 336 ff.), since in his *Confession* (38, 51) he uses the word *consummare* instead of *confirmare*. St. Ambrose had at an earlier date used the latter verb with a similar but not identical meaning (*de Myst.* 42); and in the middle of the 5th cent. Pope Leo I. (*Ep.* 159) applies it to the laying on of hands on those who had been baptized in heresy. In Egypt at the present day the rite is called *tathbit*—a word exactly equivalent to 'confirmation.' In the 9th cent., when confirmation was deferred, the newly baptized were said to be 'confirmed' by the reception of the Holy Communion

(Alcuin, *Ep.* 90; Jesse Ambian. *Ep. de bapt.*; Amalarius, *de Cær. Bapt.* 4; Raban. Maur. *de Cler. Inst.* i. 29).

2. Confirmation in the Apostolic Age.—A study of Ac 19¹⁻⁶—the account of the twelve disciples who had been baptized into John's baptism—seems to yield the following results. St. Paul's first question implies that a reception of the Holy Spirit usually, though not always, synchronized with admission to the Christian Society, and that in the case of disciples whose conversion was not due to the preaching of him or his immediate companions (v. 2 *ἑλθετε πιστεύσατες*). It is also implied in what follows that the outpouring of the Spirit was not a result of the act of baptism (v. 3), but that it was mediated, at least in St. Paul's practice, by a laying on of hands which normally followed immediately upon baptism (v. 4). Since apparently St. Paul, in accordance with his rule (1 Co 14¹⁻¹⁷), which was also that of other Apostles (Ac 10⁴⁸, cf. 28⁸), did not himself baptize the Ephesian disciples, though he laid his hands upon them (v. 5¹ *ἐβαπτίσθησαν . . . ἐπιθέντος τοῦ Παύλου*), it may be inferred that, while baptism was commonly administered by persons of lower ministerial rank, confirmation was reserved for those who had a higher place in the ministry, if not for Apostles.

These conclusions are confirmed by the narrative of the planting of the Church in Samaria (Ac 8¹²⁻¹⁷). From it we learn that the practice of the older Apostles coincided with that of St. Paul. Baptism by itself did not convey the gift of the Spirit. That was mediated by a laying on of hands by Apostles, with prayer for the Holy Spirit (vv. 15, 17), the baptisms having been previously performed by Philip, and perhaps by others of inferior ministerial office who accompanied him. It is hinted that, at least when St. Luke wrote, according to established usage the bestowal of the Holy Spirit was not separated in time from the administration of baptism (v. 18).

In each of these cases the reception of the Spirit was manifested by the exercise of miraculous powers (8¹⁸ 19⁶). But it would be contrary to the teaching of the NT as a whole to suppose that such manifestations were of the essence of the gift. If we may suppose (Chase, *Confirmation in the Apostolic Age*, p. 35) that 2 Ti 1⁶ refers to

Timothy's confirmation, rather than to his ordination, it proves that the graces looked for as a result of the laying on of hands were such as 'power and love and soberness' (cf. Ac 24¹², where 'wonders and signs' are confined to the Apostles).

The inferences which have here been drawn from Ac 8¹²⁻¹⁷ 19¹⁻⁶ are corroborated by many references in the Epistles to a reception of the Holy Spirit on admission to the Church (Ro 5⁵, 2 Co 5⁵, Eph 1¹³, 4³⁰, 1 Jn 2²⁷ 3²⁴), in some of which St. Paul uses the very phrase ascribed to him by St. Luke, as pointing to a laying on of hands, πνεῦμα ἐλάβετε (Ro 8¹⁵, 1 Co 2¹², 2 Co 11⁴, Gal 3²⁴), while others appear to indicate that the bestowal of the gift was an act distinct from and following the washing (1 Co 6¹¹ 12¹³, 2 Co 1²¹, Tit 3⁴²). To these may be added He 6³, where βαπτισμοὶ ἐπιθεοὺς τε χειρῶν must at least include a laying on of hands closely connected with a Christian act of lustration.

3. A review of the evidence afforded by the NT, therefore, leads to the belief that in the Apostolic age a rite of confirmation was widely, if not universally, used, the main parts of which were prayer and imposition of hands. But it has been held that at this period, as in later ages, with the laying on of hands was associated an anointing of the neophytes. In support of this view it has been urged (Chase, *op. cit.* p. 53): (a) that unction and imposition of hands are 'closely related symbolical acts' in both OT and NT (cf. Nu 8¹⁰ with Ex 28¹, etc.; and Mk 6⁵ 8²³ and Ac 28⁸ with Mk 6¹³ and Ja 5¹⁴); (b) that anointing is associated with confirmation in the earliest sub-Apostolic records (Iren. *Hær.* I. xxi. 3; Tert.; *Can. Hipp.* 134-136; to the authorities cited by Chase may be added Theophilus of Antioch; see below, § 5 a); (c) that the supposition adds force to such passages as 2 Co 1²¹, 1 Jn 2^{20, 27}.

It must be noticed, however, (a) that no Scripture evidence has been produced that unction was used along with the laying on of hands; while, on the other hand, it was, among both Jews and Gentiles, an accompaniment of the bath (Swete, *The Holy Spirit in the NT*, 1909, p. 386, citing Ru 3⁸, Ezk 16³, to which add Sus 1⁷); (b) that neither Irenæus (*loc. cit.*) nor Theophilus makes any reference to the laying on of hands; and both Tertullian and *Can. Hipp.* connect the unction not with it but with the immersion (see below, §§ 21, 26, cf. § 22); (c) that, if 2 Co 1²¹ enumerates in order the acts of the initiatory rites, σφραγισμὸς is naturally regarded as indicating baptism (see above, § 1), and the implication, therefore, is that the unction preceded baptism, and was separated by it from confirmation. The connexion of the unction with the gift of the Spirit in 1 Jn 2^{20, 27} does not by itself establish the contention. It may, however, in part account for the close relation which subsisted in later times between the unction and the imposition of hands, leading in some cases to the overshadowing, or even the superseding, of the latter by the former.

On the whole, the reasonable inference from the facts appears to be that unction was a primitive accompaniment of baptism rather than of confirmation.

4. The passages of the NT examined in § 2 point to confirmation by laying on of hands after baptism. Nevertheless, it must be remarked that there is no indication that any feeling of incongruity was occasioned by the outpouring of the Holy Spirit upon Cornelius and his friends before they were baptized (Ac 10⁴⁴⁻⁴⁸), and it is recorded that Ananias laid hands on Saul that he might be 'filled with the Holy Ghost,' and afterwards baptized him (Ac 9¹⁷). These facts suggest the possibility that confirmation may regularly have preceded baptism in some regions, concerning whose customs in this

matter the NT supplies no information. It will be found that this suggestion has some bearing upon peculiarities of the early Syrian rite of initiation (§ 7).

5. References to confirmation in the sub-Apostolic period.—It was not to be expected that the scanty remains of the earliest extra-canonical Christian literature would supply many references to confirmation. In the *Didache* and Justin Martyr's *1st Apology*, both of which contain accounts of the baptismal rite, explicit mention of it might, indeed, have been looked for. The absence of such mention in the former may, however, be accounted for by supposing that its administration belonged to apostles and prophets, for whose guidance the *Didache* was not intended. In Justin, on the other hand, but few details of the baptismal rite are given (*1 Apol.* 61), and we are told (ch. 65) that, after the washing, the neophyte was brought into the assembly, where prayer was made for him and others, followed by the kiss of peace and the Eucharist. That this is a vague account of the confirmation is rendered probable by its resemblance in general outline to *Can. Hipp.* 135 ff. (see below, §§ 26, 28). Irenæus seems to imply that a laying on of hands followed the immersion, both being included in the rite of baptism. Thus in *Hær.* III. xvii. 1, 2 he seems to distinguish the grace of baptism from the gift of the Spirit; and in *Dem.* 3 he describes the former as forgiveness of sins and regeneration, while in *Dem.* 41 f. he speaks of the Apostles as baptizing their converts and giving them the Holy Spirit, and connects this with the present life of the Church, by describing believers as the habitation of the Spirit given in baptism (cf. *Hær.* IV. xxxviii. 1, 2).

6. The ancient Syrian rite.—About the ceremonies of baptism used in Syria in earlier centuries there is a considerable amount of evidence, which must be set out as briefly as possible.

(a) From Theophilus, Bishop of Antioch (c. 180), we learn (*ad Autol.* I. 12, ii. 16) that anointing with the 'oil of God' was, when he wrote, an important feature of the initiatory rite; and his statement that the name 'Christian' was derived from it implies (see Ac 11²⁶) that he believed it to date from the Apostolic age. According to him, the immersion conveyed re-birth and remission of sins.

(b) *Clementine Recognitions*, iii. 67 (Gersdorf, p. 110; Lagarde, p. 119) (c. 200 [?]). A description of baptism is put into the mouth of St. Peter. It includes anointing with oil sanctified by prayer, immersion in the threefold Name, and Holy Communion.

(c) *Didascalia*, III. xii. 2 f. (Funk, p. 208) (c. 230). When speaking of the duties of deaconesses at the baptism of women, the writer mentions anointing by the bishop with the oil of unction on the head 'at the laying on of hands.' An anointing of the rest of the body by deaconesses or other women follows, and then the baptism by the bishop or by deacons or presbyters, at his command. Funk accounts for the absence of reference to a post-baptismal unction by supposing that the deaconesses had no share in it; but it must not be assumed that there was any unction after the baptism.

(d) *Syr. Acts of Judas Thomas*, in Wright, *Apoc. Ac. of Ap.* (vol. II. Eng. tr.), 1871 (3rd cent.). This work contains five detailed accounts of baptisms (pp. 165, 188, 257, 267, 289), which, combined, give the following results: After the blessing of the oil, the candidates are anointed with the seal on the head, the men first. Their bodies are then anointed, in the case of the men by Judas, in the case of the women by a woman. They are subsequently baptized and communicated. There is no intimation of a consecration of the water, and apparently no recognition of a distinction between the grace conveyed by the anointing and by the immersion.

(e) Aphraates (c. 345). In one of his few allusions to the baptismal rite this writer mentions the unction before the baptism (*Dem.* xii. 15), though he does not actually state that the former preceded the latter in the rite. He does not, apparently, mention the gift of the Spirit, but he connects both regeneration and the putting on of spiritual armour with 'the water' (*Dem.* vi. 1, xiv. 16).

(f) Ephraim, *Epiphany Hymns* (Eng. tr. by Gwynn in *Nicene and Post-Nicene Fathers*, vol. xlii.) (c. 350). From many allusions we gather that the baptismal rite included the following elements in the order in which they are here mentioned: (1) anointing with 'the seal' (iii. 1, 2, v. 8); (2) the baptism (xi. 8, xiv. 41 f. [for the order of these two, see iii. 1, 17, iv. 1, vi. 9, 20, viii. 22]); (3) vesting of the neophytes in white (vi. 15, 18, xlii. 1, 5, cf. iv. 3); (4) crowning (xiii. 5); and (5) communion (vii. 23, viii. 22, cf. iii. 17, xlii. 17). From *Sermo Ezeq.* in *Ps. cxl.* 8 (*Opp. Syr.*, Rome, 1787-43, II. 382) it appears that the anointing

'with the seal of the Holy Spirit' on the head was followed by unction of the members of the body. In the commentary on J 24 (b. 232) mention is made of the oil and fragrant *μύρον* with which the 'midle' are sealed and put on the armour of the Holy Spirit. [In this passage 'midle' may mean 'baptizand', in accordance with the order implied in the *Epiphany Hymns* (see the passage quoted in Dietrich, p. 63, n. 15).] The priest is the minister both of the unction and of the baptism (*Epiph. Hymns*, iv. 4, v. 81).

(g) *History of John the son of Zebedee* (4th cent. [?]), in Wright, *op. cit.* Two baptisms are described in detail (pp. 38, 58). The 'fine scented' oil was first consecrated, and then the water, fire appearing over the former after consecration. Afterwards the candidates were signed on the forehead, and their bodies anointed. Then followed the baptism, the vesting in white, the giving of the kiss of peace to the neophytes, and the communion. The immersion was 'for the forgiveness of debts and the pardon of sins,' while the appearance of fire on the oil may indicate that the unction conveyed the gift of the Spirit.

(h) *Apostolic Constitutions* (c. 380). The *Ordo Baptismi* agrees closely with that of the contemporary Church of Jerus. (below, § 28). But that the compiler, in introducing a second, post-baptismal, unction, was consciously innovating upon Syrian custom, is clear. (1) Upon it alone of the component parts of the rite does he comment, and his remark upon it is polemical in tone (vii. 44): ταῦτα καὶ τὰ τοῖς ἀκούουσιν λέγεται· ἐκείνους γὰρ ἡ δύναμις τῆς χειροθεσίας ἐστὶν αὐτῇ. ἐὰν γὰρ μὴ εἰς ἐκείνους τοῖς ἐκλήουσιν γένηται παρὰ τοῦ εὐσεβοῦς ἱεροῦ τοιαύτη τίς εἰς ἑσθαρ μόνον καταβαίνει· οὐ βαπτίζουσιν ὡς οἱ Ἰουδαῖοι κ.τ.λ. (2) He connects the gift of the Spirit with unction before baptism, while the post-baptismal unction is merely 'the seal of the covenants' or 'the confirmation of the confession' (iii. 16 f., vii. 22).

(i) St. Chrysostom (c. 390), in discourses delivered at Antioch, makes it plain that he regarded the bestowal of the Holy Spirit as mediated by unction (*in 1 Tim.* ii. 2), and as closely connected with baptism, which was followed by Holy Communion (*in Mt.* xii. 8, *in 1 Co.* xxx. 2; in the latter passage Mason (*Relation of Confirmation to Baptism*, p. 365) mistranslates ἀπὸ τοῦ βαπτίσματος 'directly after baptism'). Preaching at Constantinople, he implies that there confirmation followed baptism; but, by his remark that it was not wonderful that Cornelius received the Spirit before baptism, since 'this takes place also in our own day' ('καὶ ἐφ' ἡμῶν τοῦτο γέγονεν'), he hints that elsewhere it preceded it (*in Ac.* xxiv. 2). He distinguished the 'Spirit of remission,' which the Samaritans received at their baptism, from the 'Spirit of signs' subsequently given, and probably held that the former was the gift bestowed in later times by the anointing (*in Ac.* xviii. 2 f. of xl. 1 f.).

(j) *Life of Rabbulah*, in Overbeck, *S. Ephr. Syriaci, opp.*, p. 164 (c. 450). On his arrival at the river Jordan, Rabbulah 'recited the Belief before' the priests, who then 'anointed and baptized him'; and immediately after he was come up from the water 'a cloth was wrapped about his body' after the custom of the spiritual kindred of Christ.' The latter ceremony no doubt corresponded to the vesting of the neophytes in white.

(k) Theodoret, *in Cant.* i. 2 (c. 450). Those who are being initiated are said, after renunciation and profession of allegiance (and therefore before baptism), to receive 'as it were a certain royal seal, the unction of the spiritual ointment, receiving thereby, as in a figure, the invisible grace of the all-holy Spirit.' To argue (Mason, *op. cit.* p. 874), against the natural force of the words, that the unction followed baptism, because it was made with ointment (*μύρον*) and not with oil, is to assume that the Syrian usage of this period agreed with that of other places and other times. There is independent evidence that in Syria scented oil or ointment was used for the preliminary unction (above, f, g). In fact, in Syria to a comparatively late date, and in early writers elsewhere, there seems to have been no sharp distinction between *μύρον* and oil (see below, § 20, and Hippol. *in Dan.* i. 16). Elsewhere, as here, Theodoret seems to assume that normally the gift of the Holy Spirit conveyed by the laying on of hands preceded baptism (*in Heb.* vi. 1 ff., cf. *Qu.* in Nu. 47).

(l) Narsai, *Homilies*, 21, 22 (Nestorian, end of 5th cent.). According to these homilies, after the consecration of the oil the candidate was signed with it, first on the forehead and then over the whole body. After this—the water having been consecrated—he was immersed, and, on ascending from the font, was given the kiss of peace, clothed, and communicated. By the oil the Spirit was imparted (Connolly, in *TS* viii. 40, 43, 45, 50–52).

(m) *Baptism of Constantine*, in Overbeck, *op. cit.* p. 365 (c. 500 [?]). After the blessing of the font, Constantine is said to have been anointed with oil, baptized, and communicated.

(n) Severus, Patriarch of Antioch (Monophysite, 512–519), habitually speaks of anointing with chrism as following and completing baptism. Since he quotes the *Testamentum Domini* as authoritative on the subject of baptism, it may be inferred that the rite, as he practised it, resembled that which is described in that work. See especially *Epp.* ix. 1, 3 (ed. E. W. Brooks).

(o) The catholicos Isô'yâhb i. (Nestorian, 580–596). In his *Questions* (Dietrich, *Dis. nestor. Tausliturgia*, p. 94 ff.) directions are given for the baptism of adults by a priest, and for the baptism of a sick person by a deacon. In each case a signing with oil (of men on the breast, of women on the forehead) is followed by the baptism. The only acts mentioned subsequent to baptism are the clothing of the women by the deaconesses and their crowning by the priest, and the administration of the Eucharist, if it is customary, by the deacon to the person baptized by him.

7. From this evidence some important inferences may be drawn. It would seem that throughout Syria up to the 5th cent., and among the Nestorians to the end of the 6th cent., the initiatory rite included three principal acts—unction, baptism, and communion of the baptized. The unction consisted of two parts—the signing of the head (3rd and 4th cents.), forehead (4th and 5th cents., and later in the case of women), or breast (6th cent.), and the anointing of the body. The gift of the Holy Spirit is usually associated with the unction (see above, § 6 f, g, h, i, k, l, and cf. c, where the unction is 'at the laying on of hands'); and in this connexion it should be noticed that the evidence for the consecration of the oil is earlier than for the consecration of the font (see b, d). There is no trace, apart from the *Apostolic Constitutions*, of any important act following the immersion except the communion of the baptized. Thus, according to the earliest known custom of the Syrian Christians, confirmation preceded baptism. It is not difficult to believe that this usage was simply a development of local primitive practice. In places where the laying on of hands for the imparting of the gift of the Spirit took place before baptism (above, § 4), if the baptismal unction also preceded the immersion (see § 3), the laying on of hands and the unction would in time come to be closely associated. Thus the confirmation would become the unction 'at the laying on of hands' (§ 6 c). Finally, in accordance with a tendency of which there are many examples, the unction would supersede the laying on of hands, except so far as the signing of the person with oil could be so described (cf. § 6 k).

In the early part of the 3rd cent. (§ 6 c) confirmation was reserved to the bishop, but, according to all later authorities, the entire rite is administered by one person—bishop or priest—assisted by a deacon or deaconess. It will be observed that there is early evidence for three minor ceremonies between the immersion and the baptismal Eucharist—the kiss of peace (§ 6 g, i), vesting in white (§ 6 f, g, j, l, o), and crowning (§ 6 f, c).

8. Modern Nestorian rite.—The Syrian ritual was re-cast shortly after the middle of the 7th cent. by the catholicos Isô'yâhb iii. (652–661), and the office of baptism drawn up by him is the basis of the rite as now practised by the East Syrians. He allowed the pre-baptismal anointing to remain; indeed, he seems to have restored the ancient custom of an unction (that is, probably, a signing with oil) on the head, followed by an anointing of the body. The result of this change has been much confusion, through the persistence of 6th cent. customs, in the existing MSS. But in one point all agree. In the formula pronounced at this unction there is no reference to the gift of the Spirit. No special grace seems to be connected with it, and in a rubric it is described as a symbolic act indicating that 'the acknowledgment of the Trinity is imprinted on the heart' of the person about to be baptized. It no longer corresponds to confirmation.

The distinguishing feature of Isô'yâhb's ritual is, in fact, confirmation after baptism. It consists of two main acts—the imposition of the hand upon the head of the baptized with an appropriate prayer, and the signing of the forehead with oil (not ointment), accompanied by a formula. Some of the MSS omit mention of the use of oil in this signing, but there is good evidence that it was ordered by Isô'yâhb, and it is apparently still customary (A. J. Maclean, *Recent Discoveries illustrating early Christian Life and Worship*, 1904, p. 68). In the present Nestorian rite, as everywhere in the East, the priest is the minister

of confirmation. But it is characterized by several unusual features. The priest (not the bishop) consecrates the oil at each performance of the rite, the laying on of the hand is separated from the signing, and there is no use of ointment, as distinct from olive oil, at any part of the rite.

That post-baptismal confirmation was actually introduced by Isô'yāhb III. follows almost certainly from the evidence given in § 6, for there seems to have been no catholicos between Isô'yāhb I. and Isô'yāhb III. who was a liturgical reformer. The supposition is confirmed by the fact that Isô'yāhb III. was a traveller, who must have had some knowledge of non-Syrian rites (Connolly, *op. cit.* p. xlix), and by the number and magnitude of the variations of existing rituals from each other, and from the *Ordo* drawn up by him—a natural consequence of so startling an innovation.

One or two of these may be mentioned. Isô'yāhb seems to have given no direction about the ceremony of crowning. Hence in some MSS it is omitted. In one it is described as a custom in some places. In another it appears in its original position after the vesting, and therefore before confirmation (Dietrich, *op. cit.* p. 87). Its present place is after the final signing (Maclean-Browne, *The Catholics of the East*, 1892, p. 272). Again, Isô'yāhb I. ordered that the water should not be let out of the font till after the mysteries—i.e. apparently the Eucharist—had been administered (Dietrich, *op. cit.* p. 94). Isô'yāhb III., on the contrary, ordered that it should be let out before the confirmation (*ib.* p. 92). Nevertheless the older usage persisted, and is still followed (*ib.* pp. 601, 82, 101 f.).

The post-baptismal Eucharist was retained by Isô'yāhb III., and apparently still remained in the time of Elias III. (1176–1190; see Dietrich, *op. cit.* p. 101); but it has long fallen into desuetude (*ib.* p. 91 f.).

9. Rites of the Syrian Monophysites.—We have seen (§ 6 n) that post-baptismal confirmation with chrism is implied in the letters of Severus of Antioch. It is, in fact, probable that its introduction into Syria was due to him. Tradition ascribes to Severus a Gr. *Ordo Baptismi* which was translated into Syr. by James of Edessa in the latter part of the 7th cent., and received the approbation of Gregory Barhebraeus six hundred years later (Denzinger, *Ritus orient.* i. 266, 279, 280). Four of the existing rituals, of which two bear the name of Severus and one that of James, while the fourth is anonymous (*ib.* p. 267), resemble one another closely, and are apparently all derived from the Syr. *Ordo* of James of Edessa, and thus ultimately from the Gr. of Severus. The anonymous ritual probably represents a recension subsequent to that of Barhebraeus. There is also a short office for the baptism of the dying (*ib.* p. 318), attributed to Severus' contemporary Philoxenus, Bishop of Mabug or Hierapolis (c. 435–519). All these Orders contain a post-baptismal signing or unction. In two respects they stand apart both from ancient Syrian and from modern Nestorian usage: they have no form for the blessing of the oil, which is consecrated, not by the priest at the baptism, but by the bishop (*ib.* p. 361); and at the final unction unguent, likewise consecrated by the bishop, is used instead of oil.

10. On the other hand, among the liturgical reforms attributed to Peter the Fuller, Patriarch of Antioch (471–488), by Theodorus Lector (Valesius, *Hist.*, ed. Reading, 1720, iii. 582), was the consecration of the *μύρον* in the church before the whole people. This might seem to give colour to the supposition that post-baptismal confirmation was introduced among the Monophysites by him. But Peter, Bishop of Edessa (498), appears from the *Chronicle* of Joshua the Stylite (32, ed. Wright, p. 23), written during his episcopate, to have adopted the principal reforms of the Fuller about A.D. 500: among other things, 'he [prayed] over the oil of unction on the Thursday [before Easter] before the whole people.' From

this passage it would seem that Theodorus quoted the actual words of the Fuller, and that the latter used *μύρον* as equivalent to oil (cf. § 6 k). It may be inferred that what the Fuller did was to reserve the consecration of the oil of unction to the bishop, and that post-baptismal chrismation had not come into use at Antioch in 488, or at Edessa by the end of the century.

11. The post-baptismal confirmation consisted of a prayer followed by a threefold signing of the baptized with chrism on the forehead and other parts of the body, with the formula, 'N. is signed with the holy chrism, the sweetness of the odour of Christ, the seal of the true faith, the complement of the gift of the Holy Ghost, in the Name,' etc., followed by an anointing of the rest of the body, the vesting in white, and prayers, one of which contained a petition for the sending forth of the Holy Spirit upon the neophytes.

That this form of confirmation is a later addition is perhaps already sufficiently clear. But this becomes still more evident when we consider the portion of the office which immediately precedes the immersion. Here the Monophysite rituals seem to follow ancient usage more closely than the Nestorian. Before baptism the candidates are signed on the forehead with oil, and their bodies are anointed. The connexion between these two acts is obscured in all the MSS by the interpolation between them of the consecration of the water. They are accompanied by prayers which distinctly associate with them the gift of the Spirit.

The first prayer has the petition: 'Vouchsafe to send upon them thy Holy Spirit.' The second begins: 'Holy Father, who by the hands of thy holy Apostles didst give the Holy Spirit to those who had been baptized, send now also, using the shadow of my hands, thy Holy Spirit on those who are about to be baptized . . . that they may be worthy of thy holy anointing.' This is evidence that a laying on of hands once preceded this unction, though no mention is made of it in the extant rituals (cf. § 6 a, b). The third runs: 'Thou who didst send upon thy only-begotten Son . . . thy Holy Spirit . . . and didst sanctify the waters of Jordan, may it please thee that the same thy Holy Spirit may dwell upon these thy servants . . . and do thou perfect them . . . purifying them by thy holy laver,' etc. This extract seems to indicate (1) that the consecration of the font originally followed the anointing, and (2) that the indwelling of the Spirit preceded the purification of the laver.

Thus the Monophysite rite is strangely anomalous. It has two distinct anointings, one before and the other after baptism, by both of which it is implied that the gift of the Holy Spirit is mediated. The former was at one time accompanied by an imposition of hands, and the references to the gift of the Spirit in immediate connexion with it are still much more precise and emphatic than in connexion with the latter, which is now regarded as the confirmation.

12. Of the attendant ceremonies, the vesting, the crowning, and communion follow the chrismation. All are omitted in the anonymous ritual.

It has not been thought necessary to take account here of two rituals used by the Monophysites, bearing the name of St. Basil, since they are not of Syrian origin. One is a mere translation of the Gr. *Ordo*, the other incorporates some Syrian elements (Denzinger, *op. cit.* p. 818).

13. Maronite rite.—It is probable that the two closely similar early Maronite baptismal rituals (Denzinger, *op. cit.* pp. 334, 351) are derived from an Order drawn up by James of Serug († 521), whose name appears at the head of one of them. But that they have been subjected to considerable revision is evident; e.g. the baptismal formula is not in the third person, as in all other Eastern Orders, but in the first, as in the Latin rite. This assimilation to Western standards was carried much further about the year 1700, when the Order now in use was composed (*ib.* pp. 334, 350). Till that revision, however, some ancient Syrian characteristics were preserved. The oil was consecrated at each baptism, and at the consecration

the deacon bid the prayers of the people that those who were to be baptized might be made 'pure temples for the habitation of the Holy Spirit.' Again, the pre-baptismal unction was divided into two parts, as in the Monophysite rite, by the consecration of the water. Before this consecration the candidate was signed with oil on the forehead, the prayer following, 'Let thy Holy Spirit come and dwell and rest upon the head of this thy servant,' etc.; after it the priest again signed him with oil, this time on the head, and the deacon anointed his body. After the baptism the candidate was signed with chrism, and then his body was anointed (*ib.* p. 349), or the principal members were signed (*ib.* p. 357), a formula being used similar to that of the Monophysite rite. In an accompanying prayer (not in all MSS) the words occur, 'Grant us by this seal the union of thy Holy Spirit.' Thus in this rite there is the same anomaly as in the Monophysite, proving that the post-baptismal confirmation had no place in the ancient Syrian Order from which it was derived.

14. The attendant ceremonies are the vesting—which in one Order retains its original place immediately after baptism (*ib.* p. 357), and in the other (*ib.* p. 349) is postponed till after the chrismation—the crowning, and the communion.

15. Armenian rites.—The Armenian baptismal ritual is said to have been drawn up by the catholicos John Mandakuni (c. 495). It was revised at the end of the 9th cent. (Conybeare, *Rituale*, p. xxvii ff.). The extant office obviously differs much from the original from which it was derived. After the consecration of the 'holy oil,' the filling and consecration of the font takes place, and then the baptism. After this there is a prayer for the baptized, and an anointing with the 'holy oil,' with which the forehead and several members of the body are signed, in each case with an appropriate formula. In these formulæ no mention is made of the Holy Spirit.

The consecration of the oil at the beginning of the baptismal office proper seems to imply an unction before immersion, which has fallen into desuetude (cf. Denzinger, *op. cit.* pp. 35, 57). At present simple oil is not used at all, and this prayer of consecration is said over the chrism which has been already consecrated by the catholicos at Etchmiadzin (*ib.* p. 34; Neale, *Hist. East. Ch.*, 1850, Introd. p. 987). The single petition for the grace of the Holy Spirit in the prayer before the anointing is so wanting in definiteness that this act can scarcely be regarded as a confirmation. It is less emphatic than the clause in the prayer of consecration, 'Send the grace of thy Holy Spirit into this oil, to the end that it shall be to him that is anointed therewith unto holiness of spiritual wisdom,' etc. On the whole, it appears that this rite is of Syrian origin, and that it once had two unctions, with each of which the gift of the Spirit was associated (cf. §§ 11, 13). As in the modern Nestorian rite, the unctions were probably performed, not with chrism, but with oil consecrated by the priest in the course of the office; though the use of chrism consecrated by the catholicos was certainly in vogue to some extent as early as the 7th cent. (Denzinger, p. 55).

16. After the unction follow the vesting, crowning, bowing to the altar, and communion. The prayer used at the bowing to the altar has no special appropriateness to this ceremony; but it contains words which imply a laying on of the hand ('Stretch forth thy unseen right hand and bless him'), and is perhaps misplaced.

17. The baptismal office of the Paulicians of Armenia (Conybeare, *Key*, p. 96) has neither anointing nor imposition of hands, but after the

affusion there are prayers for the gift of the Holy Spirit to the baptized, interspersed with lessons (Mt 3¹³⁻¹⁷, Ac 2¹⁻⁴, Mk 1⁹⁻¹¹, Gal 3²⁴⁻²⁹, Lk 3²¹, Ac 8²⁶⁻⁴⁰ [with the 'Western' additions in vv. 37, 39], Jn 20¹⁰⁻²²; but not Ac 8¹⁴, 19¹⁷). One of the prayers seems to imply that communion followed (*ib.* p. 98, cf. p. xlix). The minister is the 'elect one.' This rite cannot be said to include an act of confirmation, but it was probably derived from one in which confirmation followed baptism.

18. Orthodox Eastern rite.—The baptismal office of the Orthodox Church (Goar, *Εὐχολόγιον*, 1647, p. 350) closely resembles that which was used at Constantinople in the 8th cent. (Conybeare, *Rituale*, p. 389), and both belong to a group which comprises the *Ordo Baptismi* in *Const. Ap.* vii. 39-45 (cf. iii. 16 f.) and the rite as described by St. Cyril of Jerusalem (*Cat. Myst.*) and ps.-Dionysius (*Hier. Eccl.* ii. 2, 3). The *Ordo* in *Const. Ap.* seems to represent an attempt to bring the Syrian rite into agreement with that of the Church of Jerusalem. It accordingly preserves some Syrian features.

Combining the testimony of all these documents, we learn that the following series of acts in the modern office has descended from the 4th cent.: anointing with exorcized oil, consecration of the font, baptism, vesting in white, anointing with chrism on the forehead and other parts of the body (the vesting follows the chrismation in St. Cyril), and communion. In St. Cyril and ps.-Dionysius the second unction is associated with the gift of the Spirit, and in the present rite it is accompanied by the formula, 'The seal of the gift of the Holy Spirit' (cf. the spurious can. 7 of C. Constantinop. 1.). It is, therefore, rightly described as confirmation. It is said, however, that the chrism is now administered with a spoon (Maclean, *Rec. Discoveries*, p. 68); thus no vestige of the primitive laying on of hands remains at this point of the rite. That c. A.D. 325 it was still an act distinct from the chrismation is shown by the evidence of Macarius, Bishop of Jerusalem (Conybeare, *Key*, pp. 183, 186).

Among the Orthodox the chrism is consecrated by the Patriarch apart from the administration of baptism. The practice of the 4th cent. in this matter is somewhat obscurely described by Macarius (*ut supra*).

It is possible that the rite of the Church of Jerusalem with its modern Greek derivative was developed from an ancient Syrian rite in which confirmation preceded baptism. But however that may be, it is highly probable that many of the more modern features of the Monophysite, Maronite, and Armenian rituals—especially post-baptismal confirmation with chrism—were borrowed from it (cf. Conybeare, *Key*, p. 179).

19. The Egyptian rite.—The baptismal rituals of the Alexandrian Copts (Denzinger, *op. cit.* p. 191) and the Abyssinians (*ib.* p. 222) vary so slightly from each other that they may be treated as one. There are two unctions, but the first is performed outside the baptistery and is separated from the baptism by a long interval. Immediately after the baptism comes the confirmation. The priest, standing before the altar, prays for the bestowal of the Holy Spirit on the baptized, and signs his forehead or head with chrism in the threefold Name. Other parts of the body are then signed, each with an appropriate formula. This is succeeded by the laying on of the hand with a formula in which the words occur, 'Receive the Holy Ghost,' and another prayer for the neophyte, including a petition for the sending forth of the Spirit upon him. Both oil and chrism are consecrated by the Patriarch of Alexandria (*ib.* pp. 54, 248 f.).

By means of the newly recovered Sacramentary of Serapion and the evidence of contemporary writers, it has been shown that an Order of confirmation identical with this in its main features was in use in Egypt in the 4th cent. (Brightman, in *JThSt* i. 252 f., 263 ff., 268 ff.). Indeed, some of its elements can be traced much further back. Origen alludes to the final unction in several places (*Hom. in Lev.* vi. 5, in *Rom.* v. 8; *Sel. in Ezk.* 16). The laying on of hands seems also to be implied by him, and if so, he certainly regarded it as of Apostolic origin (*de Princ.* i. iii. 27; cf. *Clem. Alex. Eac. Th.* 22). In Egypt alone has the laying on of hands been preserved, apart from the signing with chrism, by an unbroken tradition, as part of confirmation. In the 4th cent., indeed, it preceded instead of following the chrismation (Brightman, *loc. cit.* p. 265); but in Abyssinia at present there is laying on of hands with prayer for the Holy Spirit, before as well as after the chrismation. In early times, as now, the priest administered the chrism, but only as the delegate of the bishop (Ambrosiaster, *Qu. Veteris et Novi Test.*, ci. 5; in *Eph.* iv. 12).

20. After confirmation follow the vesting, crowning, and communion of the baptized. In Abyssinia and, until comparatively recent times, at Alexandria, they received milk and honey in the Eucharist. At Alexandria only milk is now given. No early evidence has been discovered for the crowning; but the vesting is alluded to in the 4th cent., the baptismal Eucharist is referred to by Origen (*Sel. in Ex.* [PG xii. 283]), and apparently the giving of milk and honey is mentioned by the writer of the *Ep. of Barnabas* (6) and by *Clem. Alex.* (*Ped.* i. 6).

21. The African rite.—In several passages (*de Præsc. Hær.* 36, 40; *de Bapt.* 6 ff., 17; *de Res. Carn.* 8; *adv. Marc.* i. 14; *de Cor.* 3; *de Pud.* 9) Tertullian alludes to the ceremonies of the rite of initiation. From them we learn that immediately after the immersion the baptized was anointed, perhaps over the whole body ('perungimur,' *de Bapt.* 7). He was afterwards signed with the cross, apparently on the forehead. The laying on of the hand followed, and finally the Eucharist. At some point of the rite the neophyte received a mixture of milk and honey. The exact position of this ceremony is doubtful; but it was certainly between the anointing and the Eucharist, and probably immediately after the former. It is possibly hinted in one place that the baptized was crowned (*de Præsc.* 40).

The imposition of the hand is separated from the unction by the signing, and probably the giving of milk and honey. Moreover, while the spiritual effect of baptism is remission of sins, of unction consecration, and of the signing protection, the gift of the Holy Spirit is attributed to the imposition of the hand. The unction, therefore, is connected with baptism rather than with confirmation (cf. BAPTISM [Early Chr.], vol. ii. p. 387* (β)). The proper minister of the entire rite is the bishop, but with his authority it may be performed by a presbyter or a deacon. Tertullian holds that in case of necessity a layman may baptize (and confirm); but it seems to be implied that this opinion was not generally accepted. Since Tertullian (*de Cor.* 3) claims the authority of long-standing tradition for several of the ceremonies, it is probable that he describes the rite as it was practised in Carthage at least as early as the middle of the 2nd century.

22. The letters of Cyprian on the baptism of heretics confirm and supplement the information given by Tertullian. According to him, the special gift of baptism is remission of sins (*Ep.* lxi. 11, lxx. 1, lxxiii. 6, lxxiv. 5) and regeneration (lxxiv. 7); but the regeneration is not com-

plete without the gift of the Spirit (lxxii. 1, lxxiii. 21), which is conveyed by the laying on of the hand (lxxii. 1, lxxiii. 6, lxxiv. 5). Thus baptism and confirmation are distinct, yet closely related as parts of the same rite (lxx. 3, lxxiii. 9). The immersion was immediately followed by unction (lxx. 2), and it is implied that the unction was connected rather with baptism than with confirmation. The gift of the Spirit is not associated with it in the one passage in which it is mentioned; and in that passage, arguing against the validity of heretical baptism, as distinct from confirmation, Cyprian makes a point out of the invalidity of the unction which accompanied it. It is to be added that he speaks of sanctification (*sanctificatio*) as one of the benefits conferred by baptism, in the narrower sense (e.g. lxx. 1, 8, 11, lxx. 2, lxxiii. 18 f., lxxiv. 5, 7), just as Tertullian had connected the same (*consecratio*) with unction. The act by which the Holy Spirit was communicated was, therefore, the imposition of the hand. But this act was accompanied by prayer for the Holy Spirit and signing of the baptized on the forehead (lxxiii. 6, 9; *ad Demetrian.* 22). At some time in the course of the rite, probably after confirmation, the kiss of peace was given (lxxiv. 4). The bishop confirmed, but apparently he did not usually baptize (lxxiii. 9). The oil used in the unction was consecrated on the altar at the Eucharist, and therefore not at the administration of baptism (lxx. 2).

23. The mode of administration of the rite remained much as it was in the 2nd cent. till at least the beginning of the 5th; but the giving of milk and honey was transferred to the baptismal Eucharist (C. Carthag. III. c. 24, longer form).

For the order, see St. Augustine, *Serm.* 824; for consecration of oil at the Eucharist, *de Bapt. cont. Don.* v. 23; for conferring the Holy Spirit by imposition of hand with prayer, *ib.* iii. 16, *de Trin.* xv. 46, *Retract.* i. 12, 9, *Tract. in Ep. Jo.* vi. 10; for communion, *Serm.* 324, 227, 228; for the bishop as minister, *de Trin.* xv. 46, and for the presbyter acting in his stead, *Serm.* 824.

By the second half of the 5th cent. the unction had become a more prominent feature, and was closely connected with the imposition of the hand, for which it was a preparation (Optat. Milev. iv. 7, vii. 4; Aug. *contra litt. Pet.* ii. 239), though it still always followed baptism (Avitus Vienn. *Ep.* 24). The material used seems to have been no longer simple oil (Optat. *loc. cit.*; Aug. *de Trin.* xv. 46, *conf. litt. Pet.* ii. 104). The unction, though not apparently held to convey the Spirit, is the 'sacramentum Spiritus sancti' (Aug. *Serm.* 227, *Tract. in Ep. Jo.* iii. 5, 12). During this period attempts were made to abolish the consecration of the chrism by priests, which appears to have been the older custom; but the practice still continued (C. Carth. II. c. 3, III. c. 36; C. Hipp. c. 34; Joan. Diac. *Ep. ad Senar.* 8).

24. The Gallican rite.—The rite which prevailed most widely in the West in early centuries was that known as the Gallican, which was used in North Italy, Gaul, Spain, probably Britain, and Ireland. The earliest descriptions of it are found in Ambrose, *de Mysteriis*, and another tract founded upon it, viz. ps.-Ambrose, *de Sacramentis*. These witness to the use of North Italy c. A.D. 400. In this rite baptism was immediately followed by an anointing with chrism on the head or forehead (Prudent. *Psychom.* 360; Patr. *Ep.* 3; Missal. *Bobien.*; cf. *Stowe Missal*), with the formula 'Deus . . . qui te regeneravit . . . ipse te unget,' etc. After the chrismation the feet of the candidates were washed (Maximus Taurin. *Tract.* iii.; Cassarius, *Serm.* clxviii. 3, clcvii. 2 [PL xxxix. 2071, 2220], *Serm. de unct. cap.* [PL xl. 1211]; C. Elib. c. 48; and the Orders), and they were vested in white. They then received the *signaculum spirituale*—apparently a signing with the chrism (cf. Greg.

Tur. Hist. Franc. ii. 31)—which was accompanied by a prayer for the septiform Spirit, no doubt similar to that which occurs in all later Western rites, including the Anglican (Isidor. *de Eccl. Off.* ii. xxvii. 3; Ildefons. *de Cogn. Bapt.* 127). Finally, they communicated (*Sac. Gall.*; *Sac. Goth.*; *Stowe Missal*; Zeno Veron. *Tract.* ii. 38, 53). Since there is early evidence that confirmation consisted of two acts—chrismation and ‘imposition of the hand’ or ‘benediction’ (Gaul: C. Arous. i. c. 1 f.; Gennadius Massil. *de Eccl. Dog.* 52; Avitus, *Ep.* 24; Spain: Isidor. *op. cit.* ii. xxv. 9, xxvii. 1; Ildefons. *op. cit.* 121–125, 128 f.)—it may be inferred that both the unction and the *signaculum*, though not in immediate sequence, belonged to it. In some *Ordines* the *signaculum*, or laying on of hands, disappeared as a separate act (Gaul: German. Paris. *Ep.* 2; *Sac. Gall.*; *Sac. Goth.*; North Italy: Maximus Taurin. *ut supra*; *Missal. Bobbien.*; Ireland: Patr. *Ep.* 21; *Stowe Missal*), and with it the invocation of the septiform Spirit. Thus the ‘confirmation’ was reduced to an anointing with chrism, perhaps including a signing, without any direct prayer for the Holy Spirit. If this was the use of the Irish Church in the 12th cent., the statement of St. Bernard (*Vita S. Mal.* 3), that confirmation was not practised in Ireland, is not only intelligible but justified.

25. It is clear that about the end of the 4th cent. baptism and confirmation were ordinarily administered by the same person (Ambr. *op. cit.*; ps. Ambr. *op. cit.*; Pacianus, *Serm. de bapt.* 6, *Ep.* i. 6; Zeno Veron. *Tract.* ii. 53). This, according to Ambrose and Pacianus, was the bishop; but ps. Ambrose seems to make the presbyter the minister of both (Wordsworth, *Ministry of Grace*, 1901, p. 80). A century earlier the Synod of Elvira (cc. 38, 77) implies that if a presbyter baptized he also confirmed, and that presbyterial confirmation prevailed widely in later times, in spite of continual efforts to suppress it, there is abundant evidence (Gaul: C. Arous. i. c. 1 f.; C. Arel. ii. c. 28 f.; Gallican Statutes [C. Carth. iv.], c. 36; Leo, *Ep. de priv. Chorep.*; C. Epao. c. 16; C. Antisiodoren. c. 6; C. Hispal. ii. c. 7; *Sac. Gall.*; *Sac. Goth.*, cf. C. Vassen. c. 3; North Italy: *Missal. Bobbien.*; Ireland: *Stowe Missal*; Spain: C. Tolet. i. c. 20; Mart. Bracar. *Capitula*, 52; Isidor. *op. cit.* ii. xxvii.; Ildefons. *op. cit.* 128, 131; cf. Montanus, *Ep.* 1 [Mansi, viii. 788]; C. Bracar. ii. c. 19).

This summary of the evidence will suffice to show that between the Gallican and the Eastern confirmation rites there are many points of resemblance. Gallican usages gave place to Roman in France at the end of the 8th century. They had a more prolonged existence in Spain, Milan, and Ireland (Duchesne, *Orig.* p. 97 ff.).

26. The Roman rite.—If the Gallican rite resembled those of the Eastern Church, the baptismal rite of Rome was akin rather to that of Africa. According to the *Canons of Hippolytus* (134 ff.), in the Rom. use of c. A.D. 200, the priest, immediately after administering baptism, signed the baptized on the forehead, mouth, and breast with the *χρῖσμα ἐξαγιασμένο*, or oil of unction, which had been consecrated by the bishop at an earlier stage of the office, and then proceeded to anoint his body. The baptized was then vested and brought into the church, where he was confirmed by the bishop. The confirmation consisted of imposition of the hand and a prayer, in which there was a thanksgiving for the outpouring of the Holy Spirit, and a petition that the neophyte might receive the earnest of the Kingdom, followed by the sign on the forehead without oil.

That this represents early Rom. practice is confirmed by Hippolytus, in *Dan.* i. 16, where the oil used in the bath is said to signify ‘the powers (*δυνάμεις* (read *δυνάμεις* ?)) of the Holy

Spirit wherewith (αἰς) the believers are anointed after the laver, as though (ὡς) with ointment,’ the implication being that oil was not actually used in conferring the Holy Spirit.

Thus the unction was connected with baptism, not with the laying on of hands.

The imposition of the hand continued to be the principal act in confirmation till at least the end of the 4th cent., when it was accompanied by the prayer for the septiform Spirit (Jerome, *cont. Luc.* 9; Siricius, *Ep. ad Himer.*). But by that time the unction on the forehead seems to have come to be regarded as closely associated with it, and as belonging, like it, rather to the bishop than to the priest. In 416, Pope Innocent I. permitted an additional unction, which must not be on the forehead, by the priest after baptism. This is the first notice of the double chrismation, which soon afterwards became the regular practice of the Roman Church (Innoc. *Ep. ad Dec.* 6, cf. 9; Joan. Diac. *Ep. ad Senar.* 6, 14). A signing of the head with chrism after baptism, with a formula almost identical with that of the Gallican rite (§ 24), is enjoined in the *Gelasian Sacramentary* and in later Rom. books.

27. The development of the Rom. order of confirmation is instructive. In the *Gelasian Sacramentary* (which agrees with the description of the Rom. rite in the Epistle of Jesse of Amiens, A.D. 812), and the 9th cent. *Ordo* of St. Amand (Duchesne, *op. cit.* p. 453)—as in the much later *Liber S. Cuthberti* (C. Wordsworth, *Pontif. S. Andreæ*, 1885, App. 5)—the imposition of the hand, with the prayer for the septiform Spirit, is preserved, and at the subsequent chrismation a special formula is used. In the *Gregorian Sacramentary* the laying on of the hand gives place to the raising of the hand. In later orders the raising or extending of the hand is sometimes accompanied by the formula ‘*Spiritus sanctus superveniat*,’ etc., the prayer for the septiform Spirit following, and a formula more or less resembling the Gelasian being used with the signing. Of the latter the latest form is that which Pope Eugenius IV. (*Decr. pro Armen.*) declared to be the ‘form’ of the sacrament.

28. In the *Canons of Hippolytus*, and in most later Orders in which confirmation immediately follows baptism, the communion of the neophytes is enjoined. The communion commonly followed baptism when confirmation was deferred, though it is sometimes ordered with the reservation that it is to be administered only if the neophytes are of suitable age. Two ceremonies anciently followed confirmation (*Can. Hipp.*)—the kissing of the neophyte, with the words, ‘The Lord be with you,’ and the giving of milk and honey. The former has disappeared from all later Orders, but the memory of it is preserved in the words ‘*Pax vobiscum*’ after the chrismation. The latter continued till the 6th cent. (Joan. Diac. *op. cit.* 12). The bishop has always been the minister of confirmation in the Rom. Church, though apparently Innocent I. (*ut supra*) permitted priests to confirm in cases of necessity if authorized to do so by the bishop. The bishop has also always consecrated the chrism (but see Joan. Diac. *op. cit.* 8).

29. The mingling of Roman and Gallican rites.—In early centuries the Rom. rite was used only in the immediate neighbourhood of the city. That it had not been adopted in the Gr. district of Lucania at the end of the 5th cent. is easily understood (Gelas. *Ep.* ix. 6, 10); but it is more surprising that at the beginning of the same cent. Pope Innocent I. should find it necessary to urge a bishop of Umbria to bring the customs of his diocese into conformity with those of Rome. From his letter to Decentius (416) it may be gathered that at Eugubium (Gubbio) the consecration of the chrism was not reserved to the bishops, and that presbyters anointed the baptized with chrism (apparently on

the forehead) and laid hands upon them, with an invocation of the Spirit. Thus in Eugubium (c. 400) the baptismal rite was of the Gallican type (cf. Leo, *Ep.* 168). Innocent compromised matters with Decentius by suffering the chrismation by the priest to remain, provided it was not on the forehead, and provided the baptized was subsequently confirmed in Rom. fashion by the bishop. One result of his letter, which was widely quoted as an authoritative document, was, no doubt, the modification of Gallican usage in a Rome-ward direction in many places; another was the introduction into the Rom. baptismal office of the post-baptismal chrismation. The Western rite, in fact, combines the Gallican and the earlier Rom. confirmation Orders, which suffices to explain the anxiety of Gallican writers like Rabanus Maurus (*de Cler. Inst.* i. 28-30; cf. Theodulf, *de Ord. Bapt.* 14; Jesse of Amiens, *Ep. de bapt.* [P.L. cv. 790]), not long after the suppression of the Gallican customs, to distinguish the spiritual effect of the two chrismations, assuming that each of them conveyed a gift of the Spirit. The phenomenon is not unlike that which presents itself in the rites of Western Syria (above, §§ 11, 13, 15). The consequence of the interaction of the Rom. and Gallican rites, exemplified in this striking case, is that the present Latin confirmation rite is not purely Roman, though it is not now possible to distinguish in all cases those features which were developed within the Rom. Church from others which may have been imported from without. Cf. the following article.

30. The separation of confirmation from baptism.—For many centuries in the West, confirmation has been divided from baptism by a considerable interval. The beginning of this separation of the rites may be traced to the 3rd cent., when the validity of heretical confirmation was denied even by those who admitted the validity of heretical baptism (but see E. W. Benson, *Cyprian*, 1897, p. 420). By them persons baptized in heresy, when they joined the Catholic Church, were admitted by a ceremony analogous to, if not identical with, confirmation. Later on we find cases contemplated in which confirmation at the time of baptism was impossible, either because the minister was a deacon or a layman, or because the baptizing priest had no chrism (C. Elib. cc. 38, 77; C. Araus. i. c. 2). But the practice of administering confirmation apart from baptism in ordinary cases had a different origin. The Rom. tradition of restricting the administration of confirmation to bishops involved its postponement in the case of all persons baptized by a priest in the absence of the bishop. This, of course, became more frequent as the Church spread beyond the cities, as bishops became fewer in proportion to the number of Christians, and infant baptism became the rule. It was already common at the end of the 4th cent. (Jerome, *loc. cit.*; cf. Anon. *de Re-baptismate*, 4f.). But the separation of the rites did not become universal in the West for many centuries, and, when confirmation was postponed, it was usually only deferred till the offices of a bishop could be had. If it was not administered in infancy, the delay was due to the negligence of parents or of the bishops themselves. On the eve of the Reformation, infant confirmation was still the normal practice (see, e.g., Tindale, *Answer to More*, 1531, ed. Parker Soc., 1860, p. 72). At a much earlier period, however, there was a movement towards admitting to confirmation only those of more mature age (Gratian, *Decr.* III. v. 6; Syn. Colonien. 1280, c. 5), and in the latter part of the 16th cent. it became the rule, both in the Rom. and in the Anglican Communion, that candidates for confirmation should have come to years of discretion (Eng. Pr. Bk.; *Cat. ad paroch.* ii. 2, § 8; cf. *CQR* xxiii. 72ff.).

For information about modern offices of confirmation and substitutes therefor, in the Reformed Communions, it must suffice to refer to the works named at the close of the following list of authorities, and to art. BAPTISM (Later Chr.), vol. ii. p. 404.

CONFIRMATION (Roman Catholic).—As a supplement to the data furnished in the preceding article, the following points illustrating the position of Confirmation in the present teaching and practice of the Roman Catholic Church seem worthy of note:—

1. Dogmatic tenets.—The doctrine according to which Confirmation is named as the second of seven Sacraments is clearly enunciated at least as early as the middle of the 12th century. In a sermon which is put into the mouth of St. Otto, Bishop of Bamberg († 1139), by his biographer Herbold (c. 1159), the preacher, addressing the newly baptized Pomeranians, discourses at some length of the seven Sacraments. Enumerating them in their order, he says:

'The second Sacrament is Confirmation, that is, the anointing with chrism on the forehead. This Sacrament is necessary for those that are to conquer, to wit, that they be protected and armed by the strengthening of the Holy Spirit, as they will have to fight against all the temptations and corruptions of this present life. Neither is this rite to be deferred until old age, as some suppose, but it is to be received in the vigour of youth itself, because that age is more exposed to temptation' (Pertz, *MGH* xxii. 783).

Most of this doctrine, including the sevenfold number of the Sacraments, can be shown to have been taught by Radulfus Ardens fifty years earlier, in his as yet unprinted *Speculum Universale* (see Grabmann, *Gesch. der scholast. Methode*, i. 259), but much vagueness still prevailed regarding the nature and definition of a Sacrament. A decretal of Innocent III. in 1204, included in the *Corpus Juris Canonici* (Friedberg, Leipzig, 1876-80, ii. 133), outlines further the main points upon which stress was laid by scholastic theologians both before and after the Council of Trent.

'By the unction,' he says, 'of the forehead with chrism (*per frontis chrismationem*) is denoted the imposition of hands, which is otherwise called Confirmation, because by this means the Holy Spirit is bestowed for increase and strength. Hence, while a simple priest (*sacerdos vel presbyter*) may perform other unctions, this ought not to be administered by any one but a high priest, that is to say a bishop, seeing it is recorded of the Apostles alone, whose vicars the bishops are, that they conferred the Holy Spirit by the imposition of hands' (cf. *Ac* 8:14ff.).

During the Council of Florence (1438-1445), a bull was issued by Eugenius IV., known as the *Decretum pro Armenis*. This, taken as a whole, was not so much a dogmatic decree, defining points of faith, as an instruction to secure uniformity of practice. A portion of it, which consists of a compendious treatise on the Sacraments, is taken almost word for word from an opusculum of St. Thomas Aquinas, *De fidei articulis et septem sacramentis*. The 'matter' of the Sacrament is declared to be chrism, i.e. oil mixed with balsam, and the 'form' to be the words, 'I sign thee with the sign of the cross, and I confirm thee with the chrism of salvation in the name of the Father and

of the Son and of the Holy Ghost,' spoken both then and now by the bishop in administering the unction. In view, however, of the imperfectly dogmatic nature of the *Decretum pro Armenis*, this decision is not held to be an infallible pronouncement. On the contrary, the more commonly accepted view regards the act of unction as itself constituting an imposition of hands, so that the 'matter' comprises both the unction with chrism and the laying on of hands.¹

The most prevalent theory, then, concerning Confirmation regards the 'outward sign' of the Sacrament as consisting in the act of the bishop, who makes the sign of the cross with chrism upon the candidate's forehead, whilst he pronounces the words already quoted. The Council of Trent, in its systematic review of Sacramental doctrine, is very guarded in its affirmations concerning Confirmation. It contents itself with declaring that it is 'truly and properly a sacrament,' and 'one of the seven, all of which were instituted by Jesus Christ our Lord.' It denies that 'it was in olden days nothing else but a sort of catechism in which those who were entering upon youth gave an account of their faith in the presence of the Church.' It condemns those (Reformers) who had declared that to attribute any virtue to the chrism used in Confirmation was an outrage to the Holy Ghost. It also rejected the view that every simple priest could administer the Sacrament; but, by pronouncing that a bishop was 'the ordinary minister,' it tolerated the practice by which simple priests in special cases receive from the Holy See faculties to confirm. Finally, the Council declares (Sess. vii. can. 9) that 'in Confirmation a character is imprinted in the soul, that is, a certain spiritual and indelible sign, on account of which the Sacrament cannot be repeated.' It will be observed that this leaves many questions open. In particular, nothing is said as to the time and manner of the institution by Christ, whether direct or indirect; and no definition is given regarding the matter and form—for example, as to whether the use of chrism is essential to the validity of the Sacrament.

Of late years another pronouncement, which, however, is not usually regarded as possessing infallible authority, has been made in the decree of the Inquisition, *Lamentabili sane*, of 3rd July 1907. This, in its 44th heading, condemns the following proposition as an error, viz., 'there is no proof that the rite of the Sacrament of Confirmation was employed by the Apostles; while the formal distinction between the two Sacraments, Baptism and Confirmation, has no place in the history of primitive Christianity' (Denzinger-Bannwart, *Enchiridion*¹⁰, Freiburg, 1908, n. 2044).

Lastly, it should be noticed that, according to the teaching outlined in the above-mentioned *Decretum pro Armenis*, and universally held by Catholic theologians, the Sacrament of Baptism is *vita spiritualis janua*, and consequently no other Sacrament can take effect except in the case of those who have first been admitted to the life of supernatural grace through these portals. Hence it follows that, if Confirmation should precede Baptism, it would be invalid.

2. Adjustment of theory to historical fact.—It must be sufficiently obvious that, accepting the foregoing as a summary of approved Roman teaching upon the Sacrament of Confirmation, some

¹ This point of view may be curiously paralleled by some of the prayers of the early coronation rituals, in which the sovereign is described by the officiant prelate as receiving his crown *per impositionem manus nostræ* (e.g. in Legg, *Three Coronation Orders*, Henry Bradshaw Soc., 1900, p. 62); and it is supported by the wording of the *Professio Fidei* of Michael Palæologus, drafted at the Second Council of Lyons (1274), which speaks of the *sacramentum confirmationis quod per manus impositionem episcoporum conferunt chrismando renatos*.

explanations are needed to bring these tenets into accord with the facts of early Church history set forth in the preceding article. Attention may be directed, in particular, to the following points:—

(1) Although Trent teaches that Confirmation, like all the other Sacraments, was instituted by Christ, nothing is positively laid down concerning the manner of that institution, i.e. whether immediate or mediate, whether in *genere* or in *specie*. Modern theological opinion seems to favour the view that Christ did Himself immediately institute all the Sacraments (i.e. that we do not owe their institution to the Church, acting upon His general commission), but that He did not Himself give them all to the Church fully constituted. As a recent authority puts the matter:

'On some Sacraments particularly essential to Christianity, Baptism and Holy Eucharist for example, Christ explained Himself completely, so that the Church has had from the very beginning full and entire consciousness of these sacramental rites. As to the rest, the Saviour laid down their essential principles, leaving to development to show the Apostles and the Church what the Divine Master wished to accomplish. . . . In other words, Jesus instituted immediately and explicitly Baptism and Holy Eucharist; He instituted immediately but implicitly the five other Sacraments' (Pourrat, *Theol. of the Sacraments*, Eng. tr. p. 301 f.).

(2) It would be readily conceded that, in the case of such a Sacrament as Confirmation, the historical evidence is in some respects imperfect and obscure. The Church does not claim to clear up all the dark passages, but she claims to supplement by supernatural guidance and theological reasoning the data which we owe to natural research.

(3) With regard to the early recognition of the gift of the Holy Spirit as a distinct rite following Baptism, great stress is usually laid by Roman Catholic theologians, and deservedly, upon the opening of the heavens and the descent of the Holy Ghost in the form of a dove upon our Saviour after His baptism in the Jordan. This, taken in combination with the NT passages cited in §§ 2 and 3 of the preceding article, seems to provide a sound historical foundation for such an immediate but implicit institution of the Sacrament by Christ as has just been spoken of.

(4) The extensive treatment which, following Connolly's *Homilies of Narsai*, pp. xlii-xlix, has been given to the peculiarities of the ancient Syrian rite in the preceding article (§§ 7 and 8), tends to obscure the very local character of the observances by which the gift of the Spirit seems to be connected with unctions preceding baptism. At Jerusalem itself, where the testimony of St. Cyril is explicit, as well as at Constantinople, Alexandria, Northern Africa, Rome, and throughout the West, we find full and clear historical evidence which not only establishes the practice of conferring the Holy Spirit after baptism, either by unction or by imposition of hands, but points to a very marked consciousness of the distinction between the two rites; in other words, to the recognition of Confirmation as a sanctification of a separate order, often conferred by a separate minister. For a discussion of this subject the reader may be referred to Dölger, *Das Sakrament der Firmung*, while the same writer, in an article in the *Röm. Quartalschrift* (1905, pp. 1-41), has dealt with the archaeological evidence of early date, which establishes the existence in many places, e.g. at Naples, Rome, and Salona in Dalmatia, of a separate Confirmation chapel (*consignatorium, chrismarium*) distinct from the baptistery. In the Syrian Church, however, the accounts given of the unction, e.g. the lengthy discussion of Narsai himself, do not seem to remove it from the category of a mere ceremony subsidiary to baptism, while the effort made in the *Apostolic Constitutions* to alter the Syrian practice, introduc-

ing an unction with chrism after baptism (see Connolly, p. xlvii), points to a consciousness that the former practice was fundamentally incomplete. Or, can it be that, after all, a post-baptismal unction was in use, although for some unaccountable reason it is not formally spoken of in the Syrian texts? It is certainly strange that, as has been pointed out by A. J. Maclean (*JThSt*, Jan. 1910, p. 316), 'in the present East Syrian rite the post-baptismal anointing is not explicitly mentioned, though it is usually administered in practice.'

(5) With regard to many other points—e.g. the alleged re-administration of Confirmation when heretics were reconciled to the Church (see previous article, §§ 22 and 30), the reservation to the bishop of the power of consecrating the chrism, or, again, the history of the introduction of the unctions with the 'oil of catechumens' and chrism, which now precede and follow the administration of baptism in the Roman rite—it is submitted that our ancient authorities do not speak with sufficient clearness to warrant any certain conclusions. Much difference of opinion upon such matters exists even among writers of the same theological sympathies.

3. Modern liturgical details.—Two or three details of the ritual prescribed in the *Pontificale Romanum* call for brief comment.

(1) The bishop holds his hands out over the candidates while saying certain preliminary prayers. This action was formerly considered by some to constitute a *manuum impositio*, and to be of the essence of the rite.

(2) The candidates—it is not now the custom to confirm children before they are seven or eight years old—are presented to the bishop by a godfather or godmother, according to sex. This practice seems, however, to date back to the time when Confirmation was administered immediately after Baptism, at which period the same godparents served for both ceremonies.

(3) A curious rubric, still printed, though obsolete in practice, directs that the candidate who is not an infant shall place his foot upon the foot of the godfather. This seems to be a vestige of some feudal practice of commendation, and may be compared with a similar practice in Teutonic marriages (cf. Grimm, *Deut. Rechtsalterthümer*, Berlin, 1881, pp. 142, 155-156, and Weinhold, *Deutsche Frauen*², Vienna, 1882, ii. 40 ff.).

(4) After the unction, the bishop is directed to give the newly confirmed a slight blow on the cheek, with the words *Pax tecum*. This is most probably an imitation of the blow by which knighthood was conferred (cf. the *Ordo* 'De Benedictione Novi Militie,' in the *Pontificale Romanum*; and Martene, *de Antiq. Eccles. Ritibus*, Venice, 1783, ii. 240). But there is perhaps something also to be said for the view that the blow may have originally been given to the child to impress upon his mind the fact of his confirmation (cf. Tougard in *Précis historiques*, Jan. 1888; Heuser in *Amer. Eccles. Review*, May 1889; and F. Brenner, *Verrichtung der Firmung*, p. 68), much as the boys of the parish were formerly whipped at specified places on the occasion of the 'beating of the bounds.' An early instance, before 1200, of the mention of such a blow in administering confirmation occurs in the Life of St. Hugh of Lincoln (Giraldus Cambrensis, *Opera*, vii. 95).

LITERATURE.—The best historical account is that of F. J. Dölger, *Das Sakrament der Firmung*, Vienna, 1906. A very full treatment of the subject is also given by various critics in Vacant-Mangenot, *Dict. de théol. cathol.*, Paris, 1905, iii. 975-1108. Consult also Chardon, *Hist. des sacrements*, Paris, 1745; N. Gühr, *Die heil. Sakramente*, 2 vols., Freiburg, 1899; B. Nepefny, *Die Firmung*, Passau, 1869; Van Noort, *Tract. de Sacramentis*, Amsterdam, 1905; M. Grabmann, *Gesch. der scholast. Methode*, Freiburg, 1909; P. Pourrat, *La Théol. sacramentaire*³, Paris, 1909 (Eng. tr., St. Louis, Mo., 1910); F. Brenner, *Geschichte*.

Dogmat.*², Paris, 1908, vol. ii.; L. Billot, *De Ecclesia Sacramentaria*, Rome, 1898; C. S. J. Pesch, *Prælectiones Dogmaticæ*, vol. vi.3, Freiburg, 1908; F. Probst, *Sakramente und Sakramentalien in den drei ersten Jahrhunderten*, Tübingen, 1872; G. L. Hahn, *Die Lehre von den Sakramenten*, Breslau, 1884.

HERBERT THURSTON.

CONFORMITY.—The ethical question regarding conformity is, How far may a man, from regard to the feelings or authority of others, consent in outward action to what, apart from such regard, he is not inwardly convinced is right or true, or what he is even inwardly convinced is not right or true—more shortly, How far may a man conceal or act against his own inward conviction, in deference to the feelings of other persons or to external authority? Such a question cannot be simply set aside as illegitimate, unless we are prepared to assert for certain abstract formulæ of duty (e.g. that we ought to speak the truth) a kind of absoluteness which ignores the social ends to which all duties are relative, and ignores also the way in which a general rule, valid under ordinary and tacitly assumed conditions, may be modified or abrogated by the presence of extraordinary conditions not contemplated in the general statement. No one would seriously contend, e.g., that the duty of promise-keeping requires the promiser not to stop even to save a drowning man's life, if by so doing he would have to break an appointment. On the other hand, it is evident that our question is, as it has been called (Morley, *On Compromise*), 'a question of boundaries,' a question involving a conflict of duties. And, so far as the decision of such questions turns upon the infinite variety and subtle details of personal relations between individuals, ethical science can have nothing to say beyond the vaguest generalities, such as that, on the one hand, we ought not unnecessarily to wound other people's feelings, or that, on the other, we ought not to suppress our convictions except for grave reasons. It is difficult, e.g., to see how the writer just quoted is entitled to say, so emphatically as he does, that 'one relationship in life, and one only, justifies us in being silent where otherwise it would be right to speak; this relationship is that between child and parents' (*op. cit.* p. 165). If we take a duty such as that of a son to support and care for his parents in old age, it is obvious that the duty is one which falls upon a son as such: the relationship is the very basis of the duty. But we can hardly say the same of the duty of suppressing one's convictions: here the relationship seems to require only that added degree of deference which a son will naturally pay to his parents' opinions in all relations of life. And, if so, it is surely paradoxical to contend that a like deference is not equally obligatory in the more intimate relation of husband and wife.

It would seem, then, that the only cases in which we can look for a definite development of ethical doctrine in regard to conformity—as distinguished from mere casuistical discussion—are those in which some external authority has a peculiar claim upon our conformity, in a sense analogous to that in which parents have a peculiar claim to their boy's obedience or to their adult son's support. The two authorities which most evidently possess such a claim, and whose claims most need discussion, are the State and the Church. How far is a citizen morally permitted or obliged to obey legal injunctions of whose nature or objects he disapproves? How far, e.g., is military service to be obligatory upon a Quaker, payment of Church rates upon a Dissenter? And the question of obligation is, of course, both accentuated and modified when the citizen is himself an official of the State acting as such; e.g., how

far is a soldier or a subordinate officer, when ordered to fire upon a mob, relieved from all moral responsibility by the fact of his superior's command? Very similar questions are raised by the Church's claim to authority. How far may a layman, and still more a clergyman, subscribe a creed which he does not fully or literally believe?

All that can be attempted here is to point out some of the more general considerations which must be kept steadily in view if these questions are to be adequately discussed. In the first place, we must put aside as an empty truism—irrelevant or even question-begging—the assertion that a man must at all costs obey his conscience. For our problem is precisely to determine what, in the above cases, conscience really commands. We cannot, then, from the ethical point of view, start with a deliverance of conscience as a fixed datum. (From the political point of view, the ruler must needs take the conscience of any section of his subjects as a datum to be reckoned with. Not that he is obliged to give way to their conscience if he thinks them wrong,—for the sanctity of conscience can extend, in any ultimate sense, no further than the amount of moral truth which it apprehends,—but he must take it into account as one of the data of his problem. A Christian ruler might be very unwise in trying to enforce monogamy on a Muhammadan population, and yet the United States be entirely justified in putting down Mormonism.) In the second place, we must be on our guard against a fallacy into which we are likely to fall, if we begin by considering what the individual's duty would be, apart from his relation to the external authority, and then bring in this relation as a modifying circumstance. For we are then apt to think of the relation as *merely* a modifying circumstance, in the sense of being essentially subordinate to the abstract rule of duty. That is to say, we are apt to assume beforehand that the relation to the external authority *cannot* be important enough to alter the whole character of the duty. And thus, by the very form in which we put our question, we already go far to prejudice the answer. It would be absurd, *e.g.*, to begin the consideration of the duty of military service in time of war by laying down that we may not kill a man who has done no wrong, and then go on to ask whether we may break this rule at the command of the State. If, with Tolstoi, we begin by putting the question in this form, we have already committed ourselves, tacitly or by implication, to that denial of the value and authority of the State as an institution to which he proceeds to give open expression (*Kingdom of God is within you*, 1894, ch. vii.). But, on any less extravagant view than his, it is impossible for the citizen of a State, that is to say, the institution on which the whole system of law and order in life practically depends, to treat his relation to the State in any matter of public duty as a mere qualifying circumstance to be taken into account *after* his duty has been *otherwise* determined. In any matter of public duty the real question at issue as regards conformity is always this, Do I think the *particular human interest*¹ that is endangered by conformity so vital, that I, with others of like mind, am prepared to endanger, by our refusal of service or our passive resistance or our active rebellion, the institution on which the *whole fabric of human interests* depends? This, at any rate, is the question of principle. To say, with regard to a par-

ticular case, that no such danger to the State is likely to ensue, is (1) to admit that the interest, however important in itself, is a narrow one; and (2) to ignore the fact that the State depends on a *universal habit* of obedience, which is undermined in some degree by every example of disobedience. If, then, the citizen cannot answer the above question of principle in the affirmative, he does no wrong by conformity—provided always, of course, that in his capacity as a citizen he uses all lawful means to secure the particular interest endangered.

We have illustrated the duty of conformity, as regards the ordinary citizen, from the supposed case of a citizen required to serve in the army. It is worth while to illustrate the duty of an official of the State from the corresponding case of a soldier required, *e.g.*, to fire on a mob. For it is interesting to observe that our English system of law commits in practice, and in an even aggravated form, the same mistake as that to which we have objected in theory. It treats the soldier's special duty of obedience to military law as a mere qualifying circumstance in relation to his general civic duty to obey the ordinary law of the land; or, rather, it says he must obey both laws, and choose as best he can which to obey when they conflict. Hence 'he may . . . be liable to be shot by a court-martial if he disobeys an order, and to be hanged by a judge and jury if he obeys it' (Dicey, *Law of the Constitution*², 1902, p. 298, and cf. case cited p. 297, note 4). In the actual working of the legal machinery the absurdity of this situation is, of course, largely relieved by reliance on the common sense of a jury and by the power of the Crown 'to nullify the effect of an unjust conviction by means of a pardon' (Dicey, p. 301). But the situation illustrates very well the practical consequences of the theoretical error.

The question of religious conformity differs from that of civic in this respect, that membership of a Church is voluntary in a sense in which citizenship is not. We ought not, indeed, to exaggerate this difference, for in the case of a person of strong religious convictions, and of (what may be roughly called) 'high' Church views, it may amount to very little in practice. We can hardly wonder, *e.g.*, at the submission with which Roman Catholic disbelievers in Papal Infallibility received the decree, when the choice lay between submission and excommunication. Provided that we recognize, however, that Protestants and Nonconformists are, in the very nature of the case, disposed to take a less grave view of schism in the ecclesiastical sphere than the secular moralist must take of rebellion in the civic sphere, the question of principle and the general considerations to be kept in view are otherwise similar. If we begin by assuming that the repetition of a creed in a church service is to be judged like an ordinary assertion made with reference to a simple matter of fact in words chosen by ourselves, and that subscription to a creed is to be judged like an ordinary promise made with reference to a particular act in terms chosen by ourselves, and that the only question as regards conformity, accordingly, is whether and how far we may relax the ordinary rules of truth-speaking and promise-keeping in church matters without bad results, we simply prejudice the answer from the outset. We may as well go on to repudiate creeds and Churches altogether, as Tolstoi repudiates the State. Argument about the function of a creed and the adequacy of actual creeds does not fall within the scope of this article, any more than argument about unity and schism. So it will here be simply assumed that the kind of creed with which we are practically concerned is to be regarded as a traditional symbol of the Church's

¹ It might be objected that what is endangered by war is, not a particular human interest, but the sanctity of human life in general. But the objection simply repeats the original fallacy. There is no World-Empire which could assert the sanctity of human life against warring States, and therefore we have to choose, not between a cosmopolitan and a civic patriotism, but between a civic patriotism and anarchy.

faith, and is to be interpreted by the authority of the present-day Church itself. From the point of view thus assumed we must regard such an accusation as that of 'hard, flat, unmistakable falsehood' (Sidgwick, in the controversy referred to in literature below), brought against clergymen who do not accept certain propositions in the Apostles' Creed in their literal sense, as analogous to the accusation of murder brought against soldiers who, under orders, fire on an enemy or on a riotous mob. The only objective definition of the extent of the clergyman's obligation is that which is given to it by the authoritative organs of the Church's government. And if he satisfies his own ecclesiastical superiors, outsiders have no right to apply to his action a standard which implicitly sets aside the Church's authority. We need not, of course, deny that a Church would do well to revise a creed which in any considerable measure has ceased to afford an adequate expression of its faith. But this is a question of the Church's obligation rather than of the individual clergyman's. Just as a citizen may—within wide limits—rightly conform to a law which he thinks unjust, so too a churchman may—within corresponding, if perhaps narrower, limits—rightly conform to a creed that contains propositions which he thinks untrue (whether in a historical or in a religious sense)—provided always, of course, that the churchman, like the citizen, has used all lawful means to have the evil remedied.

A special difficulty is caused by the fact, just alluded to, that propositions may be true in a religious sense, while false in a literal, historical, or scientific sense; or, to put the distinction in a less objectionable or ambiguous way, a proposition intended to express a genuine religious truth, which the believer does accept, may express it in a form which he is unable to accept, not because of any religious reason, but because the proposition so formulated combines the genuine religious truth with other statements neither true nor religious; e.g., to very many religious persons the Divinity of Christ is inconceivable apart from His miraculous birth, but to others 'it is just blasphemy to suppose that the divinity of a man who comes nearer to God than other men consists in some abnormality of his physical organization' (Nettleship, *Philosophical Remains*, 1897, p. 105; cf. whole Letter). If the Church at large enforces the former view, while the individual takes the latter, the case is specially hard, because the individual then finds himself expelled from the communion of the Church, although he is not conscious of any real or religious divergence from its faith. See also art. NONCONFORMITY.

LITERATURE.—On the general ethical principles: T. H. Green, *Proleg. to Ethics*, Oxford, 1883, bk. iv. ch. ii., and *Princ. of Polit. Obligation* (reprinted from *Works*, vol. ii.), Lond. 1895, especially sect. H. On conformity generally: J. Morley, *On Compromise*, Lond. 1877 (often reprinted). On the ethics of religious conformity: an interesting discussion between J. Sidgwick and H. Rashdall in *J.E.*, vol. vi. and vii., 1896-7, continued by Sidgwick, *Practical Ethics*, Lond. 1898, pp. 142 ff., and T. O. Smith, *J.E.*, vol. x. **HENRY BARKER.**

CONFUCIAN RELIGION.—The Confucian religion is the ancient religion of China, the worship of the Universe by worship of its parts and phenomena. In the age of Han, two centuries before and two after the birth of Christ, that Universalism divided itself into two branches—Taoism and Confucianism, and simultaneously Buddhism was grafted upon it. Buddhism probably found its way into China principally in the universalistic form which is called Mahāyāna, so that it could live and thrive perfectly upon the congeneric stem. And so we have in China three religions, as three branches upon one root or trunk, which is Universalism.

The Chinese Empire was created in the 3rd cent. B.C., when the mighty Shi Hwang, of the Ts'ing dynasty, which had ruled in the north-west since the 9th cent. B.C., destroyed in streams of blood the complex of States which, up to that time, had existed in the birthplace of higher East Asian culture, the home of Confucius and Mencius. But the House of Ts'ing did not exist long enough to organize the great creation of this first Emperor of China. It collapsed after a few years, giving place to the glorious House of Han, which maintained itself and its throne till the 3rd cent. A.D. This dynasty, in organizing the enormous young Empire, built up a political constitution, naturally and systematically taking for its guide the principles, rules, and precedents of the old time, that is to say, the ancient literature, in so far as it was not irrecoverably lost in the flames which Shi Hwang, in a frenzy of pride, had kindled to devour it. With a view to the completion of this gigantic task of organization, this classical literature was sought for, restored, emended, commented upon, and thus there arose a classical, ultra-conservative State-constitution, which, handed down as an heirloom to all succeeding dynasties, exists to this day. The religious elements contained in the classics were necessarily incorporated with that constitution, together with the political, seeing that everything contained in the classics was to be preserved and developed as a holy institution of the ancients; in other words, those religious elements became the State religion. This is, in consequence, now fully two thousand years old. Its basal principle, Universalism, is, of course, older, much older than the classical books by which it has been preserved. As is the case with many origins, that of China's Universalism is lost in the darkness of antiquity.

With the classical books the name of Confucius is inseparably associated. Five are called *King*; the others are called *Shu*. Certainly Confucius did not write them all; they belong partly to a much older, partly to a later, period. He is held to have written only one *King*, the *Ch'un-t's'u*. Three other *Kings*, called the *Shu*, or Book of History, the *Shi*, or Songs, and the *Yih*, or Natural Mutations, he is said merely to have compiled or edited; and even this may not be true. In the books which constitute the fifth *King*, entitled *Li-ki*, or Memorials on Social Laws and Rites, he and his disciples are mentioned so frequently that this classic appears to have been composed from information about him, and from sayings originating with himself. The four *Shu* originated almost entirely with disciples of the sage; they contain sayings, doctrines, and conversations of their master, mostly of an ethical and political complexion. The titles are: *Lun-yü*, or Discourses and Conversations; *Chung-yung*, or Doctrine of the Mean; *T'ai-hioh*, or Great Study; and *Meng-tszé*, or (Works of) Mencius.

We may then just as well call Confucianism Classicism, and the classics the holy books or bibles of Confucianism. Universalism, which it represents, is known by the name of Taoism. Indeed, its starting-point is the Tao, which means the 'Road' or 'Way,' that is to say, the road in which the Universe moves, its method and processes, its conduct and operation, the complex of phenomena regularly recurring in it—in short, the Order of the World, Nature, or Natural Order. Actually, it is in the main the annual rotation of the seasons, the process of renovation and decay of Nature; and it may, accordingly, be called Time, the creator and destroyer. According to the classics, Tao is the *Yang* and the *Yin*, the two cosmic souls or breaths which represent the male and the female part of the Universe,

assimilated respectively with the fructifying Heavens, and with the Earth which they fructify, as also with heat and cold, light and darkness. The vicissitudes of these souls, indeed, every year produce the seasons and their phenomena.

Universalism defines the Yang as a supreme universal *shen*, or deity, living, creating, which divides itself into an infinite number of *shen*, and deposes them into beings; and it defines the Yin as a universal *kwei*, likewise divisible into myriads of particles, each of which, in a man, may form his other soul. Accordingly, creation is a continuous emanation or effusion, and destruction a never ceasing re-absorption, of particles of the Yang and the Yin. These particles, the *shen* and *kwei*, are innumerable. The Universe is crowded with them in all its parts. A *shen*, being a part of the Yang, or the beatific half of the Universe, is a good spirit or a god, and a *kwei*, belonging to the Yin, is, as a rule, a spirit of evil, a spectre, a devil, or demon. As there is no power beyond the Tao, there is no good in the Universe but that which comes from the *shen*, no evil but that which the *kwei* cause or inflict.

We may, accordingly, say that Confucianism is a universalistic Animism, polytheistic and polydemonistic. The gods are such *shen* as animate heaven, the sun and moon, the stars, wind, rain, clouds, thunder, the earth, mountains, rivers, etc.; in particular also the *shen* of deceased men are gods. And *kwei* swarm everywhere; this is a dogma as true as the existence of the Yin, as true also as the existence of the Tao, or Order of the World. They perform in that Order the part of distributors of evil, thus exercising a dominant influence over human fate. But, since the Yang is high above the Yin, as high as heaven which belongs to it is above the earth, Heaven is the chief *shen*, or god, who rules and controls all spectres and their actions; and so theology has this great dogma, that no spirits harm men without the authorization of Heaven or its silent consent. They are, accordingly, Heaven's agents for punishing the bad; and this dogma is a principal article in the Confucian system of ethics.

1. Because the Emperor stands at the head of the realm, nay, of the whole earth, he is the head of the State religion. He acknowledges the superiority only of Heaven, whose son he is. Heaven is the natural protector of his throne and house, which would unavoidably perish if, by wicked conduct, he forfeited Heaven's favour. Heaven is the highest god that exists, there being in the Chinese system no god beyond the world, no maker of it, no Jahweh, no Allah. It bears to this hour its old classical names, *T'ien*, Heaven; *Ti*, Emperor; or *Shang-ti*, Supreme Emperor (cf. also vol. iii. p. 549 f.).

The most important sacrifice offered to this god takes place on the night of the winter-solstice, an important moment in the Order of the World, when Heaven's beneficent influence is re-born, because the Yang, or light and heat, then begins to increase after having descended to its lowest ebb. The sacrifice is presented on the so-called Round Eminence (*yen k'iu*), also known as the Altar of Heaven (*T'ien tan*), which stands to the south of the Tatar city. This altar, quite open to the sky, is composed of three circular marble terraces of different diameters, placed one above the other, all provided with marble balustrades, and accessible by staircases which exactly face the four chief points of the compass. At the northern and eastern sides there are buildings for various purposes. A wide area, partly a park with gigantic trees, and surrounded by high walls, lies around this altar, which is the largest in the world. On the longest night of the year,

the Emperor proceeds to the altar, escorted by princes, grandees, officers, and troops, to the number of many hundreds. Everybody is in the richest ceremonial dress. The spectacle, illuminated by the scanty light of large torches, is most imposing. Every magnate, minister, and mandarin has his assigned place on the altar and its terraces, or on the marble pavement which surrounds it. On the upper terrace, a large tablet, inscribed 'Imperial Heaven, Supreme Emperor,' stands in a shrine on the north side, and faces due south. In two rows, facing east and west, are shrines which contain tablets of the ancestors of the Emperor. Before each tablet a variety of sacrificial food is placed—soup, meat, fish, dates, chest-nuts, rice, vegetables, spirits, etc., all conformably to ancient classical precedent and tradition. On the second terrace are tablets for the spirits of the sun, the moon, the Great Bear, the five planets, the twenty-eight principal constellations, and the host of stars; furthermore, there are those of the winds, clouds, rain, and thunder. Before these tablets are dishes and baskets with sacrificial articles. Cows, goats, and swine have been slaughtered for all those offerings, and, while the ceremonies are proceeding, a bullock or heifer is burning on a pyre as a special offering to high heaven. The Emperor, who has purified himself for the solemnity by fasting, is led up the altar by the southern flight of steps, which on both sides is crowded by dignitaries. Directors of the ceremonies guide him, and loudly proclaim every action or rite which he has to perform. The spirit of Heaven is invited, by means of a hymn accompanied by sacred music, to descend and settle in the tablet. Before this tablet, and subsequently before those of his ancestors, the Emperor offers incense, jade, silk, broth, and rice-spirits. He humbly kneels, and knocks his forehead against the pavement several times. A grandee reads a statutory prayer in a loud voice, and several officials offer incense, silk, and spirits to the tablets of the sun, moon, stars, clouds, rain, wind, and thunder. Finally, the sacrificial gifts are carried away, thrown into furnaces, and burned.

This Imperial sacrifice is probably the most pompous worship which ever has been paid on this earth to a divinity of Nature. It is attended by a large body of musicians and religious dancers, performing at every important moment.

In the same vast altar-park there is, to the north of the Round Eminence, another altar of the same form, but of smaller dimensions, bearing a large circular building with dome or cupola, called *ki nien tien*, or 'temple where prayers are sent up for a good year,' that is to say, for an abundant harvest throughout the Empire. Here a sacrifice is offered by the Emperor to Heaven and to his ancestors, in the first decade of the first month of the year; while, to obtain seasonable rains for the crops, a sacrifice is presented in the same building, in the first month of the summer, to the same tablets, as also to those of rain, thunder, clouds, and winds. This ceremony is repeated if rains do not fall in due time or sufficiently copiously. These sacrifices are mostly performed by princes or ministers, as proxies of the Son of Heaven.

The ritual for all the State sacrifices is similar to that for Heaven, but the pomp and offerings vary with the rank of the gods.

Next to Heaven in the series of State divinities is Earth, called officially *Hu-t'u*, or 'Empress Earth,' whose square altar of marble, open to the sky, is situated in a vast walled park, outside the northern wall of Peking. Here a solemn sacrifice is offered annually by the Emperor, or his proxy, on the day of the summer solstice, to the tablet

of Earth and to those of the Imperial ancestors, and, on the second terrace, to the tablets of the chief mountains, rivers, and seas.

From the fact that the Emperor, in performing the sacrifices to Heaven and Earth, allots a second place to the tablets of his ancestors, it follows that they stand, in the system of the State religion, next to Heaven and Earth in rank. Solemn sacrifices are offered to them by the Emperor in the *Tai miao*, or 'Grand Temple,' on the south-east of the Palace grounds, and at the mausolea, in temples erected there, one in front of each grave-mound.

Next in rank to the Imperial ancestors in the pantheon of the State are the *Sie-Tsih*, or gods of the ground, and of millet or corn. They have their large open altar in a park to the west of the Grand Temple. The Emperor sacrifices there in spring and autumn, or sends a proxy to perform this high-priestly duty.

2. The above are the so-called *Ta-sze*, or 'Great Sacrifices.' Next in rank are those of the second category, the *Chung-sze*, or 'Middle Sacrifices.' These are presented at various altars or temples erected in or about Peking. The Sun-god has his large walled park, with round, open altar-terrace, outside the main east gate, to the region of sunrise; the Moon-goddess has her square altar outside the west gate, because the west is the region in which the new moon is born. Sacrifices are offered there to the sun by the Emperor or his proxy, at the astronomical mid-spring, when the sun conquers darkness; the Moon receives her sacrifice on the day of mid-autumn,—autumn being, in China's natural philosophy, associated with the west, where the new moonlight is born.

The other State-gods of this Middle Class are the famous men of fabulous antiquity who introduced the Tao, or Order of the Universe, among men, thus conferring on them the blessings of civilization, learning, and ethics. They may be enumerated as follows:—

(1) *Shen Nung*, the 'divine husbandman,' the Emperor (28th cent. B.C.) who taught people husbandry. He is worshipped by the Emperor, or his proxy, with a sacrifice on an auspicious day in the second month of the spring, when the works of husbandry are supposed to begin, this rite being performed on an open square altar in a walled park, situated west of the great Altar of Heaven.

(2) *Sien-ts'an*, or 'the first breeder of silkworms,' supposed to have been the wife of the Emperor Hwang (27th cent. B.C.). In the first month of spring, the Empress, followed by a great train of court-ladies, presents a sacrifice to her on an altar in the park of the Palace.

(3) 188 Imperial and princely rulers of the past. The five Emperors of the oldest mythical period receive special sacrificial worship in a temple in the Palace, viz. Fuh Hi, Shen Nung, Hwang-ti, Yao, and Shun, together with the founders of the house of Cheu, and Confucius.

(4) Confucius. He is worshipped together with his nearest ancestors, and over seventy earlier and later exponents of his doctrine and school, all of whom have tablets in his temples throughout the Empire.

(5) State deities also are the men and women who, in the course of the centuries, have been distinguished for Confucian virtue and learning. Four temples are built for them near every Confucius temple.

(6) The *T'ien Shen*, or 'deities of the sky,' that is to say, of the clouds, the rain, the wind, and thunder.

(7) The *T'ü-ki*, or 'earth-gods,' are the ten principal mountains of the Empire, besides five hills and ranges of hills which dominate the site of the

mausolea of the present dynasty; further, the four seas or oceans at the four sides of the Empire or of the earth, and the four main rivers of China, viz. the Hwang-ho, the Yang-tze, the Hwai, and the Tsi; and, finally, the mountains and streams in the neighbourhood of Peking, and various others within the Empire.

(8) Next comes *T'ai-sui*, or 'the Great Year,' the planet Jupiter, whose path in the heavens governs the arrangement of the almanac which is annually published by Imperial authority, and gives the various days considered suitable for the transaction of the various business of life. This god thus rules the Tao, or revolution of the Universe, and consequently the Tao of human life, which, in order to bestow happiness and prosperity, must fit in with the Universal Tao, or course of Time.

3. The third section of the Confucian State religion embraces the *Kün-sze*, or 'Collective Sacrifices.' These are all offered by mandarins to the gods in the following lists: (1) the *Sien-i*, or 'physicians of the past,' patriarchs of the art of promoting and preserving human health: Fuh Hi, Shen Nung, and Hwang-ti; (2) *Kwan-yü*, the war-god of the present dynasty, a great hero of the 2nd and 3rd cents. A.D.; (3) *Wen-ch'ang*, a star in the Great Bear, the patron of the classical studies on which is based the selection of State officials, who by their rule maintain the Tao among men; (4) *Peh-kih kiün*, 'the ruler of the north pole'; (5) *Huo shen*, 'the god of fire'; (6) *Pao-shen*, 'the cannon-gods'; (7) *Ch'ing-hwang shen*, 'gods of the walls and moats,' that is to say, the patron divinities of walled cities and forts throughout the Empire; (8) *Tung-yoh shen*, the 'god of the Eastern Mountain,' i.e. the Thaisan in Shan-tung; (9) four *Lung*, or dragons, gods of water and rain, for whom temples exist in the environs of Peking, apparently for the management and regulation of the *fung-shui* of the city and the Imperial palace; (10) *Ma Tsu-p'o*, the goddess of the ocean and water; (11) *Hu-t'u-shen*, or 'god of the ground'; and *Sze-kung shen*, the patron of architecture, to each of whom, before any building works are undertaken, sacrifices are offered on altars erected on the site of the building; (12) *Yao shen*, 'the gods of the porcelain kilns'; (13) *Men shen*, the gods of certain Palace doors and gates of Peking; and (14) *Ts'ang-shen*, 'the gods of the store-houses' of Peking and Tung-chow.

Many of these State sacrifices are also offered by the authorities throughout the provinces, on altars or in temples which have been built for this purpose in the chief city of each province, department, or district—namely, those of the gods of the ground and of millet; those of Shen Nung, Confucius, and the gods of clouds, rain, wind, and thunder; those of the mountains and rivers in the country; those of the walls and moats of the city; and those of Kwan-yü. In Peking, as in the provinces, there are, moreover, temples, built with the same official design, for a great number of historical persons who have rendered services to the dynasties and the people. They have, on that account, received titles of honour from the Emperors, and have their special temples in the places where they lived and worked. There are also similar temples for former wise and faithful princes, nobles, and statesmen; for men who have sacrificed their lives in the service of the dynasty, etc.

4. Lastly, three sacrifices are prescribed to be offered annually by the authorities all through the Empire for the repose and refreshment of the souls of the departed in general.

All the State sacrifices take place either on certain fixed days of the calendar, or on days which are indicated as favourable and felicitous.

This synopsis of the State pantheon shows that the Confucian religion is a mixture of Nature-worship and worship of the dead. It is the rule to represent the gods who are believed to have lived as men, by images in human form, and the others by tablets inscribed with their principal divine titles. Images as well as tablets are inhabited by the spirits, especially when, at sacrifices, these have been formally prayed to or summoned, with or without music, to descend into those objects. Confucian worship and sacrifice, then, being actually addressed to animate images, is idolatry. Certainly it is quite inconsistent with the Chinese spirit to think of such tablets and images as mere wood and paint.

The religion of the State, performed by the Son of Heaven as high priest, and by ministers and mandarins all through the Empire as his proxies, is thoroughly ritualistic. Since, during the Han dynasty, under the auspices of Emperors and by the care of illustrious scholars, the classics were rescued from oblivion, an elaborate ritual, based on those classics, was at the same time called into existence in the form of rescripts, regulating in minutest detail every point in the State religion. Subsequent dynasties framed their institutions in general, and their ritual of the State religion in particular, on those of the House of Han, though with modifications and additions of more or less importance. Instances of eminent statesmen presenting memorials to the throne, in which they criticized rituals and proposed corrections, abound in the historical works; and these instances prove that formal codifications of rites have always been in existence since the reign of the House of Han.

These codifications have for the most part been preserved in the dynastic Histories, but it is not possible now to decide whether they are given in their entirety or in an abridged shape. None of them equals in elaboration that of the Khai-yuen period (713-741). This vast compendium of statutory rites of the Tang dynasty is a systematic compilation of nearly all the ceremonial usages mentioned in the classical books, with a few additional elements borrowed from the House of Han. It was drawn up by the statesman Siao Sung, assisted, as we may admit, by a body of officials and scholars, and it has been the medium through which the most ancient religious institutions of China have held their place as standard-rites of the State religion to this day. The *Ta Ts'ing houi tien*, or Collective Statutes of the Great House of Ts'ing, are moulded on it. It is also the prototype of the *Ta Ts'ing tung li*, or General Rituals of the Great Ts'ing dynasty, which is an official codification of the rites proper for the use of the nation and its rulers. Therefore, whoever is able to read and interpret Chinese texts has it in his power to study and describe in its details the State religion from official printed documents.

The conclusion is, of course, ready to hand, that the State religion is instituted for no other purpose than to influence the Universe by the worship of gods who constitute the Yang, in order that happiness may be ensured to the Emperor and his house and to his people. It is, in other words, a religion purporting to secure the good working of the Tao, or Universal Order, thus naturally to frustrate the work of the Yin and its spectres. Thus the exercise of that religion is reasonably the highest duty of rulers, whom that Tao has assigned to secure that good working among men. The people are not allowed to take part in it, except by erecting the State temples and altars, and keeping them in good repair at their own cost and by their own labour. The only religion allowed to them by the State is

the worship of their own ancestors, which is classical and therefore Confucian.

Yet, as everywhere in the world, religious instincts in China go their own way, in spite of official rescripts. Not content with the worship of their ancestors, the people freely indulge in the worship of Confucian deities. In villages and in other localities they have temples for the worship of mountains, streams, rocks, and the like. The god of the earth in particular enjoys much veneration; in all quarters the people have erected temples or chapels and shrines to him; they regard and worship him as the god of wealth, and the patron divinity of agriculture. And everywhere the people resort to certain State temples in the chief towns of provinces, departments, and districts, and worship the idols there after their own fashion.

This popular worship of Confucian divinities being practised all through the Empire, the images of gods exist by tens of thousands, the temples by thousands. Almost every temple has its idol gods which are co-ordinate or subordinate in rank to the chief god, so that China fully deserves to be called the most idolatrous country in the world. This religion is also practised in private houses, many of which have altars for gods and goddesses, to whom, on fixed days, sacrifices are annually presented.

The worship of ancestors is mentioned in the ancient classics so often, and in such detail, that we cannot doubt it was also the core of the ancient religion. It has assumed the form of a most elaborate system of disposal of the dead. Washing and dressing of corpses, confining and burial, and grave-building are matters of the greatest solicitude. The erection of large tumuli for princes and nobles was always the rule in China, and the mansolea built for emperors and princes were magnificent structures. Those of the present ruling dynasty certainly belong to the greatest and grandest which the hand of man ever produced.

The ancestral cult is regulated in the State ritual by special rescripts for all classes of the Chinese people. Many a well-to-do family possesses its ancestral temple, where the soul tablets of its older generations are preserved, and where sacrifices are offered to them. In the dwelling-house a part of the altar is set apart for the worship of the latest generations. A temple in front of the altar serves for the offerings, which are presented by the family on various fixed days in the calendar, with the father or grandfather at their head. Besides, there is an altar on each grave, which has been built with some outlay, and the mansolea of the great of this earth have even a temple, containing an altar with the tablet of the soul which rests with the body in the grave. In the first months and years after the burial, certain sacrifices are offered on the grave; later on there is one sacrifice in every year, in spring, in the *Ts'ing ming* season, reserved for visits to the family tombs, and for cleaning and repairing them. Of course the tombs are visited on many other occasions (cf., further, art. COM-MUNION WITH THE DEAD [Chinese]).

No doubt ancestor-worship has some value as an ethical element. The punishing hand of the forefathers is always present on the house-altar and in the temple of the family, and will deter many a son or daughter from evil. Ancestor-worship strengthens the ties of family life, as it supplies the descendants with a rallying point in the common ancestral altar. It thus fosters a spirit of mutual help in the emergencies of life, and it has exercised a powerful influence upon Chinese family life and social institutions.

LITERATURE.—See end of next article.

J. J. M. DE GROOT.

CONFUCIUS.—The system which is known in the West as Confucianism is described in China as *Jü-kiao*, or 'School of the Learned,' and professes to conserve the teachings of K'ung Fu-tsu, the philosopher Kung, whose name is familiar to Westerners under the Latinized form of Confucius. *Jü-kiao* represents orthodoxy in China, all other systems being nominally heterodox, though Taoism and Buddhism have, as a result of long association, been popularly admitted to a place among the 'three Schools.' Buddhism is, of course, exotic in its origin, but Taoism is based upon the same ancient materials as Confucius requisitioned. Lao-tse, or Laocius, to whom is attributed the system known as *Tao-kiao*, or 'School of the Way,' commonly known as 'Taoism,' was a strenuous reformer, who boldly applied the teachings which he discovered in the ancient Chinese records to the amelioration of existing conditions, making non-interference and the suppression of personal ambition the keystones of his system. Confucius made no profession of original thought, and confessed himself to be but a transmitter of the manners and maxims of the 'good old times.' What he attempted to do was to apply to the degenerate days in which he lived the best elements of the accumulated wisdom and experience of the past, which he found locked up in the ancient records, and reflected in the time-honoured ceremonials. These he endeavoured to elucidate and emphasize, not only *viva voce* to the ardent disciples who flocked to him from all quarters, and to the feudal lords whom he interviewed in the course of his wanderings from State to State, but also by carefully prepared and annotated editions of the early writings for the benefit of posterity. His highest hope was to lead the rulers of the feudal kingdoms, by easy stages, to the gentler manners of the past, and thus to initiate a reign of peace. In order to appreciate the standpoint of Confucius and his contemporary Laocius, it is necessary that the political circumstances of their times should be carefully considered.

1. The times in which Confucius lived.—The Chow dynasty, established by King Wu (1122 B.C.), was in a declining condition at the time when Confucius was born, and the central authority, which gave its name to the Central State, or 'Middle Kingdom,' as the Chinese call their Empire even to-day, was powerless to enforce its dicta upon the turbulent States which were its nominal vassals. Constant war, with its dreadful concomitants, was the 'sign of the times.' The soldier was in the ascendant, the schoolmaster unemployed. Agriculture languished for lack of manual labour, and plague, pestilence, and famine wrought untold horrors upon the feudal kingdoms. In the midst of scenes such as these a son was born (551 B.C.) to an ancient officer of the K'ung family, who had distinguished himself by commanding physique and martial powers in the wars of his times, and who was then living a retired life in the State of Lu, situated in the modern province of Shantung. The infant was given the name of K'iu = 'a hillock' (in allusion to certain circumstances of his birth and appearance), with the alternative Chung-Ni, or 'second Mount Ni,' there being another 'Mount Ni' in the person of an elder step-brother, the offspring of a concubine.

The life of K'ung K'iu, or, as we know him, Confucius, may be divided into 5 periods: (1) 551-531, covering his early boyhood, his marriage at the age of 19, and his appointment to the office of keeper of the State granaries, and, a year later, to that of guardian of the common lands; (2) 530-501, when he devoted himself to the work of teaching, and gradually collected around him an enthusiastic band of disciples, at the same

time completing his own education and labouring at a new edition of the ancient Odes and Historical Records; (3) 500-496, when, for a short period, he acted as magistrate in his native State, and, as a result of the signal success of his methods, was promoted to the office of Minister of Works, and, subsequently, to that of Minister of Justice, resigning his office only when he found his counsels unavailing to turn the reigning Duke from the evil ways he had adopted; (4) 496-483, when he wandered over a large number of the feudal States, vainly endeavouring to induce their rulers to reform their manners and return to the ancient ways; and (5) 483-478, the last period of his life, spent in his native State, during which he devoted himself to the completion of his literary labours in connexion with the ancient records, and to the production of his one original work, the *Ch'un-t'zu* = 'Spring and Autumn' annals.

2. The Confucian library.—The materials upon which the system known as Confucianism is based are to be found in the various *King*, or *Canons*, and the *Shu*, or *Writings*, which are attributed to Confucius and his disciples. These have been variously tabulated at different periods of history, but are nowadays generally described as the 'Four *Shu*' and the 'Five *King*' (see preceding art., p. 12^b).

3. The doctrines of Confucius.—When the condition of the feudal kingdoms in Confucius' time is borne in mind, it will be seen to follow naturally that the great object towards which he directed his efforts was the tranquillizing of the Empire. The possibility of effecting this aim he demonstrated in three ways: (1) by his redactions of the ancient historical records and poetry, showing, to the present and to all future ages, the method by which the great rulers of antiquity, Yao, Shun, and others, had succeeded in controlling and directing the 'black-haired people'; (2) by his personal instructions and counsels to the various nobles whom he interviewed in the course of his journeyings through the feudal kingdoms, and to the ardent students who delighted to sit at his feet; and (3) by his own example in the small spheres which were entrusted to him, and where his methods are represented as being entirely successful. This, indeed, was the cardinal principle which he so frequently emphasized, viz., that, if Sage and Sovereign could be combined in one person, the difficulties of empire would disappear. The force of example was the great motive power he sought to apply to every exigency; if the lord paramount would but imitate the ancient worthies, the various princes would be excited to emulation, and thus, through every grade of society, the process would be continued until the whole nation was reformed. The stages by which this process was to be completed are thus described in the 'Great Learning' ['Great Study']:

'The ancients who wished to illustrate illustrious virtue throughout the Empire first ordered well their own States. Wishing to order well their own States, they first regulated their families. Wishing to regulate their families, they first cultivated their persons. Wishing to cultivate their persons, they first rectified their hearts. Wishing to rectify their hearts, they first sought to be sincere in their thoughts. Wishing to be sincere in their thoughts, they first extended to the utmost their knowledge. Such extension of knowledge lay in the investigation of things. Things being investigated, knowledge became complete. Their knowledge being complete, their thoughts were sincere. Their thoughts being sincere, their hearts were thus rectified. Their hearts being rectified, their persons were cultivated. Their persons being cultivated, their families were regulated. Their families being regulated, their States were rightly governed. Their States being rightly governed, the whole Empire was made tranquil and happy.'

As to extraneous aids to the effecting of this purpose, Confucius could only propose the illustrious examples of antiquity, which he delighted in discovering and popularizing; he could promise no assistance from above. Heaven might commis-

sion men to perform certain tasks, and protect them whilst in the execution of them, but, for the carrying out of those commissions, man must depend upon his own unaided abilities, upon that 'nature,' predisposed towards goodness, which Heaven had conferred on him, and to which he himself must allow its full development, in harmony with the observed course of Nature and the examples of the great sages of the past. The gifts of nature vary in different individuals. There are four great classes of mankind: (1) those who possess intuitive knowledge; (2) those whose natural abilities enable them to learn with ease; (3) those who, though naturally dull, are able by earnest application to become learned; and (4) those who decline the attempt to acquire knowledge because of natural incapacity and indifference. Yet, in spite of the diversities of natural gifts, it is possible for every man, by means of self-culture, to reach the highest development of which his nature is capable; and nothing less than this should satisfy the aspirant. 'Rest in the highest,' or 'Cease only when the acme is reached,' is the key-note of the 'Great Learning.' Confucius himself aimed high; he did not expend his strength in the interests of common men, but concentrated his efforts on the education of rulers, either those who were already in office or those who were likely to attain to power, believing that, if he should succeed in implanting his opinions amongst the highest classes, the regeneration of the masses would follow as a matter of course.

There is practically nothing of a religious nature in Confucianism pure and simple. Religion, in the strict sense, existed in China long before his day, and survives even to the present in the sacrifice to Shang-ti, described on p. 13, which the Emperor offers as the representative of the myriad people. Confucius seems to have directed all his energies to the promotion of self-culture, adopting an attitude of strict reserve on the question of religion. He certainly countenanced the religious observances of his time so far as they were consonant with the ancient rites, and did not openly rebuke the extravagances which existed, as, for instance, the burial alive of human victims, which was not unknown in his day. Perhaps in this matter he was guided by a principle which he enunciated, viz., 'When good government prevails in a State, language may be lofty and bold, and actions the same. When bad government prevails, the actions may be lofty and bold, but the language may be with some reserve.' It may be that he had but little sympathy with the religious decadence of his own times and the abuses which were then prevalent, but he evidently considered it no part of his mission to attack them in any iconoclastic spirit, and he preferred to adopt an attitude of strict reticence towards the question of religion, recommending the observance of the accustomed ritual, but deprecating a too close inquiry into the spiritual phenomena. He evidently regarded the offering of sacrifice as of great subjective value, but professed ignorance of the meaning of the great sacrifice to Shang-ti. He certainly added nothing to the contemporary knowledge of God or of spirits; he had nothing to say with regard to death or the hereafter; the 'present distress' was a sufficient occasion for the exercise of his disciplinary methods; the present life was the only theatre in which he sought to inspire men to act their part. The existence of the Empire was imperilled through the unceasing struggles of the feudal States, and his great endeavour was to induce their several rulers to suppress their overweening ambitions, and to cultivate that moderation, that harmonious balance, which is emphasized in the 'Doctrine of the Mean'; so that the various

parts of the social organism might work together smoothly and with mutual profit, like a perfectly fitted and well-oiled machine, each State furnishing its quota of Imperial service, each ruler and officer occupying his appointed place, and all friction being avoided, so that the Middle Kingdom might become once more a model to the barbarians on its frontiers, and a power which no alien combination might venture to impugn.

Confucius was, above all things, a political reformer, but one who founded his political principles upon moral bases. He wished the harmony of Nature to be reflected in the world of men, and hence the very first essential in his system was the cultivation of knowledge, especially natural science. But, by a strange irony of fate, the chapter of the 'Great Learning' which was supposed to deal with this fundamental question has been lost, and what remains is occupied with the lesser details which appear as branches detached from the tree. The abortive attempts of later philosophers to deal with the phenomena of Nature are described in art. COSMOGONY AND COSMOLOGY (Chinese).

The steps in the process of self-culture have already been enumerated; the completion of knowledge leads to sincerity in thought, for the reason that the scholar who has thus attained enlightenment can no longer be deceived by outward appearances or inward imaginings. Being thus freed from the deceptive influences of passion, emotion, fear, etc., he is able to rectify his heart, i.e. to restrain wayward thoughts, feelings, and tendencies; as a consequence, his outward actions are conformed to the highest ideals of propriety, i.e. the cultivation of the person; and, from this point, he becomes a centre of influence which extends to his family, his State, etc., so that the whole Empire is made tranquil and happy.

This may be said to be the Confucian gospel in a word, and it will be evident that it is based upon the conviction that man's nature is originally good, and merely requires cultivation on right lines to bring it to its highest perfection. Confucius admitted that 'by nature men are nearly alike; by practice they get to be wide apart.' It follows, therefore, that what is prescribed for rulers should also apply, in a measure, to the mass of the people; they may not have the opportunity of pursuing their studies to the same degree, but all must share in the process of self-culture, and thus bear a part in the tranquillizing of the Empire, which is to be brought about by the regulation of the individual State, family, and person.

In the family and social relations the recognition of a common brotherhood is to be the inspiration and obligation of all corporate life. 'Within the four seas all are brethren,' and this is the idea which underlies (1) the principle of 'Benevolence,' which is the first of the five cardinal virtues. Upon this follow: (2) 'Uprightness of Mind,' i.e. the exhibition of moral excellence, as the word seems to denote; (3) 'Propriety in Demeanour,' the observance of convention, including the orthodoxies of religious worship, etc.; (4) 'Practical Sagacity,' or 'Knowledge of Affairs'; and (5) 'Good Faith.' The whole may be combined in the word which may serve as a rule of life—Reciprocity or Considerateness, i.e. 'What you do not want done to yourself, do not do to others.' These were to be regarded as the special characteristics of rulers; but the five cardinal relations, upon which the whole social structure is based, were required of all classes, and were defined as those existing between sovereign and subject, father and son, elder brother and younger, husband and wife, friend and friend. Filial conduct and its correlate of fraternal subordination may be described as the corner-stones of the system, for upon them depend

not only self-culture, but also the regulation of the family and the government of the State. It may have been for this reason that Confucius was willing to overlook the extravagant attention paid to ancestor-worship, because it served to emphasize his own doctrines of Divine right and the paramount importance of acquiescence in the prevailing order. He anticipates St. Paul in saying, 'Let every soul be in subjection to the higher powers . . . the powers that be are ordained of God' (Ro 13). The appointment of a new ruler is described as the 'receiving of Heaven's decree'; every subject of the State must, therefore, accept his ordered place, and every member of the family, in like manner, must fulfil his part with loyal submission. There must be 'no contrariety' in the home or in the State; no trespass beyond the appointed limits, no disruption of the social harmonies. This is the teaching of the 'Doctrine of the Mean,' which follows on the 'Great Learning'; i.e. the avoidance of all *eccentricity*, or departure from the normal course as exemplified in Nature. Equilibrium and Harmony are the two essentials to happy social relations and a contented empire, Equilibrium being the negative side when the mind is not aroused by feeling or emotion, and Harmony the positive side when feeling is excited but acts in due accord with its environment.

Amongst the factors which conduce towards correctness of conduct are included Poetry, which inspires to the attempting of noble deeds; Ceremonials, by which the habit of correct action is established; Music, which, if orthodox, produces an atmosphere congenial to the cultivation of virtue, and gives a finish to character; and Archery, which is recommended as exercising a moral discipline.

From the above it may be seen how little of a transcendental character there is in the teachings of Confucius. The process of self-culture must proceed independently of any spiritual aid, except in so far as the conventional rites of sacrifice may be considered as of such a nature—a supposition which appears to be negated by the fact that to Confucius they were evidently of little objective value.

The doctrines thus enumerated find illustration in the *Analects*, or Counsels, of Confucius—a collection of acts and sayings attributed to him by his immediate disciples; and they are represented in concrete form in the person of the 'princely man,' or ideal scholar, who is constantly held up as a standard of imitation, and a criterion of conduct—an ideal which, by the way, Confucius himself disclaimed having attained.

The principles of Confucius found further exposition in the writings of Mencius (Mêng k'o, 372-289 B.C.), who is accorded the title of 'Second Sage,' or the next in order of dignity to Confucius himself. The work which bears his name enlarges on the topics of Benevolence and Righteousness, which formed the subject of his discussions with the rulers of the several States he visited and the disciples he gathered. But the most popular exponent of Confucianism was Chu Hsi, or Chucius (A.D. 1130-1200), whose commentaries on the classical books are now generally accepted as the highest standard of orthodoxy. Like Confucius, he proceeds upon the assumption that human nature is originally good, but applies his speculations to the hitherto unsolved problem of the origin of evil. So great has been the influence of Chucius upon modern thought in China, that 'Chucianism' might be substituted for 'Confucianism' as descriptive of the later development of the tenets of Confucius and his followers.

4. Secret of the success of Confucianism.—In view of what has been stated above as to the

absence of religious motive in Confucianism, it may be asked how the system which is thus denominated attained its present popularity and general acceptance. As a matter of fact, Confucius utterly failed to convince his generation or the value of the methods he so ardently advocated. Outside of the circle of those who formed his school of disciples he appears to have had few admirers. No ruler of his day was prepared to put his opinions to the test; only in the small sphere which he himself occupied, for a short period, in his own State of Lu, was he able to demonstrate their practical character. His personal influence over his immediate followers must have been immense, though his family life was unfortunate; but, when his despairing complaint of the non-appreciation of his doctrines and non-recognition of his character had been silenced by death, and after his favourite disciples had passed away, it seemed as if the very memory of the sage was about to perish. Many years elapsed before any national attempt to commemorate him was initiated, but succeeding ages and dynasties have vied with one another in elevating him in the scale of posthumous dignities, until, at the beginning of the present century, he was at last raised to the pre-eminent position of 'Co-assessor with Heaven and Earth.'

No doubt the intense patriotism of Confucius was a feature which won the hearts of those who delighted to learn from him; everything was subordinated to the well-being of the distracted Empire, and to this end he was prepared to sacrifice his personal ambitions, and to subject himself to ignominy and even physical danger. His doctrine of the Divine right of virtuous sovereigns, even though usurpers, was entirely congenial to the founders of later dynasties, such as the Han line of rulers, who were anxious to conciliate the student classes that had suffered so severely under the regime of the short-lived Ts'ing dynasty, and who sought to find justification for their claim to the supreme authority in the literature which their predecessors so greatly feared. The masses were well content with the abolition of the severe measures with which the first Empire (the Ts'ing) had familiarized them, and were prepared to accept the new conditions. Hence it was the policy of the new rulers and the scholars to come to an understanding, and an active endeavour was made to restore the Confucian literature which survived the fires of Ts'ing, for such writings were now almost the sole survivors of the ancient records, and were regarded with a new interest and an ever growing veneration. The course of time served only to deepen the impression, though Confucianism did not succeed in obtaining exclusive recognition until long ages of conflict with Taoism and Buddhism had passed. The masses, too, were predisposed in favour of the Confucian system, not only because of its intrinsic excellence, but because it advocated the rights of the people, and aimed at individual happiness as well as at the larger issue of national tranquillity. Hence it was to the interest of all classes—the newly established rulers, the scholarly classes, and the majority of the people—that the system of Confucius should be accepted as a moral code, even though the feudal conditions to which it owed its birth, and for the amelioration of which it had been designed, had long passed away. The establishment of the Hanlin academy and of the system of literary examinations, during the T'ang dynasty (A.D. 755), had the effect of encouraging the study of the Confucian classics amongst all sections of society, since a complete knowledge of the text was required by those who presented themselves for examination with a view to official employment.

5. Defects of Confucianism.—The failure of

Confucianism to satisfy the cravings of man's spiritual nature, its attitude of reserve on questions affecting the unseen world, its silence with regard to sin and its remedy, and its equivocal references to the possibility and value of prayer—all these have had the effect of paving the way for the introduction of Buddhism, with its doctrines of an All-merciful One, its spiritual aids and consolations, its plans of salvation and theory of a 'Western Paradise,' and its recognition of woman's place in its propaganda (cf. art. CHINA [Buddhism in]). Here also is offered a field where Christianity, when once relieved of the prejudice and suspicion which now encompass it, will find a place and a welcome, and the true Sage whom Confucius dimly outlined, the true 'Coming One' of whom the Buddha prophesied, will be recognized in Jesus Christ, in whom alone the highest definition of brotherhood is exhibited, and in whom alone fatherhood, in the ultimate sense, is pronounced—the Fatherhood of God, whose offspring is not limited to the confines of the four seas, but embraces 'all nations of men' who 'dwell on all the face of the earth' (Ac 17²⁶); in whom also is found that motive power which can compensate for the weaknesses and disabilities of a corrupted human nature, and can enable men to attain to the highest perfection—a standard far transcending that which Confucius had in mind when he enunciated his great axiom, 'Rest in the highest excellence.'¹

W. GILBERT WALSH.

CONGREGATIONALISM.—I. The name.—The term 'Congregational' came into general use about the beginning of the great Civil War in England, and contemporaneously in New England, as descriptive of a form of Church polity in which the local congregation is the unit of organization and the source of ecclesiastical government (e.g. Richard Mather, *An Apologie*, London, 1643 [written 1639], p. 6, and generally in the literature of the succeeding years). From the last decade of the 16th cent. its adherents had been nick-named 'Brownists,' from Robert Browne (see BROWNISM). Against this name they protested (e.g. *A True Confession*, Amsterdam, 1596, title; *An Apologetical Narration*, London, 1643, p. 24). They were also called 'Separatists,' because of their withdrawal from the English Establishment. The title 'Independency' was attached to the system at about the same time as that of 'Congregationalism' (in 1642), and, though an object of early protest (e.g. *An Apologetical Narration*, p. 23), long remained its usual designation in Great Britain, though it is now generally supplanted by 'Congregationalism.' In America it was never in use. 'Congregationalist,' as a title of the adherents of the polity, is encountered in 1692 (C. Mather, *Blessed Unions*, Boston); and 'Congregationalism,' in 1716 (I. Mather, *Disquisi-*

tion on Ecclesiastical Councils, Boston, p. vi). As a polity, Congregationalism is much more wide-spread than the Congregational name. The Baptists, the Plymouth Brethren, the Disciples of Christ, the Unitarians of the United States, as well as certain sections of the Adventists and of the Lutherans, are congregationally governed. In this article, however, only that group of Churches to which the name 'Congregational' is attached by historic, popular, and official usage, will be considered.

2. Fundamental principles.—Early Congregationalism was a product of the devotion of the Reformation epoch to the Bible. That period exalted the Bible as the only rule of faith and practice. If the Scriptures teach fully all that it is requisite for men to know or believe, and all duties of the Christian life, it was but logical to raise the question whether they did not also contain a complete and authoritative guide as to the nature, organization, officering and administration of the Christian Church. It was the conviction that the Bible contains such a pattern that gave rise to Congregationalism.

'The partes of Church-Government are all of them exactly described in the word of God . . . soe that it is not left in the power of men, officers, Churches, or any state in the world to add, or diminish, or alter any thing in the least measure therein' (*Cambridge Platform*, 1648, ch. i.; see also *A True Confession*, 1596, of the London-Amsterdam Church, ch. xx.).

Examining the Scriptures, therefore, in the light of the knowledge of their age, and under a profound conviction of an inspiration which made every portion a word of God, the Congregationalists of the 16th and 17th cents. denied the existence of national or territorial Churches; and, while holding that the invisible Church 'conteyneth in it all the Elect of God that have bin, are, or shal be' (*A True Description*, Dort, 1589, p. i), affirmed that none but local associations of experiential Christians are visible Churches. Each of these Churches has Christ as its immediate and only Head. Each 'hath powre and commandement to elect and ordeine their own ministerie,' as well as 'to receive in or to cut off anie member' (*A True Confession*, chs. xxiii. and xxiv.). Each local church is therefore a completely self-governing body.

There can be no doubt that early Congregationalism felt a mystical conviction, not now characteristic of it, that Christ is in so real and true a sense the Head of each church of His disciples, and they are so one with Him by covenant, that the acts of such a church, though those of human agents, are in vital reality His acts, whether in the admittance of members, the choice of officers, or the administration of discipline.

That which distinguishes between a chance assemblage of Christian people and a church is that the members of the local congregation are united into church-estate by 'a willing covenant made with their God' and with one another (R. Browne, *A Booke which sheweth*, Middelburg, 1582, p. 3). 'A company becomes a Church, by joyning in Covenant' (R. Mather, *An Apologie*, p. 5). Yet this covenant is not necessarily formal, though it is more desirable that it be so, for 'wee conceive the substance of it is kept where there is a real agreement and consent of a company of faithful persons to meet constantly together in one congregation for the publick worship of God and their mutuall edification' (*Cambridge Platform*, ch. iv.). The only fit persons to enter into such a covenant, and hence the only proper church-members, are those of personal religious experience; but, by a comparison with the Abrahamic covenant of Gn 17, early Congregationalists argued that the children of such covenanting members were included in the parents' covenant and were themselves therefore church-members. The status of such children, when grown to maturity and not conscious of a personal religious

¹ Cf. J. Iwerach, *Is God Knowable?*, 1884, p. 112 f.

faith, was a sore puzzle to New England Congregationalism from the middle of the 17th to the end of the 18th cent., and led to the strenuous controversies known as the Half-Way Covenant discussions; but the belief of Congregationalism has always been that the true material of church-membership is to be found only in conscious and purposeful Christian discipleship.

Such a local church as has been described should have no officers but those of NT example—'pastors, teachers, elders, deacons, helpers' (*A True Confession*, ch. xix.). The 'pastor' 'hath the gift of exhorting and applying especiallie'; the 'teacher' that 'of teaching especiallie' (R. Browne, *A Booke which sheweth*, p. 32). Both preached, though the teacher gave special attention to doctrinal exposition. Both administered the sacraments. The 'ruling elder' was a disciplinary officer, reckoned to the ministry, whose 'work is to joyne with the pastor and teacher in those acts of spiritual rule which are distinct from the ministry of the word and sacraments' (*Cambridge Platform*, ch. vii.). Only in the absence of pastor and teacher could the ruling elder preach, and in no case could he administer the sacraments. All three officers, known as 'teaching' and 'ruling' elders, were chosen by the congregation they served, and, in earliest Congregationalism, were ordained by representatives of the congregation. Ordination, being considered but the recognition of a charge in a particular church, was to be repeated at each fresh entrance into office. But by the time that the *Cambridge Platform* was adopted, in 1648, custom was changing, and ordination was passing from the membership of the particular church to the hands of those already in the ministry. 'In such churches where there are no elders, and the church so desire, wee see not why imposition of hands may not be performed by the elders of other churches' (*ib.* ch. ix.). Ordinations by the membership of the local church ceased soon after the middle of the 17th century. Two other classes of officers were recognized as to be chosen by the church. Of these the more important were 'deacons,' whose work was 'to receive the offerings of the church, gifts given to the church, and to keep the treasury of the church, and therewith to serve the tables which the church is to provide for, as the Lord's table, the table of the ministers, and of such as are in necessitie' (*Cambridge Platform*, ch. vii.). Theoretically desirable were 'helpers' or 'widows' 'to minister in the church in giving attendance to the sick' (*ib.*); but, though an instance or two of their appointment may be found in early English Congregational practice, none held office in New England.

Each local church was from the first free to express its faith in its own language, and to make such tests for admittance to its membership as it chose. Congregationalists from the beginning felt, however, that churches had relations of fellowship one with another, which were generally pictured as those of sisterhood in a common family of God.

'There be synodes or meetings of sundrie churches, which are when the weaker churches seeke helpe of the stronger, for deciding or redressing of matters, or else the stronger looke to them for redresse' (R. Browne, *A Booke which sheweth*, p. 30).

Although churches be distinct, and therefore may not be confounded one with another; and equal, and therefore have not dominion one over another; yet all the churches ought to preserve church-communion one with another' (*Cambridge Platform*, ch. xv.).

The two principles of local autonomy and fellowship have always been the foci of Congregationalism, and the latter has preserved it from Independency. The principle of fellowship gave rise almost at the settlement of New England to the occasional council—a meeting of pastors and

lay delegates from such churches as the church seeking advice chooses to summon, called to give counsel in such matters as the ordination, installation, and dismissal of ministers, cases of discipline beyond the power of the local church to control, and similar ecclesiastical exigencies. Such councils have always been a feature of American Congregational practice, though not employed in Great Britain.

3. Present Congregational principles and organization.—Early Congregationalism, as thus described, has undergone much modification in detail, though its essential features still remain unaltered. Modern Congregationalism, like its prototype, still conceives of the Church as a local company of experiential Christians, autonomous, yet owing fellowship to sister churches. But it does not find, as its early leaders did, any hard and fast pattern of the Church in the Scriptures. It would emphasize the congregational as a desirable, rather than as the only rightful, polity. Congregationalism sees the merits of that polity in its democracy, its voluntarism, its capacity to develop full, rounded, Christian manhood and womanhood, its freedom, and its flexibility. The number of officers supposed by early Congregationalism to be required by Scripture proved long ago beyond the power of a small congregation to maintain. Though instances of the 'teacher' and 'ruling elder' continued late into the 18th cent., and a single example of the 'ruling elder' may be found in the 19th, most Congregational churches, on either side of the Atlantic, had before the close of the 17th cent. reduced their officers to a pastor and several deacons. These are the chief officers of a Congregational church at the present time. Of comparatively modern growth are such additional officers as a superintendent of the Sunday School, a treasurer, a choir-master, and the like. Only the pastor is now ordinarily ordained. In a few churches deaconesses have been recently introduced, and, in most, several members are chosen, usually annually, to serve with the pastor and deacons as an executive committee by which the admittance of members and other ecclesiastical business are primarily considered, though with ultimate reference, on its recommendation, to the whole body of the church.

The larger fellowship of the churches is expressed not only in the occasional councils, characteristic of the United States, of which mention has been made, but in a close-knit network of regularly recurrent meetings in which larger or smaller groups of churches are represented. Some 'Associations' came into existence in Great Britain in the time of the Commonwealth, and probably survived the vicissitudes of the Restoration; but, beginning with that of Devonshire, organized in 1785, county 'Associations' spread rapidly through England. The desire for a larger expression of fellowship found embodiment in the additional organization of a 'Union' for Scotland in 1812, and for England and Wales in 1832. The latter now meets twice a year. In the United States, the first voluntary ministerial 'Association' was formed in Cambridge, Mass., in 1690. In Connecticut, 'Consociations' of ministers and lay delegates were organized in 1709. The system of meetings representative of churches by pastors and lay delegates was not generally introduced, however, till the early years of the 19th century. It is now universal in American Congregationalism. A variety of nomenclature exists, but uniformity is now being sought, so that the local groups into which churches are confederated shall be known as 'Associations,' and the larger State-wide organizations as 'Conferences.' After preliminary gatherings representative of the Congre-

gationalism of the United States as a whole, held in Albany, N.Y., in 1852, and in Boston, Mass., in 1865, the 'National Council of the Congregational Churches of the United States' was formed in Oberlin, Ohio, in 1871, and has met triennially since. Similar organizations exist in Canada and the British colonies. In 1891, an International Council, representative of world-wide Congregationalism, met in London, and subsequent sessions were held in Boston in 1899, and in Edinburgh in 1908.

None of these representative bodies, though composed of delegates from the churches, possesses judicial or legislative authority. Their action is purely advisory; but such action, in actual practice, carries great weight. An important function discharged by the local Associations in Great Britain and America is that of certification of ministerial good-standing; and efforts are being made in America to constitute the local Association the regular ordaining body instead of the occasional council.

4. *Relation to the State.*—Original Congregationalism denied the existence of a State Church, and practised voluntarism in church maintenance and ministerial support. As a party of protest it could not do otherwise. At the same time it held, with Calvinism in general, that civil rulers ought 'to establish and mayntein by their lawes every part of God's word, his pure religion and true ministerie' (*A True Confession*, ch. xxxix.). It was natural, therefore, that wherever Congregationalism became the dominant faith, it entered into an intimacy of association with the State, not wholly justified, perhaps, by a strict construction of its principles. The political history of England afforded few such opportunities. Under Cromwell, Congregationalists enjoyed some State patronage; and, in 1658, a council of the Congregational Churches of England, the 'Savoy Synod,' met in London with Governmental approval, though not directly called by the Government, its work being a revision of the Westminster Confession and a statement of polity. From the Restoration to the present day Congregationalism has not been in a position to receive Governmental support in Great Britain, and therefore counts voluntarism among its cardinal principles.

In the New England colonies the situation was widely different. In Massachusetts the political franchise was from 1631 to 1664 confined by law to members of Congregational churches. In New Haven Colony it was similarly restricted from 1639 to 1665. Between 1638 and 1655 all the Congregational colonies of New England passed statutes basing ministerial support on universal taxation. The colonial legislatures, though maintaining the theory of ecclesiastical autonomy, were really the ultimate bodies of appeal in ecclesiastical controversies. By civil authority 'Synods' were called, composed of ministers and representatives of churches, to discuss doctrinal and administrative problems in 1637, 1646, 1662, 1679, 1708, and 1741. The Congregational churches were a real 'Establishment,' from the support of which Episcopalians were not relieved in Massachusetts and Connecticut till 1727, and Baptists and Quakers not till 1728 and 1729. This connexion with the State continued in Connecticut till 1818, and in Massachusetts till 1834. Since then, in America, Congregationalism has had purely voluntary support; but voluntarism has never been a fundamental contention in America as in Great Britain. American Congregationalists have, however, cheerfully acquiesced in the separation of Church and State characteristic of the United States.

5. *Continental antecedents.*—It is difficult to

estimate the possible influence of the more radical Continental parties of the Reformation age in the origin of Congregationalism. Their direct connexion it is impossible to demonstrate, and English Congregationalism seems far more a radical growth out of English Puritanism than any effect of Continental discussions. Nevertheless, the fact deserves notice that many of the most characteristic positions of Congregationalism were anticipated by the radicals of the Reformation age, notably the Anabaptists (see art. ANABAPTISM).

Originating in Switzerland in 1523 or 1524, and apparently arising nearly contemporaneously in other parts of the Continent, the Anabaptists were known chiefly for their rejection of infant baptism, their chiliastic hopes, their condemnation of oaths, their opposition to war, their denial to Christian disciples of the right to hold civil office, and their criticism of the Augustinian theology. Congregationalism followed them in none of these things. But they also held that the Church is made up of local congregations of experiential Christians, and that each congregation is self-governing, and is empowered in democratic fashion by the suffrages of its members to choose and ordain its own officers and administer its own discipline. They held that the Bible is the all-sufficient rule of faith and practice. In these principles Congregationalism agreed with them. Drawn mostly from the ignorant lower orders of the population, though not without a few educated leaders, the Anabaptists were severely persecuted by Catholics and Protestants alike; and, in the opinion of their opponents, the movement bore its appropriate fruitage in the frightful fanaticism in Münster in 1534-1535. The fanatical element was only a fraction of the Anabaptist party, however, and notably under the lead of Menno Simons (1492-1559) it grew in orderly fashion, especially in the Netherlands, where it obtained protection from William the Silent, and became wide-spread among the artisan classes. The terrible wars with Spain through which the Netherlands independence was achieved drove thousands of Protestant Dutch and Walloon working-men to England, where they constituted a not inconsiderable element in the population of London, and more than half the inhabitants of Norwich—cities intimately identified with the beginnings of Congregationalism—at the very time when Congregationalism had its origin. It is not probable that any large portion of the Netherlands exiles were Anabaptists, but there were Anabaptists among them; and it is not impossible that some more or less unconscious infiltration of Anabaptist ideas may have prepared the way for Congregationalism. Of this, however, there is no direct proof, though the similarity between some of the principles of the Anabaptists and those of the Congregationalists makes the question of a connexion an interesting problem.

6. *History.*—The beginnings of Congregationalism, so far as they can be definitely traced, were associated with Puritanism, of which it was the most radical expression. The form of the Church caused relatively little discussion in the early years of the English Reformation, and, when discussion arose, it was forced by practical rather than by theoretical considerations. England presented a most difficult problem at the beginning of the reign of Elizabeth. A clergy and a population, a great proportion of whom, while eager to maintain England for Englishmen, were averse to any considerable doctrinal changes, had accepted with outward conformity the restoration of a uniform service in the English tongue, and admitted the royal supremacy over the Church.

From a Governmental point of view it was eminently wise to make the transition from Roman Catholicism as easy as possible, and to keep as many of the ancient clergy in office as would acquiesce in the new institutions, without inquiring too minutely into their spiritual fitness. From the religious standpoint, however, such a course was extremely distasteful, especially to those more earnest Protestants who, like many who had gone into exile under Queen Mary, had drawn their ideals from Geneva. These men desired the abolition of such vestments and ceremonies as seemed to them calculated to preserve what they deemed Roman superstitions. They wished to see an earnest, educated, preaching ministry established in every parish, and to institute a vigorous discipline by which the Church could be purged from unworthy members. They were soon nick-named 'Puritans.' Their attempts to effect these results, especially the modification of vestments and ceremonies, encountered the opposition of Elizabeth and her spiritual agents, the bishops—an opposition based in large measure on a desire to avoid controversy and civil discord. But this opposition aroused further questioning, which ushered in a second stage of Puritanism. Men, of whom Thomas Cartwright (1535-1603) was typical, began to ask whether a form of Church government that opposed reforms which seemed to them so desirable was Divinely warranted. By 1593, Cartwright, who became that year Lady Margaret professor of Divinity in Cambridge, was attacking the constitution of the

Church of England itself, and urging its further reformation along lines essentially borrowed from Presbyterianism as it had been developed under the influence of Calvin and his disciples. This seemed to him and to his party the Scriptural model of what a Church should be. Cartwright held to the existence of a national Church. The disaffected Puritan was not to separate from it; but to labour in it to introduce as much of what he believed to be Gospel order and discipline as he might, and to wait for the strong hand of civil authority to reform the often-altered Church of England into full conformity to what he deemed the Divine pattern. To come out from it and to found different churches was no part of the duty of a Christian. These views of Cartwright represented the opinions of the vast majority of Puritans down to the Great Rebellion. To the more radical thinkers of the time this condition of things seemed intolerable. They would come out from the Church and organize at once as they believed the Church should be organized. They were 'Separatists.' Such was an obscure company of which Richard Fitz was pastor, which was arrested in Plumber's Hall, London, 19th June 1567, and has often been called 'the first Congregational Church.' But their Congregationalism, though evident, was not systematically developed. The first careful theoretic exponent of Congregationalism was Robert Browne (1550?-1633), whose life and doctrines are considered in art. BROWNIISM. Whether through the influence of his books, or as an independent illustration of the same tendencies which led Browne to separation, a similar movement soon showed itself in London, under the leadership of a radical Puritan clergyman, John Greenwood (?-1593), and a lawyer of ability, Henry Barrowe (1546?-1593). Arrested in 1587, they were yet able to write from their prison treatises of which Barrowe's *A Briefe Discoverie of the False Church*, 1590, is the most important. Their sympathizers increased, however, and, in 1592, a Congregational Church was formed in London, or, if organized four or five years earlier, as is possible, was then more definitely established, with Francis Johnson (1562-1618) as its 'pastor' and Greenwood as its 'teacher.' This activity excited the authorities. On 6th April 1593, Barrowe and Greenwood were hanged for denying the queen's ecclesiastical supremacy, and the rest of the church was gradually driven into exile. It found a refuge in Amsterdam, where its experience proved stormy owing to exaggerated attempts to enforce discipline.

The same causes which had resulted in the movements in which Browne and Barrowe were leaders induced a company of advanced Puritans in Gainsborough and the region about Scrooby to organize two Separatist churches, probably late in 1605 or early in 1606. Of that in Gainsborough, Rev. John Smyth (?-1612) was the leader; and in that meeting in the home of William Brewster (1560?-1644), postmaster in Scrooby, Rev. Richard Clyfton, Rev. John Robinson (1576?-1625), and the youthful William Bradford (1590-1657), in addition to Brewster himself, were the most prominent. Compelled to leave England, both congregations found a refuge in Amsterdam, where Smyth and his associates adopted Baptist principles. The Scrooby exiles, under the lead of Robinson, removed, in 1609, to Leyden; but, being anxious to live on English soil, even across the Atlantic, a minority of the church, under the spiritual oversight of 'ruling elder' William Brewster, made the voyage in the *Mayflower*, and established the colony of Plymouth in New England in 1620. Meanwhile, in 1616, a Congregational church, which still exists, was founded in the Southwark district of London by Rev. Henry Jacob (1563-1624), who had been a member of the Leyden congregation.

It may be doubted, however, whether Congregationalism would have developed in power on either side of the Atlantic had it not been for the stimulus of the great Puritan struggle with Charles I.

Puritan thought, despairing of securing the reforms desired in England, inclined to seek the New World to which the Scrooby-Leyden Pilgrims had already shown the way. In 1628 the advancement of Puritan emigration, under John Endicott, landed in Salem, Massachusetts. On 4th March 1629 the royal charter creating the 'Governor and Company of Massachusetts Bay' was sealed. The same year the Salem colony was largely reinforced. In 1630 no fewer than 1000 persons left old England for the new, and the emigration ran full tide till the advent of the Long Parliament in 1640 changed the political situation in the homeland. To the Massachusetts colony of 1629, Connecticut was added in 1635-1636, and New Haven in 1636. These settlers were Puritans, not Separatists. They were, many of them, men of wealth and position, and they had among them a large proportion of well-educated, influential ministers. Yet the remarkable fact is that, on their arrival in the new land, they organized their ecclesiastical institutions, beginning with the church in Salem in 1629, essentially on the model of Separatist Plymouth. The explanation is that the Scripture model of Church government seemed to them that which Separatism had already anticipated, and, under the freedom of the plastic conditions of new settlements, they created churches of practically the same type as the earlier Separatist congregations. But, as has been indicated in the section on the relations of Congregationalism to the State, these New England churches became a real Establishment, and enjoyed State support in a manner for which the earlier Separatism never had opportunity, and which it repudiated in principle. The history of Congregationalism in 17th-cent. New England was largely that of growth in numbers by reason of the slow increase of the population, of a declining religious enthusiasm, and of discussions arising from the development of polity. Education was fostered not only by lesser schools, but by the founding of Harvard College in 1636, and of Yale College in 1701. There was little doctrinal division, all the churches representing the current Puritan Calvinism, and there was remarkable uniformity in organization, worship, and method.

Congregationalism made slow progress in England from its permanent establishment in Southwark in 1616 to the meeting of the Long Parliament in 1640. Its chief representatives found refuge in New England or in the Netherlands. But, with the outbreak of the struggle between King and Parliament, and the return of a number of the exiles, it grew very rapidly. Though the Westminster Assembly, which began its sessions in 1643, was overwhelmingly Presbyterian, it included five determined Congregationalists and several at least partial adherents. The desire of Cromwell and the army for a large toleration was favourable to the spread of Congregationalism. Congregationalists were appointed to many important ecclesiastical and educational posts under the Protectorate, and enjoyed the cordial favour of Cromwell. The Savoy Synod, held in London in 1658, gathered the representatives of 120 churches. Congregationalists suffered with other Nonconformists from the repressive policy of the Restoration, but their churches were not extinguished, and at the Revolution in 1689 the Toleration Act secured them legal standing, under rather onerous conditions, in common with other Dissenters. The enthusiasm of the epoch of the struggle between King and Parliament and of the Commonwealth was spent, and Congregationalism shared in the spiritual decline of the first half of the 18th century. It was touched, however, but slightly by the Arian and Socinian defection that made such inroads on contemporary English Pres-

hyterianism. During the latter half of the 18th cent. it felt with increasing power the stimulus of the great Evangelical movement which the Wesleys and Whitefield had initiated, and experienced a profound spiritual re-awakening which led to rapid growth. County Associations were generally established between 1785 and 1810. The London Missionary Society, nominally an undenominational organization for carrying the gospel to the heathen, but increasingly Congregational in constituency, came into being in 1795. The Home Missionary Society was organized in 1819, and the Colonial Missionary Society in 1836. The year 1832 saw the formation of the Congregational Union of England and Wales. The period from that time to the present has been one of healthful growth and spiritual fruitfulness.

In Scotland, Congregationalism did not gain a permanent foothold till the last decade of the 18th cent., when it won its way as the supporter of a warm, evangelical type of piety and preaching. Its hold on the Scottish people has been relatively small, but it has proved a vigorous force in the religious life of the nation.

The earlier part of the 18th cent. witnessed a decline in the spiritual vigour of Congregationalism in America as in England. From this condition in America it was powerfully aroused by the 'Great Awakening' in 1740-1742, through the preaching of George Whitefield, Jonathan Edwards, and other promoters of the revivals. The 'Awakening' led to division of sentiment, though not to actual separation, in the New England churches—the 'Old Lights' opposing its methods, which the 'New Lights' favoured. With Jonathan Edwards (1703-1758) a great theological development began, essentially Calvinistic in fundamentals, but with no little modification of historic Calvinism. This was continued by Joseph Bellamy (1719-1790), Samuel Hopkins (1721-1803), Jonathan Edwards the younger (1745-1801), Nathanael Emmons (1745-1840), Timothy Dwight (1752-1817), Nathaniel W. Taylor (1786-1858), and others, and produced the most distinctive school of theology that America has originated. In the Revolutionary War the Congregational churches sympathized warmly with the colonial cause. The year 1792 saw the beginning of a great epoch of revivals, which continued to recur at intervals till 1858. By 1800, Congregationalism, which had been practically confined to New England, began to spread westward with the settlement of the country, and the process was initiated which has resulted in the establishment of nearly three-quarters of the present Congregational churches of the United States beyond New England borders.

By 1815 a Unitarian movement, the roots of which ran back into the 18th cent., was felt especially in Massachusetts, and resulted in a separation, which still continues, from the main Congregational body. The American Board of Commissioners for Foreign Missions was organized in 1810 to do the work indicated in its title. Home missionary work was begun by State bodies, commencing with Connecticut in 1774, and resulted, in 1826, in the formation of a Home Missionary Society of national scope. The American Missionary Association, which has laboured chiefly among the Negroes and the Indians, came into being in 1846; and the Congregational Church Building Society dates from 1853.

World-wide Congregationalism has expressed its fellowship in International Councils, of which previous mention has been made.

7. Beliefs.—Congregationalism has been a system of Church polity rather than a peculiar form of faith. In its early history it stood, in common with Puritanism in general, on the basis of

Calvinism. The Cambridge Synod in New England, in 1648, approved the doctrinal portions of the Westminster Confession; and the Savoy Synod in London, ten years later, expressed a like concurrence, except for slight modifications. The 'New England Theology' of the 18th and 19th cents., whatever its departures from earlier Calvinism, belonged to the Calvinistic school. It regarded itself as an improved or 'consistent' Calvinism. The Declaration adopted by the Union of the Congregational Churches of England and Wales in 1833 is distinctly, though mildly, Calvinistic. The National Council of the Congregational Churches of the United States, held in Boston in 1865, was with difficulty prevented from adopting a declaration that the faith of the Churches was 'that which is commonly known among us as Calvinism.' The Declaration was frustrated by the determined efforts of those who deprecated any party shibboleth. But the later years of the 19th cent. witnessed a rapid decline of interest in the older doctrinal discussions. The 'Declaration' adopted by the National Council at Oberlin, in 1871, was designed by its omissions to make the way easy for those of Arminian sympathies. The 'Creed,' prepared in 1833 by a commission appointed by the National Council, maintains the same neutrality between Calvinism and Arminianism. It will be remembered that these various expressions of belief have the value only of testimonies, each local church being free to declare its faith in its own way. Since the last of them was set forth, however, the Congregational churches, in common with Protestantism generally, have been passing through a period of theological re-statement—the result of Biblical criticism, of the wide prevalence of an evolutionary view of history, of the new emphasis on the Divine immanence, and of a quickened conception of social service as a main aim of the Christian life, whether of individuals or of Churches. No body of Christians has on the whole been more willing to welcome these newer views than the Congregationalists, but the degree in which they have been accepted varies widely in different churches. It is not sufficient, however, to disturb their sense of fellowship and of continuity with their historic past, or the broad fundamental outlines of their conception of the meaning of the Gospel.

8. Worship.—The Congregational churches, at their origin, shared to the full the Puritan objections to ceremonies and vestments which seemed to savour of Romanism, and, like the more radical Puritans in general, they rejected fixed forms of prayer. They long confined the hymns of their services to rhymed portions of Scripture. It was not till the first half of the 18th cent., through the influence of the English Congregational hymn-writer, Rev. Isaac Watts (1674-1748), that this prejudice against hymns 'of human composition' gradually broke down. The typical Congregational service of the 17th cent. began with a prayer in words of the minister's own choosing, followed by the reading of Scripture, generally with comments verse by verse, then the singing of a psalm, the sermon, a second free prayer, a second psalm, and the benediction. This order was slightly modified, very possibly through the influence of the Westminster Directory, so that the sequence became commonly a brief prayer of invocation, reading of the Scriptures, usually without comment, singing, a 'long prayer,' the sermon, prayer, singing, and the benediction. This remained the almost universal order till within half a century, and still constitutes an approximate outline of Congregational worship. The last few decades have witnessed a large use of responsive readings, anthems, and other efforts at the 'enrichment' of

service, and the individual freedom of each congregation makes possible a considerable variety of usage. Opposition to some use of fixed forms of prayer is waning, but Congregational worship is still non-liturgical in its fundamental character. The Lord's Supper has been observed since the early days of Congregationalism at intervals of a month or two months. Till near the close of the 18th cent. Congregational worship involved two services, such as have been described, each Sunday, and in large towns a mid-week 'lecture,' which was really another sermon. About the end of the 18th cent. the 'prayer-meeting' was generally introduced for the cultivation of the Christian life — by prayer, Scripture exposition, singing, and informal addresses, under the presidency of the pastor, but with free participation by the laity. It has been ever since a feature of congregational worship, but its successful maintenance, save in times of unusual religious interest, is generally regarded as one of the most difficult of pastoral problems.

9. **Characteristics.**—Congregationalism has always favoured education, both in the pulpit and in the pew. In England many 'academies' were founded after the Toleration Act and throughout the 18th century. A number of these have become flourishing 'colleges,' their aim being to train a learned ministry and to provide the higher education for laymen which ecclesiastical tests, now abrogated, then made unattainable in the Universities. In the United States the Congregationalists have been foremost among religious bodies in planting colleges and fostering schools. The Congregational spirit has not been sectarian, however, and these institutions have been freely opened, and have not been used as a means of denominational propaganda.

Congregationalists have been greatly interested in home and foreign missions. The efforts of the Rev. John Eliot (1604-1690), begun in 1646, for the conversion of the Massachusetts Indians, led to the incorporation by the Long Parliament, in 1649, of the first English Foreign Missionary Society, the 'President and Society for the Propagation of the Gospel in New England.' The establishment of the London Missionary Society in 1795 and of the American Board of Commissioners for Foreign Missions in 1810 has already been noted.

The flexibility of Congregationalism has made it easy to try experiments in methods of Christian work, and these churches, as a whole, have always been ready to welcome novel activities which seemed to promise greater usefulness in Christian service.

10. **Problems.**—The problems of Congregationalism are those of democracy generally. That which is most pressing is how to secure efficiency without sacrificing democratic liberty. Congregationalism has proved itself admirably adapted to rural conditions among a homogeneous population of intelligence. It has been less successful in cities where contrasts in wealth and education are extreme. Each church being a self-governing, democratic community, there is always danger that those congregations in the more needy parts of a city will be unduly weak in resources both of money and of men of ability. Congregationalism endeavours, with partial success, to counteract this tendency by Home Missionary aid and superintendence. There is also the peril, in city communities, where congregations are gathered largely by elective affinity, that a church may become essentially a religious club. As in all democratic bodies, union for strategic advance is often accomplished at the cost of undue effort, or is not achieved at all. In order to make itself more efficient in these re-

spects, without forfeiting the essential autonomy of the local church, Congregationalism, both in Great Britain and in America, is at present displaying a centralizing tendency. The advisory powers of Associations are being extended and increased, and a system of superintendency, by committees or individuals, without judicial or mandatory powers, but with large advisory influence, is in process of development. The watchword of this movement, now felt on both sides of the Atlantic, is 'a more efficient Congregationalism.'

11. **Statistics.**—In the statistics of Congregationalism only those who have become church-members by a profession of personal Christian experience are included. The figures, it is usually thought, must be multiplied five-fold to represent the total number of adherents.

In the following table only church-members are included:

Countries.	Churches, Chapels, and Stations.	Church Members.	Sunday-School Scholars.
England and Wales . .	4,652	459,147	675,785

LITERATURE.—The literature of Congregationalism is enormous, but a substantially complete bibliography to 1879, embracing 7250 titles, may be found in H. M. Dexter, *The Congregationalism of the last Three Hundred Years as seen in its Literature*, New York, 1880. The following works will be found of special value:—

(1) **POLITY.**—Robert Browne, *A Book which sheweth the Life and Manners of all true Christians*, Middelburg, 1582; Henry Barrowe, *A Briefe Discoverie of the False Church*, Dort, 1590; John Robinson, various treatises between 1610 and 1625, collected in R. Ashton's *Works of John Robinson*, London, 1851; Richard Mather, *Church-Government and Church-Covenant Discussed*, London, 1643; John Cotton, *The Keyes of the Kingdom of Heaven*, London, 1644; Thomas Hooker, *Survey of the Summe of Church Discipline*, London, 1648; *A Platform of Church Discipline*, etc. (The 'Cambridge Platform'), Cambridge, Mass. 1649, and twenty-five later editions; *A Declaration of the Faith and Order owned and practised in the Congreg. Churches in England* (The 'Savoy Declaration'), London, 1658, and eleven later editions; *Heads of Agreement Assented to by the United Ministers in and about London*, London, 1691, and many later editions; *A Confession of Faith*, etc. (The 'Saybrook Platform'), New London, Conn. 1710, and six later editions; John Wise, *A Vindication of the Government of New England Churches*, Boston, 1717; Cotton Mather, *Ratio Disciplinae*, Boston, 1726; Thomas C. Upham, *Ratio Disciplinae*, Portland, Maine, 1829; Woodbury Davis, *Congreg. Polity, Usages, and Law*, Boston, 1865; H. M. WILLISTON WALKER.

CONNEXIONALISM.—There are many systems of Church organization in which itinerant evangelists link together scattered congregations, and maintain a strong corporate feeling by regular meetings among themselves, when they as a body arrange the sphere of work for each, and often exercise other functions of government. Such systems are usually styled 'Connexional,' and although that name is also employed more loosely, it is such systems that are here compared with one another. They flourish where a democracy, or an oligarchy, is inspired with a zeal for propaganda, and especially where a revival is prompted and supported by Bible study.

Connexional elements may be traced even in the Apostolic era, when the Apostles allotted among themselves their fields of labour, and when St. Paul and his comrades travelled widely, and kept in touch with the churches they founded, both by visits and by letters, and by delegates to supervise, such as Timothy, and Tychicus, and Titus. But the Greek churches brought over the Greek love of independence, and the Third Epistle of John shows at the close of the Apostolic age a local minister revolting against the mere presence of any visiting missionary. This tendency was reinforced by a jealousy between the officers of business, appointed primarily to 'serve tables,' and the gifted brethren, including those who were set apart to give themselves to the ministry of the word. The local administrators steadily gained in esteem at the expense of the travelling evangelists, and, when the Montanist movement failed, the reaction within the Catholic Church practically ended the career of the evangelists. They survived only on the frontiers of Christendom, and we shall see that connexionalism flourishes best in the mission stage of a church, and in communities which emphasize evangelism.

While a bureaucracy of church officials developed, on lines suggested by the Roman civil service, there was no room for connexionalism in this diocesan system. But among the laity there arose a new plan of organization, whereby those who were in thorough earnest about their Christian life put themselves under severe discipline as monks. Basil for the East, and Benedict for the West, produced bodies of rules to order the community life, and these were widely adopted. But neither the one nor the other contemplated evangelism as a leading feature; salvation of self rather than salvation of others was the chief aim. Although the Irish-Scottish monks had a loftier conception, yet they

conspicuously lacked the faculty of organization, and their foundations remained isolated. Two races have displayed a genius for method and order—the Roman and the English,—and certain developments of the Benedictine scheme due to these nations show signs of connexionalism.

Thus Stephen Harding in 1119 inspired the Cistercian method, whereby the religious belonged to an Order rather than to a single House. Year by year the Abbots of the Houses met in consultation, and in theory not only the humbler members, but the Abbots themselves, could be transferred from convent to convent. Since, however, no systematic plan of rotation was adopted, or even any rule that rotation should take place, there was in practice much inertia. And as the aims of the Order did not exalt evangelism, there was no special motive for circulation.

A century later the English Benedictines moved in the same direction, but the Italians evolved farthest, producing the Silvestrine, the Celestine, and the Olivetan organizations. Instead of officers being appointed for life, they had fixed terms of duty; a General Chapter chose a nominating committee which selected them. This line of evolution culminated in 1432, with the approval of the Cassinese constitution. Details of these schemes are given by Abbot Gasquet in his *Introduction to Montalembert's Monks of the West* (Eng. tr. 1861-79).

It might have been expected that the friars would show more originality, that their ideal of brotherhood would express itself in a democratic rule, and that their ideal of service would impel them to steady organized work for others. But the movement was soon captured by the Roman Curia, and the time-honoured diocesan pattern was adopted, with the slight changes needed for definitely local groups of professed Christians instead of areas within which a professed clergy ministered to a population nominally Christian. Thus friaries were grouped into congregations under a provincial, and all were ruled by a minister-general. The Roman monarchical ideal prevailed in the plan of government.

But a similar movement, originated by Peter Waldo of Lyons, being discountenanced by the authorities, was free to elaborate its own machinery (Newman, *Manual of Church History*, i. 571-8). In 1218 a conference was held at Bergamo, when, amongst other matters, the polity came up for discussion. An annual meeting was held, usually in Lombardy, when probationers were admitted to membership after long training and testing. They made promises of celibacy, poverty, and readiness to evangelize, quite on the Franciscan model. But, once the initiate was admitted, he found himself a member of a governing corporation, which not only recruited itself and saw to the purity of the whole body, but also required reports from every part of the field, and administered the funds of the community, gathered during the year. The Lombards, indeed, with the Italian instinct, decidedly preferred a single head, chosen for life; and they favoured a general life tenure of all offices. The Germans, again, upheld the plan of Waldo, that all offices should be terminable, and that there should be no single head, but several rectors. In this matter the two parties apparently agreed to differ, maintaining their own customs and recognizing the legitimacy of each others' officers. But the unique feature is that the annual meeting had full powers, and actually exercised them in the appointment of all officers, in allotting to each member his work, and in determining its nature and sphere. To some extent this scheme influenced the Bohemian Brethren and the Moravian Anabaptists, though these bodies

adopted the Italian plan of a single head holding office for life.

In 1527 an important conference was held at Augsburg, when delegates from the 'Brethren' organized on new lines (Lindsay, *Hist. of Reformation*, Edinb. 1907, ii. 435). All the officers of all the congregations within a convenient district chose a committee of themselves to act for the group, and the committee chose a president. The districts associated on the same principle, and thus a pyramid of committees was erected. To these people, popularly known as 'Anabaptists,' is therefore due not only the machinery of a single congregation, which was presently taken over by Calvin in his *Institutio*, and put in practice at Geneva, but also the machinery for an alliance of congregations, adopted in France during 1559, and in Scotland next year, and so well known as the Presbyterian schema. But the 'Brethren' had one feature which was dropped by the French, the Scots, and the Dutch—an order of evangelists whose business it was to travel and propagate the faith. It is not quite clear how these were appointed, or how their routes were determined—if, indeed, appointment and travelling were not spontaneous rather than systematic. And, although several conferences were held, the persecutions of the next few years were enough to disorganize any machinery.

A year after the fall of Münster, an important meeting was held a few miles away at Bockholt, when the Anabaptists of Lower Germany and England re-organized and adopted the connexional plan (Barclay, *Inner Life of the Religious Societies of the Commonwealth*, 88). Each congregation sent delegates to an annual meeting, which stationed the ministers and arranged for the support of those who itinerated, besides aiding poor congregations and members. This system was developed in the Netherlands and up the Rhine, and, though many divisions occurred,—into Mennonites, Waterlanders, Doopsgezinden, Flemings, Old Flemings, Frisians, etc.,—yet each body held to the connexional type. As most of these Connexions held the doctrine of passive resistance, and objected to bearing arms or taking oaths, they found their position extremely awkward during the Napoleonic era; and the renewed conscriptions of the last forty years have caused their practical disappearance from Europe, and their emigration to America (Barclay, *op. cit.* 243). In the New World may still be found the remnants of these ancient bodies, and of kindred organizations like the Schwenkfeldians, true to the connexional type in that the annual meeting governs; but, as the numbers have greatly diminished, the vote is exercised not by officers alone, but by all male members.

Recurring to the Reformation period, we find forty churches in Lombardy and Switzerland acting together; and a special convention was held at Venice in 1550 (Newman, *Hist. of Anti-Pedobaptism*, Philad. 1896, pp. 327-9). The Waldensian plan so well known in the vicinity had been adopted in general outline, and the government lay in the hands of the itinerant preachers, who associated with themselves candidates under training, and not only visited all the congregations, but also ordained the local ministers. These churches mostly adopted anti-Trinitarian views, and were persecuted till they left the district; but many members went to Moravia and Poland, where they spread their tenets, so that the 'Socinians' were indebted to them for hints on ecclesiastical polity as well as on doctrine.

The Reformed Churches took over from the Anabaptists the general scheme of organization, and especially the principle that, whether in a

single congregation or in a court supervising several congregations, the power was vested entirely in the officers. Ordinary members might have a voice and vote in electing an elder, but his ordination rested with the existing elders, who thus tended to become a self-perpetuating caste. Ruling elders were usually local, but preaching elders or ministers were liable to move; in Germany and Scotland the authority of the State was interposed in various matters, extending occasionally to the location of a minister, and thus the autonomy of the Churches was crippled. Owing partly to the high educational qualifications of the Reformed ministry, and partly to general inertia, long tenure of a pastorate became customary, and thus one frequent feature of a Connexion was obscured. But in theory the whole spiritual government of a Presbyterian church resides with the ordained members, and they have at least a veto on any increase of their number, or on the translation of any minister; nor is his personal preference a decisive factor any more than the wish of a single congregation. While these theories are still upheld, the connexional element is not extruded, however little certain powers may be actually exercised. Yet there has been much specialization, so that ruling elders hardly rank themselves with ministers on the ground of their common ordination; and their interests are so local that they hardly consider themselves a class apart from their fellow-members, with a corporate life of their own; still less do the officers as such pursue systematically a policy of extension, a policy which seems closely linked with the vigour of connexionalism.

In England, voluntary sects were unable to organize till the general relaxation of government in 1640. Then the General Baptists, who for thirty years had been in close contact with the Waterlanders of Amsterdam, entered on a vigorous campaign of evangelism. As churches were gathered in different parts of the country, they were kept in touch, and the earliest minutes that survive testify to some plan of organization. Thus, thirty congregations in and near Leicestershire and Lincolnshire sent delegates to a conference in 1651, which stated the faith and order which they held in common: in concise terms they set forth that gifted men are set apart for preaching, and are maintained by voluntary gifts. Five years later a 'General Assembly' was held in London, attended by delegates from Surrey, Kent, Sussex, Bucks, Northants, and other parts. The constitution of the Assembly is not stated, but the minutes show two classes of superior officers: Elders are explicitly said to be local, bound to serve their own congregations for life, and having no status in other congregations; Messengers exercise a general superintendence over whole districts, but are forbidden to choose other Messengers without the unanimous consent of the Churches. The minutes are signed by ten Messengers and eight Elders (Brit. Museum, *Add. MSS* 36709).

In 1678, Thomas Grantham published a folio on primitive Christianity, and, when expatiating on the officers of the Christian Church, he put in the forefront the Messengers or Apostles, whose permanent functions were to succeed the original Apostles 'as Travelling Ministers, to plant churches, and to settle those in order who are as Sheep without a Shepherd.' These, like the Bishops (or Elders) and Deacons, were to be elected by the free choice of the brotherhood and then ordained; and it is expressly laid down that the power of ordination is not limited to those who were already ordained, but is shared by all who have received the gifts of God's Holy Spirit. Then, in discussing General Assemblies, which were proved to be Scriptural, and were therefore

held regularly by the General Baptists, not only the Messengers and Elders who signed were admitted to the meetings, but also any gifted brethren who chose to attend. The office of Messenger was evidently regarded as a task by some. So, from the analogy of Timothy and Titus, it was claimed by Grantham that, while they had a larger circuit, had business in many places, and so were greater servants than the fixed ministers, yet they had no jurisdiction over other bishops (Grantham, *Ancient Christian Religion*, 186). Then, in a special treatise, Grantham showed that the actual practice of the Brethren was to 'send forth Men to act Authoritatively, both in preaching to the World, and setting things in order to remote Congregations, to exercise Discipline by Excommunication of Offenders and remitting the Penitent; by ordaining them Elders, and dispensing to them the Holy Mysteries or Ordinances' (*op. cit.* 160).

Grantham wrote on his own authority only, but probably expressed the feeling of the Fen districts—Lincoln, Hunts, and Cambridge. In the same year a meeting of the General Baptists, near Bucks and Oxon, adopted a Confession, drawn up by Monk, another Messenger, in which Article xxxix. is very explicit:

'General Councils, or assemblies, consisting of bishops, elders, and brethren, of the several churches of Christ, and being legally convened, and met together out of all the churches, and the churches appearing there by their representatives, make but one Church, and have lawful right and suffrage in this general meeting or assembly, to act in the name of Christ, it being of Divine authority, and is the best means under heaven to preserve unity, to prevent heresy, and superintendency among or in any congregation whatsoever within its own limits or jurisdiction,' etc.

In a long article, xxxi., 'Of Officers in the Church of Christ,' we see a slight difference of opinion as to the power of ordination:

The bishop or messenger is to 'be chosen thereunto by the common suffrage of the Church, and solemnly set apart by fasting or prayer, with imposition of hands, by the bishops of the same function, ordinarily; and those bishops, so ordained, have the government of those churches that had suffrage in their election, and no other ordinarily; as also to preach the word or gospel to the world, or unbelievers. And the particular pastor, or elder, in like manner is to be chosen by the common suffrage of the particular congregation, and ordained by the bishop or messenger God hath placed in the church he hath charge of,' etc. (Hanserd Knollys Society, *Confessions of Faith*, pp. 159, 160).

When after 1689 the organization comes into full light, and its records become continuous, we find not only this order of Messengers fully rooted in the esteem of the Connexion, but numerous Associations established, each of which was supposed to have one Messenger at least, while all sent representatives to the General Assembly. As everything depended on voluntary consent, the choice of a new Messenger was a matter of careful negotiation between the Assembly and the Association concerned, usually extending over more than a year, and generally the consent was sought of the church where he was a member. Ordination was by authority of the Assembly, or of the Association concerned, and was usually performed by the existing Messengers. In practice the office was maintained by voluntary subscription, which, however, was not large enough to free the officer from the necessity of supporting himself, often by manual labour. The Messenger usually resided for life within his district, and visited all the churches there freely. The order was considered superior to the Eldership, both priority and presidency being conceded. But there are no signs that the Messengers ever met together apart from the Elders of local churches, or that they acted as a corporate body. The Elders were so far from any system of itinerancy, that in 1696 it was resolved that no Elder might leave his own people and be established as Elder over another people in another place (T. Goadby,

By-paths of Baptist History, London, 1871, p. 244). The funds of the Connexion were vested in lay trustees, on trusts so loosely expressed that the Messengers never tried to assert any legal claim to them. (The Minutes of Assembly are published by the Baptist Historical Society.)

As the Connexion lost vitality during the 18th cent., whole Associations ceased to meet, and therefore their Messengers died out, while the local churches, in many cases, asserted their independence. Then the foundation of the New Connexion of General Baptists effectually stopped the revival of the Old Connexion, and attracted some of its component parts. Yet, even at the present day, there are about a score of churches, unobtrusively pursuing their way, with their Messengers, keeping up their General Assembly, and showing still this primitive connexional system, though completely devoid of that which inspires it, the spirit of propagandism.

In the 17th cent. this organization had been copied and developed by the Society of Friends, who were also in direct contact with the Dutch Mennonite Connexion (Barclay, *op. cit.* 342). While a group of local Friends formed a church for local purposes, the provision of evangelists was clearly beyond the power of such a group. At first George Fox organized, then associations of local churches recognized, ministers and certified them as fit to travel; these then shared his responsibility, both gathering converts and organizing them into churches, even appointing the first Elders (*ib.* 388). By 1661 a regular Yearly Meeting was established in London for the whole Society (*ib.* 392). As custom became settled, it was agreed that the Travelling Ministers were *ex officio* members of this Yearly Meeting, and Fox even applied to them the term 'Apostles,' which the General Baptists also had borrowed from Scripture. The other members were to be chosen by the quarterly meetings out of the local Elders, but these did not always sit with the 'Public Labourers' (*ib.* 404). These Travelling Ministers retained for themselves the right to organize and control their own work of evangelization, which fell entirely into their hands when Fox passed away. They met regularly on Monday and Sunday to arrange where they would preach; they discussed openings for new work, and the character of those who wished to be recognized as ministers, and they kept a roll of their own membership (*ib.* 381).

The fervour of the age died down, and propagandism became of less importance, so that the Travelling Ministers lost their pre-eminence. In 1735 the Yearly Meeting forbade their meeting to control its own membership, and within twenty years they were brought under the direction of Mixed Meetings, in which the dominant element was a new kind of Elder, whose main business was to administer, not to preach. Thus, with the cessation of evangelizing came the transformation from the connexional type in the Society. The pyramidal series of courts remains, but the Travelling Ministers now form a very small element in them, and in the Society.

The general decay of the 18th cent. was met by the vigorous evangelism of Whitefield and Wesley; and, as crystallization took place, it was on the connexional system. In 1744 six clergymen and five lay preachers met, and traced the foundations of the Methodist polity; forty years later, Wesley enrolled a deed in Chancery which settled the government of the Connexion, while in the same year a Conference at Baltimore organized the Methodist Episcopal Church in America. The United Empire Loyalists laid the foundation of Methodism in Canada, while from

England other Methodists spread throughout the British dominions. Questions of Church polity, however, have been fiercely debated, and have led to many secessions in both England and America, which have only partially been offset by reunions; the very principle of these secessions calls in question the connexional scheme. As Wesley organized it, the body with supreme authority in spiritual matters was a Conference of a hundred ministers. These, however, he desired to act in harmony with the whole number of mutually recognized ministers, and his wishes have invariably been respected. Thus all questions of doctrine, of discipline, and of ministerial standing and employment, are settled by the ministers in full conclave. It was against the exclusion of other members that revolts chiefly occurred, and the resulting bodies, such as the Primitive Methodists and the United Methodists, temper their Conferences with laymen in at least an equal proportion. Even the Wesleyan Methodists now have a Representative Conference, with equal numbers of ministers and laymen meeting first and dealing with all matters of policy and finance. But here it is to be noted that the trust deeds on which chapel property is held ensure that the enjoyment is secured to the ministers stationed by the Pastoral Conference. The Methodist Episcopal Churches have moved on similar lines; but here the bishops retain their exclusive powers, and when met as a body they define the duties of each member. While an increasing deference is paid to local wishes, the supreme authority technically resides in the Conference, and in England at least the Conferences regularly exercise their powers. The itinerant system is being encroached upon by the claims of central offices or by the new system of Central Missions, in which continuity of service is regarded as important. Wesley's three year rule is also being relaxed, both in the parent body by ingenious constructions of the Deed Poll, and in the offshoots by open legislation.

The title of 'Connexion' was adopted by other bodies, such as the Calvinistic Methodists of Wales, the Countess of Huntingdon's chaplains, and the New Connexion of General Baptists. Historically these originated almost independently of one another and of other bodies, and in their gradual organization they have profited by the experience of Methodists and Presbyterians, besides steadily rejecting the central feature of the ever-present Episcopal system; thus they have given new extensions to the term 'Connexion.'

The Leicester preachers, who formed the nucleus of the New Connexion of General Baptists, had retained all power to themselves at first, and so had the Yorkshire preachers who joined with them; but soon the local officers were associated, and, when negotiations were undertaken with the Lincolnshire churches of the Old Connexion, they explicitly repudiated the office of Messenger as not of Divine institution, although they were ready to discuss its expediency. The first rules were drafted by ministers alone, who advised that the Association should be open only to ministers and elders; but the separate churches made steady efforts to secure local control by the whole body of local members. Thus in 1817 their historian summed up to the effect that they were in their discipline strictly congregational, that each society allowed no foreign control even from its own Conferences or Association, and that the rights of church members were sacred against the encroachments of their own officers (A. Taylor, *Hist. of Eng. Gen. Baptists*, Lond. 1818, ii. 468). In that year also the basis of representation in the Association was settled on such terms that the pastors were far outnumbered by the lay delegates. Twenty years

later a new constitution was drafted, but was carefully emended, to ensure the independence of the churches; and the united action was reduced to the consideration of cases referred spontaneously by Conferences, churches, or individuals, to the management of the academy and of some publications, to the conduct of home and foreign missions (J. H. Wood, *Hist. of the Baptists*, Lond. 1847, p. 278). Even as regards the ministry, the advisory committee to report on applicants had equal numbers of laymen and ministers, while the ministers had no joint function peculiar to themselves. When we note, also, the disappearance of any itinerant system, it will appear that the mere name of Connexion survived the reality in this case; and since 1891, in order to establish more intimate relations with Baptists of another school, the meetings of the Association have been reduced to a mere formal gathering.

Similarly, the Countess of Huntingdon's Connexion has long ceased to show any connexional vitality, and the methods of its churches and ministers approximate to the Congregationalists. In the Principality, however, the Calvinistic Methodists have moved the other way, as is shown in their adoption of the title 'Presbyterian Church of Wales'; yet, while the ministers are ordained only with the approval of an Association, and have part of their time claimed by the whole body rather than by the local congregation, there is a feature of Connexionalism still discernible.

Many mission fields present good examples of connexional principles. Often the whole body of foreign workers are associated into a Synod or Conference, which reviews the progress of the band, decides on plans, and allots the individual members to their departments. Rarely, indeed, do the native converts have any voice at all in such a meeting, though a native minister may have a seat in Conference as a worker. Sometimes the decisions of the Conference are subject to review by a committee chosen by the subscribers who defray the expenses, and by this feature a special complication is introduced into the connexional machinery. This power of the purse is one of the most important factors in the modification of Connexionalism. Not only may a committee sitting in Britain tend to regard the workers abroad rather in the light of civil servants, to be moved about at the will of an ecclesiastical Foreign Office; but also in home affairs a rich Methodist circuit often appears to obtain the particular ministers it wishes, even against the apparent good of the whole Connexion. Yet this same power of the purse can manifestly be used to stereotype connexional methods in the drawing up of trust deeds, so that all ecclesiastical property, buildings and endowments alike, can be placed under the control of the Conference of workers, and not of local supporters.

Another menace to Connexionalism, as to all other organizations, is the irrepressible ambition of some men to wield power. In the early days, an outside autocrat like Constantine was able to capture and transform the machinery of the Church. For many centuries within Christian circles, a steady claim to supremacy has been put forth from Rome by an oligarchy of Pope and cardinals, who have succeeded in rendering nearly every revival subservient to their concentrated rule. Nor is it needful to look outside connexional circles: the corps of ministers most readily arranges to perpetuate itself, excluding the mass of members from all direct influence; it reaches out beyond the stationing and supervising of its own members, to the control of all activity, on which it can at least interpose a veto. Such encroachments have more than once excited revolt,

and led to the formation of other bodies in which such domination is expressly guarded against. Within the body of active self-governing workers there has often arisen some commanding figure, whose actual influence extends far beyond the nominal position he holds; but such a phenomenon is equally common under any system of management, and no such leader has proved able, or even desirous, to found a dynasty which may subvert the general principles.

In estimating the permanence of the type, we have to bear in mind that details of organization are not prescribed in the New Testament, but a few principles are insisted upon as fundamental. None is more urgently reiterated than: 'All ye are brethren; one is your Master, even the Christ.' Again, the primary object of the Church is evangelization: Go everywhere, tell all peoples, enlist the converts, instruct them in the ways of Christ; such are the purposes for which the Church was called into being. Propagandism and brotherhood are thus to be inwrought in any scheme. Now, as a matter of history, every great revival of religion has been marked by an appreciation of these elements, and has fashioned its machinery on somewhat connexional lines. True, the Franciscans were brought under the control of the Curia, but the very struggle against this, and the rapid degeneracy from the spirit of Francis, show the natural relation of Connexionalism to these principles, so that the disappearance of the one imperils the existence of the other. Similarly the transformation of the connexional type among the old General Baptists and the Friends reflects the decay of the spirit of propaganda in those bodies. But the great Methodist Churches, with their firm grasp on the evangelistic purpose of their existence, and their warm fraternity, hold fast to the connexional system as the best embodiment of their principles. And whenever a revival takes place, even on a microscopic scale, it seems natural that those who are actively concerned shall meet simply as brethren to consult and arrange mutually as to the division of labour.

W. T. WHITLEY.

CONSANGUINITY.—By 'consanguinity' is meant blood-relationship, and more particularly, close blood-relationship. When we speak of a consanguineous union, we mean that the two organisms are near relatives; when we speak of a high degree of consanguinity in a herd or in a community, we mean that there has been much inbreeding or endogamy. It is desirable to know what the biological facts are in regard to the results of the sex-union of closely consanguineous organisms, but it must be admitted that clear-cut facts are few. It should also be noted that, as the range of living creatures expresses a very long gamut, we must be very careful in arguing from one level to another. What is normal and apparently wholesome at one grade of organization may not be desirable at another.

It seems to have been securely established that some hermaphrodite animals habitually fertilize their own eggs. This autogamy has been proved in some tapeworms and flukes—not auspicious illustrations; it seems sometimes to occur in the freshwater hydra and a few other free-living

animals. There are numerous self-fertilizing flowers, though there is no case known where cross-fertilization is impossible. It may also be that one hermaphrodite liver-fluke sometimes inseminates another, so that the habitual autogamy may be interrupted. In the great majority of hermaphrodite animals, such as earthworms and snails, cross-fertilization is the invariable rule. It is also relevant to recall the fact that in many of the small Crustaceans, in many Rotifers, and in some insects, such as Aphides, there may be long-continued parthenogenesis—generation succeeding generation without loss of vitality, although the eggs develop without any fertilization. In some of the Rotifers the males are still undiscovered; Reaumur kept Aphides breeding parthenogenetically for over three years (50 consecutive generations), and Weismann kept females of a common water flea (*Cypris reptans*) breeding in the same way for eight years. This shows that at certain levels of organization a vigorous life may be kept up for many generations, not only without any introduction of 'fresh blood,' but without the presence of any males.

A number of careful experiments have been made on in-breeding, but there is imperative need for more. Weismann in-bred mice for twenty-nine generations, and his assistant Von Guaita continued the experiment for seven more generations, but the only notable general result was a reduction of the fertility by about thirty per cent. Some experimenters, such as Crampe, have found that the in-breeding of rats resulted in disease and abnormality, but this was not observable in the equally careful experiments of Ritzema-Eos. He in-bred rats for thirty generations; for the first four years (twenty generations) there was almost no reduction in fertility; after that there was a very marked decrease of fertility, an increase in the rate of mortality, and a diminution of size. These and other experiments on mammals, though insufficient to be satisfactory as a basis for generalization, suggest that very close in-breeding may be continued for many generations without any observable evil effects, and, on the other hand, that there are limits beyond which in-breeding becomes disadvantageous. It is certain that, if there be well-defined hereditary predisposition to disease in the stock, then in-breeding soon spells ruin.

'Extensive experiments by Castle and others [see *Proc. Amer. Acad.* xli. 731-786] on the in-breeding of the pomace-fly (*Drosophila ampelophila*) led to the general result that "inbreeding probably reduces very slightly the productiveness of *Drosophila*, but the productiveness may be fully maintained under constant inbreeding (brother and sister) if selection be made from the more productive families"' (J. A. Thomson, *Heredity*, 1908, p. 393).

Some of the histories of domesticated breeds are so well recorded that they may be ranked as carefully-conducted experiments, and it seems that some very successful breeds of cattle—such as Polled Angus—have in their early stages of establishment involved extremely close in-breeding. When we examine the pedigree of famous bulls and stallions, we find in some cases an extraordinarily close consanguinity. Valuable results have often been attained by using the same stallion repeatedly on successive generations.

From breeding experiments four general results seem to be clear: (1) that progressive results have usually followed mating within a narrow range of relationship; (2) that close in-breeding has a great utility in fixing characters or developing 'prepotency'; (3) that close in-breeding may go far without any injurious effect on physique; and (4) that, if there be any morbid idiosyncrasy, close in-breeding tends to perpetuate and augment it.

Darwin paid much attention to the question of in-breeding (see *Variation of Animals and Plants under Domestication* [London, 1868], etc.), and his general conclusions were:

(1) 'The consequences of close interbreeding carried on for too long a time are, as is generally believed, loss of size, constitutional vigour, and fertility, sometimes accompanied by a tendency to malformation.' (2) 'The evil effects from close interbreeding are difficult to detect, for they accumulate slowly and differ much in degree in different species, whilst the good effects which almost invariably follow a cross are from the first manifest.' (3) 'It should, however, be clearly understood that the advantage of close interbreeding, as far as the retention of character is concerned, is indisputable, and often outweighs the evil of a slight loss of constitutional vigour.'

From his researches on flowering plants, Darwin concluded that there was 'something injurious' connected with self-fertilization; and although he came to recognize that self-fertilization was more frequent and more successful than he had at first believed, he adhered on the whole to the aphorism, 'Nature abhors perpetual self-fertilization.' In his book on *Cross and Self Fertilisation* (1876), however, he says: 'If the word "perpetual" had been omitted, the aphorism would have been false. As it stands, I believe that it is true, though perhaps rather too strongly expressed.' The fact is that self-fertilization in flowers is for the most part relatively, and not absolutely, injurious.

In the present state of our knowledge, it seems fair to say that there is little biological evidence to show that there is anything necessarily disadvantageous or dangerous in close consanguineous unions. These seem often to occur in nature in isolated and restricted areas, and they are frequent

in successful breeding. It must be admitted that evil effects sometimes follow prolonged consanguineous pairing in the artificial conditions of stock-breeding, but it must not be hastily inferred that these evil effects are necessarily due to the consanguinity. There may be persistence of unwholesome conditions of life which have a cumulative evil effect as generation succeeds generation, or there may be some organic taint in the early members of the stock which becomes aggravated, just as a desirable organic peculiarity may be enhanced.

Bateson expresses the view of most biologists when he says:

'It should perhaps be pointed out categorically that nothing in our present knowledge can be taken with any confidence as a reason for regarding consanguineous marriages as improper or specially dangerous. All that can be said is that such marriages give extra chances of the appearances of recessive characteristics among the offspring. Some of these are doubtless bad qualities, but we do not yet know that among the recessives there may not be valuable qualities also' (*Mendel's Principles of Heredity*, new ed., London, 1909, p. 220).

When we take into account such evidence as there is from animals and from plants, and such studies as those of Huth (*Marriage of Near Kin*², 1887), and the instances and counter-instances of communities with a high degree of consanguinity, we are led to the conclusion that the prejudices and laws of many peoples against the marriage of near kin rest on a basis not so much biological as social.

CONSCIENCE.

Introductory (J. H. HYSLOP), p. 30.

Babylonian (T. G. PINCHES), p. 33.

Egyptian (G. FOUCART), p. 34.

CONSCIENCE.—The term 'conscience' is derived from the Lat. *scientia*, which meant originally 'joint knowledge,' or the knowledge which we share with others. It soon came to denote, however, what we mean by concomitant knowledge, that is, consciousness or self-consciousness, and only in later literature had it the meaning which we attach to 'conscience.' Even then it was not exactly what we mean by it as the arbiter and motive power in right and wrong. The Greek equivalent of Lat. *scientia* was *gnôstis*. This was in use by Plato and the Stoics, and denoted joint knowledge, and with the Stoics it also denoted the knowledge of right and wrong. In Cicero *scientia* can often be translated indifferently 'conscience' or 'consciousness.' It is the same with the French term *conscience*.

It is more distinctively in modern times that a radical difference is marked between the idea of consciousness and that of conscience. Consciousness with us is a purely intellectual function, a generic term for the phenomena of mind, or for that concomitant act of mind which Hamilton has well called the 'complement of the cognitive energies.' 'Conscience' is a term with a moral import, though complicated with the intellectual, and implies an emotional content at the same time. 'Consciousness' is thus a term for Psychology, and 'conscience' one, for Ethics, with the distinction, however, that consciousness is implied in the problems of Ethics, while conscience is not necessarily so implied in those of Psychology. 'Conscience' is thus a name for the function of distinguishing between right and wrong, and of enforcing the one or preventing the other. The difference between the ancient and the modern conception of it is determined by the difference between their ideas of morality, and may be said to reflect the whole

Greek and Roman (W. H. S. JONES), p. 37.

Jewish (M. GASTER), p. 41.

Muslim (D. S. MARGOLIOUTH), p. 46.

difference between their ethical and religious civilizations. The morality of antiquity, in so far as it was a subject of reflexion, hardly got beyond the conception of prudence—except, perhaps, with the Stoics. That of modern times involves the idea of duty or devotion to a law which may require sacrifice. There is no doubt a perfect reconciliation between these two points of view when we come to make a concrete examination of the facts to which they are supposed to apply; but in their abstract formulæ they seem opposed to each other. In its conception of rational conduct antiquity sacrificed a proximate to a remoter interest; modern ideas assume to deny all interest or happiness, and to demand unswerving obedience to law. But when this is carefully scrutinized it often turns out to be a sacrifice of the interests of the present life to a remoter interest in a life to come. The Christian system was the originator of the phrases which came to express inflexible obedience to duty; but this system was based on the immortality of the soul, and on the rewards and punishments apportioned to the nature of one's conduct in this life. Hence, when its moral conceptions are subjected to analysis, they do not differ absolutely in kind from those of antiquity, but they take two worlds into account where the ancient took only one, namely, the present world. The difference, so far as it is a difference, was between a materialistic and a spiritualistic view of the present life, and also between merely intelligent action and such action as involved duty with personal sacrifice.

The difficulty of comparing our modern conception of conscience with that of the ancients is apparent in the philosophy of Plato. Though he used the etymological equivalent of the modern term 'conscience,' this was not the term for one of the main functions of conscience with us.

'Reason' was the function which did service for conscience, and even this was not the motive agency in the direction of the will, but the guide for other influences. The myth of the chariot with the two steeds represents Plato's conception of the moral nature. Plato's distinction was between 'rational' and 'irrational' conduct, by which he meant the distinction between intelligent and ignorant conduct. Irrational action was under the influence of desire and passion, two unruly steeds which in their behaviour never looked before and after, but rushed into action without deliberation or reflexion. Reason was the charioteer whose function it was to direct these two steeds or impulses towards an end which represented knowledge of what the subject does, instead of blind passion. In this conception, however, reason furnishes light but not power. The motive agency was in the desires and passions, and reason only gave counsel or directed them, without providing any other end than these impulses offered. It took a more spiritual age to supply an end which was distinct from that of sense and passion, and so to modify the conception which gave rise to the more modern idea of conscience. The distinction between right and wrong with Plato, and, for that matter, with all Greece, was that between the prudent and the imprudent, between what was best for the individual and what was injurious to him, and the judge of this was intelligence, not conscience in our use of the term. The nearest conception to ours was the Stoic obedience to law, a law too which sacrificed the impulses and started the reflective mind towards the later Christian doctrine. But it was still an appeal to reason, and tried to reconcile its opposition to passion by insisting upon traditional ethics in details. But other Greek thinkers conceived reason as the director, not the commander, of the impulses, and so the Greek point of view was not that of the supremacy of conscience, but the supremacy of reason, thus making prudence instead of law its standard of morality. The emotional element of conscience the ancients did not recognize. The influence which introduced this factor into the conception was partly the Christian idea of sacrifice, and partly the idea of respect for an inner law of life and conduct, suggested by the Stoic ethics, and made effective in the Christian system by the necessity of eschewing politics. This conception was explicitly formulated in later thought, and especially in the ethics of Immanuel Kant, as represented in his 'categorical imperative,' an unbending sense of duty, regardless, in some thinkers, of all consequences, and in others of pleasure and pain. Here it denotes not only the consciousness of moral distinctions, but also an impelling motive or influence towards the execution of the right and the evasion of the wrong.

The Furies, or *Erinyes* (q.v.), are often regarded as mythological representations of the Greek idea of conscience. But this interpretation of them is due to certain analogies with the more modern conception of remorse as a punishment for sin inflicted by conscience on the transgressor. The Furies were not inner monitors, but external agencies punishing the individual for the violations of the moral law. Remorse is an inner punisher. In the rationalistic stage of Greek reflexion there was a tendency on the part of some thinkers to give a subjective interpretation to the idea of the *Erinyes*, but this never availed to suggest to them the modern idea of conscience as a distinct function of the mind. There was no tendency in Greek thought to combine the ideas of reason, self-consciousness, and penitence for sin so as to form the complex idea which has done so much service in modern times. The consciousness of sin was not a characteristic of the Greek mind.

It was the general character of Christianity that gave rise to the new conception of conscience, and this was because it created a new morality. The Greek never got away from the secular view of things. Whatever his talk about the Divine, he associated it with the æsthetic and political view

of the world; his ethical interests were confined to the present life and its joys. But Christianity extended the horizon of human hope beyond the present, and created the brotherhood of man, a new social feeling and interest. At the same time it brought a doctrine of personal salvation, based upon the idea that the present life was a probation for a better, and that man's only hope of happiness in the next life was his conformity to duty here. With this new social ideal, the extension of man's horizon of hope, and the strenuousness of his conception of duty and limited probation, the idea of morality was formed with a direct reference to a spiritual as opposed to a material or carnal world. Morality was conceived as possibly demanding a sacrifice of all that the Greek mind valued in life, namely, the world of sense, or the intellectual world of speculation—which was only the grosser sense-world a little refined. The transfer of happiness to a spiritual world forced morality to neglect that end here, and gave a very abstract meaning to duty. It also laid so much stress on the moral law, and so little on mere intellectual culture, that morality became the important characteristic of the man who was to be saved; that is to say, his morality and not his wisdom saved him. This, too, was the consequence of the democratic as opposed to the aristocratic view of social relations involved. In all, however, it substituted moral for intellectual virtues, and started civilization on a new tack, which was to make conscience more important than culture, while it gave a larger content to the conception of man's moral nature. As conduct rather than knowledge came to be the condition of salvation, the idea of conscience took root as the most important part of man's constitution, and it was appealed to not only to secure individual salvation, but also as the characteristic in man which reflected his lineage with the Divine.

The early Fathers defined conscience as the director of man's spiritual nature, and the distinguisher between right and wrong. Apparently not until Descartes did it take on the special import of an inner faculty to punish the soul for its sins. The function of remorse was recognized long before, but it took philosophic reflexion to introduce the idea into the scholastic conception of conscience. The same conception prevails in Spinoza. But this is entirely altered when we come to Kant. He identifies conscience with the function of the 'categorical imperative,' or sense of duty. Conscience, he says, is not the product of experience, but an inherited or original capacity of the soul, and is identical with the law of duty. This was equally a departure from the ancient idea that it was an intellectual function, and from the Cartesian idea that it was the after-emotion of the soul in regard to conduct. It was not, with Kant, a faculty of judgment determining means to end, or deciding when any particular course was right or wrong, but the faculty which impelled the right attitude of mind towards any course which the judgment made right or wrong. The consequence was that conscience was convertible with the inner sense of duty or the compulsory nature of the moral law.

Bishop Butler's view preceded that of Kant historically, but was much the same as that of the great German. It did not have the same development, but it reflected the logical consequence of the age toward this view. Butler expounds his conception of conscience in his *Sermons*, which are an analysis of human nature. There is a tendency to emphasize the emotional element, but the intellectual is admitted as essential to it. He says:

'There is a principle of reflection in men, by which they distinguish between, approve and disapprove their own actions. We are plainly constituted such sort of creatures as to reflect upon our own nature. The mind can take a view of what passes within itself, its propensions, aversions, passions, affections, as

respecting such objects, and in such degrees; and of the several actions consequent thereupon. In this survey it approves of one, disapproves of another, and towards a third is affected in neither of these ways, but is quite indifferent. This principle in man, by which he approves or disapproves his heart, temper, and actions, is conscience' (*Serm. I. § 71.*).

He is careful subsequently to insist that the function involves 'reflexion,' and distinguishes it from the appetencies or natural affections, as the agency which can give their promptings stability and rationality. The conception at this point takes on some resemblance to that of Plato, with additions from the course of Christian development. But in completing his conception of it he assigns a supremacy to conscience which is based not on its power but on its right to prior judgment in questions of right and wrong.

'Thus,' he says, 'that principle, by which we survey, and either approve or disapprove our own heart, temper, and actions, is not only to be considered as what is in its turn to have some influence; which may be said of every passion of the lowest appetites; but likewise as being superior; as from its very nature manifestly claiming superiority over all others—inasmuch that you cannot form a notion of this faculty, conscience, without taking in judgment, direction, superintendency. This is a constituent part of the idea, that is, of the faculty itself: and, to preside and govern, from the very economy and constitution of man, belongs to it. Had it strength, as it has right; had it power, as it has manifest authority; it would absolutely govern the world' (*Serm. II. § 19.*).

In respect of the idea of authority, this view is strikingly like that of Kant, but it contains an element of judgment and emotional attitude after the act which does not appear to make a part of Kant's conception. Kant starts with a law of rational action which is to hold good for all rational beings, and makes this an imperative duty which is to regulate conduct without regard to consequences or external relations and conditions. External deeds are with him neither good nor bad. The only good or bad thing in the world is a good or bad will, and any will governed by the 'categorical imperative,' or sense of duty, is moral, regardless of what the external act is. One does not need to know the means to an end or to reflect on consequences in order to be virtuous in this conception. Neither the amount of intelligence or wisdom nor the after-emotional effects of approval or disapproval have anything to do with virtue, but only the right attitude of the will and reverence for the law. The motive or mere sense of duty was sufficient to determine the whole character of conduct, and this motive constituted the nature of conscience.

Both these schools or tendencies resulted in the conception that conscience is a simple and unique faculty of the mind. This was especially indicated in the simplicity of its function in the Kantian system, and in the view that it was not a product of experience, and with the English thinkers it was further favoured by the emphasis placed upon its presence in man as an evidence of the Divine. The Kantian argument for immortality and the existence of God pointed in a similar direction, as it rested on the moral nature of man. Both schools treated conscience as an implanted power and not the result of experience, and accordingly their conception came into conflict with the implications of the doctrine of evolution. This theory attempted to derive conscience from various elements in man's social nature, and refused to regard it as an implanted and unique faculty of the mind. The controversy between the two schools was made clear by the relation of the idea of conscience to the theistic interpretation of the cosmos. The last resource of the theologian for the proof of a Divine existence had been the unique and moral character of conscience. Evolution had assumed that it had proved its claims in all other matters, and was reluctant to make an exception of conscience. It was only natural that it should so treat the question, and it was unfortunate for the theistic

view of things that it seemed to stake its claims on the integrity of its argument regarding the origin of conscience.

This controversy, however, is not the best setting for the consideration of conscience. We should first see what we think it is as a fact, and we can then discuss its origin. The tendency since the rise of the controversy has been to consider conscience not as a unique or simple faculty, but as a complex of mental phenomena organized with reference to moral ends. Instead of being made a separate faculty—the 'faculty' Psychology having been abandoned—it is considered as the *mind occupied with moral phenomena*. This enables us to conceive it as the organization of all that intelligence and feeling which are connected with the actions called moral or immoral. There was an approximation to this view in the conception of Butler, but it was concealed by the prevailing interest in other questions. But, taking conscience as a complex instead of a simple function, the present writer would recognize three general elements in it: (1) The *intellectual or cognitive* element, which is concerned with the perception of the means to ends, and the fact of some end which we agree to call the good as distinct from the merely true. Other mental functions are called in to estimate what shall be the good as distinct from the true, but the intellectual judgment and perceptions are involved in determining both the fact of this ideal and the necessary means to its realization, and on these means rests a part of the judgment of right and wrong. In fact, right and wrong hardly have any meaning without this conception of means to ends. (2) The *emotional* element, which is primarily the valuation of facts and things in relation to our welfare, whether they represent retrospective or prospective feelings. Hence they divide into what we shall call the *judicial* and the *legislative* feelings. The judicial feeling represents the approval or disapproval of self or actions in their relation to the moral law. The legislative feeling is the sense of duty, or 'categorical imperative,' and commands obedience as the retrospective feelings pass judgment on acts already done. (3) The *desiderative* element, or that mental state which may be called reverence, good-will, or conscientiousness, and is representative of respect for law, where the sense of duty represents a sense of compulsion often against the desires. The highest condition of conscience is that in which respect for law is substituted for the imperative which feels a struggle against natural desire.

These various elements will include all the social instincts which figure so prominently in the theories of Darwin and Spencer and the evolutionists generally. The important point, however, is that they show the moral nature or conscience to be complex and not simple. The view solves some perplexities in the evolutionist controversy. The difficulty proposed by the older view, in its effort to utilize the distinction between man and the animal in respect of morality, was that evolution could not account for this new increment in the process of creating man, and that, since it was not derived from anything like it in previous organic life from which man was supposed to be developed physically, a special creative act was necessary to account for it in man. But with the analysis of conscience into elements which may be found in all consciousness, animal or otherwise, we may suppose that the process of evolution has only organized or consolidated elements otherwise separate into a systematic tendency to act in the direction we call conscience. In this manner we may admit the uniqueness of the function, and so its distinction from animal life, while we at the same time accept the evolution, if not of the ele

ments, certainly of the organic whole for which the term stands. The distinction as a whole between man and animal is preserved, while the identity of their elements is maintained, evolution being formative, not creative.

The consequence of this view is that conscience is no more simple than the æsthetic faculty or any other function of the mind. It receives a distinct name merely because of the importance attaching to certain fixed relations between men and their conduct. All the functions of the mind are employed in the determination of action, and it seems simple only because we are in the habit of seizing some one particular mark in the whole for denominating the process; and, in any case in which a single term is used to denominate a fact, a natural tendency arises to consider that fact a simple one. But in matters of moral character there are many mental states and many external relations involved, and so long as conscience is a term to denote the moral nature it must include all these factors.

The problem, however, of its origin is not so important as its validity as a function of mind. The perplexity created by the controversy of the religious mind with the evolutionist was caused by the original conception that its meaning and value as a function of mind depended on its origin. The assumption was that, unless it had a Divine origin, its authority was impaired. In other words, its validity was made to depend on its creative origin instead of upon its judgment of facts. The consequence was that evolution only enforced the conclusion which the theist admitted hypothetically. But once realize, as we do in all other scientific and philosophic problems, that historical origin does not determine validity, and the authority of conscience will depend on the same criteria as those which determine ordinary truths, and not upon any contingency of its remote source, whether it be a simple or a complex faculty. We do not make any other scientific truth depend on the cause of its origin but upon its conformity to facts and the law of things. It must be the same with the dictates of conscience. They are valid or invalid irrespective of the mode of their origin, and because of their relation to the welfare of the individual.

JAMES H. HYSLOP.

CONSCIENCE (Babylonian).—As is indicated in the art. **CONFESSION** (vol. iii. p. 825), the Assyro-Babylonians felt strongly the consciousness of the commission of sin and wrongdoing, and herein the idea of conscience appears plainly, and must have presented itself with all its force to their minds. Confession of sin, in fact, can exist in all sincerity only when conscience speaks to a man, and tells him that he is in fault—when,

'Sitting in lamentation,
In bitter mutterings and pain of heart,
In evil weeping, in evil lamentation,
He mourns like a dove; tearfully night and day,
To his merciful god like an ox he lows, (and)
Bitter lamentation he constantly makes.'¹

The Assyro-Bab. conception of sin, however, differed from that prevailing in a Christian community, as the failings of a religious man belonging to those ancient nationalities might be due to causes over which he had no control—the effects of the actions of evil spirits, or the ritual uncleanness brought about by acts of forgetfulness or by the effects of illness. The disadvantage arising from this consisted in the disfavour of the gods, or of the king as the gods' representative, and there was a desire to avoid such disfavour in future by

¹ *WAT* iv. 3 pl. 28, 50 ff.

refraining from the commission of the misdeeds which brought it about. This, though not the Christian idea of conscience (including, as it does, the feeling of remorse), may have tended to bring about the frame of mind which we understand thereby, or something akin to it.

An excellent example of the heart-searchings of the Babylonians and their remorse of conscience is given by the 2nd tablet of the *Surpu*-series. Here the afflicted man has not only to ask himself whether he has committed the sins of blasphemy, uncleanness, bribery (?) to thwart the ends of justice, used false balances, removed his neighbour's landmark, etc., but must also put to himself searching questions as to whether he has separated father and son (or other near relatives), refrained from freeing the captive, failed to enable the imprisoned to see the light of day, whether, being 'upright of mouth,' his heart was nevertheless faithless, and whether, while saying 'Yes' with his mouth, 'No' was in his heart.¹ As these queries run to about 80 lines, it will easily be recognized that the Babylonian, in his conscientiousness, was exceedingly thorough.

In fact, we may, perhaps, see in the last of the following lines something expressing the idea which the word 'conscience' contains:

'On account of his eye, which is filled with tears, [accept thou his] lamentation;

On account of his troubled face, [accept thou his] lamentation;

On account of his mind (?), from which tears depart not, [accept thou his] lamentation;

On account of his lips, on which a bridle is placed, [accept thou his] lamentation;²

On account of his hands, which rest spread abroad, [accept thou his] lamentation;

On account of his breast, which complains like a resounding flute, [accept thou his] lamentation.'³

In this extract the breast, the seat of the feelings, may be regarded as the inner conscience of a man, and as practically synonymous with the heart, when used in the same sense. In the Laws of Hammurabi, the person who had a complaint to make was recommended to go before Merodach and Zérpanitum in prayer, 'with perfection of heart.' 'Perfection of heart' would, therefore, seem to have been an expression equivalent to freedom from the consciousness of sin—a clear conscience. In the fullest sense of the words, therefore, the great gods of Babylonia exacted, for their favour, not only that rectitude in the sight of the world which every right-minded person desires, but also a good conscience, such as would urge one to repentance, contrition, reconciliation, and restitution when the interests of his fellow-men were involved.

Numerous inscriptions, mostly of the nature of penitential psalms and litanies, might be quoted in illustration of the above, but very little fresh information is to be obtained from them.⁴ Their cumulative evidence, however, shows the Babylonians in a most favourable light, notwithstanding that the objects of their worship were the gods and goddesses of their national pantheon. Religious in the extreme, the constant aim of the believer among them was a clear conscience, without which there was no hope of happiness, but, on the contrary, pain and grief in this world, and, to all appearance, separation in the world to come from the deity whom they worshipped.

CONSCIENCE (Egyptian).—The actual word 'conscience' does not occur in the indexes of Egyptological works—which is *a priori* a significant fact. For not only must we suppose that the word has no exact equivalent in the Egyptian vocabulary (any more than have the terms 'sanction,' 'morality,' 'remorse,' etc.), but we must also conclude that the literature of ancient Egypt has nothing to say on the subject. Of course, we find numerous writings on propriety, on duty, on everything connected with the vast domain of ethics in general; but there is nothing that bears directly upon the phenomena of conscience in themselves. Since, on the other hand, we still find most delicate manifestations of what we might call an *organized* conscience in Egypt, in its literature and religious works, we must presume that the Egyptians had quite a different conception of conscience from ours for both of the senses in which the word is used to-day. Psychologically, they connected it with very different phenomena, and with methods of perception of the 'ego' which are no longer ours. Morally, conscience was regarded as playing a part in concepts grouped in a different way from that followed by our method. Or, rather, Egyptian thought arranged the operations of the moral conscience in separate and independent categories, whereas we make them a unity. It would take too long to investigate whether this fact is due to the general inability of the Egyptians to make abstract definitions, or, on the other hand, to the method whereby Egyptian intellectual civilization originally formed the foundations of its knowledge. The latter is probably the more correct view.

These radical differences of terminology explain, at any rate, why the question has never yet been entered into in modern works of Egyptology. These speak very often of the moral culture of Egypt, but never of its conscience or of the possible formation of the same (the work of Flinders Petrie, *Religion and Conscience*, is the only exception at present; but note also the restriction made in the literature at the end of this article). In fact, the complete absence in ancient Egypt of definition or treatment of the subject forces us to a long process of reconstruction of the Egyptian conscience by means of the direct study of whatever implicit manifestations of conscience can be seen in the whole collection of Egyptian writings. Thus, inscriptions such as a prayer, a hymn, a biography, or a copy of a deed of division or a lawsuit; or testamentary or epistolary papyri; or even magical incantations may supply a detail here or there; and the sum of such contributions may gradually make it possible to reach a knowledge of Egyptian conscience. This study is necessarily a very intricate one; but it is indispensable for our ultimate understanding of the duties and divisions of Egyptian morality, of which so much has been said. What follows cannot be any more than a first attempt, of provisional character.

It is a common thing to read that the Egyptians 'had a conscience superior to that of the other peoples of classic antiquity.' Such an expression is ambiguous. Its actual meaning, as Petrie rightly notes (*op. cit.* 86), must be that the *theoretical standards* were nowhere so well defined and apparently so high as in Egypt. The gradual development of these standards can be followed in a long historical series of documents.¹ But the

study of this evolution constitutes an inquiry which belongs to moral and social history. It amounts, in short, to an attempt to disentangle the notion of the *co-ordinate* moral system, with its sanctions and its more or less successful attempts at a codification of duties—the whole being organized on the standards of which we have just spoken. An investigation of this nature must be accompanied by that of the word 'duty,' because it is connected logically with the conception of moral obligation, and with the various questions attached thereto (nature of duty, categories, origins, sanctions, etc.). This has been the treatment followed in almost all the works occupied with the word 'conscience' in general.

It appears, then, to have been a mistake to study the 'duties' of Egyptian morality in connexion with conscience, as Petrie has done (*op. cit.*); and an examination of his work shows precisely that, among the hundreds of obligations and prohibitions figuring among the duties, the majority (food tabus, ritual and sexual tabus, etc.) arise from sources quite apart from the true domain of conscience.

We must, consequently, occupy ourselves exclusively with the phenomenon 'conscience' considered by itself, *i.e.* that immediate intuition of good and bad, that inward feeling, instinctive (from its appearing innate), which shows itself contemporaneously with an action. There is in it a quasi-spontaneous disposition of the mind to make the judgment (which it forms on actions and intentions) subordinate to an idea that appears to be *sui generis*.

Applying as it does to a dead race, and to a race which has left no didactic matter of its own on the subject, our study must be cautious, and should begin by limiting our field of inquiry as much as possible. Thus we must dismiss as too wide the definition that 'conscience is the mass of intuitions as to what is good or bad,' because an apparent intuition may be an acquisition that has become so rapid by force of habit that it seems instinctive (either by individual education or by hereditary transmission of the tendency). This suggests the subject of physical movements (*e.g.* 'struggling' movements) which seem instinctive, but are not necessarily innate. Petrie (*op. cit.* 92) shows very clearly that similarly the body of intuitions which we call conscience is the accumulated heritage of centuries. Not one of the apparent 'intuitions' brought to light by Egyptian writings can be classed with any degree of certainty among the primordial phenomena. They must be studied as one of the fundamental elements of a social morality composed of all the individual consciences brought together, and it belongs to ethics to investigate how heredity has impressed them little by little until they have the force of instinct (*cf.* A. Leroy, *Religion des primitifs*, Paris, 1909, p. 211).

Thus limited, the question comes to be whether there is in the body of Egyptian literature a means of defining the *initial* element (we must avoid the words 'innate' and 'acquired'), or the *earliest possible* elements from which the Egyptian moral conscience seems to proceed. In a question of this type, if we do not want it to extend indefinitely, it is a good method of procedure to apply to Egypt the principal theories relating to the origin of conscience among primitive peoples, and to investigate whether what we know of Egyptian religion and ethics agrees with them.

At the very outset, it seems certain that the Egyptian conscience cannot be brought into connexion with the Divine world of the nation. The literary expressions employed in the question as to 'whether conscience is the herald of the Lawgiver or the Lawgiver Himself' have no precise meaning here. If we can prove that social morality is the product of the body of individual

¹ Especially if we use documents very much neglected as a rule, such as: the 'Negative Confession' of the Roman era; the 'Duties of the Governor' (Rekhmara inscription), and, generally, the biographies of the first Theban empire. Hitherto we have made too exclusive a use of the celebrated ch. xxv. of the Book of the Dead and of the 'Treatises on Wisdom' (inaccurately called 'Treatises on Morality').

consciences, and show the initial separateness of morality and any given religious system, we see that this separation naturally affects the origin of conscience. Now this separation of morality from religious beliefs has been attempted time after time, since Tylor, in all the religions of uncivilized or semi-civilized peoples. But nowhere is this phenomenon more scientifically clear than in Egypt, where, from the time of the pre-historic texts of the Funerary Books to the Roman Empire, the accession of the gods to the domain of morality was a slow process. Right down to near the latter period, Osiris was almost the only god connected with a moral idea (Ptah of Memphis is *perhaps* an exception, if we judge by the latest discoveries, in his temples, of stelæ to the name of 'Ptah who hears the plaint of the wretched' [cf. Petrie, *Memphis*, I, Lond. 1908, p. 17 ff.]). The other gods neither prescribed nor taught anything of morality. They only punished those who did them wrong, and blessed their benefactors. It may even be remarked, as one of the strongest characteristics of Egyptian religions, that this neutrality of the gods persists throughout the whole domain of ethics.

The systems which base conscience on 'sympathy' seem incapable of explaining its manifestations in Egypt. Not one of the texts of the monuments, *e.g.*, or of the moral or popular literature, makes any mention of, or even allusion to, anything of the nature of the Shinto doctrine of *kami*. In Egypt, 'to follow the dictates of the heart' would lead to very different results from those of a fundamental concept that 'the heart is good.' On the contrary, the total impression given by Egyptian writings may be summed up in two remarks which do not favour this system. (1) We find a great lack of those ideas which are often regarded as indications of the 'sympathetic' origin of conscience. These are the feelings which are usually qualified with 'temporary sanction,' and are called the pleasure and joy of doing good, and the remorse, regret, and repentance for evil-doing. Inversely, certain chapters of the Pyramids and the Book of the Dead, and certain reflexions of the popular tales, offer lamentable analogies, in point of 'sympathy,' with the present mental status of the very lowest races among those studied in the Congo (cf. *Notes sur la vie familiale et juridique de quelques populations au Congo Belge*, ser. iii, fasc. I, [Brussels, 1909]). (2) The study of 'sanctions' properly so called (of very different kinds, of course) reveals an *organization* (*i.e.* a *formation*) which shows its connexion with fundamental elements that are quite different, and perhaps even totally opposite.

The history of this will be examined elsewhere (see ETHICS). Here, however, we should note this tangle—at first sight inextricable—of the most various fundamental sanctions. The lowest of these are based on violation of 'tabus,' and have no possible connexion with any moral action whatever; the others show themselves as consequences, conceived from a utilitarian point of view (and recognized as such by *experience*), of incoherent series of actions which are not arranged in any kind of rational groups. We see this in the absolute and persistent inability of the Egyptians to compose any kind of reasonable list of sanctions. All that we find (Treatises on Wisdom, Book of the Dead, Maxims, Proverbs, Instructions, etc.) are lists formed in reference, not to classes of duties, but to the individuals or forces whence these sanctions proceed: the gods, chiefs, the dead, the family. Sometimes, indeed, there is a suggestion of the motives of command or prohibition. But then we find a vast confusion: the career, renown, long life, the gratitude of men, business gains and losses, eschatological conditions, reciprocity, etc. Few documentary sources give the idea of a moral conscience with any other basis better than that of 'innate goodness' or 'sympathy.'

The *innate* appreciation of right and wrong, which in any regard as the irreducible, constitutive element of the moral conscience, seems at first sight a good theory for Egypt. There is probably no other ancient literature so impregnated

with ideas of right and justice. Discourses like the one supposed to be addressed by the king to his vizier on the duties of the guardians of justice (cf. Newberry, *Bekkhamra*, Lond. 1900, p. 33), the statements of ch. cxxv. of the Book of the Dead, and especially the constant references of the biographical inscriptions to equity and hatred of wrong in all its moral and social forms, would seem to picture the very inmost mental state of the race. A critical examination of the texts, however, makes this tempting hypothesis untenable. In eschatology, we find that the idea of 'retribution' or that lofty idea of the 'average of years of good fortune' (cf. Griffith, *Stories of the High Priests*, Oxford, 1900, pp. 41–66) is of very late appearance, and the most perfect injustice preceded it, for—as has been noticed—the famous 'Negative Confession' confines itself to a magical affirmation without proofs. Finally, the moral concept which it supposes in relation to the actions of this life is not ancient in respect of its insertion in the Book of the Dead; there is no getting over the plain fact that, while we have for several years been in possession of about two hundred specimens of the Book of the Dead of earlier date than the XVIIIth dynasty, we have not one containing a single line of the only moral chapter of this literature. It is the same with the ordinary inscriptions, where the development can be followed from the *mastabas* of the IVth dynasty. Right and wrong do not appear at first except in the form of affirmations of the lawful ownership of various goods, or the absence of wrong done to those things of which the deceased has need—which is quite a different thing. Even reducing it to its humblest form (as conceded, *e.g.*, by Réville, *Prolegomènes*, Paris, 1881, p. 276), we cannot reach the evidence of a primordial, irreducible element, consisting of an *innate* feeling of right, for any one of the ancient Egyptian cases. On the other hand, it is not easy to find satisfaction in a system like that taken up lately by Leroy (*op. cit.* 205), which posits at the outset an irreducible *innate* idea of right, while admitting the infinite and contradictory variety of practical applications. It is an evident paralogy to make, from the establishment of a connexion by mental operation, an entity existing by itself. The philological examination of the texts that one would apply to this special exposition might arrive some time at the evidence of the primitive confusion of the notions of goodness and utility, but never at an abstract conception of right; such a process would lead rather to conclusions remarkably like that suggested by the examination of the moral ideas of the races recently examined in Equatorial Africa, in the basin of the Congo, or in British East Africa.

Petrie's conclusion is the theory of *utility* brought to perfection by heredity (*op. cit.* 88).

His views may be summed up as follows: The conscious idea of right and wrong conforms at its basis with what is useful or the reverse for the community. Passing centuries have gradually done away with this idea, and have imposed on the individual, and thereafter on his descendants, respect for it (if not intelligence); so that his manner of appreciating it has, like hereditary movements, become instinctive. In fact, the primitive reasoning of the ancestor has been transmitted to his posterity in the form of propensities to conscience.

This theory of Petrie's is a remodelled form, to suit Egypt, of the conception that we find elsewhere in all sorts of analogous forms; *e.g.* 'le précepte devient axiomatique dans la conscience par hérédité' (Réville, *op. cit.* 276); or the elementary principles are 'l'utilité, l'opinion, les sentiments affectifs, l'hérédité' (G. Le Bon, *Premières civilisations*, ed. 1905, p. 95), etc. The whole idea seems well adapted to the Egyptian world, so well organized in all its workings for social co-operation and utility.

But this is a narrow basis, and must be broadened. Such a system does not explain why Egypt, having the same constitutive elements of conscience as the other African peoples, should have developed its moral conscience further than

they. A more precise and intricate mechanism must be found, and can be found—in the present writer's opinion—in a careful examination of Egyptian literature. A total of 500 or 600 proverbs, maxims, precepts, ideas, or thoughts of a moral type, extending from the IVth dynasty to the Christian era, will suffice for this inquiry, the business of which is not to define the idea of duty or its working out (see ETHICS), but to find the elements of formation of what we call conscience in Egypt. The development of the utilitarian and social datum will appear as the result of the combination of two chief elements.

The first consists essentially in the feeling that there is no indifferent action, and that every action has consequences for its author. This idea is by no means of the same nature as that of right and wrong. It is not even the idea of responsibility, but it contains the latter in embryo. It also includes the future idea of *reciprocity*, applied to the doer of the action. It thus reduces itself to the form: 'If I do this, the same will be done to me (or will happen to me)'; then to the form: 'I shall not do that, so that the same may not be done to me (or happen to me).' A comparison of the mentality of the black African of to-day with the Egyptian texts makes it possible to hold that this idea of the necessary consequences of every good or bad action is a truly innate idea, or, if not innate, at least the most primitive instinctive idea that can be found. It does not presuppose, so far as appears, a developed intelligence or a long education. The African—to continue our illustration—is surrounded by an infinite number of forces and spirits of such importance that every human action and movement affects them, for good or ill—we might almost say, most often for ill. And this pessimism, rightly remarked as a characteristic of the African mind, is still visible in Egyptian literature. The action, with its consequences, agreeable or harmful or displeasing to one or other of those innumerable spirits and forces, begets the immediate perception of a good or evil consequence for the doer. This is clearly seen in the case of numerous interdictions of a ritual nature, or in the mysterious vengeance of spirits and gods offended unawares, or in violent deaths. The famous ch. cxxv. itself, looked at from this point of view, shows itself to be composed from the very same elements as those of a Kavirondo or Ubangi native's conscience. And the idea that other men, neighbours and fellow-men, are linked, by their death or by their guardian-spirits, to this sum of mysterious forces brought into motion by every action, seems to have supplied the natural means for the extension of this primitive feeling.

Whether the original mental operation is *innate* or not will not be discussed here. The positive fact is that what, in every case, is described as the first manifestation of the feeling of conscience among the 'non-civilized' Africans is at the foundation of Egyptian mentality. Experiment naturally gave this feeling definiteness and precision, and, low as we may judge it from the moral point of view, it started a great forward movement on the day when it became the idea of *necessary reciprocity*, attached to the actions or intentions. We can still detect that stage very clearly in Egypt (especially in the popular tales), when this idea is embodied in the vague form of a sort of 'fatality,' whose consequences man lets loose by his own action. It is only later, and in a very imperfect form, that this mechanism is connected with precise interventions: (1) with the dead as punishing or rewarding (cf., e.g., the expression 'your gods (i.e. your defunct dead) will bless you if you do,' etc.); (2) with the guardian-deities of the dead. And yet, even in historic times, the perception of the results of the evil action is attached to forces that are quite vague and undefined, such as chance, misfortune, and accident. These are the survivals, modified by time, of the 'spirits' of the most ancient Egyptian beliefs. Never have national religions been able to rise higher.

If we find at the base of Egyptian thought first fear, and then, with progress, the idea of personal responsibility, we must demonstrate why finally

this sort of 'conscience' later developed so differently in Egypt and among the African peoples of whom we have been speaking. A second factor came into play, which was indispensable to the evolution, and it seems that it was this factor which organized the Egyptian conscience, with its special traits, with its imperfections—but also with its nobility. The second element consists very probably in the idea of order, or the idea of the harmony of the world—later designated by the word *κόσμος*. The first knowledge of 'order' in the progress and forces of the world naturally began as purely material order, in the domain of physics and geography. We have explained in art. CALENDAR (Egyptian): the important part played in this question by the observation of the stars, and the idea that the Divine influences of the stellar powers governed the world. As the heavenly vault set the example of order, and directed events on earth, the knowledge of the laws and harmonies of the sensible world followed. A relation of this kind between the astral world and the earth seems to have been made very much more natural in Egypt by the character of the climate, in which the regularity of certain rhythms and the well-defined character of certain opposites were noticeable (the periodicity of the Nile's rise, the fixity of the seasons and winds, the contrast between the desert and the valley, etc.). The knowledge of this supposed co-relation helped the Egyptians to establish the first ideas of the correspondence that could exist between this regular rhythm of the material world and the individual efforts of men to associate their own activity therewith in a beneficial manner. Hence arose a more and more clear comprehension of the identity of what is useful for man with what is indicated by the order of astral powers. Such a conviction must in its turn engender gradually, as the foundations of intuitive conscience, the ideas of the necessity of all uniting together for the common struggle, of the necessity of solidarity, of the superiority of the general interest over the particular, and of the dependence of the individual upon the community.

The whole question, then, in the special case of Egypt, turns upon the theory that the origin of conscience 'se rattache aux efforts faits par l'homme depuis la préhistoire pour se civiliser par la coopération et la solidarité' (G. Le Bon, *Origines*, 1906, p. 191). But, instead of general hypotheses, we have here documentary evidences of this evolution; e.g. in the very frequent references in the ancient texts to the important rôle, from a moral standpoint, filled by the questions relating to water, irrigation, and the struggle against the desert (cf. ch. cxxv. of the Book of the Dead; certain passages in the panegyrics of the lords of Syut in the Xth dynasty; or of Beni Hasan in the XIIIth, etc.). The idea of a higher authority and an earthly hierarchy being necessary in this world, as they are in the celestial world, for the common good, is also a result of a conscience based on the vision of the *κόσμος*; this vision has likewise impregnated all the literature of the 'moral' type.

In conclusion, from the vague fear common to all primitive societies, the nature and climate of Egypt developed the more fertile and definite idea of an arrangement of the forces and beings of the sensible world into regular armies, some of which are man's allies and preside over the progress of the world, while others try to harass the world and so hurt man. The comprehension of consequences was followed by the comprehension of the necessity of social order, the comprehension of social interest, etc. Owing simply to its complex origin, Egyptian conscience never succeeded, in its reasoned elaboration of duties, in separating ritual *tabu* from the obligation of the moral domain. These were for the Egyptian two different forms of the necessary co-operation of men for the maintaining of the order requisite to society.

A satisfying counter-proof of this view is supplied by a comparison with a certain number of living races in the uncivilized parts of Africa. It might be concluded that the degree of organization of the moral conscience in Africa is

usually proportionate to the clearness of the conception of order in the terrestrial world, meteorological or astronomical (cf., e.g., the comparative series of the collection of *Monographies descriptives* by Van Overbergh, Brussels, 1907 ff., with what is said of the Bavi and of Benin by R. E. Dennett, *At the Back of the Black Man's Mind*, London, 1906, and *Nigeria Studies*, 1910, for the various manifestations of conscience among these peoples).

The Egyptian idea, then, ends in something very analogous to the statement of Chinese wisdom, that the natural order of the world is bound up with its political, social, and moral order, and is even quite identical with it. Only—in spite of passages of certain texts—the Egyptians do not seem to have been able to formulate this view with the same theoretical clearness. It is in any case curious to notice—and here we have probably more than a simple coincidence—that, just as the sanctions of Taoism in China are of late date, so in Egypt the organization of definite sanctions (rewards and punishments in permanent categories) did not appear until well after the actual organization of the moral conscience.

The history of this organization will be discussed in art. *ETHOS*. We need only observe here (1) that the material κόσμος has become harmony, equity, and moral and intellectual truth by a series of evolutions which can be shown philologically by the series of Egyptian texts, and that this series is analogous to the series which has gradually transformed the data on the human voice, cry, or vibration, into concepts where the word 'voice' is taken to mean the spoken word, and then becomes the equivalent of λόγος; and (2) that the appearance of the moral conscience, based on the comprehension of the κόσμος, does not in any way assume the attribution of a properly so-called moral character to the beings or forces directing the κόσμος. These simply did their own work in this world, without ever making any express demand upon the Egyptian's co-operation; and the latter simply sought, for his own good, to bring his efforts into harmony with those of the directors of the supposed order. Hence he derived, among innumerable other acquisitions, a certain number of ideas on conscience, morality, interdictions, obligations, etc. A significant fact in this respect is that, in the majority of cases, the sanctions of these obligations and interdictions are tacked on to all possible kinds of beings and things, except beings of a Divine character.

LITERATURE.—As was said at the beginning, the only work really dealing with the subject is W. M. Flinders Petrie's little book, *Religion and Conscience in Ancient Egypt*, London, 1898. Even here we must observe that the real question of conscience is treated only on pp. 86–109, the rest of the book being practically given up to a summary of Egyptian mythology (pp. 1–85), and an examination of the various categories of duties (pp. 109–163).

GEORGE FOUCART.

CONSCIENCE (Greek and Roman).—I. GREEK.—I. Definition.—Conscience operates when the individual passes an intellectual judgment on definite acts, accomplished or purposed, of his own, and decides whether these acts are right or wrong. Such judgments, being self-regarding, are always accompanied by self-satisfaction, or self-dissatisfaction, according as the individual feels he has fulfilled, or fallen short of, the moral law; conscience punishes or approves, deters or suggests. It has an intellectual side and an emotional side; it may be enlightened or the reverse, sensitive or the reverse. Its enlightenment is to be estimated by the moral ideal of the individual; he may obey the moral law through fear of punishment here or hereafter; through hope of reward here or hereafter; or simply in order to realize the ideal self. The most educated conscience is that of the man who has the highest ideal, who wishes to realize the best life of which humanity is capable. The sensitiveness of conscience depends partly upon heredity, and partly upon habit and training. Some people naturally feel their shortcomings more acutely than others, while indulgence in vice always tends to lessen the shame felt at such indulgence.

2. Homer and early times.—Although there is embedded in the Greek language the notion, in later times developed by philosophers, that virtue and sin have an intellectual side (Homer's phrase for 'versed in wickedness' is ἀπειρία εἰδώς,

'knowing lawless deeds' [see, for example, *Od.* ix. 189, 428, xx. 287]), yet the most common moral terms used in early times refer to the emotional side of conscience. In Homer we have: (1) αἰδώς (*aiḍōmat*), used of those who feel reverence towards the gods (*Il.* xxiv. 503; *Od.* ix. 269, xxi. 28), towards suppliants or guests (*Il.* i. 23, 377, xxi. 74, xxii. 419; *Od.* iii. 96, iv. 326), or of those who inhibit their passions in order to realize some higher end (*Il.* v. 530, vi. 442, vii. 93, xiii. 122, xv. 561, 657, 661, xxiv. 44; *Od.* iii. 24, vi. 66, 221, viii. 172, 324, 480, xiv. 146, xx. 171). The substantive may be rendered 'shame at offending gods or men,' 'respect for the moral rebuke of others,' 'modesty,' 'sense of honour,' 'self-respect.' (2) If αἰδώς sometimes approximates to the 'lawgiving conscience' which precedes an act, ἀλοχύνουσι (*Od.* vii. 305, xviii. 12, xxi. 323) generally represents the shame (or the fear of it) inflicted by the 'judging conscience,' although it is not always possible to distinguish between the terms. (3) The indignation felt by others at transgression is represented by νέμεσις (*Il.* vi. 351; *Od.* ii. 136, xxii. 40), but occasionally νέμεσις is self-regarding (*Od.* ii. 64, 138, iv. 158; *Il.* xvi. 544, xvii. 254), and on one occasion (*Od.* i. 263) θεοὺς νέμεσθεο means 'he stood in awe of the gods.' (4) A feeling of reverence for the rights of humanity is expressed in *Il.* xviii. 178 by σέβας, and in *Il.* vi. 417 by the verb σεβάζεσθαι.

The moral sanctions of the Homeric Greek were thus (i.) fear of the gods, (ii.) respect for public opinion (φάρσι ἀνδρῶν, *Od.* xxi. 323), and (iii.) self-respect (Helen calls herself 'a dog,' *Il.* vi. 356), and a sense of honour which sometimes led to deeds of heroism. Achilles would rather die than fail to avenge his friend Patroclus (*Il.* xviii. 95 ff.)—an instance of devotion to duty which Socrates, in the Platonic *Apology* (28 CD), quotes with strong approval. Conscience, in fact, was acting, although as yet no special word existed to represent it, while the intellectual side was less developed than the emotional.

3. Individual merged in the citizen.—The characteristically Greek respect for public opinion found freer scope as city life developed, and as State discipline became the chief educator of the Greek people. The citizen looked upon morality as submission to the will of a corporate body. 'We lie here in obedience to our country's commands,' was the epitaph of the noblest heroes that Greece ever produced. The law, in fact, was invested with a peculiar sanctity of its own, and the individual found moral satisfaction in yielding implicit obedience to the powers that be; in modern language, he surrendered his conscience to the general conscience, and was content to be guided by the latter. Plato (*Crito*, 51 E) makes Socrates personify the Laws, who point out that every citizen has virtually agreed to abide by them, and not to prefer his own sense of right and wrong. That such was the belief of the historical Socrates is shown by Xenoph. *Mem.* iv. iv. 12, where τὸ νόμιμον is equated with τὸ δίκαιον. It was generally felt that the vast majority of men needed some strong external constraint. Hesiod (*Works*, 182 ff.) dreads the departure of moral fear from the earth, and the Platonic Protagoras (*Prot.* 322 B C) calls αἰδώς and δίκη the bonds of political and social life. The language of Aeschylus is stronger still. 'Who,' asks Athene (*Eum.* 699), 'is righteous if he fear nothing?' In a remarkable passage of the *Ajax* of Sophocles (1073 ff.) it is stated that φόβος and αἰδώς are a necessary defence to both States and armies; that only δέος and ἀλοχύνη can bring a man safety. Plato, in a yet more striking passage (*Laws*, 699 C), makes φόβος and αἰδώς responsible for the Athenian victories over Persia. The

Athenians, he says, had a despotic mistress in *αἰδώς*, through whom they were the willing slaves of the laws (698 B), and those who would be good must be similarly disciplined.

4. Unwritten laws.—But, in spite of the tendency to merge morality in legality, the Greek was aware that the individual ought to form moral judgments for himself when the laws were silent. The jurymen at Athens swore to decide suits according to the laws, but, when these were no guide, to judge the case conscientiously (*γνώμῃ τῇ ἀρίστῃ*, Aristotle, *Rhet.* i. 15. 5; cf. *Æsch. Eunn.* 674). Again, the Greek acknowledged certain great 'unwritten laws,' of which Socrates (Xenoph. *Mem.* iv. iv. 19f.) mentions four—to worship the gods, honour parents, avoid incest, and repay benefactors. Occasionally the unwritten laws might clash with those of the State; then the individual must decide between them. The tragedians are constantly depicting situations in which a character has to choose between the traditional code and some higher moral end. Philoctetes is a good example, while Antigone readily faces death rather than obey the edict of Creon, and, by leaving her brother unburied, violate the unwritten laws.

5. Decay of State discipline.—It is remarkable that the notion of conscience was more clearly apprehended just at the time when the morality of the masses began to decline, that is, during the period subsequent to the outbreak of the Peloponnesian War. The reason is partly that, as the State discipline slackened, the vicious and weaker characters, no longer having so firm a check upon them, grew more immoral, while the stronger and nobler natures (not necessarily the philosophers) learned to obey an inner law of righteousness. But the latter were comparatively few, and Plato, in the second book of the *Republic*, repeats the story of Gyges' ring in such a way as to show his own belief that the many are incapable of being virtuous for the sake of virtue.

6. Decay of State religion.—Not only the State discipline, but the belief in the State religion, had by this time lost much of the power it once possessed. Few thinking men continued to believe in the existence, let alone the providence, of Zeus, Apollo, and the other Olympians. The story told by Herodotus (vi. 86) of Glaucus and the Delphic oracle illustrates how the State religion had once been, in some respects at least, a good moral influence. When, however, the Divine sanction failed to exert effective control, the individual conscience more clearly manifested itself. In yet another way did the decay of belief in the Olympic pantheon further the development of the idea of conscience; the early Greek had thought, with a strange inconsistency, that the gods both tempted men to sin and punished sin; at first he blamed the gods for leading him astray; then, deprived of this excuse, he began to blame himself.

7. Other components in Greek religion.—But there were other and more abiding components than Olympian worship in the religion of the Greeks. One should note the *φάρμακός*, or scapegoat, mentioned by Hipponax (frag. 4ff., ed. Bergk) and Aristophanes (*Frogs*, 733). Fear of spirits (probably Pelasgian in origin, as it is not to be found in Homer), especially dread of a murdered man's ghost, gave rise to the ideas of an avenging deity (*ἀλδοτωρ*), and of blood-guilt (*παλαμναῖος*, *προστρόπαιος*, *ἐναγής*). The latter might infect a whole family, or even a State (Thuc. vii. 18). Doubtless at first the infection (*μῦσος*, *μύσος*) was regarded as something material, to be cleansed by expiatory ceremonies, or it might even be personified (Furies, *μητρὸς ἑγκρατοὶ κόρες* [*Æsch. Choeph.* 1061]); but in time the doctrine was spiritualized.

Xenophon (*Cyrop.* viii. vii. 18) speaks of the fears that the souls of wronged persons bring upon murderers, and of the avenging spirits (*παλαμναῖος*) which they cause to visit the unholy; while Euripides interprets the Furies of *Æschylus* as the stings of conscience (*Orestes*, 396).

Orphism introduced the doctrine that the soul was exiled from heaven because of sin, and that reunion could be achieved only by purification. In Homer the gods lead men to transgress, but Orphism taught that guilt arose from man himself. Abstinence and rites were the Orphic means of cleansing; but, however degrading this teaching might be in unscrupulous hands (Plato, *Rep.* ii. 364 E), it was possible to give it a spiritual interpretation (*μητρεῖται κακότητος* [Empedocles 406, ed. Karsten]), and it most certainly helped to foster a sense of sin. The doctrine of *ὁμοιωσις* (becoming like unto God) is Orphic in origin, and gave to the world an ideal which increased in moral value as the idea of the Divine nature was purified and ennobled. According to Orphism, man was good and bad, Divine and human. The realization of man's dual nature must have tended to develop the individual conscience. In the Pythagorean sect, which owed much to Orphism, examination of the conscience was enjoined (according to C. Martha, *Études morales sur l'antiquité*, 1883) from early times, and in the *Hippolytus* of Euripides we have an Orphic who is horrified at the suggestion to commit a sexual offence. In the history of morals the idea of physical impurity generally precedes, and leads up to, the conception of a guilty soul.

8. Morality and the human heart.—Whatever the origin may have been, the 5th cent. witnessed the development of the idea that the human soul (*ψυχή*, *φύσις*, *φρήν*, *νοῦς*) is the supreme judge in the sphere of morality. The mere fact that philosophers like Xenophanes criticized the Homeric theology on moral grounds, shows that they regarded human nature as superior to religious tradition. This thought is specially prominent in the plays of Euripides. The *Ion* is an angry protest of the human soul against a conscienceless god who ravishes maids and leaves them to their shame (*Ion*, 892; cf. 880). The heart of man is considered by Euripides to be the seat—possibly the source—of virtue and of vice. Chastity is said to reside in the human *φύσις* (*Bacchæ*, 314, 315, *Hipp.* 79, *Tro.* 987, 988); Theonoe (*Hel.* 1002, 1003) has a 'mighty shrine of righteousness' in her *φύσις*; the unhappy Phædra exclaims, 'My hands are pure; the stain is on my soul' (*Hipp.* 317). Conscience the law-giver and conscience the accuser are both manifest in these dramas. The countryman in the *Electra* is too honourable to consummate the marriage which has been forced upon Electra; Macaria goes voluntarily and readily to an awful death in order to save her kindred; Orestes is tormented by the consciousness of matricide. Like many other men of a sensitive moral nature, Euripides is painfully aware that the times are out of joint; oaths are no longer sacred, and *αἰδώς* has vanished from the earth (*Medea*, 439). This dramatist, perhaps more than his great predecessors, admired the beauty of self-sacrifice; Alcestis and Macaria are worthy successors to Prometheus and Antigone.

The Greek of the 5th cent. was thus fully aware of the working of conscience, and he began to use special words to describe it. These laid stress, not upon the emotion which follows a judgment of conscience, but upon the intellectual character of that judgment. One word is *σύννοια*, 'deep thought' (Eurip. *And.* 805), which does not appear to have become popular in the moral sense. Another is *σύννοια*, 'understanding,' used by Euripides to describe the remorse of Orestes (*Or.* 396), by Menander (fr. incert. 86, Meineke), who says that 'conscience doth make cowards,' and by Polybius (xviii. xxvi. 13). The last passage is to this effect: 'There is no more terrible witness, or more formidable accuser, than the conscience that dwells in each man's soul.' But the most

common term is the verb *συνίδω*, with its participial substantive *τὸ συνειδός*, meaning either (a) 'to be cognizant,' or (b) 'to share in the knowledge of another.' This verb expresses at once the intellectual character of a judgment of conscience and the dual nature of human personality. It is impossible to decide when the term first acquired its moral meaning, but it is used of a clear conscience by Sophocles (*ap. Stob. Flor.* xxiv. 6) and (with a negative) by Plato (*Rep.* 331 A, *τῷ μηδὲν ἑαυτῷ ἄδικον ἐνεαίδοντι ἡδέα ἐλπίς*), and of a guilty conscience by Euripides (*Or.* 396) and by Aristophanes (*Wasps*, 999, *Theogn.* 477). Stobaeus has collected a number of passages dealing with *τὸ συνειδός* in his *Florilegium*, ch. xxiv., and it is interesting to note that he attributes to Pythagoras an exhortation 'to feel shame most of all before oneself,' and the statement that conscience deals more cruel blows than the lash. We are reminded that the Pythagoreans laid stress upon self-examination, not as an exercise of memory, but as a moral discipline.

One other word for conscience may be noted here. A scruple is sometimes called *ἐνθύμιον*, 'something lying heavy on the heart' (Herod. viii. 54; Thuc. vii. 50; Antipho, *Tetral.* ii. 1, 2, 4, 9; Soph. *Oed. Tyr.* 739; Eurip. *Her. Fur.* 722).

9. Shame before the self.—A clearer distinction now begins to be drawn between the shame which results from fear of punishment or disgrace, and the shame which accompanies loss of self-respect. Democritus, a profound moralist without an ethical system, looks for happiness in serenity of soul (fr. 9-11, ed. Natorp). Sin should be avoided, not through fear, but because it *ought* to be avoided (*διὰ τὸ δεόν*, fr. 45). Even when alone, a man ought not to do or say anything base. He should be ashamed before himself rather than before others (fr. 42). He should no more do evil when nobody will learn about it than when everybody will do so; it is best to reverence oneself (*ἑαυτὸν μάλιστα ἀδείψαι*, fr. 43). The Attic orators not only emphasize the uneasiness of conscience resulting from the fear of discovery, but also extol the life that is free from self-reproach, although the two ideas are sometimes combined. Antipho (*Tetral.* i. 3, 3) mentions as moral checks both fear (*φόβος*) and dread of sin (*ἄδικία*), and he thinks that a jury will be influenced by respect for 'the gods, piety (*τοῦ εἰσεβοῦς*), and themselves' (*Or.* vi. 3, cf. also vi. 1). Isocrates (*Nic.* 39 A) bids us envy not the rich, but those conscious of no sin. Fear of punishment or of disgrace may be implied here, but a clearer note is sounded in [Isocrates] 5 B: 'Never expect to hide a sin. Even if others learn nothing of it, you will be conscious of it yourself.' Lysias (*Or.* xix. 59) speaks of one who thought that a good man ought to help his friends, even though nobody should know about it. In the pseudo-Demosthenic speech against Aristogiton, the writer says (780) that 'there are altars of justice, discipline, and honour (*αἰδώς*) among all men; the fairest and holiest are in the soul and nature of the individual.' Socrates is made in the Xenophontic *Apology* (§ 5) to avow that in the past he has enjoyed the most pleasant possession a man can have, the consciousness that his life has always been holy and just (cf. also Xen. *Apol.* § 24, and Stob. *Flor.* xxiv. 13). Finally, a fragment of the comic poet Diphilus (*ap. Stob.* xxiv. 1) denies that a man who is not ashamed before himself when he has done wrong can be ashamed before others who are ignorant of it.

10. Philosophy and conscience.—It has been maintained, and as energetically denied, that this clearer realization of the shamefulness of sin is to be attributed to the work of the philosophers. Both seem to have been due to the same cause, namely, the decay of old beliefs, but it is perhaps unreasonable to deny a real, though indefinite, influence to philosophic ethics. It should be noticed, however, that *συνίδω* and *τὸ συνειδός* are popular, not philosophic, expressions.

There are plenty of examples throughout the course of Greek literature and Greek history of the individual deliberately following the dictates of his better self, but such acts are rarely associated with the words employed to designate 'con-

science.' The latter (*τὸ συνειδός*, etc.) generally refer, not to the law-making conscience, but to an adverse decision of the judging conscience, and to the self-dissatisfaction which accompanies it. Now, it was with the enlightenment of morality that Greek ethical philosophy chiefly concerned itself. As a rule it passed over the shame that accompanies wrong-doing, and never tried to make it the highest moral motive. Convinced that vice is ignorance, both Socrates and Plato devoted their lives to educating the moral sense; and Plato constantly insists that mere conscientiousness, like that, for example, of Euthyphro, is not sufficient. But if sin is nothing more than a mistaken notion of what is good, no place is left for shame and remorse. Carried to its logical conclusion, the doctrine denies either the existence or the reasonableness of moral praise and moral blame. Socrates trusted to reason to guide him aright in moral questions, and doubtless fathered any scruples he might occasionally feel on his *δαμόνιον*—probably a hallucination of the sense of hearing.

(1) Plato.—Plato regarded as true morality only that which springs from knowledge of the idea of good. Morality founded on fear he continually disparages, especially if the fear be that of public opinion (cf. *Crito*, 47 C, *Phaedo*, 82 A B, and *Euthyphro*, 12 C), though he admitted that the majority of men were incapable of 'philosophic' virtue, and should be compelled to obey, not the fluctuating general conscience, but the dictates of philosophic rulers (*Rep.* 519, 520). Consequently, *αἰδώς* is for the many rather than for the few, and it and fear form the two warders of the ideal State (*Rep.* 465 B). Towards the end of his life, Plato emphasized more the value of awe and reverence. Every legislator, he says in the *Laws* (647 A), will hold moral fear in high honour: fear, law, and true reason are the principles that keep the appetites in check (783 A); strong public opinion restrains a man from incest, the fear of committing which, even unknowingly, makes a man ready to kill himself (Edipus, Macareus, 838 C). But what Plato valued was the fear that checks crime, not the shame that follows it, and he therefore set little store by the popular conception of *τὸ συνειδός*; it is the old man Cephalus in the *Republic*, the representative of the old morality, who is made to sound the praises of a 'conscience void of offence,' and to enlarge on the terrors of the wicked.

Conscience the lawgiver, though working in the hearts of men, was as yet but feebly apprehended as an idea, and herein the work of Plato bore fruit. The keynote of his ethical philosophy is that the really virtuous man must know what the good is, i.e. must have an educated morality. And when a man knows what virtue is, he cannot help acting virtuously; for no one is voluntarily wicked. Sin is a disease of the soul (*Gorgias*, 479 B), and he who sees this will submit to anything, even to death, to rid himself of the plague. Even though the gods and men are unaware who is righteous and who is not, righteousness accompanied by all the punishments of sin is better than unrighteousness accompanied by all the rewards of virtue (*Rep.* 366 DE). Plato felt that the enlightened soul, brought face to face with sin in all its nakedness, would turn from it in disgust.

(2) Aristotle.—Aristotle, taking the end of man to be a full and virtuous life, the result of habituation and practical wisdom, never discusses conscience. The first principles of the science of human conduct, he thought, were perceived immediately, by a kind of intuition (*αἰσθησις*, *Ethics*, 1142a). He values highly self-respect, and the beauty and desirableness of virtuous actions; *αἰδώς* he regards sometimes as modesty, befitting only the young

(1129 b), sometimes as a shrinking from the ugliness of sin (1116 a, 1179 b). Emphasizing as much as Plato the necessity of an enlightened intelligence for truly virtuous conduct, Aristotle did good service by insisting (again with Plato, *Laws*, 653 B) upon the importance of training youth by habituation to love good and to hate evil (*Ethics*, 1104 b).

(3) *Stoics*.—It has been held that the Stoics, with their individualism, their doctrine of the self-sufficiency of man, their neglect of public opinion, their elaboration of the idea of duty (*προσηκον, καθήκον*), and their exhortations to live a life according to the Divine reason implanted in the heart of man, did much to develop the notion of conscience. Some believe that they coined the word *συνείδησις*, but this is more than unlikely. By *συνείδησις* conscience is described in the (of course apocryphal) sayings of Bias and Periander recorded by Stobæus (*Flor.* xxiv. 11, 12), in Wf 17¹, in the NT, in Diodorus (iv. 65. 7: *διὰ τὴν συνείδησιν τοῦ μύθους εἰς μανίαν περίεστη*), in Lucian (*Amores*, 49), and in the proverbs assigned to Menander (*Monosticha*, 654: conscience is a god to all mortals). Chrysippus (Diog. Laert. vii. 85) used the word, but he meant, not conscience, but consciousness. Even the later Stoic writers, Epictetus and Marcus Aurelius, though they constantly mention the action of conscience, seem purposely to avoid the word *συνείδησις*. The fact is that all the Greek words for 'conscience' look, with scarcely an exception, to conscience the judge, and are associated with shame. Plutarch, in his famous description of conscience (*Moralia*, 476 F), says, in wonderfully modern language, that it wounds and pricks the soul. Thought, which softens other pains, only increases this; the guilty mind punishes itself. The Greeks, familiar as they were with the working of conscience the legislator, had no special word to describe it, although its emotional side is hinted at in *αἰδώς*. Now, the Stoics attributed 'absence of emotion' (*ἀπάθεια*) to their wise man; yet, though he would not entertain fear of disgrace (Diog. Laert. vii. 112, 116), he would feel *αἰδώς*. It was the legislating conscience, *ὁρῶς λόγος*, that the Stoics emphasized; but, while Roman Stoicism came to express this by *conscientia*, among the Greeks it had no generally recognized name.

(4) *Epicureans*.—Perhaps it was the Epicureans who developed the idea of a guilty conscience, and this would account for the Stoics avoiding the term *συνείδησις*. At any rate, Epicurus held that sin is an evil only because of the fear of discovery (Diog. Laert. x. 151), and a graphic description of conscience the accuser is to be found in the poems of the Epicurean Lucretius (*de Rer. Nat.* iii. 1014-1023, cf. iv. 1135). Probably, however, philosophy, whether Stoic or Epicurean, had less influence than the facts of moral experience, which were more and more consciously realized by the popular mind.

II. Summary.—From the earliest times the Greeks had terms referring to the emotional side of conscience in most of its aspects. From the end of the 5th cent. *σύνεσις* and *συνείδησις* were used to denote the intellectual aspect of conscience the judge. Orphism had emphasized the dual nature of human personality, while the gradual decay of the State religion and of State discipline, along with the intellectual movements of the 5th cent., forced men to realize that they had a judge in their own hearts. The idea, present from the first, that a man should feel shame before himself grew clearer; the hatefulness of sin was more acknowledged, and is urged with unsurpassed moral force in the writings of Plato. From the first it was felt that man owes allegiance to his better self; that he must obey, not only the traditional code, but the dictates of an inner law. Hinted at occasionally in *αἰδώς*, this feeling was not crystallized into a special term;

but the philosophers laid stress upon educating this better self, and thereby enlightening morality. Of the individualistic schools, the Stoics insisted on obedience to an inner law of reason, the Epicureans on the fears that follow wrong-doing. The growth of the idea of conscience was due to the development of the people; philosophy merely tried to inspire higher ideals by which conscience might judge. As the notion of conscience developed, morality appears to have declined. The relaxation of the bonds of external discipline, while it caused the few to acknowledge an inner judge and lawgiver, allowed the many to sink into superstition and moral degradation.

It should be noticed in conclusion that among the Greeks conscience was as yet scarcely connected with religion. The Christian's conscience accuses the sinner before God; the Greek's conscience accused him before himself. Cf. general art. CONSCIENCE.

II. ROMAN.—The Greeks, although they had many words denoting the emotions connected with moral self-criticism, failed to bring into common use any term summing up all their experience of the action of conscience; the Romans, richer in words denoting obligation, crystallized into *conscientia* the different aspects of conscience soon after Stoic teaching began to be effective.

1. Common moral terms.—*Pietas*, one of the commonest moral terms, signifies a sense of duty, not only towards the gods (Cicero, *de Nat. Deor.* i. 115, *Top.* 90), but also towards country, parents, and friends. It combines the notions of loyalty, respect, and (sometimes) affection. *Fides* (faithfulness, trustworthiness), 'the foundation of justice' (Cic. *de Off.* i. 23), was thought to be a virtue peculiarly characteristic of the early Romans. It is combined with *pudor* and *probitas* in Cicero (*de Rep.* iii. 28), and moralists insisted that it meant loyalty to intention rather than to the spoken word (*de Off.* i. 40). The formula *ex animi sententia* was used of conscientious fulfilment of an oath, while *pudor* denoted the shame which prevents or follows a violation of the moral law. But in no term is the notion of conscience more clearly implied than in *religio*. Originally used of a feeling of awe towards an unknown object, it came to mean a scruple as to the proper means of propitiating a divinity. Cicero distinguishes it from *superstitio*; and though, when applied to the worship of the gods, it contains little moral meaning, when used metaphorically it often denotes or implies the action of conscience. Thus Cicero combines it with *auctoritas*, *æquitas*, *fides*, and *timor* in describing the character of certain witnesses, and it often denotes conscientious carrying out of a duty (*ad Fam.* xi. 29, *pro Font.* xiv. [40], *pro Roscio Com.* xv. [45]; Livy, xxiii. 11). The remorse caused by conscience is not infrequently described by such phrases as *morsus animi* (Livy, vi. 34), *tormenta pectoris* (Tac. *Ann.* vi. 6), and *flagella mentis* (Quint. *Declam.* xii. 28; cf. Juv. xiii. 194, 195).

2. Obligation to external, and to internal, law.—In early times obligation was felt to an external moral law; it was only when the Republic was tottering to its fall, and the State religion ceased to hold the hearts and minds of men, that the inner voice of conscience was heard more clearly. We cannot trace the development of the idea so well as in the case of Greece, because, with the exception of Plautus and Terence (who adapted or translated Greek originals), there is very little Latin literature of earlier date than the 1st cent. B.C. But it cannot be doubted that much of the change was due to the teaching of the Stoics, especially of Posidonius and Panaetius, who exhorted men to follow the deity within them, i.e. the Divine reason, of which a portion has been given to each

individual. The conception of this deity (*δαίμων*), this fragment of the Divine mind, this guide and protector, must have helped to develop the notion of conscience; indeed, Epictetus (fr. 97) speaks of God handing men over to be guarded by 'their innate conscience.' Cicero, in speaking of the sanctity of an oath, warns us (*de Off.* iii. 44) that he who takes an oath summons as witness God, 'that is, his own mind'; and the same writer is the first to employ the noun *conscientia* (*pro Roscio Am.* 67).

The verb *conscire* occurs only once (Hor. *Ep.* i. i. 61), and is there used (with a negative) of a clear conscience. *Conscius* is often used without any moral meaning, but once in Plautus (*Most.* 544) *animus conscius* has the sense of a guilty conscience; this phrase and *mens conscia* are occasionally found with the same meaning in later writers (Lucret. iii. 1018, iv. 1135; Ovid, *Fasti*, i. 485; Sallust, *Cat.* 14). Ovid (*Fasti*, iv. 311) uses *conscia mens recti* of a clear conscience that laughs at slander; but in Virgil (*Aen.* i. 604), *mens sibi conscia recti* probably refers to conscience the guide, which leads men to differentiate between right and wrong.

In the sense of 'consciousness,' *conscientia* is rare, but it is exceedingly common in most writers after Cicero with the meaning 'conscience.' The first time it occurs it is joined to *animi* (Cic. *pro Roscio Am.* 67, 'conscientiae animi terrent'—the writer's rationalistic interpretation of the Furies), and, as Mulder remarks (*De conscientiae notione*, p. 97 f.), the expressions *animi conscientia*, *mentis conscientia* (the latter in Cic. *pro Cluent.* 159) are intermediate between the vague *pectus*, *animus*, *mens*, on the one hand, and plain *conscientia* with its full moral meaning on the other.

From Cicero onwards the idea of conscience grows more distinct and more full of meaning. It is regarded as Divine (Cic. *Parad.* iv. 29); it accuses and judges (Livy, xxxiii. 28; Tac. *Hist.* iv. 72; Sen. *de Ben.* vi. 42); it is a witness (Sen. *Ep.* 43; Quint. *Inst. Or.* v. xi. 41; Juv. xiii. 198). *Bona conscientia*, *mala conscientia*, 'clear conscience,' 'guilty conscience,' are terms which do not appear to be used by Cicero, but are common enough in Seneca and other later writers. But *conscientia* (with a genitive case added) not infrequently occurs in Cicero with the meaning of 'a clear conscience,' which he calls 'fruit' (*Phil.* ii. 114), 'a reward' (*de Rep.* vi. 8), 'a joy' (*ad Fam.* v. 7), and 'a comfort' (*ib.* vi. 6, 12).

3. Conscience the lawgiver valued as a guide.—The Stoic teaching, insisting as it did upon obedience to the Divine reason in the heart, led men not merely to fear conscience, but to value it highly as a director of life. Cicero recognizes conscience as a lawgiver (*ad Att.* xiii. 20), and so does the younger Pliny (*Ep.* i. 22), while the idea is especially common in Seneca. Conscience, from Cicero onwards, is considered a better guide than public opinion (Cic. *de Fin.* ii. 71, *ad Att.* xii. 28; Livy, xxxiii. 28; Pliny, *Ep.* i. 8, iii. 20; Sen. *de Ben.* vi. 42), though it is difficult to decide whether these are cases of the judging conscience or of the legislating conscience; indeed, it is impossible to keep these quite distinct, as a judgment on a past act is, of course, a guide to future conduct.

4. Summary.—Conscience, then, was always acting, but at first it took the form of a strong feeling of obligation to an external moral law that was sanctioned by tradition, religion, and the State. As the influence of these grew weaker, men transferred their allegiance to their own hearts, and realized that they had within them an accuser, a judge, and a guide. The Stoic doctrine of a Divine reason immanent in each individual was a most powerful aid to a clearer conception of

conscience; the writings of Cicero and Seneca, who were both imbued with Stoicism, afford the best evidence of the way in which the notion of conscience developed.

The ethical terms used by the early Greeks emphasized chiefly the emotional side of conscience; those used by the early Romans laid stress on moral obligation. Among both peoples the development of the idea of conscience was due to the decay of the State religion and of the State discipline, and the consequent turning of men's thoughts inwards; but, whereas the Greek philosophers made little use of the popular term *ῥᾷ σκευδός*, and devoted their energies to improving the moral ideal according to which conscience judges, the Roman Stoics appear to have adopted the term *conscientia*, and to have made it express far more than its Greek equivalent. The Greek word nearly always stands for a guilty conscience; the Latin word, although very often associated with guilt, not infrequently denotes moral self-satisfaction or the inner promptings of conscience the lawgiver. Neither word is associated with the State religion; but, while philosophic religion neglected *ῥᾷ σκευδός*, *conscientia* was naturally used as an equivalent of the Stoic 'guardian,' the fragment of Divine reason implanted in the heart of each individual. Hence Christianity found in *conscientia* a term whose fuller meaning it could develop by its doctrine of the Holy Spirit accusing, exhorting, and 'leading into all truth.' But it should be noticed that the ancients made no attempt to analyze psychologically the conception of conscience, which remained to the last popular rather than philosophic, in spite of its adoption by Roman Stoicism.

W. H. S. JONES.

CONSCIENCE (Jewish).—Conscience is an essential element in the system of Jewish ethics. It is the motive power and the last arbiter for the moral rectitude of man; it is the judge, and at the same time the highest standard by which his actions in his relation to God and to his neighbours are measured. Conscientiousness in the fulfilment of duties is a moral heightening of the principle of duty, and is the necessary preparation for the virtues of mercy and love. The principle of righteousness which underlies conscience may be of a purely legal and ceremonial character, whereas conscience goes beyond simple legal forms, and springs from higher motives than those of obedience to the law and the performance of ceremonies. The motive force is a truer conception of the relation between man and God, and the acknowledgment of the principle that human perfection can be attained only by imitating, as far as human power allows, the ways of God. The 'hallowing of life' is the real object of all the laws, and still more so of the moral injunctions and acts of conscience which supplement them and assist in achieving the purpose of making the Jewish nation 'a kingdom of priests and an holy nation' (Ex 19^a). More than once is the sanctification of life enunciated in the Pentateuch, and the reason given is 'because I am holy.' The holiness of God is the ultimate reason and explanation of the laws which would cause man, who had been formed

'in the image of God,' to reach a higher standard, and place him almost on a par with the angels (Ps 8⁹). As explained by the Rabbis, the various instances recorded in the Bible of God's direct communion with the Patriarchs were intended to teach their descendants how to act. 'Just as God clothes the naked (Adam and Eve), so should man clothe the naked; just as God visits the sick (Abraham), so should man make it his duty to visit the sick; just as God buries the dead (Moses), so must man bury the dead; just as God comforts the mourners, so must man comfort the mourner' (*Gen. rabba*, viii., *Pirke R. Yehudah*, § 25); in fact, all acts of charity and benevolence, all those duties which a man is bound to perform, not in virtue of a direct command or a legal prescription, but prompted by his 'heart,' are to conform to the Divine standard and promote the hallowing of life—the sanctification of God's name. And all the blessings that follow from it—peace, happiness, charity, goodwill, love—make man approach the Divine. The seat of this higher conception of moral duty—self-imposed duty, not duty imposed from without—was placed in the 'heart,' which stands in Hebrew for mind, sentiment, feeling, conscience.¹ Hence 'a pure heart,' 'a clean heart,' as mentioned by the Psalmist, means a clean conscience, a pure mind, a noble conception of duty fulfilled without any other motive than the desire of self-sanctification.

In Jewish teaching, however, the legal and the purely ethical have never been really separated, but have been treated as concomitant principles. For, as remarked above, the justification and explanation of the former were sought in the latter, and both were to lead to the sanctification of life. Thus we read: 'And the heart of David smote him' (1 S 24⁹). In Isaiah 58 these ethical principles are summed up in a masterly manner, and show us the workings of that spirit of holiness in the practical walks of life. The other books of the Prophets teem with denunciations against 'hardness of heart,' harsh treatment of widows, orphans, and slaves, and dishonest dealings with one's neighbour. Moral perfection is thus defined by the prophet Micah (6⁸): 'He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?' 'To do justly' was the particular realm of the mind, the work of conscience for God's sake, the work assigned to 'the heart' (cf. Concordance, s.v. 'Heart'; and the expressions 'with all thy heart,' 'with the whole heart,' etc.).

These ethical principles and guides of life, in addition to the legal prescriptions, found terse expression in proverbs and maxims, saws of wise men, and teachings left by venerated persons—a kind of moral compendia like the Books of Proverbs and Ecclesiastes. The authors of some of the apocryphal books followed these examples, and the Books of Sirach and the Wisdom of Solomon, as well as Fourth Maccabees, are nothing other than such moral compendia. Direct reference to conscience we find in Sir 42⁹ and Wis 17¹⁰ (11), which are in the spirit of Jewish ethical teaching. A special class of ethical literature starts from the same period, i.e. before the destruction of the Temple, and it has continued to our day—the literature of 'Testaments,' or ethical wills of some great personage. These circulated afterwards far and wide, and became recognized moral guides independent of the codes of laws which regulated the strictly formal mode of life. It would be out of place here to discuss the whole range of ethical teaching; hence we must limit ourselves to those

passages that refer to 'conscience,' uprightness, moral responsibility, in the daily relations between man and man—references found scattered throughout these books. A brief survey of this branch of literature, however, is imperative for the historical sequence of such teachings, and in view of the fact that ethics had not been reduced to a system, or split up into sections differentiating the moral value of one principle as opposed to another. All stand on the same footing, and demand the same attention. There is no room for eclecticism in these collections. The oldest example is perhaps the *Testament of Tobias*, which emphasizes, as he had done in his lifetime, the moral duty of burying the dead—one of those pious duties and works of charity which the law does not prescribe, and neglect of which is not punishable by its letter, but whose fulfilment was a matter of conscience for every pious Jew. More important is the reference (To 14¹⁰) to the *History of Achiacharus* (Ahiqār), since recovered and restored to its place at the end of the Book of Tobit. This is a collection of wise maxims and guides to proper deeds and moral actions, though in the versions preserved it is more in the nature of worldly practical wisdom of not too elevated a type. Its interest lies also in another direction; the form of address, 'O my son,' etc., is repeated in a large number of treatises to be mentioned later on. Richer is the harvest yielded by the *Twelve Testaments*, in which apparently the very word 'conscience' occurs for the first time in Palestinian texts: Reub. 4³ 'Even until now my conscience causeth me anguish on account of my impiety' (cf. Charles, *ad loc.* p. 9). In other testaments the same idea occurs: Jud. 20⁸, where the corresponding word is 'heart,' and similarly Gad 5⁸. To this category of testamentary teaching the present writer would assign also the famous collection of the 'Fathers of the Synagogue,' called 'The Chapters' (*Pirke Aboth*) after they had been grouped together in chapters. They can only be properly understood as such testamentary injunctions, the last wills of the leading men of the Great Synagogue and their successors in the high position of spiritual guides and leaders of the people during the period of the Second Temple. The authors have been grouped chronologically, and these chains of ethical maxims served the purpose of being a chain of tradition. In reality they are the principal ethical teachings representing the ethical wills of those sages, and as wills they fall naturally into their place, whilst hitherto they had been a riddle. A few examples may suffice:

'Rabban Gamaliel, the son of R. Judah the Prince, said: "An excellent thing is the study of the Torah combined with moral discipline (*derekh eres*), for the practice of both causes sin to be out of remembrance" (il. 2).¹

'Hillel said: "Judge not thy neighbour until thou art come into his place" (il. 5). According to R. Eleazar, the good way to which a man should cleave is 'the possession of a good heart,' and the evil to be shunned, 'a wicked heart' (il. 12, 13), where 'heart,' no doubt, is to be taken in the Biblical sense. 'R. Eliezer said: "Let the honour of thy friend be dear unto thee as thine own" (il. 14). 'R. Jose said: "Let the property of thy friend be dear to thee as thine own" (il. 16). Among those who have no share in the world to come, R. Eleazar the Muddaita places the man who puts his fellow-man to shame in public. It is the moral and not the legal sin which is to be shunned, and if committed it is to be expiated by 'repentance and good deeds,' as is often repeated here (iv. 16; cf. Taylor, *Sayings of the Jewish Fathers*², Cambridge, 1897, *ad loc.*)

Round this collection of maxims grew up a whole cycle of similar teachings, accretions, and additions from other sources, and examples drawn from the lives of other sages. It also was commented upon by the most prominent writers of subsequent ages. One of the oldest is a small collection known as the 'Work (or Story) of R.

¹ As will be seen, there is no Hebrew word which corresponds entirely with 'conscience.'

² The phrase *derekh eres* has hitherto been wrongly translated 'worldly business.' It can only mean, at least in this passage, 'moral discipline,' and one of the later compilations intended to serve as a 'moral guide' bears the title *Derekh eres*.

Judah the Prince' (*Ma'aseh R. Yehudah ha-Nāsi*), and later on developed into the 'Chapters of R. Judah the Prince' (*Pirke di Rabbenu ha-Kaddosh*). Another is 'The Will of Eliezer the Great,' or 'The Ways of the Pious' (*Savaath R. Eliezer hagadol, or Orhoth Saddikim*), agreeing in many points with the history of Achiacharus. It shows exactly the same development as other collections of maxims, apologies, and saws in universal literature, inasmuch as, to one portion, or to a small, old, and genuine section, other elements of a similar tendency are added. The names of the reputed authors vary, and a compilation ascribed originally to Talmudic authorities, i.e. Eliezer ben Hyrkanos, is then transferred to a much later Eliezer of the year 1050. The substance, however, is the same; and most of these collections merely repeat older materials, increased in later times by some similar maxims from other sources. The burden of the message of these collections is to seek the judge in one's own conscience, and to find the punishment for moral guilt in remorse of conscience, in the consciousness of a fall from a moral height, and in the desecration or profanation of the Sacred Name. In a much more elaborate manner the theme is enlarged upon in the 'Chapters or Maxims of R. Nathan' (*Aboth di R. N.*) of the 7th-8th cent., into which much of the accumulated matter had flowed; and in the book called *Derekh eres*, 'Moral Guide' (of which two recensions have been preserved—'Major' and 'Minor'), and in the *Tanna debe Eliahu*, in which the prophet Elijah is the teacher. The feeling of inner responsibility for moral faults and the glory in conscientious performance of ethical deeds have found in this book a powerful, and at the same time an elevating, poetical expression. The way to shun sin, to lead a pious, modest, exemplary life, full of humility and charity, and to accomplish 'the duties of the heart' is here expounded in simple and withal dignified language. This book belongs still to the Talmudic period, and is certainly anterior to the 9th century.

But the postulates of ethical teaching were not limited to mere maxims, highly appreciated and honouring to those who had formulated them, but still of a purely theoretical value. On the contrary, as far as possible, they were introduced into the fabric of consistent legislation, and, though many of the acts in question were not indictable before the regular tribunal, the conscience and religious principles of the individual remaining the ultimate forum before which they could be brought, some of them at least were brought within the four corners of the Law, and were made offences amenable to its rigours. Starting from the prohibition of oppression, fraud, and violence against widows, orphans, and strangers (Ex 22²⁴, Lv 19³³), and, more especially, of fraud and overreaching in business transactions (Lv 25^{14, 17} 'And if thou sell aught unto thy neighbour, or buy of thy neighbour's hand, ye shall not wrong one another'; 'And ye shall not wrong one another; but thou shalt fear thy God'), the Rabbis have extended the effects of these prohibitions very far, and have very clearly defined the principle of overreaching, and also established the rule that it applied to Jew and non-Jew alike. They have shown a high conception of moral duty and obligation, and have applied a lofty standard of moral rectitude in the interpretation of these commands, which are called 'subjects left to the discretion of the heart' (*Debārīm ha-mešurīm la-leb*); the 'heart,' of course, stands for 'conscience'. The law is called *Ona'ah*, from the hypothetical root of the Heb. word *hōnāh* in the above Biblical passages. They have made this law very severe, and any deviation from its strict application makes the sale or pur-

chase void. To take advantage in any way of favourable legal circumstances, or of ignorance, or of quibbles, is sufficient to annul the transaction.

Oppression by means of word alone and not by deed is considered even worse than overreaching in the matter of money (*Bab. mes.* 58b): 'If a man repents, he must not be reminded of his sins'; 'If a man is a proselyte, he must not be told of his heathen ancestry, for money can be restored, but spiritual agony can never be made good.' Nor is a man to ask for the price of an object unless he has the intention of buying, for he is thereby deceiving the vendor, who is unable to read the man's heart (*Mishn. Bab. mes.* ch. iv.; see also *Lampronti Pahad Yizhak*, s.v. 'Ona'ah') [the whole of the Rabbinical literature on the question of overreaching, from the Mishna down to the 17th cent.]. 'If a man, under a flimsy pretext, withdraws from a bargain, they say: "May He who obtained redress (by punishment) from the men of the Flood and the men of the Dispersion (of Babel) be sure to obtain redress from (i.e. to punish) the man who does not keep his word"' (*Mishn. Bab. mes.* iv. 2). In addition to overreaching, the Sages also inveigh strongly against obtaining a good opinion under false pretences, which they call 'stealing a good opinion' (*Genebath Da'ath*): 'Of seven kinds of thieves, those who steal a good opinion (create a false impression in their favour) are the worst, for, if they could, they would attempt to deceive the Almighty' (*Tosetta, Z. Kama*, vii.). 'He who deceives man by such devices is like unto him who attempts to deceive God' (*Kailath rab. fol. 18a*). 'Do not invite a man to dine with these when thou knowest that he is not then inclined to eat'; 'one must not open a jar of oil or wine pretending to do it in honour of a guest, if it [has to be opened as it] is already sold to a customer, and thereby create a good opinion by false appearance of consideration, be it a Jew or a Gentile' (*Hullin, 94a; Shulhan Arukh Hoshen Mishpat, ch. 228; and Maimonides in his Principles of Ethics*).

The reason for all these precepts is that they are inimical to the sanctification of life, and cause the defamation of the Divine Name, which are in the keeping of man's conscience, and left to the 'discretion of the heart.'

'A queen having lost her jewels, it was announced by royal proclamation that whoever should find and return them within thirty days would obtain a rich reward, but if after thirty days, he would be put to death. R. Samuel b. Sosarti, having found them, returned them after thirty days. When asked why he did so, as he was exposing himself to suffer capital punishment, he replied: "If I had returned the jewels within the thirty days, the people would have said that I had done so for the reward; I have therefore kept them till now, so as to show, even at the risk of severe punishment, that one is bound to return the property found even if it belonged to a Gentile"' (*Jerus. Talm., Bab. mes.* ch. ii.). Again, 'R. Shimeon b. Shefatā bought an ass from an Ishmaelite. When his pupils examined it more closely, they found a jewel hanging round its neck, and they said to him: "O master, it is a blessing from above, thou hast become rich!"; whereupon he replied: "I bought the ass and not the jewel," and he returned the jewel to the Ishmaelite owner' (*ib.*).

It would be easy to multiply examples and maxims of an ethical character from the Talmudic literature.

The Talmudic Sages coined a word for moral obligation which affords us a glimpse into the working of their mind. They use the verb *hayyab*, from the Bibl. root *hob*, which means 'material debt,' and employ it to designate man's moral 'indebtedness,' his moral 'obligation,' which he must fulfil, lest by neglect he become 'guilty.' The moral duty stands at least on a par with his legal obligations, and most of the ethical duties mentioned in the Talmud are regularly introduced by the formula *hayyab ādām*, 'a man is bound' (of course by moral conscience) to do this or that. This formula has since become stereotyped, and is never used in connexion with legal commandments.

In this ethical Haggada the material is not arranged according to any system, starting, as it were, from the fundamental principle of the love of God or of His Unity, and then deducing from it those secondary principles which form the subject of a moral life. The teaching was of a purely practical nature; the people did not care to follow it up to its theoretical beginnings. The Bible set the example. There also the laws and commandments are not arranged in any systematic order, and some of the fundamental principles are placed next to matters of relatively minor importance. At the end of the 9th cent., however, a great change took place. Under the influence, indirectly

of Greek, and directly of Arabic, philosophic speculations, the Jews began to develop systems of religious philosophy in which special attention was often paid to the ethical side of the Jewish faith. Whilst, in the older period of Hellenism, Jewish thinkers were influenced by Plato and the Stoa, such as Philo and the author of the pseudo-Josephus 'On the Rule of the Intellect,' and were more or less guided by allegorical interpretations of the Bible, the philosophers of later times were mostly under the influence of Aristotle and his Arabic commentators, such as al-Fārābī (†950), Ibn Sīnā (Avicenna, †1038), Ghazālī (†1111), and Ibn Rushd (Averroës, †1198), while the purely theological speculation of the adherents of the *Kalām* (the Mutakallimūn) also found followers among the Jews.

Before referring to the Jewish philosophers, it is of interest to mention a fact hitherto entirely ignored in connexion with the dissemination of their moral teachings. Such collections of maxims as are mentioned above were also put into verse, and formed terse epigrams or long didactic poems—a form better adapted to render them popular, for the masses do not care for historical or theoretical investigations, and still less for philosophical justifications of moral conduct. Fragments of the ancient saws of Ben Sira were then collected, and other collections of a similar nature were made. It is owing to this tendency that about that period (9th–10th cent.) the Book of Sirach was re-translated into Hebrew, as the language of the newly discovered version testifies. It is the period of 'Achiacharus' in its modern recension (Lukman, etc.). A century later no less a person than the last of the great *Gēnīm* of Babylon, Hai (940–1039), wrote his rhymed didactical poem *Mūsar Haskel*—also a kind of moral *vade-mecum* adapted to the understanding of the people, and probably taught in the schools and otherwise learnt by heart. It agrees also with the 'will' of Eleazar, Achiacharus, etc. A few examples must suffice.

'My son, my first word is: Fear the Lord; and with each of thy deeds give praise unto Him' (vv. 1, 3). 'Forgive the sin and transgression of thy neighbour, and be ready to accept repentance and regret.' 'Be not treacherous or seek strife, and foster not rebellion' (vv. 75 ff.). 'When thou hearest the defamation of thy neighbour, cover it up and pretend not to have heard it' (vv. 88–89). 'Wisdom is to walk in the path of faithfulness and of the fear of God; and true understanding (character) is to avoid evil.' 'Be an (honest) judge among thy people' (vv. 114 ff.). 'In all thy transactions choose righteousness; have pity on the poor and miserable, and appoint an adviser and admonisher to thy soul' (vv. 135 ff.). 'Let thy heart (mind) beware of pride (proud insolence)' (163). 'Do not say to thy neighbour, Come to-morrow, when thou canst give to-day; give and do not tarry.' 'Judge thyself as thou wouldst judge others' (176).

His contemporary Samuel Ha-Nagid imitated Hai in Spain, in his *Ben Kokeleth* ('Son of Ecclesiastes'). On other didactic poems we need not dwell.

To return to the Jewish philosophers, we note that, though they were all bent on finding in Judaism the highest expression of Divine truth, and aimed at leading to the highest good, yet they differed in their definition of the *summum bonum* and in the means of attaining it. To cultivate all the virtues was the road which led to the knowledge of God, and in this knowledge was to be found the ultimate goal of human perfection, i.e. nearness to God. Hence sometimes the intellect and moral conscience were not clearly distinguished from one another. This is not the place to discuss the various systems of ethics evolved by these Jewish philosophers. It may suffice to point out that every system of thought among Arabs and mediæval Scholastics is to be found among the Jews. Of those thinkers some—like Saadya, Gabirol, Ibn Zaddik, and Maimonides—are more rationalistic, assigning to the knowledge of God

and to Wisdom the highest potentiality for good, and considering that the highest aim is to be attained by moderation, by the rule of the intellect over the actions and thoughts of man, while others incline more to the mystical side. To the latter category belongs Behay, the first philosopher to write a special work on the 'Duties of the Heart' (such is the title of the book, *Hoboth ha-Lebaboth*). He recognizes human conscience as the last arbiter and the true inward prompter and guide in all moral actions which lie outside the specifically legal injunctions. He lays special stress on the elevating and purifying influence of moral consciousness, and therefore leads up to a kind of religious asceticism or Quietism, by recommending retirement from life, abstinence, and prayer as means for attaining perfection. Without being morbid, he exhibits a high moral sensitiveness, and has had a lasting influence upon succeeding generations. One can trace his influence especially in a whole series of subsequent writings.

These philosophical writings, being almost all composed in Arabic, had to be first translated into Hebrew, and only then could they gain a wider circulation. The writings of Saadya thus reached France and Central Europe, through the medium of the Hebrew anonymous translation which was used by Berechyah ha-Nakdan (second half of 12th cent.) in his two ethical compilations—the 'Compendium' and the 'Refiner' (*Hibbur* and *Maṣref*, ed. H. Gollancz, London, 1902). He eliminated the entire speculative part, and retained only the ethical, which he augmented with excerpts from the writings of Ibn Gabirol, Behay, and Nissim.

Of sin and repentance he says: 'From the passage Hos 14th. "Return, for thou hast sinned," we learn that we should have an inward regret at our guilt, and that we should reflect that our sins have proved unto us a wretched stumbling-block' (p. 71, ed. Gollancz). He speaks most emphatically of the 'duties of the heart.' All action rests upon the heart's intention and upon the secret thoughts; their study must necessarily precede the study of the physical, practical performance of the commandments. And he goes on to relate the following: 'A pious man once said to his disciples, "If you had no sins whatever, I should be afraid lest you had something worse than sins." And they asked, "What can be worse than sins?" He answered: "Insolent pride, for it is written, Every one that is proud in heart is an abomination unto the Lord" (Pr. 16th) (ch. cxvii, p. 113 (Heb.)). Very beautiful is the chapter devoted to 'the heart' (ch. iii, in the *Maṣref*), in which the author has skillfully collected verses of the Bible, teachings of the Sages, and philosophical speculations, to show that Reason, Law, and Tradition demand of a man the performance of those actions by which human perfection can be attained, and that man must be guided by an enlightened understanding and a pure heart, i.e. by pure conscience.

Of the same way of thinking as Behay was Abraham b. Ḥiyah (middle of 12th cent.), although he was more emphatic about fasting and repentance to assuage the pangs of stricken conscience, and to serve as the means of avoiding sin. Like Behay, he shows points of contact with the teaching of Ghazālī and of the *Sūfis* (the pure brethren). Of the Intellectuals, or, better, of those who derive all the moral virtues—charity, piety, energy, loving-kindness, love of God, moral rectitude, etc.—from the knowledge of God, and seek the road to that knowledge in the 'middle way,' the most prominent is Maimonides. He enunciates his views in his commentary on the 'Chapters of the Fathers,' in the chapters on the 'Knowledge of God' in his great Compendium of the Law, in his 'Guide of the Perplexed,' and in other writings. The problem which agitated the philosophers of that time, and, one may add, the philosophers of religion at all times, was that of human free will, with the concomitant problem of reward and punishment, of virtue and vice, of human perfection and debasement. He decides unhesitatingly, in accordance with the general consensus of Jewish opinion, that man is a free agent in all his moral actions. Man's soul is the seat of know-

ledge, and from it alone emanates the impulse to action or inaction (Introd. to *Aboth*, ch. viii.). It is his moral conscience which causes reward or punishment for deeds which are neither commanded by the Divine legislation nor forbidden by it (*Guide*, iii. 17, fifth theory). In ch. liii. Maimonides defines the meaning of the Heb. words *hesed* ('loving-kindness'), *mishpāt* ('judgment'), and *ṣedāqāh* ('righteousness'), and says of the last:

'The term *ṣedāqāh* is derived from *ṣadeh*, "righteousness." It denotes the act of giving every one his due, and of showing kindness to every being according as it deserves. In Scripture, however, the expression *ṣedāqāh* is not used in the first sense, and does not apply to the payment of what we owe to others. When we, therefore, give the hired labourer his wages, or pay a debt, we do not perform an act of *ṣedāqāh*. But we do perform an act of *ṣedāqāh* when we fulfil those duties towards our fellow-men which our moral conscience imposes upon us, e.g. when we heal the wound of the sufferer.' And again: '*ṣedāqāh* is a kindness prompted by moral conscience, and is a means for attaining perfection of the soul.'

He also insists on the harmony between good action and good thought: in the exercise of human free will the good must be sought for its own sake; and the evil must be shunned because of its inherent wickedness, not out of fear of punishment or in the expectation of reward (Com. to *Aboth*, i. 3, on the passage: 'Be like servants who minister to their master without the condition of receiving a reward'). He rebukes men who, though they do not possess a certain virtue, yet, appreciating its perfection,

'sometimes desire to make others believe that they possess that virtue. Thus people, e.g., adorn themselves with the poems of others, and publish them as their own productions. Also in various branches of science, ambitious yet lazy men appropriate the opinions expressed by other persons, and boast of them that they have originated these notions' (*Guide*, ii. 40).

And he condemns men who seek honour at the expense of others and spread insinuations and slanderous statements (*Hilch. Teshubah*, iv. 4). He is no less emphatic in his condemnation of those who try to overreach Jew or Gentile, or create a false opinion in their favour. Such men are an abomination before the Lord,¹ for the aim and object of a moral life is to approach the Divine.

'Having acquired the true knowledge of God, the knowledge of His Providence, and of the manner in which it influences His creatures in their productions and continued existence, he (i.e. man) will then be determined always to seek loving-kindness, righteousness, and judgment, and thus imitate the ways of God' (*Guide*, iii. 54, *ad fin.*; cf. *Jer. 9* 23¹⁷). With this sentence Maimonides concludes his *Guide*.

The next period, which commences almost with the close of the philosophical era at the end of the 13th cent., shows the deep impress of those two streams of thought reaching down from the past. The ethical and the philosophical, the mystical and the rationalistic, the purely practical and the deeply spiritual, moral, and unselfish teaching were caught up in one current and gathered into one stream (cf. Berechyah, above). A new word is used to denote this new ethical literature—*Mūsār*, 'Moral Discipline,' foreshadowed in Hai's poem, and occurring already in the Proverbs as 'moral teaching' (1st, cf. 4th 5th etc.). Henceforward it denotes 'piety,' 'religious-moral life,' embracing the legal in a narrower and the ethical in the largest sense. The works belonging to this period inculcate the practice of virtue, honesty, piety, resignation, charity, love of one's neighbour, and saintliness of life. There is a psychological reason for the abundance of such books from the 13th cent. onwards. It was the time of the direst persecution of the Jews in many lands, and, unless the Sages and teachers of those generations had fortified the moral courage of the harassed and unfortunate people, every trace of consciousness of the moral duties of man would have been obliterated. The sense of sin and chastisement, of Divine visitation justified by inward backsliding,

¹ He refers, of course, to the Talmudic passages quoted above (*Be'ra*, 94a, and B. *ḥamma*, 113a).

was deepened by these books of *Mūsār*, in which the best teaching of the past was placed before the readers in as simple a language as could be commanded. Each author, following the bent of his own inclination, laid stress now on one side of the moral life, now on the other. Thus, some would exhort to fasting and ascetic practices; others to works of unselfish love of God and men; others would teach wisdom, moderation, patience, and freedom from passion; but all were united in the conviction that human life is worthily lived only when it is placed in the service of God, for the benefit of mankind, and for the glorification of His name. A man's conscience must be pure, and every one is equally responsible for thought as for deed, whether prescribed by the Law or left to the discretion of one's own heart, for God sees everything, and nothing is hidden from Him. We are, and ought to be, the judges of our actions, and to us is left free choice to decide which way to turn.

What lends special importance to this *Mūsār* literature is the fact that most of these books of *Mūsār* were translated at an early date into the vernacular language for the benefit and instruction of the middle-class Jews, who were not sufficiently acquainted with the Hebrew to read them in the original language. These books became the literature *par excellence* of Jewish women; they were translated into the Jewish-German and the Jewish-Spanish languages, and parts also into Arabic and Persian, thus becoming real 'household treasures.' Shabbethai Bass gives a list of no fewer than 120 such books in his bibliography (*Siftei Yeshenim*, printed in the year 1680, fol. 15a), exclusive of the numerous commentaries on the 'Chapters of the Fathers' (*ib.* fol. 18a). A few of the more prominent may be mentioned, for, besides reminiscences of, and direct quotations from, the older literature, the authors have added some more instructions—personal expressions of their own conceptions of the duty and moral obligation incumbent on every Jew. Here, of course, the notions of the fear of God and the love of God prevail, for everything must be done out of that love and for the sake of hallowing His name by moral actions, and thereby sanctifying human life.

Nahmanides, in 1267, writes to his son from Acco a 'moral epistle,' in which he enjoins, among other things, that he be modest and humble: 'When thou speakest, bend thy head and lift up thine heart (*sursum corda*), and speak quietly, and consider every man whom thou address as being greater than thou art. If he be poor and thou rich, or thou a greater scholar than he is, then think that thou art more full of guilt; or, if he be sinning, that he is doing it out of ignorance, unintentionally, and not deliberately. In all thy deeds and thoughts remember Him of whom it is said that His glory filleth the world.'

Jonah of Gerona (†1263), known as the *Hasid* and *Kaddosh*, i.e. Martyr, wrote, in the strain of Behay, his famous *Sha'arei Teshubah*, 'Gates of Repentance,' and *Sefer ha-Yirah*, 'Book of the Fear of God,' where the feeling of consciousness of the gravity of sin and the duty of repentance are expounded in a masterly manner. He says: 'There are people who believe that, if you do not transgress any of the written laws, you cannot commit sin, for it is connected with active work. And yet there is no greater loss for the soul than to imagine that purity consists only in not having gone the way of active sin, and not also in the neglect of the performance of deeds of charity and of good works. For the highest perfections can be achieved only by carrying out injunctions (which are not direct legal commandments, but ethical demands), such as the exercise of free will, love of God, contemplation of His loving-kindness, the recognition of God's ways in His visitation of man, and, above all, in the sanctification of His name by worship, fear, and by cleaving unto Him' (*Sha'arei Teshubah* ii. §§ 14, 17). 'Do not pretend that thou art not able to help by word or deed, for, if thou refusest, thy strength will wane' (*ib.* § 70). 'Thou shalt not take a bribe (Ex 238) means also, Thou shalt not allow thy judgment to be influenced by flattery,' for the purity of conscience will thereby be clouded (*ib.* § 98).

Almost contemporary with these were Yehudah the Pious in Germany (12th cent.), and his pupil Eleazar of Worms (†1238), and Yehiel b. Yekutiel in Rome (1278), as well as Moses of Coucy in France (1239-45), who wrote ethical treatises and guides for a moral life—the 'Book of the Pious,' *Sefer Hasidim* (Yehudah); the 'Perfection of Human Conscience,' *Me'alah*

ha-Middoth (Yekutieli); and the great Code of Laws, *Sefer Mishvot ha-Gadol* (Moses of Coucy). Each of these men represents a special school of thought. The first two are of a mystical disposition, Quietists; the writer in Rome follows, on the whole, the philosophical writers; while the codifier of the Law, like Maimonides, introduces chapters on ethical duties into the very Code. 'Be fair to every one, be he a Jew or a Gentile.' 'Money obtained by sweating the workman, or by buying stolen goods and idols as ornaments, brings no blessing.' 'Draw the attention of the Gentile to his mistake (in any business transaction); and better live on charity and begging than appropriate the money of others, which will be a disgrace to Judaism and to the Jewish name.' 'Be honest with every one, no matter to what faith he belongs.' 'Those who clip the coin, who sell short measure, who practice usury, are a curse; and there is no blessing in their money.' 'Do not say, "I will repay evil," but trust in God, and He will help thee.' 'If any one has defrauded thee or brought false witness against thee, or has ruined thee, do not avenge the injustice by doing the same to him.' 'Do not listen to slander' (Yehudah Hasid). 'Act in such a manner that thou needst not be ashamed of thyself.' 'Keep thee imagination pure, so that thy deeds may be likewise.' 'Know that the reward from the Lord is in accordance with thy resistance to sin.' 'The highest aim and ambition of man should be to fulfil the commandments, to sanctify His name, and to sacrifice himself for God's sake' (Eleazar). 'A Sage said: "Whoever sows hatred reaps regret." 'Be true and honest, as our Sages say: "Let your yea be yea and your nay nay." 'If a Gentile trusts you and relies upon your word, you must in all your transactions justify his confidence and be true and honest, so that the name of God be sanctified' (Yekutieli). 'Whosoever is a novice in the fear of God shall say every morning on rising: "To-day I will be a faithful servant of the Lord; I will beware of wrath, lying, hatred, strife, and envy; I will not look (sustfully) upon women, and I will forgive those who hurt me." 'Whoever forgives is forgiven; hard-heartedness and implacability are grave sins unworthy of a Jew' (Moses of Coucy).

The mystical philosophy of religion embodied in the *Zohar*, the chief exponent of the later Kabbālā, recognizes no less emphatically the call of conscience. The fulfilment of moral duties is not only a reward in itself, but it is the main cause of the harmony of the world and of the uninterrupted flow of Divine grace from the highest spheres down to the mundane sphere. 'Woe unto the sinners, for they keep the Divine glory in exile,' is a constantly recurring phrase. The mystical philosophy has in this case not contributed to weaken the moral fibre, and a high tone of ethical loftiness pervades the pages of the *Zohar*.

In conclusion, a few wills may now be mentioned. That of Asher b. Yehiel is of special interest on account of the fact that his code of the Law, with slight modifications, is the direct source of the recognized standard religious Jewish Code. He died in 1327, and by his will continued the old tradition, which was carried on to the end of the 18th cent. and even later. Among the authors are men like his son, Yehudah b. Asher († 1349), Abraham, and his grandson Sheftel Hurwitz (17th cent.), and the founder of the sect of the modern *Hasidim*, Israel Ba'al Shem-Tob (end of 18th cent.). Differing somewhat in their views on Divine worship, they are at one in the conception of moral duty and human responsibility, as lying not in the fulfilment of legal commandments alone, but to a greater degree in the performance of moral obligations for which there is no incentive by the promise of reward, and no threat of punishment for neglect.

Last, not least, the 'Shining Lamp,' *Menorath ha-Ma'or*, of Israel ben Joseph Alnau († 1391), preserved partly in the *Reshith Hokhmah*, 'Beginning of Principles of Wisdom,' of Elijah de Vidas (16th cent.), and the compilation of Isaac Aboab under the same name, *Menorath ha-Ma'or*, contain the gist of the ethical and Haggadic teaching of the Rabbis. Though a rather large volume, this book has been the household book of Jewry from the time of its compilation (c. 1300) to the present day. It has been translated into many languages, and, together with the Book of Elijah de Vidas, it is the Golden Treasury. The love of one's neighbour, and the principles of moral rectitude, of moral duty, of the heinousness of

clandestine sin and open hypocrisy, of the happiness wrought by repentance and a clean conscience, of loving-kindness and mercy as Divine attributes to be imitated by man, of moral perfection to be attained not only by outward ceremonial law or by fulfilment of prescribed legislation, but by following the inner voices of the soul and the unwritten commands of the Divine in man, of the hallowing of life and the sanctification of the name of God—of all this the book is full. Its aim is summed up in exemplifying the words of the prophet, in the light of Maimonides' interpretation that the highest duty of man is to fulfil acts of *hesed*, 'loving-kindness,' *mishpāt*, 'judgment,' and *sedāqah*, 'righteousness': 'For I am the Lord which exercise loving-kindness, judgment, and righteousness, in the earth: for in these things I delight, saith the Lord' (Jer 9²⁴). This has remained the guiding principle for 'conscience' in Judaism.

M. GASTER.

CONSCIENCE (Muslim).—I. Names for the phenomenon.—The normal manifestations of the conscience, whether in individuals or in communities, are to be found in uneasiness about acts perpetrated in the past, and the desire to make amends for them, or in refraining from perpetration, on grounds of abstract right and wrong. These manifestations are to be found among moral agents with few or no exceptions, but they are not always labelled with a name. Probably the nearest equivalent in Arabic is the word *al-zājir*, 'the restrainer,' defined as 'God's preacher in the heart of the believer, the light cast therein which summons him to the truth'; but it obviously refers to the second group of manifestations only, and its limitation to 'Believers' is due to the fact that in a sense, according to the Islāmic system, the unbeliever can do no wrong, as being outside God's covenant. For the first group probably the word *sarira*, 'the secret,' i.e. the secret self, would be the nearest synonym; this is the word used in the maxim 'God concerns Himself with your consciences,' embodied by Omar I. in his *Instructions to a Judge*. The modern Islāmic languages employ conventional translations of the European words; in Turkish *vicdan* (properly 'sensation') is employed, in Arabic *damir* ('the hidden being'). But for the adjective 'conscientious' it is probable that a paraphrase would have to be used.

2. The conscience in law.—The maxim quoted above was of the highest importance for the development of Islām. Whereas St. Paul says, 'he is not a Jew who is one outwardly' (Ro 2²⁹), the Prophet's doctrine was, 'he is a Muslim who is one outwardly,' i.e. who pronounces a certain formula and pays a certain rate. In virtue of this principle, and another to the effect that Islām cancelled all that was before it, the Prophet's most stubborn opponents and persecutors might be admitted to the privileges of Islām without any atonement for their former conduct being necessary, or any guarantee that their conversion was dictated by anything but fear. The phrase 'union of hearts' was applied to the winning over of opponents by bribes. The inquisition into people's private character and opinions, carried on by some Islāmic sovereigns, was in open contradiction to the Prophet's principles, and confession of secret sin was so far from being encouraged by the Prophet, that, in a tradition of fair authority, he is represented as doing his utmost to dissuade a man from confess-

ing. In the maxim quoted from Omar the reference is to the credibility of Muslim witnesses, into which no inquiry may be made. Provided they are not notorious evil-livers—a term which is clearly defined—all Muslims are credible. On the other hand, to religious performances the maxim 'acts are by their intentions' applies. And Omar held that the Divine power would intervene to expose cases of shameless hypocrisy which would seriously interfere with the course of justice.

3. Conscience as a guide to the individual.—So far as the conscience is identical with the moral sense, or instinctive notions of right and wrong, the Prophet's system took little account of it; indeed, its tendency was to make the Prophet's revelations and practice the sole source whence knowledge of right and wrong could be obtained. His followers constantly handed their consciences over to his keeping, being unwilling to set their opinion against his. The fact that he claimed obedience only *in licitis et honestis* shows that he did not really claim the infallibility which logic compelled his followers to ascribe to him. That logic was, however, irresistible; for, if the right of private judgment were once allowed, clearly people could not be compelled to accept Islam at all. Although, then, there are occasional attempts at basing a system of ethics on either reason or the natural sense of right, these are not really in accordance with the spirit of the religion. The reference is regularly to the Qur'an, the practice of the Prophet, and the sayings of his followers: 'Whoso makes them his model goes right' is a common saying. The scope allowed to the conscience in private affairs by Muslim writers is similar to that indicated by the maxim *noblesse oblige*. So the formula, 'I appeal from you to yourself,' i.e. 'your better self,' is occasionally heard.¹ Hence the word *abiyy*, 'refusing,' is often applied by poets to a soul which declines of itself to enter humiliating courses.

4. The public conscience.—In Oriental despotisms the sovereign does not, as a rule, pay much regard to public opinion, and it might be hard to find any case in Muslim history in which the conduct of the sovereign had been of itself actively resented; neither parricide nor fratricide, debauchery, nor even heresy, appears to have of itself stirred up such indignation among the subjects as to cost a sovereign his throne. The assassination of the monster al-Hakim, the Fātimid Khalif (A.D. 1021), seems to have caused more indignation than his long catalogue of atrocities. Cases are therefore of interest in which concessions are made by the sovereign to the public conscience, to the extent of salving it; for such concessions imply that the sovereign thought it worth salving. A fiction with which we meet in Egyptian history more than once is the discovery of buried treasure, enabling the sovereign to build a mosque—there being a doubt whether the Muslims would attend worship in one which had been built out of ill-gotten gains. The murder of a brother was occasionally explained in an official document as an accidental death,² etc.; but, on the other hand, clever usurpers not infrequently gathered followers by stirring up public indignation against those whom they wished to overthrow. The Umayyad and Abbāsiid dynasties both won their first triumphs in this way. It was at times thought worth while to murder a saintly man and make it appear that a sovereign had perpetrated the crime, with the view of getting him dethroned.³ Similarly, in our time there have been suspicions of atrocities being engineered in the Ottoman empire for the purpose

of rousing the conscience of Europe. The best-informed political writers in the East insist on the maxim, 'the people follow the religion of their kings,' and the maxim, 'even in your conscience curse not the king' (Ec 10²⁰), represents the prevailing practice.

5. Noteworthy manifestations of the conscience.—Although the lives of the Muslim sovereigns, as told by their chroniclers, frequently, if not ordinarily, display absolute ruthlessness, yet in their relations with those persons who played the part of the Hebrew prophets, conscientiousness seems to have been the rule rather than the exception. Cases in which the sovereign, however arbitrary, permitted himself to be rebuked by a saint, and even followed the saint's advice, are quite common.⁴ A saint might even denounce the doings of a Khalif from the pulpit.⁵ The following anecdote of the Ghaznavid Mahmūd b. Sabuktakin illustrates the conscientiousness of an Oriental despot. A traditionalist was summoned to repeat edifying matter before the Sultan. The man commenced his discourse before he had been asked, and a slave was told to box his ears. The blow rendered the preacher permanently deaf. The Sultan was deeply distressed at this result, and offered abundant gifts in compensation; the traditionalist declined them all, saying he would accept nothing but what had been taken from him, the power of hearing. Requests from the Sultan for pardon were met merely with a reference to the final judgment. To this stubborn reply the Sultan answered with an embrace.⁶

There is a considerable literature on the desirability of cleansing the 'inner man,' of which Ghazālī's 'Scrutiny of the Hearts' may be mentioned as an example.⁴

LITERATURE.—This is given in the article.

D. S. MARGOLIOUTH.

CONSCIENTIOUSNESS.—Conscientiousness (from 'conscience' [q.v.]) may be described as an attitude within the moral life, a source of virtue, rather than one of the virtues. Judgment, with its intellectual reference, and integrity, with its emotional reference, are involved, imparting direction to conduct, and tending strongly to the adaptation of habit on the basis of new values.

Developed morality presupposes two main groups of elements which interact with each other. These are the objective and the subjective, often termed the universal (or social) and the individual (or personal). The former consists of customs and usages, of conventions, observances, and legal or quasi-legal codes, of social and political institutions. All, in turn, are integral to a cultural organization such as a race, a people, or even an epoch. The latter, though inseparable from the former, consists of the peculiar contribution resultant upon the reaction of individuals to the norms of the social unity. So long as this response remains unconscious or unreflective, personal character misses complete distinctiveness, and tends to keep the level of the general, customary average. But when, thanks to a subtle admixture of intellect and emotion, men place themselves in a reflective attitude towards the norms of the communal spirit, conscientiousness supervenes, and obligation acquires an enhanced, because positively recognized, influence upon character.

Conscientiousness, then, is reflective intelligence grown into character. It involves a greater and wider recognition of obligation in general, and a larger and more stable emotional response to everything that presents itself as duty; as well as the habit of deliberate consideration of the moral situation and of the acts demanded by it' (J. Dewey, *Outlines of a Critical Theory of Ethics*, 1891, p. 200).

In a word, conscientiousness is marked by the

presence of a reinforced requirement of conscience, and by the effort to meet it. Yet, even so, the condition of moral anxiety, accompanied by habitual introspection, can hardly be accepted as an equitable account of the matter. This view savours too much of temporary circumstances, associated, say, with such supposititious entities as the 'Non-conformist conscience,' the 'New England conscience,' or the like. Possibly the Puritan strain led Green to formulate his over-subjective analysis:

'There remain the cases (1) of reflexion on past actions of our own, (2) of consideration whether an act should be presently done, which it rests with ourselves to do or not to do. In both these cases, the question of the character or state of will which an action represents may be raised with a possibility of being answered. Given an ideal of virtue . . . a man may ask himself, Was I, in doing so and so, acting as a good man should, with a pure heart, with a will set on the objects on which it should be set?—or again, Shall I, in doing so and so, be acting as a good man should, goodness being understood in the same sense? . . . The habit in a man of raising such questions about himself as those just indicated, is what we have mainly in view when we call him conscientious' (*Prot. to Ethics*, 1883, p. 322 f.).

But conscientiousness is not to be identified with conscience 'in its extreme form of self-reflectiveness,' which 'investigates with the searching power of an expert, in order to discover the slightest deflection from what it holds to be good. It is because of its personal or individual character that it is able to put forward a claim to independence of the State or of any social order' (S. Alexander, *Moral Order and Progress*, 1889, p. 157 f.). Accordingly, one may accentuate the subjective aspect of conscientiousness readily, and thus minimize the objective reference. If it be reduced to a mere analysis of internal moods, it may very well indicate weakness rather than strength of character.

'The simply ethical temper is related to spiritual productiveness as mere good taste is to creativeness in poetry and art. With so circumspect a step it makes no way; and, though it never wanders, never flies. For ever occupied in distinguishing, it acquires the habit of fear instead of love—nay, above all things, *fears to love*. Its maxims are maxims of avoidance, which shape themselves into negatives, and guard every avenue with the flaming sword of prohibition, "Thou shalt not." In apprehension of possible evil, it dares not surrender itself to any admiration and fling itself into unrestrained action for any haunting end: the admiration must first be scrutinized, till it has cooled and its force is gone; the end in view is traced through a thicket of comparisons, till it is lost in the wood. Nothing, accordingly, is more rare than a character at once balanced and powerful, judicial and enthusiastic; and faultless perception is apt to involve feeble inspiration' (James Martineau, *Types of Ethical Theory*², 1886, ii. 60).

Thus the division of opinion regarding conscientiousness has its roots in the two groups of elements inseparable from morality. If the objective factor be emphasized, knowledge of social demands, or insight into their nature, is viewed as the dominant feature. If, on the other hand, emphasis be laid on the subjective factor, self-examination, with anxiety about personal moods and feelings, assumes primary importance.

In the Greek world, where our sense of conscientiousness had not developed, but where 'wisdom' (*σοφία*, *σύνεσις*, not yet *συνέλησις*) played a parallel rôle, the community-aggregate of predispositions and tendencies in the realm of values (cf. Grote, *Plato and the Other Companions of Sokrates*, 1865, i. 249) furnished plentiful material which was regarded as neither good nor bad. The 'wise man' was likened to an artist, who shaped this raw stuff into the masterpiece of a model life. For example, 'Aristotle presents us with the general type of a subtle and shifting problem, the solution of which must be worked out afresh by each individual in each particular case. Conduct to him is a free and living creature, and not a machine controlled by fixed laws. Every life is a work of art shaped by the man who lives it' (G. L. Dickinson, *The Greek View of Life*³, 1907, p. 137).

Accordingly, paradox though it may seem, virtue was knowledge, in the sense that the superior, and therefore thoughtful, citizen superimposed a conscious (reflective) attitude upon the traditional custom of the *πολιτεία*. In this way the 'higher law' of wisdom was made manifest. But, leaving

the imperfect Socratics out of account (cf. CYNICS, CASUISTRY), it bore rather upon group-norms than upon the independent 'conscientious' judgment of the individual. The internal thrust of the principle had to await Stoicism and the Christian consciousness.

Nevertheless, the classical moralists of Greece did originate the idea of inward principle, of individual reaction upon the cultural situation, with the result that, consequent upon profound civil vicissitudes, the Stoic conception of 'conscience,' based on the independence of the 'wise man,' grew up and acquired fixity. In this way, dynamic progress in morality, as contrasted with static custom, was enlivened—not, however, without pathological accompaniments, because the restraints of the old society weakened. Despite this, two heritages had been prepared for the Christian consciousness: the conception of inner principle, mediated individually; and the doctrine that, in the sphere of morality at least, whatever might be said of religion, this inward principle must be adjudged by the mind. Thus the contrast between the two elements—the objective or social and the subjective or individual—took definite shape. And successive conceptions of conscientiousness witnessed, if not a struggle, then a lack of balance, between them. At one time, as in the mediæval view of 'prudence,' the objective tended to assert itself; at another, as in the Puritan emphasis on 'righteousness,' the subjective exercised primacy. In a word, men constructed their description of the source of virtue on the basis of current relative evaluation of the virtues.

The very fact, then, that the Christian consciousness has substituted 'conscientiousness' for the 'wisdom' of the Greeks—and this finally—suffices to show that the internal and individual had won full recognition. The conscientious man must use discernment, according to the inward principle, with reference to the norms of social custom. Moral progress and initiative pivot upon this. On the other hand, this initiative is concerned about these same customs—to discover how they may be preserved lively. And yet, of necessity, this process means that, because they are subjects of concern and of consequent new estimate, they must alter.

Conscientiousness, then, may be described as genuine concern, mediated intelligently, for all such values. This cannot but result in approval and disapproval; and these attitudes are traceable in part to emotional convictions about an inward ideal. So far as the conscientious man has made this ideal his own, being able to say, 'This one thing I do,' it has become 'the way and the truth' for him. Accordingly, in the issue, conscientiousness turns out to be an energetic pursuit of an individual-social ideal—an ideal that appeals to emotion mainly through objective associations, and to intellect mainly through intelligent personal reactions to those associations. The conscientious man is at once responsive to social achievements and ends, and considerate of the one principle whereby these ends are relegated to their due places in a harmonious whole. He feels that his own goodness is bound up with that of others, hence personal assertion of the norm as he envisages it; he knows that his own progress must depend ultimately upon the clearness of his apprehension of the inward principle. Thus reflective insight, on the basis of affective conviction, grasping and transforming group-norms, constitutes the moral attitude known as conscientiousness. For this reason, the latter is held to be the source and guardian of virtue. It serves itself the central factor to be reckoned with in an active moral consciousness.

But, further, this implies that conscientiousness

is characterized by disinterestedness. Otherwise, it would not include a concrete estimate of the entire import of an action. Self-assertion here becomes a species of self-forgetfulness. For by this quality the self-reference of conscientiousness is merged in a larger whole. So, if this quality be emphasized, conscientiousness may find a place in the list of virtues. It would then stand as the chief of the cardinal virtues, thus becoming more or less identical with what modern moralists have termed the 'good will.' This implies that it is the guarantee, not of mental acumen or of aesthetic taste, but of goodness realizing itself throughout the entire circle of a life which, in turn, draws sustenance from the norms of the community. In these norms the conscientious man discovers new stimuli to the inner principle. But the necessity for reflexion rules out supposititious automatic deliverances of an equally supposititious 'internal tribunal'—'conscience.' Briefly, vital interest in the good, as the principle reveals it, at once sets problems, and points the conditions of their solution. Fusion of sober judgment with earnest aspiration, and fusion of restraint, mediated socially, with fervent desire, both passing over into will, constitute the modern counterpart of the Greek 'wisdom.' And this species of ethical apperception which imports our experience into a moral order, and also perceives that it is originated from a moral order, is true conscientiousness. It is the pre-requisite and accompaniment of any end which moral beings can adopt for the completion of their well-being. Hence its inevitable relation to questions which pass over into the field of religion.

R. M. WENLEY.

CONSCIOUSNESS.—What is consciousness? From the dawn of modern philosophy the question has been discussed, and psychology and philosophy have endeavoured to find a reply. The answers have been very various, but we may not summarize them in this article. To summarize those given from the time of Descartes onwards would be to write a history of modern philosophy. And at present the question is more widely and more incisively discussed than ever before. Some philosophers and psychologists almost insist on discarding the name altogether, while others make the results of the analysis of consciousness the whole of their philosophy. For example, A. E. Taylor writes:

'This is perhaps the place to add the further remark that, if we would be rigidly accurate in psychological terminology, we ought to banish the very expression "consciousness" or "states of consciousness" from our language. What are really given in experience are attentive processes with a certain common character. We abstract this character and give it the name of "consciousness," and then fall into the blunder of calling

the concrete processes "states" or "modifications" of this abstraction, just as in dealing with physical things we make abstraction of their common properties under the name of "matter," and then talk as if the things themselves were "forms of matter." Properly speaking, there are physical things and there are minds, but there are no such things in the actual world as "matter" and "consciousness," and we do well to avoid using the words when we can help it' (*Elements of Metaphysics*, p. 79 n.). In the text, with all the emphasis of italics, Taylor says: 'We cannot too strongly insist that if by "self-consciousness" is meant a cognitive state which is its own object, there is no such thing, and it is a psychological impossibility that there should be any such thing as self-consciousness. No cognitive state ever has itself for its own object. Every cognitive state has for its object something other than itself' (*ib.* p. 79).

Taylor makes short work of consciousness; and if we took his view, the writing of an article on consciousness might be dispensed with. But, as we are hardly able to conceive what is meant by a cognitive state which has an object which is something other than itself, we may be permitted to go on. It is scarcely consistent with the ordinary use of language, and certainly quite inconsistent with the use of psychological language, to speak of a cognitive state in active relation with an object. For whom is the state, and who is aware of it? But this question may be better discussed at a later stage. Meanwhile it may be safely said that the word 'consciousness' denotes some phase or aspect of our mental life, and that it is not identical with any of the other aspects which we apply to particular mental processes or states. It is not feeling, nor is it willing, nor is it thinking; but these states or processes have this at least in common, that they are conscious states. The contrast does not lie between feeling and consciousness, or between willing and consciousness, or between thinking and consciousness. The contrast lies between consciousness and unconsciousness. For the characteristic of every mental state, or of every mental process, seems just to consist in the fact that they are states of a conscious subject, and that they are for that subject.

While this is so, many questions of interest and importance arise as to the relations of the subject to its states, as to the distinction, if there is a distinction, between the phrases 'states of consciousness' and 'consciousness of states.' Is consciousness to be identified with the sum of its states? Can we neglect the reference to a subject, and proceed to analyze, compare, classify, and arrange these states according to the laws of their growth, their interrelations, and so on, leaving out of sight, as common to them all, their relation to a common subject? This has been done, and, in fact, it is the ordinary psychological procedure. But there is always a sort of uneasiness about proceeding in this way; for many inconvenient questions arise as to the subject for whom the experiences are, and the unity to which they are referred. Ideas, processes, and states come and go; they cluster together, they occupy our attention, and they seem to pass into the unconscious. It is natural that the scene of their appearance should be likened to a theatre, and that, while they have passed from the scene, they should have a sort of existence behind the scenes. It may be well to quote the classic illustration of Hume:

'For my part, when I enter most intimately into what I call *myself*, I always stumble on some particular perception or other, of heat or cold, light or shade, love or hatred, pain or pleasure. I never can catch *myself* at any time without a perception, and never can observe anything but the perception. When my perceptions are removed for any time, as by sound sleep, so long am I insensible of *myself*, and may truly be said not to exist. And were all my perceptions removed by death, and could I neither think, nor feel, nor see, nor love, nor hate, after the dissolution of my body, I should be entirely annihilated, nor do I conceive what is further requisite to make me a perfect non-entity. If any one, upon serious and unprejudiced reflexion, thinks he has a different notion of *himself*, I must confess I can reason no longer with him. All I can allow him is, that he may be in the right as well as I, and that we are essentially different in this particular. He may, perhaps per-

ceive something simple and continued, which he calls *himself*; though I am certain there is no such principle in me.

But, setting aside some metaphysicians of this kind, I may venture to affirm of the rest of mankind, that they are nothing but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and movement. Our eyes cannot turn in their sockets without varying our perceptions. Our thought is still more variable than our sight; and all our other senses and faculties contribute to this change; nor is there any single power of the soul which remains unalterably the same, perhaps for one moment. The mind is a kind of theatre, where several perceptions successively make their appearance; pass, re-pass, glide away, and mingle in an infinite variety of postures and situations. There is properly no *simplicity* in it at one time, nor *identity* in different; whatever natural propensity we may have to imagine that simplicity and identity. The comparison of the theatre must not mislead us. They are the successive perceptions only that constitute the mind; nor have we the most distant notion of the place where these scenes are represented, or of the materials of which it is composed' (Hume's *Works*, ed. Green and Grose, London, 1909, I. 534 f.). Or, again, a little further on: 'What we call mind is nothing but a heap or bundle of different perceptions united together by certain relations, and supposed, though falsely, to be endowed with a certain simplicity and identity.'

It is a curious passage, and the more we study it the more curious it appears. There is the suggestion of a theatre, so often made since by other psychologists, and no sooner is it made than it is withdrawn. Yet it has fulfilled its aim. It has directed our attention to the stage, and has so far served its purpose. But a theatre suggests a stage, and players, and spectators. These suggestions, however, are somewhat inconvenient, and raise awkward questions. So we are told that 'the comparison of the theatre must not mislead us.' For it is 'the successive perceptions only that constitute the mind.' One is compelled to ask, What is a perception, and what is a succession? Above we were told that 'several perceptions successively make their appearance—pass, re-pass, glide away, and mingle in an infinite variety of postures and situations.' The perceptions make their appearance—to whom? Hume had formerly spoken of 'what I call *myself*.' So it is to what he calls himself that the perceptions appear, and all the passing, re-passing, and other movements are perceived by himself. And yet the mind that perceives, that looks on at the gliding show, is nothing but the bundle or collection of different perceptions. Is the mind aware that it is a bundle? Or that it is a collection? Whence came the bundle or collection? And how does it recognize itself to be a unity? In the passage before us, Hume is unable to state his argument without the implication, in every sentence, of what he formally denies. He is in the presence of a unique fact—the fact of a succession of perceptions which recognizes itself as a bundle or collection. How is it so? We are careful to state it in his own language, for that language implies the unity of the conscious subject to which all the gliding appearances are referred. It would appear that we are face to face with a unique kind of thing—a thing which seems at the same time to be knower and known, actor and spectator, a show and the spectator for whom the show is. For all these passing, re-passing, and gliding appearances, so felicitously described by Hume, had an existence only for himself; and, while other people may have similar experiences, these particular experiences were for him alone. And he was something more than the bundle of perceptions, he was the self for whom the perceptions were. We do not require here to discuss the relation of body and mind (see BODY AND MIND, BRAIN AND MIND, MIND), or of physiology and psychology. Nor can we dwell on the attempts to deduce the unity of consciousness from the unity of the nervous system. There is a parallelism between the growth of mind and the growth of an organized nervous system. Physiology has often given useful hints to psychology. There are parallels between the evolution of the organism and the

evolution of consciousness. But, while that is so, the fact of consciousness remains without parallel, and its nature must only be described and not explained. It is interesting, for example, to follow Herbert Spencer through his works setting forth the Synthetic Philosophy, from the First Principles, through Biology and Psychology to Sociology and Ethics. It is of special interest to mark the description of the origin and growth of these, and then to notice how psychology enters in. After he has described the evolution of the nervous system, he seeks to correlate the stages of evolution with a corresponding mental growth. How about consciousness? Whence did it come?

'In its higher forms, instinct is probably accompanied by a rudimentary consciousness. There cannot be co-ordination of many stimuli without some ganglion through which they are all brought into relation. In the process of bringing them into relation, this ganglion must be subject to the influence of each—must undergo many changes. And the quick succession of changes in a ganglion, implying, as it does, perpetual experiences of differences and likenesses, constitutes the raw material of consciousness. The implication is that, as fast as instinct is developed, some kind of consciousness becomes nascent' (*Psychology*, London, 1885, sect. 196).

So far we obtain only a raw material of consciousness and some kind of nascent consciousness. Another passage from the *Psychology* seems to show how a consciousness must arise:

'Separate impressions are received by the senses—by different parts of the body. If they go no further than the places at which they are received, they are useless. Or, if only some of them are brought into relation with one another, they are useless. That an effectual adjustment may be made, they must be all brought into relation with one another. But this implies some centre of communication common to them all, through which they severally pass; and as they cannot pass through it simultaneously, they must pass through it in succession. So that, as the external phenomena responded to become greater in number and more complicated in kind, the variety and rapidity of the changes to which this common centre of communication is subject must increase—there must result an unbroken series of these changes, there must arise a consciousness. Hence the progress of the correspondence between the organism and its environment necessitates a gradual reduction of the sensorial changes to a succession; and by so doing evolves a distinct consciousness—a consciousness that becomes higher as the succession becomes more rapid and the correspondence more complete' (sect. 179).

It is interesting to note how, in the description of the process, Spencer is constrained to assume, as in existence, the consciousness whose genesis he is seeking to describe. He speaks of 'perpetual experiences of differences and likenesses' in the ganglion through which the numerous stimuli are co-ordinated. If these exist, then we submit that the work supposed to be effected by consciousness is already being done. If these stimuli can be co-ordinated by a ganglion, what is the need of a consciousness to do a work already sufficiently provided for? As we read on, the wonder increases. The impressions received by the senses must be adjusted, and the adjustment is made through a centre of communication through which they pass in succession. But this centre, through which the impressions pass in succession, does a business which is ever on the increase, and, in order that its work may be done, a consciousness must arise. Why? As a matter of fact, a consciousness has arisen—something which is aware of the various changes within itself, which also has a certain power of intervention. But in the description of the whole process no place is left at which a consciousness can enter in. Either one must hold that consciousness has been implicitly present from the beginning, or it can never appear on the terms assigned to its entrance by Spencer.

That there is a relation between consciousness and the nervous states of the organism is unquestionable. But the origin and character of that relationship are not sufficiently described by Spencer. From the above account of the origin of consciousness, it appears as altogether a superfluous addition to a nervous system. The work of co-ordination has been already accomplished, and has, indeed,

automatically proceeded until the stimuli have learned how to pass through a centre, and to pass in orderly procession. Yet, on the whole, consciousness is greatly needed in the system of Spencer. For 'all mental action whatever,' we are told a little further on, 'is definable as the continuous differentiation and integration of states of consciousness' (*op. cit.* ii. 301). Are the states of consciousness determined by the states of the organism? Are they part of the integration and differentiation of matter and motion? Or is there only a parallelism between the two? Is psychophysical parallelism the ultimate word on the relationship between the two? Or is the consciousness simply an epiphenomenon, a mere accompaniment, or, in the metaphor of Huxley, is it simply the ticking of the clock which is mistaken for its function?

Leaving on one side the questions of the origin of consciousness as unanswerable, and the further questions of the relations of mind and body as too large for our proper theme, let us ask, What is really meant by conscious life, or, in other words, by consciousness? As we reflect on what happens when we attend to the processes of our inner life, we note three main characteristics: (1) There is the fact of change; without change, or without the entrance of a new fact into consciousness, there is no consciousness. Continued sameness would mean unconsciousness. (2) There is the preservation or reproduction of previously given elements, with some connexion between elements formerly given and those that are new. (3) There is the inward unity of recognition. In the stream of the inner life there are always present those three factors. Thus synthesis is the fundamental fact of all consciousness. But the synthetic activity of consciousness has always a certain end in view. This will become abundantly clear as we look at the mental attitude towards an object. This attitude is threefold, corresponding to the three aspects of mental activity. Consciousness is always occupied with some object. It is not needful to define the object for our present purpose. But, be it what it may, (1) it is an object of knowledge; we seem to know it, or to know something about it. (2) It brings to us some pleasure or pain; it affects us in some way. (3) We tend to alter it, transform it, take possession of it, and master it. We desire to have a clearer view of its character, or to make it serve our purpose. An object is thus related to us in three ways; and these three are the fundamental aspects of conscious activity—knowing, feeling, and striving, which are three aspects of the same mental state, not to be separated from each other, not to be thought of as successive in time, but elements of one concrete experience. From any of these points of view we arrive at the conclusion of the unity of the subject, which recognizes all these attitudes as its own. Cognition, recognition, or any other name descriptive of the cognitive attitude, presupposes the unity of the subject. The feeling of pleasure in activity, or of pain in the interruption of the activity, presupposes a central point into relation with which the changing elements of consciousness are brought. Similarly, it may be shown that all conative activity presupposes the unity of the subject, for it is the attempt to bring the object into harmonious relations with the other objects formerly or presently held together in our experience.

Thus from many points of view, as we look at the living, moving, thinking, willing, concrete being, we are presented with the fact of a unitary consciousness, of a real self, capable of a real experience. Yet it has been possible for systems to be constructed, theories of knowledge to be promulgated, psychological theories to be set forth, and

views to be argued, from which personalism has been excluded, and all reference to self and the unity of the self avoided. It is worth while to see how this has been possible. The possibility of it has not been without advantage in the interests of science. What does science desire to accomplish? A man of science does not know anything, does not desire to know anything, save the objects in their causal relation to one another. He seeks to look at things as parts of Nature, strives to construct and to model them until he has arranged them in their sequence as causes and effects. He strives to find the linkages, and, when he has linked all things together in a scheme which seems to include the whole, he is satisfied with his work. But, in order to fulfil this purpose, he has to make himself a martyr to science. He is no longer a man with his will and his purpose, a living, breathing man with a life of his own; he has become what we may call an abstract spectator, a consciousness which simply becomes aware of the ongoing and the linkages of the energies of the universe. Such a personality is not a real man. The standpoint of the spectator involves certain abstractions. He has put aside all interests, all living attitudes, and all the varied manifoldness of his concrete life, and has converted himself into a mere onlooker, whose whole aim is to understand the ways in which things are linked together. It is so far an artificial attitude, but in this abstraction from all that relates to personal will and purpose lies the enormous strength of the scientific attitude. It enables the onlooker to regard the processes of the world as the outcome of laws, to bring them into relations, to master them, and harness them to the fulfilment of his purposes. In fact, the scientific spectator who desires simply to know and to master the system of the world, abstracts altogether from his own life-interests, even from his own individuality, becomes merely a spectator of processes which are not for this individual or for that, but the same for every one. Further, not only does he abstract from all personal interests and from all individual proclivities, he finally comes to abstract from the activity of the knowing subject itself, and to look at the world as a system complete in itself, and independent of any subject. This mere abstract knower, who has detached himself from every personal characteristic, attitude, and interest, who simply watches the processes of Nature and registers them, is a useful creature for many purposes, but he can scarcely be taken as a complete and adequate representative of what consciousness, or self-consciousness in the fullness of its concrete being, means.

Science must proceed after the fashion described, if it is to do its work. But we ought to remind ourselves of the limitations prescribed by this attitude. In particular, we are not to put this abstract spectator, who has reduced himself to the stature of a mere spectator, in the place of the living man. The synthetic unity of apperception, to use Kant's phrase, may be all that is required for the purposes of explaining and describing the world, but this abstract attitude of the subject is not sufficient when we seek to speak of consciousness or of self-consciousness as it is in living experience. In the science of psychology we have also to assume this abstract attitude. Before the psychologist are the perceptions and thoughts, the feelings and emotions, the judgments and volitions, which he is to study and describe. He is well aware that the only key to the understanding of them lies within himself. No one save himself is aware of these conscious states, so far as they are his own. They are for him part of his own individual experience, and no one else has these particular experiences. But he has to take them as typical, and the subject

which has the experience becomes an abstract detached subject, a spectator who stands outside of the skull of everybody, and is supposed to have the manifold life of every conscious subject open to his gaze. It is necessary to make these abstractions; to make them is indispensable for the solution of particular problems, and helps us to attain to that mastery of the world which is essential for the fulfilment of the tasks of life. It is not needful to quarrel with the abstract attitude of every science, or to accuse it of wilful neglect of many elements in conscious life; our quarrel arises only when these special scientific aspects are set forth as complete and exhaustive accounts of the world.

To deal rightly with the question of consciousness which we have in hand, we must not be content to regard it as it appears in abstract science—merely as that which is aware of the processes of the world's ongoing, or merely as the abstract subject which meets us in psychological treatises. To neglect the subject and all its individual experiences, hopes, fears, and wishes, is quite right on the part of the physicist, the chemist, and the naturalist; and so to exclude the individual, and to declare that biography forms no part of psychology, is quite legitimate when the psychologist is seeking to understand the process of consciousness in general. But if the aim is to understand the fullness, the manifoldness, the complexity, as well as the unity, of mental life, the method is inadequate. The psychologist looks at the inner life as mere contents of consciousness. This consciousness only becomes aware of what is going on, and from this point of view it is nothing more. All contents are of equal value, or, rather, they are of value simply because they have a place in the stream of consciousness. But this view of consciousness is of value only to the psychologist, whose business is to describe and explain the contents of consciousness, and to organize them into a system. When we look away from the peculiar business of psychology, and speak of men in their habit as they live, we are aware of a great deal of which psychology takes no notice. There is the life which the poet sees, expresses, and interprets; there is the life of which the historian writes, which he seeks to interpret and to understand; there is the world of political, social, moral, and religious interests; and all of us are in that world—each a separate personality, characterized for selves and others as personalities, with the power of looking before and after, of foreseeing ends, and adopting means to realize them, of forming ideals, and of living up to them. Again, in every act of ours, in every feeling, every volition, and every thought, we are conscious of a self which expresses itself in aims and meanings. We see ourselves girt about with duties, laden with responsibilities, and we feel that we have a meaning in ourselves, and a place in the world.

We are not called on to explain here the different meanings which the self has for the psychologist, and for all others, such as the poet, the historian, the jurist, the artist. In the works of all these we are in a field of personal will and personal interest; in the company of the psychologist we are merely in the presence of a consciousness which is reduced to the aspect of being only aware of its contents, and has no special interest in, or preference for, any of these contents. Such a potentiality we may leave on one side as we proceed to deal with consciousness. What is it? Well, it is not to be identified with the sum of all its states, or with the sum of all its real or consistent presentations. It is not the stream of changes which goes on within it, or merely the awareness of the contents of that stream. It is not knowing, or willing, or feeling, for outside of it there is no feeling, no willing, no

knowing. Consciousness is the condition of all mental life; without consciousness there is no mental life. A psychical fact is simply a fact in consciousness, and it is nothing else. Unconscious knowing is a phrase to which we can attach no meaning. Just as little can we interpret a willing of which we have no consciousness.

Consciousness, therefore, is undefinable. Like all ultimates, we must simply accept it as the condition of the explanation of all else, itself remaining unexplained. It may not be identified with the sum of its states, any more than we can identify a real whole with the sum of its parts. For, after we have summed up the parts, there remains unaccounted for the wholeness of the whole. A machine is not the sum of its parts, and an organism is something more than the sum of its structures and functions. This statement, true of every whole, is uniquely true of the whole of consciousness. It is not a faculty in addition to other faculties, as memory is different, say, from imagination; it is implied in all the faculties of the mind. It is an essential property of every process that goes on within the mind. The simplest view is that which regards consciousness as the sphere in which immediate experience goes on. We are baffled by the very simplicity of the immediate operation of consciousness. We are baffled also by the fact that out of this simplicity are evolved all the results of the activity of consciousness in relation to the world and to self. Sciences, poems, histories, all the outcome of human endeavour, are due to the activity of consciousness. But what we are conscious of at any given moment is simply the mental states, activities, and passivities, and the presentations with which they work. What we insist on here is that consciousness cannot be deduced from anything else.

Certainly it cannot be deduced from the play of unconscious forces, or from the elaboration of correspondences between the growth of consciousness and the evolution of a nervous system. It may be well to dwell for a little on the attempts made to deduce consciousness from the play of unconscious forces. 'Latent mental modifications,' 'unconscious cerebrations,' are among the phrases used in this connexion. W. James, in discussing the 'mind-stuff' theory, thus deals with the distinction between the unconscious and the conscious being of the mental state:

'It is the sovereign means for believing what one likes in psychology, and of turning what might become a science into a tumbling-ground for whimsies. It has numerous champions, and elaborate reasons to give for itself. We must therefore accord it due consideration' (*Principles of Psychology*, I. 163 f.).

In answer to the question, Do unconscious mental states exist?, James enumerates no fewer than ten proofs,—an almost exhaustive list,—submits them to a drastic criticism, and returns the verdict, 'Not proven.' Of one proof he says:

'None of these facts, then, appealed to so confidently in proof of the existence of ideas in an unconscious state, prove anything of the sort. They prove either that conscious ideas were present which the next instant were forgotten; or they prove that certain results, similar to results of reasoning, may be wrought out by rapid brain-processes to which no ideation seems attached' (*ib.* 170). The tenth proof may be quoted more fully: 'There is a great class of experiences in our mental life which may be described as discoveries that a subjective condition which we have been having is really something different from what we had supposed. We suddenly find ourselves bored by a thing which we thought we were enjoying well enough; or in love with a person whom we imagined we only liked. Or else we deliberately analyze our motives, and find that at bottom they contain jealousies and cupidities which we little suspected to be there. Our feelings towards people are perfect wells of motivation, unconscious of itself, which introspection brings to light. And our sensations likewise: we constantly discover new elements in sensations which we have been in the habit of receiving all our days, elements, too, which have been there from the first, since otherwise we should have been unable to distinguish the sensations containing them from others nearly allied. The elements must exist, for we use them to discriminate by; but they must exist in an unconscious state, since we see

completely fail to single them out. The books of the analytic school of psychology abound in examples of the kind. Who knows the countless associations that mingle with his each and every thought? Who can pick apart all the nameless feelings that stream in at every moment from his various internal organs, muscles, heart, glands, lungs, etc., and compose in their totality his sense of bodily life? Who is aware of the part played by feelings of innervation and suggestions of possible muscular exertion in all his judgments of distance, shape, and size? Consider, too, the difference between a sensation which we simply have and one which we attend to. Attention gives results that seem like fresh creations; and yet the feelings and elements of feeling which it reveals must have been already there—in an unconscious state' (ib. 170 f.).

Thus far the statement of the proof of unconscious mental states is real and existent. Of this argument, or proof, so fully stated, James says:

'These reasonings are one tissue of confusion. Two states of mind which refer to the same external reality . . . are described as the same state of mind or "idea," published, as it were, in two editions; and then, whatever qualities of the second edition are found openly lacking in the first are explained as having really been there, only in an "unconscious" way. It would be difficult to believe that intelligent men could be guilty of so patent a fallacy, were not the history of psychology there to give the proof. The psychological stock-in-trade of some authors is the belief that two thoughts about one thing are virtually the same thought, and that this same thought may in subsequent reflexions become more and more conscious of what it really was all along from the first. But, once make the distinction between simply having an idea at the moment of its presence, and subsequently knowing all sorts of things about it; make, moreover, that between a state of mind itself, taken as a subjective fact, on the one hand, and the objective thing it knows, on the other, and one has no difficulty in escaping from the labyrinth' (p. 172).

He deals with the latter distinction first, and thus concludes:

'There is only one "phase" in which an idea can be, and that is a fully conscious condition. If it is not in that condition, then it is not at all' (p. 173).

His language in dealing with the distinction between simply having an idea and knowing all sorts of things about it we quote fully, as it is of the highest importance in view of what we must discuss presently:

'The truth is here even simpler to unravel. When I decide that I have, without knowing it, been for several weeks in love, I am simply giving a name to a state which previously I have not named, but which was fully conscious; which had no residual mode of being, except the manner in which it was conscious; and which, though it was a feeling towards the same person for whom I now have a much more inflamed feeling, and though it continuously led into the latter, and is similar enough to be called by the same name, is yet in no sense identical with the latter, and least of all in an "unconscious" way. Again, the feelings from our viscera and other dimly-felt organs, the feelings of innervation (if such there be), and those of muscular exertion which, in our spatial judgments, are supposed unconsciously to determine what we shall perceive, are just exactly what we feel them, perfectly determinate conscious states, not vague editions of other conscious states. They may be faint and weak; they may be very vague cognizers of the same realities which other conscious states cognize and name exactly; they may be unconscious of much in the reality which the other states are conscious of. But that does not make them, in themselves, a whit dim or vague or unconscious. They are eternally as they feel when they exist, and can, neither actually nor potentially, be identified with anything else than their own faint selves. A faint feeling may be looked back upon and classified and understood in its relations to what went before or after it in the stream of thought. But it, on the one hand, and the later state of mind which knows all these things about it, on the other, are surely not two conditions, one conscious and the other "unconscious," of the same identical psychic fact' (p. 174).

Apart from the somewhat curious phraseology, which would seem to imply that a state is conscious of its own object—which is rather startling—the argument seems conclusive. Yet it may be well to note that a reference to the conscious subject, when we speak of a conscious state, is always in order. But it is misleading to speak of conscious states cognizing faintly or fully, when we mean that the subject cognizes through these states more or less fully. But, as we follow James through the subsequent evolution of his thought, we feel that he seems to have departed from the conclusion reached in the passages we have quoted. At all events, he writes as follows:

'I cannot but think that the most important step forward that has occurred in psychology since I have been a student of that science is the discovery, first made in 1886, that, in certain subjects at least, there is not only the consciousness of the ordinary field, with its usual centre and margin, but an addition thereto in the shape of a set of memories, thoughts, and feelings,

which are extra-marginal and outside of the primary consciousness altogether, but yet must be classed as conscious facts of some sort, able to reveal their presence by unmistakable signs. I call this the most important step forward, because, unlike the other advances which psychology has made, this discovery has revealed to us an entirely unsuspected peculiarity in the constitution of human nature' (*Varieties of Religious Experience*, p. 233). Again: 'The sub-conscious self is nowadays a well-accredited psychological entity; and I believe that in it we have exactly the mediating term required. Apart from all religious considerations, there is actually and literally more life in our total soul than we are at any time aware of. The exploration of the trans-marginal field has hardly yet been seriously undertaken; but what Mr. Myers said in 1892 in his essay on the Subliminal Consciousness is as true as when it was first written: "Each of us is in reality an abiding psychical entity far more extensive than he knows—an individuality which can never express itself completely through any corporeal manifestation. The Self manifests through the organism; but there is always some part of the Self unmanifested, and always, as it seems, some power of organic expression in abeyance or reserve." Much of the content of this larger background against which our conscious being stands out in relief is insignificant. Imperfect memories, silly jingles, inhibitive timidities, "dissolutive" phenomena of various sorts, as Myers calls them, enter into it for a large part. But in it many of the performances of genius seem also to have their origin' (p. 511 f.).

The sub-conscious self can, according to Sanday, do even more wonderful things than these:

'Besides the upper region of consciousness, there is a lower region into which the conscious mind cannot enter. It cannot enter, and yet it possesses a strange magnetic power by which the contents of the lower region are, as it were, drawn upwards and brought within the range of its cognition. This lower region is a storehouse of experiences of the most varied kinds; in fact, all the experiences that make up human life.' Having described these experiences, the author goes on: 'All these things are latent. The door of that treasure-house, which is also a workshop, is locked, so far as the conscious personality is concerned. For it there is no "harrowing of hell," no triumphant descent into the nether world, followed by a release and return of captives on any large scale. The door is locked against any such violent irruption. And yet, in some strange way, there seem to be open chinks and crevices through which there is a constant coming and going, denizens or manufactured products of the lower world returning to the upper air of consciousness, and once more entering into the train and sequence of what we call active life, though, indeed, the invisible processes of this life are just as active as the visible. It appears to be the function of the sub-conscious and unconscious states to feed the conscious. There is that continual movement from below upwards of which I have been speaking. A never-ending train of images, memories, and ideas keeps emerging into the light. But only in part are they subject to the will and conscious reason. Only in part do they come at call. And only in part do they come in fully organized form. . . . The wonderful thing is that, while the unconscious and sub-conscious processes are (generally speaking) similar in kind to the conscious, they surpass them in degree. They are subtler, intenser, further-reaching, more penetrating. It is something more than metaphor when we describe the sub-conscious states as more "profound" (*Christologies, Ancient and Modern*, Oct. 1910, pp. 142-145).

The wonderful passage just quoted prompts one to ask a number of questions. We are told that the door of the treasure-house is locked; yet Sanday seems to have obtained the key, for he describes the treasures which are there, and the work which is done there, and is able to compare it with the work done in the upper air. He is able also to declare that the processes down below are subtler, intenser, further-reaching, more penetrating. How has he come to know all this? If it be so, what is the use of a consciousness if the sub-conscious and the unconscious can do so much better work, and at so much less cost? As for ourselves, we are inclined to say of these fancies that they are 'whimsies'—the word Professor James himself employed when dealing with the question of the existence of unconscious mental states. James has seemingly changed his view on the matter, and we submit that he was bound to answer his own arguments as these are set forth in his *Principles of Psychology*. These seem to us as cogent as they were before what he calls the discovery in 1886. When he declares that 'the sub-conscious self is nowadays a well-accredited psychological entity,' we are surely entitled to ask what meaning he attaches to the word 'self' in this connexion. In the interesting chapter on the consciousness of self in the *Principles of Psychology*, he speaks of the constituents of the self as the material self, the social self, the spiritual

self, and the pure ego. In the course of the discussion he says that the substantialist view of the soul 'is at all events needless for expressing the actual subjective phenomena of consciousness as they appear.' We have formulated them all without its aid, by the supposition of a stream of thoughts, each substantially different from the rest, but cognitive of the rest and "appropriate" of each other's content. At least, if I have not already succeeded in making this plausible to the reader, I am hopeless of convincing him by anything I could add now. The unity, the identity, the individuality, and the immateriality that appear in the psychic life are thus accounted for as phenomenal and temporal facts exclusively, and with no need of reference to any more simple or substantial agent than the present Thought or "section" of the stream' (*op. cit.* i. 344).

It is true that this passage relates only to the active subjective phenomena of consciousness as they appear. Are we to have one method and one form of process as applied to the phenomena of consciousness, and another when we apply them to the sub-conscious and the unconscious? Under what heading are we to place the entity called 'the sub-conscious self'? Is it material, social, spiritual? Or is it the pure ego? Yet the sub-conscious self is 'a well-accredited psychological entity.' Are we to lay stress on the adjective 'psychological,' or on the substantive 'entity'? We should like to know a little more regarding the sub-conscious self, but it seems that it is really outside the scope of psychological investigation. The door is locked, and no one can find the key. The effects of this doctrine of the sub-conscious self on psychology, ethics, and theology are so far-reaching, and to us so disastrous, that a thorough investigation of it and its claims is urgent. That investigation cannot be made here and now; we are concerned with it only so far as it bears on our present theme.

What are we to make of this wonderful sub-conscious self, which does such marvellous things? Are we to take it as a positive conception, and with Hartmann use it as an explanatory principle, when all other sources of explanation fail? Then we say with Höfding: 'Psychology is on secure ground only when it confines itself to the clear and certain phenomena and laws of consciousness' (*Psychology*, Eng. tr. p. 73). True, Höfding immediately adds: 'But, starting from this point, it discovers the unconscious, and sees, to its astonishment, that psychological laws prevail beyond the province of conscious life. In what follows we shall adduce some examples to make this clear.' Reference is made to memory, to the physiology of the senses, to instinct, and to tact, to the fact that an unconscious activity can be carried on simultaneously with a conscious, as 'when a spinner turns the wheel, and draws out the thread, while her thoughts are far away.' But, as the outcome of the whole discussion, Höfding cautiously says:

'Notwithstanding the intimate connection and close interaction between the conscious and the unconscious, the latter remains for us a negative conception. The unconscious processes are cerebral processes just as much as the conscious, but whether, like these, they are of several kinds, we do not know. Instead of speaking of unconscious thought or unconscious feeling, it would be safer—if we wish to avoid all hypotheses—to speak with Carpenter and John Stuart Mill of unconscious cerebration, were not this expression unsuitable, as suggesting, in the first place, the mistaken notion that there may be consciousness of cerebration, properly so called, and because, in the second place, it might appear to affirm that there is nothing at all in unconscious activity related to what we know in ourselves as conscious states' (p. 81).

While mental activity may extend beyond consciousness, and while self may have a larger range than the consciousness is aware of at any one time, it is not possible for psychology, or for clear science, to seek for the principles of rational explanation anywhere save in the conscious life itself. The unconscious must remain a negative conception. It is simply metaphor, and bad metaphor at that, to speak of 'invasions,' of 'rushes' and 'uprushes,' from the lower world, and it is vain to seek for explanations of the on-

going of our mental life from what is supposed to have gone on in the sub-conscious self. We must exhaust the possibilities of consciousness, as the source of explanation, ere we seek to bring in the sub-conscious and the unconscious as a positive principle of explanation, as, from the very nature of the case, it is impossible to bring these into clear consciousness, or into consciousness at all. Instead of saying, with Sanday, that the function of the unconscious is to feed the conscious, it would be more consistent with the facts to say that the unconscious and the sub-conscious are storehouses of products manufactured by consciousness, and kept in *retentis* until they are needed. Habit has been described as lapsed intelligence, and is the outcome of repeated conscious processes, so often repeated that they have become automatic. Similarly it may be possible to deal with all the evidence of sub-conscious and unconscious activity of the self so as to show that all or most of these activities had conscious beginnings, and, in any case, that they are not unrelated to conscious activity either in the past or in the present.

At all events, it is not from these unconscious or sub-conscious experiences that our evidence is derived, out of which are built up those conclusions which make up the science, the poetry, the history, and the philosophy of the world. For the principles which underlie these achievements of the human mind, the linkages which bind them together, and the certainty which they attain to are derived from the conscious and not from the unconscious activity of the mind. The basis of certainty lies in consciousness. Its affirmations, its intuitions, are the foundations on which we build. Not on invasions from the sub-conscious, nor on uprushes from the unconscious come those convictions of truth, reality, and necessity, which turn the raw material of our experience into the organized knowledge of the race.

'The necessity of thought which is manifested in the certainty of particular acts of judgment owes its distinctive character in the last instance to the unity of self-consciousness. Every particular judgment may be repeated, with the consciousness of the identity of subject and predicate as well as of the act of judgment; starting from the same data, it is always the same synthesis which takes place, and only self-consciousness cannot exist apart from this invariability. Thus our judging ego, with its varying activity, is opposed to particular acts of judgment as a universal, as the same and the permanent which binds together the different and temporarily separated acts of thought. With the confidence of the movement in each particular case is connected the consciousness of unvarying repetition, of return to the same point. In this constancy, which presents a general law in contrast with the particular act, we are conscious of judgment as something withdrawn from the sphere in which we have a subjective choice and are free to bring about alterations; we are conscious of it in the same way as when it maintains itself in some particular act against contradiction. Because this identity and constancy of our action is the condition of our consciousness as one and undivided, it is also the final and fundamental basis upon which we can fall back' (Sigwart, *Logic*, Eng. tr. i. 137).

It is one of the merits of Sigwart's great treatise on *Logic* that he brings all the logical judgments into close relation to the unity and identity of self-consciousness. We know no work in which this has been done so thoroughly and so convincingly. Take another passage, dealing with certainty:

'The certainty that a judgment is permanent, that the synthesis is irrevocable, that I shall always say the same—this certainty can be forthcoming only when it is known to depend, not upon momentary psychological motives, which vary as time goes on, but upon something which is immutably the same every time I think, and is unaffected by any change. This something is, on the one hand, my self-consciousness itself, the certainty that I am I, the same person who now thinks and who thought before, who thinks both one thing and another. On the other hand, it is that about which I judge, my thought itself as far as regards its invariable content, which I recognize as identical each time, and which is quite independent of the state of mind of the individual thinker. The certainty that I am and think is final and fundamental, the condition of all thought and all certainty whatever. Here there can be none but immediate and self-evident certainty; we cannot even say that it is necessary, for it is prior to all necessity. In the

same way, the certainty of my consciousness that I think this or that is immediate and self-evident; it is inextricably interwoven with my self-consciousness; the one involves the other' (p. 240).

The form under which consciousness exists is that of the distinction of subject and object. As factors in the synthesis of consciousness there are to be distinguished the object of which we are conscious, and the subject which is conscious of the object. The object is for the subject, and is either a state of the subject, or an activity of it, or a quality of external things. When this distinction is clearly made, there is a clear consciousness; when vaguely made, there is a vague consciousness; when it is not made at all, there is no consciousness. When we are conscious, we are conscious of something, and we are conscious of that something only as we distinguish it from self, and place it over against self as its object. We are not to enter into the age-long controversy as to whether there can be a merely sensitive consciousness which is neither subject nor object, but consists only of particular feelings. It has been widely contended that a purely sensitive consciousness is possible, and that the reference to subject and object, which all admit as characteristic of full-grown consciousness, arises out of associated experiences. These are classified as vivid and faint, the vivid coming from the object, and the faint from the subject. Out of these particular feelings association builds up the conception of both subject and object. But Hume does not allow any validity to this conception; it is only a fiction of the mind. Herbert Spencer, while he strives to account for the distinction of subject and object by the associationalist theory eked out by the theory of evolution, does admit, or rather lays stress on, the distinction between subject and object, as a cardinal principle of his synthetic philosophy. But the mere addition of units of conscious feeling could never reach a unitary consciousness. For these units of feeling are each different from all the rest, and, as they begin in time, they perish as soon as they appear, unless they are held together by reference to the self whose they are. States of consciousness can never be without a consciousness of states. If there is to be a consciousness of states, there must be a subject which discriminates itself from the states, can hold them together for discrimination or comparison, and can distinguish all of them as states of itself.

Consciousness may range from the simplest awareness to the closest discrimination. It may be vague and narrow, or it may be clear and comprehensive. The lowest range of consciousness may be dim and indefinite, as when we are dropping off to sleep, or when our attention is directed to something else. In fact, many impressions may be made on our senses which rise only to the threshold of consciousness, and perhaps may not rise even to the threshold.

'In these cases, consciousness approaches a vanishing point, and often reaches and passes it. The object exists for us only as a vague objectivity without definite significance. They emerge from this state only by a voluntary or involuntary direction of our attention towards them. If, now, we choose to call this state unconscious, and reserve the name of consciousness only for clear or distinct consciousness, we should say that very many mental states exist below consciousness. This has often been done, and the theory maintained that we may have manifold sensations and feelings without being conscious of them. But this is simply the extravagance of confounding a vague and imperfect consciousness with none, the truth being that we may have vague and unobtrusive sensations without directing our attention to them; the lower limit of consciousness does not admit of being definitely fixed' (Bowne, *Intro. to Psychological Theory*, p. 289 f.).

The truth is, that we are unable to express consciousness save in the form 'I am thinking this or that, I am feeling pain, I am doing this act, or I am intending to take such a course of action.' It is quite true, as Hume says, that we always

find ourselves in some particular state, but in every state, whatsoever it may be, we find ourselves. It is not possible to interview a blank self, or to abstract the ego, so as to have an idea of it as we have of external objects, or of events of a particular kind in consciousness, nor can we make our self completely an object, for, even if that were possible, there is always that subjective activity of the subject which goes on while we seek to make the ego completely objective. While this is so, yet the further step which is so often taken, namely, to abstract altogether from the subject, and to make conscious activity only a stream of thought, or a mere aggregate, seems altogether illegitimate. Can we have a stream of thought, without a single permanent subject of our psychic activities? Even a stream has its identity, and anything which we can call a unity is something more, as already observed, than the sum of its parts. But can we really think of a feeling in abstraction from something that feels, or of a willing without a subject that wills, or of a thought without a thinker? Can we really think of our psychical life in an impersonal way? It is possible to describe, as in fact we do, the outward happenings of the world, and in an impersonal way to say 'it rains,' 'it thunders,' 'it hails,' 'it storms,' 'it is dark,' or 'it is a stormy night.' Try this in describing the psychic life, and immediately we feel how incongruous it is. 'It thinks,' 'it wills,' 'it feels,' 'it is in pain,' 'it is full of joy'—we can write so, as we can write nonsense, but the incongruity is too obvious, when plainly put, to allow us for one moment to regard it as an adequate account of the facts.

Even when a psychologist reduces the phenomena of consciousness to a stream of thought, he is constrained in unguarded moments to speak of our will, our psychical states, thus adding to the stream that factor without which it could not have been even a stream. In the mere statement of the case—a statement which seems at first to eliminate the necessity of a subject—one is forced to imply the subject in every statement. One is compelled to imply a subject. For ideas, feeling, or will are not there in a vacuum; they are, after all, only modes of consciousness. We may neglect a pain which nobody feels, a pleasure which is pleasant to nobody, or a will and a purpose which is the activity of no one. Is it possible to imagine or conceive a perception of these inner experiences where there is no perceiver, a perception which is only the bare object perceived, a mere subjectless feeling? How are we to account for the connexion of all the events of seeing, hearing, feeling, and for the recognition we have that we have had these experiences before, and that we have a memory of them, without the supposition of a subject whose experiences they were? Is it possible for any one really to think of an impersonal stream of thought, which binds into unity all the particular psychical events of our experience, and to suppose, further, an additional impersonal event, by which all the other impersonal events are gathered into one, while yet this additional event is only a phantom, an illusion, although it has the strange power of seeming to itself identical through all the successive moments of its experience? Can we really think so? Is it not easier, more consistent with the facts, to assume the subject as real, as present to all its states, and as able somehow to hold them together, and to group them according to their real resemblances. Can any one think of himself as the sum of the events of his experience, only with the inexplicable addition that it is he who thinks them so? Hume boldly calls this a fiction, and Stuart Mill calls it a 'final inexplicability,' and neglects it as a source of explanation. Is it not the easiest solution simply to acknowledge

that the ideas of persistence and duration find their simplest explanation from the supposition that we are, and know ourselves to be, identical in time?

While we have thus to postulate continuity of the conscious subject—for on any other supposition we should be unable to account for the ideas of change, continuity, or permanence—there are many questions which remain for discussion and for settlement. It is almost a matter of course to say that psychical events as such exist only in so far as they are present in consciousness; their distinctive character lies in the fact that they are conscious. A seeing, of which we know nothing, a pain of which we are not aware, an act of volition which takes place without our being able to notice it, are not possible, for the seeing, etc., is only by means of consciousness. While this is true, it is also true that there are different degrees and modes of becoming conscious. When a consciousness has attained to some fullness of self-possession, and is in possession of the results of experience, there is for such a consciousness a fund of experience organized into masses, and any new experience can take up a new feeling or idea into such an ideal mass already formed. The process is so fully described in many psychological textbooks that we need not dwell on it here. Thus, we refer any new experience of colour to the class of colours we already know, and, being in possession of these names, we name the new experience of colour accordingly. But there was a time in the growth of the subject when names were not in our possession. These names of general ideas are formed gradually from particular perceptions, which at the beginning had no name. But even for the particular perception, or for the particular experience, there is this indispensable condition, that there should be a discrimination of the particular elements which co-exist at every moment, and some notice taken of them. These two conditions must be present before we can properly speak of consciousness at all.

At this earliest stage of conscious life, ere the subject is in possession of the wealth of organized experience, the subject is, as it were, lost in the object.

Our immediate consciousness of objects seems at first to be a mere presentment of them to the passive subject, to a self that is not in any way occupied with itself, or even conscious of itself at all. The outwardly directed gaze seems simply to admit the object, and not to react, still less to be aware of itself as reacting, upon it. But, in the first place, we have learned to recognise that, whether we are conscious of it or not, there is always a reaction, an analytic and synthetic activity of thought, even in our simplest perceptive consciousness; for, without this reaction, no idea of any object as distinct from, and related to, other objects could ever arise to trouble the self-involved sleep of sense. Apart from such reaction, we might say that the sensitive subject would remain for ever confined to itself, were it not that in that case there would properly be no self to be confined to; for where there is no outward, there is, of course, no inward life. It is thus the mental activity of the subject that creates for him a world of objects, or, to put it more simply, that enables him to become conscious of the world of objects in which he exists. . . . In the second place, not only is the subject active in perception, but he necessarily and inevitably has an inchoate consciousness of himself as a subject, in distinction from the subjects which that activity enables him to apprehend. For to apprehend an effect, as such, is to distinguish it from, and relate it to the self that is conscious of it. It is to refer an idea or feeling to that which is other than the self, to reject it from the self and to objectify it; and such a rejection or repulsion necessarily involves, on the other side, a withdrawal of the self from the object. The simplest outward-looking gaze, which seems to lose itself in the object to which it is directed, yet recognises that object as other than itself or its own state; and, indeed, all its absorption in the object may be said to be its effort to heal the breach, of which, in the very act of perception, it has become conscious. Hence we come to the result that, even in its utmost apparent passivity of perception, the mind is active; and even in its utmost absorption in the object, it is conscious of the self in distinction from it. It is true that the subjective aspects of the consciousness of objects are at first latent, or they are present only in an imperfect and inchoate form. Attention is not specially directed to them; and in any descrip-

tion which the individual would give of his own consciousness, they would generally be omitted. But they are always there. For it is not possible, in the nature of things, that there should be an object, except for a subject, or without that subject distinguishing the object from itself, and itself from the object. In this sense there can be no consciousness of objects without self-consciousness. Even, therefore, if the word "I" be delayed for a little, the inchoate thought of it cannot be wanting to one who is conscious of objects as such' (Edward Caird, *The Evolution of Religion*, i. 183-185).

As we know consciousness in ourselves, it has a beginning, a growth, and a history. Thrust into the midst of conditions not realized, slowly learning to find itself at home in the world, and gradually coming to the knowledge that there is an external order to which it is related, the self-conscious being, in intercourse with things, comes, so far, to the knowledge of the world and of itself. The story need not be told here, but there is a story, for the finite personality does come to the knowledge of itself. It learns to distinguish between itself and the world. But consciousness becomes clear and definite when it recognizes that there are distinctions among its objects, and relations into which these can be gathered up. These relations become ever more clear and definite, and, as knowledge progresses, consciousness finds itself in an ordered world, and, just in proportion to its recognition and mastery over the order of the world, is its recognition of itself as the counterpart of the order of the universe. Its own rational principles are realized there, and it becomes more rational as it recognizes the objective value of its own rational nature, as embodied in a rational world. But we may not regard the distinction of self and not-self as if it were identical with the distinction of subject and object. The first may be called an ontological distinction, for it relates to the distinction between two things which make up the whole sphere of being, whereas the distinction between subject and object describes a mental function. The contents of the two are constantly changing. At one moment the object may be this table, with its shape, colour, material; and the next moment it may be the mental process which passed through the mind when the table was the object. The object may be things in the outward world, or it may be the state of consciousness by means of which we deal with the outer world. It may be the thing I see, or it may be the vision through which I see it. The distinction between subject and object is the form under which consciousness always takes place; subject and object are a relation within one experience, and they are essential to the reality of that experience.

It may be observed that the conception of self, like all other conceptions, is one of gradual growth, and the time of its full realization is, for us, not yet. We are not to look for the self as if it were laid on a shelf, a thing among other things. It is the subject of all experience, and usually it is the last conception which is reached by the conscious subject itself. This late recognition of the conception of itself may be paralleled by the late emergence, in the history of thought, of the problem of thought itself. Nothing is nearer to us than thought, and yet the problem of thought is one of the very hardest to grasp. Spontaneous thought deals with objects rather than with itself, and reflexion is hard. Thought hides behind itself; it is so occupied with its processes and problems that it does not reflect on them, and, having reached conclusions unreflectingly, often takes these as original data given from without. Knowledge is taken for granted, and the knowing process was for a long time utterly neglected. Nor had knowledge any suspicion of the complexity of the knowing process, nor did knowledge find it necessary to submit itself to an analysis of the process of knowing or to inquire into its own validity. It was

inevitable that in the long run the question of the possibility of knowledge should arise, but it could not arise until knowledge had been at work for a long time, and had attained to some mastery over itself and its work. So is it with the problem of the self. As shown by Caird in the quotation above, the consciousness of the self in the consciousness of objects is at first latent; it may be delayed, but it is always implicitly there. As a matter of fact, it may always be latent and never come into clear consciousness at all. Self-experience may be the only form which self-consciousness may assume. The self may be so lost in the process of experience, so absorbed in its feelings, desires, and thoughts, that it may never reflect on itself, and never ask consciously what it is. It may remain on this level all through life. Absorbed in its object, living out its experience of pleasure, engrossed in its own pursuits, and interested in the success of its plans, it may never seek to reflect on its own nature or on the order implied in the most simple experience. One may be active, energetic, far-sighted, wise, and yet may have never given a single hour to the thought of that self which has all these characteristics, for in the history of human thought and its evolution the simplest and most fundamental of all problems are the latest to emerge into the light.

The two factors—subject and object—which always represent the form which experience has, are not, at the outset, explicitly distinguished, and experience may go on all through life without any clear consciousness of the distinction. Yet the two inseparable factors are always there. It is always possible, however, to focus our attention on the one factor or on the other. The mind may direct attention on the object or on the subject. The consciousness of self may remain at the level of mere self-experience; it may be so absorbed in the object as never to ask itself about itself. It may, indeed, neglect itself altogether, and may so seek to formulate its experience as to make the subjective factor disappear. Thus it may seek to become a philosophy, and find a sufficient explanation of experience in a something which does not require a subject of knowledge at all. But such a philosophy, though it constantly reappears, is after all inadequate to answer the questions which constantly recur and which we need not here restate. For immediately the question arises as to the subject for whom all experience is possible, and, when we ask this question, the answer must be that a self which is conscious at all has implicitly within itself the possibility of a complete self-consciousness. Focusing our attention, then, on this factor of experience, we can regard it as the subject of experience which takes up all particular experiences, rules them, binds them into a system, and makes them elements in one consistent experience. In this event self-consciousness would have attained its ideal, for it would have reached the goal of self-knowledge and self-control. The conception of a perfect self-consciousness consists in the fact that it is in possession of itself, and can set the bounds of its own experience. Self-knowledge, self-reverence, self-control—in these, and not in finitude or infinitude, lies the conception of a perfect selfhood. But for finite beings, for us men, this ideal is a goal, and cannot be an actual attainment. For we do not set the limits of our own experience; we are subject to inrushes from without, we have experiences which are inherently irrational, and we have feelings which are sometimes uncontrollable, and generally there is so much of our experience which is simply given that we cannot be said to be masters of ourselves. Yet the growth of a rational personality is measured by the progress of the mastery which it has over

the elements of its own experience, and the power of placing every impulsive and merely emotional element under the guidance of reasonable self-consciousness.

Thus, then, we may regard the self as conscious of itself in all its manifold experiences. Knowledge is possible, because all the objects of knowledge can be brought into relation to the self. Objects out of all relation to the conscious self are for that self non-existent. Whether we look at the self-conscious being from the point of view of knowledge, or from the ethical, or the aesthetic, or the religious point of view, the result is to raise our estimate of the self-conscious being to the highest. For each of these affirms that the self-conscious being is the postulate without which truth, beauty, goodness are without meaning or worth. The conscious subject is the subject for whom all objects are; it is also the subject in which goodness is realized, and ethics affirms that the self is that in which goodness is to be realized through a continual process of self-realization and self-determination. The world of beauty has no meaning without the seeing eye and the ideals which the self in intercourse with the world builds up for itself.

We do not require to follow out the results of the analysis of self-consciousness into its further issues, or to enter into the discussion regarding an absolute, all-inclusive self-consciousness. Whoever seeks to follow out that argument into all its consequences may find it fully unfolded in the works of Hegel and his followers, as well as in the works of Green, of the two Cairds, of Royce, and of many others. It may, however, be said that it is scarcely possible to describe the totality of things according to the analogy of one self. The Hegelian philosophy is a perfect description of the way in which an inchoate self arrives, or may arrive, at self-consciousness. It is of the highest value from that point of view. But to make it absolute seems too great a demand. For this is a universe of many selves, and the unity of the universe cannot be construed after the fashion of the growth and evolution of one self. While, therefore, the world is indebted to the Hegelian idealists for the analysis of self-consciousness, and for the far-reaching results of that analysis, the attempt to construe the life of the universe after that analogy cannot be regarded as final.

Ere we close, it may be well to notice the argument of Bradley, because it would make all the contentings of this article invalid. We quote his summary:

'We had found that our ideas as to the nature of things—as to substance and adjective, relation and quality, space and time, motion and activity—were in their essence indefensible. But we had heard somewhere a rumour that the self was to bring order into chaos. And we were curious first to know what this term might stand for. The present chapter has supplied us with an answer too plentiful. Self has turned out to mean so many things, to mean them so ambiguously, and to be so wavering in its applications, that we do not feel encouraged. We found, first, that a man's self might be his total present contents, discoverable on making an imaginary cross section. Or it might be the average contents we should presume ourselves likely to find, together with something else which we call dispositions. From this we drifted into a search for the self as the essential point or area within the self; and we discovered that we really did not know what this was. Then we went on to perceive that, under personal identity, we entertained a confused bundle of conflicting ideas. Again the self, as merely that which for the time being interests, proved not satisfactory; and from this we passed to the distinction and the division of self as against the not-self. Here, in both the theoretical and again in the practical relation, we found that the self had no contents that were fixed; or it had, at least, none sufficient to make it a self' (*Appearance and Reality*², p. 101 f.).

In his own ironical way Bradley had said elsewhere:

'There remains still left a third moral, which, as I am informed, has been drawn by others, that if we are not able to rest with the vulgar, nor to shout in the battle of our great schools,

It might be worth our while to remember that we live on an island, and that our national mind, if we do not enlarge it, may also grow insular; that not far from us there lies (they say so) a world of thought, which, with all variety, is neither one nor the other of our two philosophies, but whose battle is the battle of philosophy itself against two undying and opposite one-sidednesses; a philosophy which *thinks* what the vulgar believe; a philosophy, lastly, which we have all refuted, and, having so cleared our consciences, which some of us at least might take steps to understand' (*Ethical Studies*, p. 38).

Perhaps *Appearance and Reality* is the endeavour to think what the vulgar believe. But there is left in it no shred of belief of what the vulgar believe. Of the whole work set forth with such amazing ability in the last named treatise this much may be said, that it amounts to a demonstration of the uselessness of the attempt to interpret experience from a mere abstract point of view. Bradley finds that all the categories and relations of thought abound in contradiction. Inherence, predication, quality, identity, causality, unity, space, and time are full of contradictions. When we arrive at the question of the self and its reality, contradictions swarm more and more. What is the way out of this network of contradictions? They are somehow removed in the Absolute. These contradictions are Appearance, and Reality has somehow absorbed them into itself. But it would be quite possible to show that the same method used by Bradley to discredit Appearance would work havoc also with the Absolute. That is on the supposition that his logical procedure could be carried out in the Absolute. The greatest contradiction we know is the contradiction between the rigour of his logic as applied to Appearance, and the slackness of it as applied to the Absolute. Apart from this, is not the method of Bradley simply an illustration of a wrong conception of the categories, and of their application?

'The epistemological interest makes us unwilling to admit anything that cannot be conceptually grasped. Accordingly it seeks to make ideas all-embracing. At the same time it is clear that this view is a tissue of abstractions. The impersonal idea is a pure fiction. All actual ideas are owned by, or belong to, some one, and mean nothing as floating free. We have already seen that the various categories of thought, apart from their formal character as modes of intellectual procedure, get any real significance only in the concrete self-conscious life of the living mind. Apart from this, when considered as real, they become self-destructive or contradictory. The idealism of the type we are now considering assumes that these categories admit of being conceived in themselves, and that they are in measure the pre-conditions of concrete existence, and in such a way that we might almost suppose that a personal being is compounded of being, plus unity, plus identity, plus causality, etc. Thus personal existence appears as the outcome and product of something more ultimate and fundamental. The fictitious nature of this view has already appeared. When we ask what we mean by any of these categories, it turns out, as we have seen, that we mean the significance we find them to have in our self-conscious life. In the concrete the terms have no meaning except as it is abstracted from our own personal experience. The only unity we know anything about, apart from the formal unities of logic, is the unity of the unitary self; and the only identity we know anything about is no abstract continuity of existence through an abstract time; it is simply the self-equality of intelligence throughout its experience. And the change which we find is not an abstract change running off in an abstract time, but is simply the successive form under which the self-equal intelligence realizes its purpose and projects the realizing activity against the background of its self-consciousness. Similarly for being itself: in the concrete it means the passing object of perception, or else it means existence like our own' (Bowne, *Personalism*, p. 253 ff.). Again, 'The notion of the self can easily be taken in such a way as to be worthless. We are asked of what use the self is, after all, in explaining the mental life. How does its unity explain the plurality and variety of consciousness?, and the answer is that it does not explain it, and yet the unity is no less necessary. For the consciousness of plurality is demonstrably impossible without the fact of conscious unity. This unity does not, indeed, enable us to deduce plurality, and hence the plurality must be viewed as an aspect of the unity, but not as an aspect of an abstract unity without distinction or difference, but a living conscious unity, which is one in its manifoldness and manifold in its oneness. Taken verbally, this might easily be shown to be contradictory, but, taken concretely, it is the fact of consciousness, and none the less so because our formal and discursive thought finds it impossible to construe it' (*ib.* p. 261 f.).

The unity of consciousness, the identity of the

self-conscious life, the progressive realization of the self in intercourse and in interaction with the world and with its fellows, are thus among the most sure of our beliefs, and among the most indispensable of our postulates. Many further questions arise which cannot be discussed here, for the adequate solution of any one problem involves the solution of every other. But no problem can be solved on a merely impersonal plane, and no category is of value except as a function of the concrete personal life.

LITERATURE.—The following is a selection from the vast literature dealing with the question: Adamson, *The Development of Modern Philosophy*, 1903; Bowne, *Introduct. to Psychological Theory*, 1886, also *Personalism*, 1908; Bradley, *Appearance and Reality*, 1893 (2nd ed. 1897), also *Ethical Studies*, 1876; Edward Caird, *The Evolution of Religion*, 2 vols. 1893; Höffding, *Outlines of Psychology*, Eng. tr. 1892; James, *The Principles of Psychology*, 2 vols. 1891, also *Varieties of Religious Experience*, 1902; Green, *Works*, ed. Nettleship, vol. 1. (1885); Külpe, *Outlines of Psychology*, Eng. tr. 1895, also *Introduct. to Philosophy*, Eng. tr. 1897; Lotze, *Metaphysic*, Eng. tr. 1884; Ladd, *Philosophy of Knowledge*, 1887; Münsterberg, *Psychology and Life*, 1899; Shadworth Hodgson, *The Metaphysic of Experience*, 4 vols. 1898; Stout, *Manual of Psychology*, 2 vols. 1898-9; Sigwart, *Logic*, 2 vols., Eng. tr. 1895; Ward, art. 'Psychology', in *EBR*, also *Naturalism and Agnosticism*, 2 vols. 1899; Taylor, *Elements of Metaphysics*, 1903; Wundt, *Human and Animal Psychology*, Eng. tr. 1894; Villa, *Contemporary Psychology*, 1903; Royce, *The Spirit of Modern Philosophy*, 1897, also *The World and the Individual*, 2 vols. 1900-1; see also the *Histories of Philosophy*, such as Ueberweg, Höffding, Erdmann. JAMES IVERACH.

CONSECRATION.—'Consecration,' or 'dedication,' may be defined as the solemn setting apart of persons or things for some particular religious work or use. The essence of any such rite or ceremony is to be found in the performance, whenever possible, of some act which is typical, or symbolical, of that for which the setting apart or consecration takes place. This act, either from the first or in process of time, is naturally accompanied by some announcement to the congregation of what is being done or intended, and by forms of prayer asking for the Divine approval and blessing; but no such accompaniments are really essential to the consecration itself, though they increase the dignity of the occasion and tend to general edification. This is, indeed, true of all symbolical rites and ceremonies in their ultimate simplicity, and the Biblical narrative well illustrates the truth in its account of the marriage of Adam and Eve (Gn 2²³), where the essence of the marriage rite is described in the simple statement that 'the Lord God brought unto the man' the woman whom He had made of the rib taken from his side.

With regard, however, to the consecration of persons or things in the stricter sense with which we are now dealing, we see traces of the original idea in various instances. The ordination of a lector (reader) consists in permitting him for the first time to read the Gospel in the course of the service.¹ A priest is made by permitting him (as in the modern Roman Pontifical) to celebrate the Holy Mysteries simultaneously with the consecrating bishop;² and in the same way an altar, and even a church itself,³ are consecrated by being first used for Holy Communion, and so on. Again, there are cases where the act is more conveniently and suitably symbolical rather than typical: e.g.

¹ Cf. Cyprian, *Ep.* xxxiii. 2, where he speaks of a young lector Aurelius thus: 'Dominico legit interim nobis, id est, auspiciatus est pacem, dum delectat lectionem' ('while he acts in his new capacity as lector').

² See Procter and Frere, *New Hist. of Book of Com. Pr.*, Lond. 1901, p. 669 note.

³ Cf. the letter of Pope Vigilius to Profuturus of Braga (A.D. 538): 'consecrationem cuiuslibet ecclesie in qua sanctuaria non ponitur celebrantem tantum scimus esse missarum.' See J. Wordsworth (*On the Rite of Consecration*, p. 6 f.), who points out the significance of the fact that the words *apocryphus* and *Dominicum* are used both for the Lord's House or Temple and for the Lord's Supper or Sacrifice; see also Duchesne *Origines du culte chrét.* p. 404 (Eng. tr.).

the doorkeeper of the church receives the keys of the church doors, the sub-deacon receives the chalice and paten (the vessels of his office), the virgin is veiled to signify her marriage with Christ (or His Church), the lector himself actually receives a copy of those Gospels which he is henceforth privileged to read, and so on. The Greek word commonly used to denote dedication of buildings (*ἐγκαινία*; cf. *κατατίθειν* and *καταρτίζειν*¹) itself suggests that the idea here emphasized lies at the root of the ceremonies employed.

It is hardly necessary to say that the Christians were not the first to introduce the practice of thus consecrating, or dedicating, persons or things to religious purposes. Apart from the well-known custom of the Jews (e.g. in dedicating houses, Dt 20⁶, Ps 30 [title]; or city-walls, Neh 12⁷; or the Temple, 2 Ch. 5. 6; Jos. *Ant.* xi. iv. 7 f., xv. xi. 6), both the Greeks and the Romans (and other nations as well) observed such ceremonies for their priests and sacred buildings. But for Christians, during a considerable period after the foundation of their faith, anything but the simplest and least imposing ceremonies in connexion with consecration would have been both out of place and practically impossible. This article does not deal (except incidentally thus far) with the ordination of the clergy (see ORDINATION). We proceed, therefore, to consider the cases (chiefly those of buildings) to which the word 'consecration' is more usually applied in the present day.

During the first three centuries of the Christian era we have little evidence, if any, of regular rites or ceremonies being in use when places or buildings were set apart for Divine service. Of course, such places or buildings gradually became more and more numerous, and more and more carefully restricted to religious purposes, as persecution decreased and the affairs of the Church became more settled. But we can easily imagine that, almost from the first, forms and ceremonies grew up in connexion with their dedication; for instance, as J. Wordsworth has reminded us,² the two primary conditions were probably 'a transference of previous ownership on the part of the Founder, and an acceptance of the trust by the Bishop of the Diocese'; and the only essential ceremony was the solemn celebration of the Holy Eucharist.³

The part played by the Founder or Builder would, in accordance with Jewish and heathen precedent, be a considerable one; and Christian custom, acting in accordance with the principles of Roman law, would prescribe the dedication by solemn and ceremonial use. The *usurpatio juris* of the Christian Society in its new home could hardly be otherwise exemplified than by the Sacrament in which believers, gathered under the presidency of their chief pastor, came together to meet their Lord in His new house, to plead His sacrifice, and to feast upon it.⁴

We have to dismiss as evidence the quotation from Philo Judeus, *de Vita Contempl.*, given by Eusebius (*HE* ii. 17. 9) and adduced by Bona (*de Reb. Liturg.*, Rome, 1671, i. xix.): *ἐν ἐκαστῇ δὲ οἰκίᾳ* [of the Therapeutae in Egypt] *ἔστιν οἰκία ἑρὸν δ καλεῖται σημείων καὶ μοναστηρίον κ.τ.λ.*, because Eusebius's identification of the Therapeutae with the Christian ascetics of S. Mark in Alexandria is baseless and next to impossible. And the statement in the Calendar from the Library of the Queen of Sweden, quoted by Baronius (*Annal.* A.D.

57, no. 100), 'Kal. Ang. Romae dedicatio primae ecclesiae a beato Petro constructae et consecratae,' is unhistorical;¹ and so, no doubt, is the assertion attributed to Euodius (Niceph. ii. 3), who was the first bishop of Antioch, that James was consecrated first bishop of Jerusalem, and that the seven deacons were ordained in that house in which Christ instituted the Lord's Supper, and where the Holy Ghost descended on the Apostles.

It is not till the cessation of the persecution of Diocletian that we are on safe ground with regard to any actually recorded service of dedication. Eusebius (*HE* x. 3) speaks of the restoration of peace at that time being marked by the founding of new churches, and, among other signs, mentions *ἐγκαινίων ἑορτά κατὰ πόλεις καὶ τῶν ἀρτί νεωγαγῶν προσευκτηρίων ἀπερρώσεις*, a notable instance being the dedication of the Church at Tyre (in the name of Paulinus), which took place A.D. 314, and at which the historian himself preached the inaugural sermon.² There was a large concourse of bishops, clergy, and people on the occasion, and the Holy Mysteries were apparently celebrated, but no other distinctively initiatory ceremony is mentioned. This occasion is historically important, because it seems to be the first recorded instance, both (1) of a kind of consecration service, and (2) of a church with what is now commonly called a 'dedication,' i.e. consecrated under the title of a patron saint. Subsequently, instances of both sorts become more and more frequent.

As Duchesne (*loc. cit.*) has pointed out, the church of S. Paulinus at Tyre is a representative of one out of two types of church in the first ages, viz. what we should now call the parochial church of a town or district. Of this type there would sometimes be more than one needed and provided in any single town or district, the principal one of which would, of course, be the 'cathedral,' as we now call it, where the bishop's throne was set up. Churches of this type seem often to have been known by the names of their founders or other great persons connected with the place (e.g. at Tyre above, S. Denys and others at Alexandria [Epiph. *Hær.* lxx. 2; *PG* xlii. 205], and S. Ambrose at Milan);³ or by some great Christian doctrine or event (e.g. *Ἁγία Σοφία* at Constantinople [A.D. 360], or the *Ἀνάστασις* at Jerusalem).⁴ A church called *Dominicum aureum* was dedicated at Antioch by Constantius in 341 (Soer. ii. 8; Sozom. iii. 5).

The other type of church was that which was connected with the tombs of martyrs and other saints. In the catacombs (*g.v.*) at Rome, and in the burying-places (*cemetery, polyandria*) generally, the custom gradually grew up (1) of keeping the anniversary of such persons' death (*natalis*) or burial (*depositio*) by a service at their grave, their very tombstone often forming the altar for the consecration of the Sacred Elements; and then (2) of holding services there more frequently than once a year.⁵ After a time a church was built over the spot, and called after the name of the martyr or confessor who lay buried under its altar (hence the term *martyrium*, and the like, applied to churches). As churches had to be

¹ Cf. *Mart. Hier.*; D'Achéry, *Spicileg.* (Paris, 1655-67) tom. iv. The Church of S. Peter ad Vincula on the Esquiline was dedicated in the name of both S. Peter and S. Paul on Aug. 1, in the episcopate of Felix IV. (432-440). There may, however, have been some church-building there before that date.

² Quoted by him at length (*loc. cit.* 4).

³ The *Gel. Sacramentary* (ed. Wilson, Oxford, 1894, p. 140 f.) contains 'orationes et preces in dedicatione basilicarum quam conditor non dedicatam reliquit,' and also '[missa] in ejusdem conditoris agendis.'

⁴ The mediæval cathedral at Aix in Provence is said to be dedicated to the Transfigured Saviour; and in later times we have dedications like the Ascension, Corpus Christi, etc., or even Holy Cross, House of Prayer, and the like.

⁵ Hence what are called the 'stations' and the 'stator days' of early Roman service-books and calendars.

⁶ Wordsworth, *loc. cit.*

more numerous than martyrs' tombs, it also became sufficient to have some portion of a saint or some small personal relic of him (*pignora, sanctuaria*), perhaps only a piece of linen dipped in his blood, or even portions of the Gospel or of consecrated bread, to represent or symbolize the 'patron' in each case; and eventually this second type of church was adopted, though very gradually, and not so universally as is sometimes imagined, at all events throughout Western Christendom.¹ See, further, art. COMMEMORATION OF THE DEAD.

Perhaps we may at this point distinguish yet a third type of church of which we sometimes hear in ancient history, viz. buildings which were adapted from secular or heathen purposes to Christian. It used to be held that this was the origin of the *basilica* form of church, the Roman law-court or business-exchange being turned into a Christian building; but this theory has been, we think, successfully disproved of late years.² We do, however, hear of heathen temples being so converted, though it is probable that in many cases the old building was pulled down and a new one erected with the old material; e.g. the Pantheon at Rome was consecrated by Boniface IV. (608-614) under the title of S. Mary ad Martyres on May 13; and Martène (*de Ant. Ritt.*, Antwerp, 1700, II. xiv. 4-5) gives other instances in both East and West.³ Jewish synagogues were also subjected to the same treatment.⁴

As to the ceremonies connected with the dedication of churches, considerable diversity must have prevailed from the first, if we are to judge by such scanty evidence as we possess; and this diversity lasted in the West well into the Middle Ages. At Tyre in 314, as we have seen, the ceremonial is of the simplest; a large assembly of bishops, clergy, and laity from the town and neighbourhood assisted at the first celebration of the Holy Mysteries, and a dedicatory sermon was preached. More than 200 years later the essence of dedication was still distinctly recognized as consisting in the public celebration of the Holy Communion and nothing else. In 538, Vigilius, Bp. of Rome, writes to Profuturus of Braga (in Spain) to the effect that, in the case of ordinary churches, it is not even necessary to sprinkle holy water by way of consecration,⁵ since this is sufficiently effected by the celebration of Mass; in the case of churches of the second type above described, the relics of martyrs (*sanctuaria*) must be previously deposited in the church, or, if they have been removed, they must be replaced. The 'Leonine' Sacramentary contains a 'missa in dedicatione [ecclesiae]'; but this is, of course, for use either after the dedicatory rite itself or on the anniversary day.⁶

It is noticeable that, while the earliest form of

the 'Gregorian' Sacramentary does not provide for the dedication of churches, the 'Gelasian' does; and this, combined with other evidence or indications given and discussed by Duchesne (*op. cit.*), suggests that, in this as in other cases, the local Roman church was originally inclined to a severe simplicity in matters of ritual, and that the fuller ceremonies and forms of prayer which afterwards obtained and are still in use in the Roman Communion are traceable to foreign or 'Gallican' influences.² It seems not unlikely also that those ceremonies in the Western rite which are distinctive of consecration proper are ultimately derived from the East (e.g. from the Byzantine ritual), and that only the part relating to the deposition of relics in the new building is originally Roman. The student cannot fail to be struck, as Duchesne and others have pointed out, with the fact that this deposition of the relics, as given in its fullest form in the two most ancient *Ordines Romani*,³ partakes distinctly of a funeral character, while the 'Gallican' ceremonies all point to the idea of adapting the Christian baptism of persons to the dedication of buildings. The modern Roman service is a combination of the two types of ceremony, but in it the deposition of the relics is to some extent outbalanced and overshadowed by the consecration rites proper.

A concise description in detail of the regulations and order of service as now provided in the Roman Pontifical is subjoined, and will be found useful, both because it exhibits most of the rites that have gradually gathered round the occasion in Western Christendom, and because it is the basis on which, since the Reformation, the Bishops of the Anglican Communion have, with varying degrees of exactness, drawn up their Consecration Offices.

With regard to the first point, it will be well to bear carefully in mind what J. Wordsworth has remarked in the valuable treatise (*On the Rite of Consecration*, p. 13) to which reference has already been made: 'I conjecture that (here), as usual, in process of time, diverse ceremonies were heaped together without much regard to their congruity.' Wordsworth makes this remark with special reference to the ceremony of the *absec-darium* (see below), but one feels its applicability to a good deal of the present overloaded service. As to post-Reformation forms of consecration, the student will find a list of those 'in use in the 17th century' on p. 27 f. of the same treatise, and the present Sarum Form on p. 30 ff. (with the music). This is much the most satisfactory adaptation of ancient forms and uses, Eastern as well as Western, that the present writer is acquainted with. The S.P.O.E. also publish the forms authorized for the dioceses of London, Truro, Worcester, Wakefield, and Winchester; and of these the first three more or less follow the old lines, whilst the last two are based on Bp. Andrews' Form (1820). It may be added that no Form would seem to be really adequate which does not provide that the consecrating bishop shall conclude the consecration with a solemn Eucharist, either at the time itself, or, if the service take place in the evening, at a reasonably early hour the next morning.⁴ This provision is made in the Form of the modern Irish Church, and in that of the Church of the United States of America.

The similar description of the modern Eastern rite, with which this article concludes, will be likewise interesting both in itself and as illustrating much that has been said during the course of our discussion.

i. **MODERN ROMAN USE.**—1. Preparatory regulations.—(1) Consecration may take place any day, but by preference on Sunday or a Saint's day. (2) The archdeacon is to give notice of the day fixed beforehand. (3) The consecrator, the clergy, and the people should fast before the service. (4) On the evening before, the consecrating bishop prepares the relics which are to be deposited in the church, placing them under seal in a suitable casket, with three grains of frankincense and a written record of the consecration, and laying the

¹ P. 133 ff., ed. Wilson.

² On this point, see E. Bishop, *Genesis of the Roman Rite*, 1899; and Wickham Legg, *Rec. Lit. Research*, p. 8 ff.

³ One, that of S. Amand (Paris, 974) of the late 7th cent. printed by Duchesne (*op. cit.* p. 456 ff.); the other, that of Verona, edited by F. Bianchini (*Anast. Biblioth.* iii. 48).

⁴ See Wordsworth's remarks (*op. cit.* p. 9 f.).

¹ See on this point a valuable paper by Wickham Legg, in no. lxixii. of *Ch. Hist. Soc.'s Tracts*, p. 53 ff., and another by J. Wordsworth in no. lii. of the same series, p. 19 ff. (already quoted). Cf. also P. Lejay's article on the Ambrosian Rite in *DACL*, pp. 1437-9. 'I would venture to suggest that the reason of the absence of the rite from this [English] form of consecration was that the early British and Irish Churches only dedicated their churches to living saints. In this case no relics could be had, and therefore the rite was of necessity omitted' (T. Olden on the *Leabhar Breac*, 1900, vol. iv. pt. ii., S. Paul's Eccles. Soc. p. 99).

² E.g. by G. Baldwin Brown, *From Schola to Cathedral*, App. 1, p. 217 ff.

³ Cf. Bede, *HE* i. 30.

⁴ Cf. *Gal. Sacram.* p. 141 f. (ed. Wilson), which gives 'orationes et preces in dedicatione loci illius ubi prius fuit synagoga.'

⁵ This, which is now such an important part of the Roman rite, seems originally to have been practised by Christians to purify their private houses rather than their churches (see Duchesne, *op. cit.* p. 407 [quoting *Lib. Pontif.* i. 127]).

⁶ P. 16, ed. Feltoe, Camb. 1896; the collect here speaks of 'hostias quas maiestati tue in honore beati apostoli Petri cui haec est basilica sacra deferimus,' and each of the other formulae also mentions S. Peter.

casket on a bier with lighted candles under a tent before the principal door.¹ Vigil is kept, and Nocturns and Lauds are sung before the relics that night.² (5) Inside the church a large number of articles have to be prepared for various purposes during the service, and care has to be taken that the church has a free passage round it outside. (6) On the morning of the day itself the bishop enters the church in ordinary dress, and sees that everything is in order, and that the 12 candles over the 12 consecration crosses on the inner walls are lighted.³ He then leaves the church empty, save for one deacon vested in amice, alb, girdle, and white stole, who stands behind the principal door, when it is closed upon him.

2. The ceremony.—(1) The service proper is now begun. The bishop, having fully vested himself, and being attended by another deacon, a sub-deacon, acolytes, and other ministers, goes to the place where the relics are reposing, and the seven Penitential Psalms are recited. He then proceeds to a faldstool before the church door, and, kneeling there, after an antiphon and collect ('*Actiones nostras, quaesumus, Domine,*' etc.),⁴ says with the choir the first portion of the Litany.

(2) The next ceremony is the exorcizing and blessing of salt and water, which, being afterwards mixed and again blessed, are made use of in the following manner: First the bishop sprinkles himself and his assistants, whilst the choir sing the usual antiphon, '*Asperges me,*' etc.; he then marches three times, preceded by two candle-bearers, round the outside of the church, sprinkling the walls as he goes,⁵ the choir singing an appropriate responsory; each time he reaches the principal door, he first kneels and says a collect, and then performs this very ancient and dramatic ceremony:⁶ he stands on the threshold and strikes the door with the butt end of his staff,⁷ saying, '*Attollite portas, principes, vestras,*' etc. (Ps 23^v Vulg.); the deacon from within (see above) inquires, in the words of ver. 8, '*Quis est iste rex glorie?*' and the bishop answers, '*Dominus fortis et potens,*' etc.; at the third time those who stand by call out '*Aperite,*' the bishop makes the sign of the cross on the threshold, the door is opened, and the procession passes in, the bishop proclaiming, '*Pax huic domui,*' and the deacon from within replying, '*In introitu vestro.*'

(3) Whilst the bishop goes to the centre of the building, two antiphons are sung, the use of the second of which is very ancient, '*Zachæe, festinans descende*' (see above). Then, during the singing of the '*Veni, Creator Spiritus,*' one of the ministers sprinkles ashes⁸ in the form of a

S. Andrew's cross (*decussis*) on the floor of the nave,⁹ thus:

The second part of the Litany is next said to the end, but with special petitions by the bishop, standing, for the church and its altar now in act of being consecrated. After this the bishop says two collects, the second an ancient one ('*Magnificare, Domine,*' etc.),² and then, whilst the choir sings the song of Zacharias (Lk 1^{68a}), with antiphon '*O quam metuendus,*' etc., between every two verses, he occupies himself in writing with the end of his staff the letters of the Greek alphabet on the cross aforesaid, from the left Western corner to the opposite Eastern corner, and of the Latin alphabet from right to left.³

(4) This done, the bishop approaches within a fair distance (*spatio congruenti*) of the high altar, and says three times: '*Dens, in adiutorium meum intende, Ky Domine, ad adiuvandam me festina,*' with the '*Gloria Patri.*' Hereupon salt and water are for a second time exorcized and blessed (with new formulæ); ashes also are blessed and mixed with the salt and water; then wine is blessed and added to the mixture.⁴ Finally, two prayers are uttered: (i.) that the Holy Spirit may be sent down upon the mixture;⁵ and (ii.) that all kinds of

¹ The origin of this rite, which is probably Gallican, has puzzled the learned. It has been connected with the cross drawn by the Roman augurs in laying out a *templum*, and by the surveyors (*agrimensores*) in measuring out land for a colony (e.g. de Rossi, *Bullet. di archeol. crist.*, 1881, p. 140 ff.). The application of the second usage is approved by Duchesne (*op. cit.* p. 417), and by H. le Clercq and P. Lejay (*DACL*, p. 58, 1438). On the other hand, Wordsworth (*op. cit.* p. 11 ff.) criticizes the applicability of either usage to the rite in question. The surveyor's cross was, he says, 'one of 4 right angles,' like the St. George's cross on our flags, cutting the four sides into equal portions,' and the letters they used were in no way attached to these lines, but 'scattered all about the plans.' It is therefore, of the two, more likely that the peculiar Christian rite came from 'a vague memory' of the old laying out of a heathen temple than from the other; and he prefers de Rossi's suggestion that the figure is really a Greek χ and the initial of our Lord's name in that language. 'To write His name' symbolically upon the new church floor 'would be a very fitting mark of His ownership.' He further conjectures that the ceremony originally belonged to the laying out of the first sketch or foundation of the building rather than to the actual consecration (see note 5 above); cf. the Gr. *σταντορίων* and the modern laying of the foundation-stone. The antiphon, '*Fundamentum alud nemo potest,*' etc., and the Psalm 86, '*Fundamenta eius,*' etc., which are found at this point in *Bened. of Archbp. Robt.*, tend to corroborate the view suggested. It may be added that the ceremony, as at present practised, is rather ineffective, and does not appear to fit at all well into the rest of the service.

² Duchesne thinks that this and two other prayers which occur later on (*Deus qui loca, etc.*, and *Deus sanctificationum, etc.*) may have been borrowed by the Gallican Rite from some Roman *Missa Dedicatio*. This first one occurs in the *Gelasian Sacram.* (p. 140, ed. Wilson) in such a *Missa*, but in the *Misal* of Gellone, *Egb. Pont.*, *Egbert* (472 Mur.), etc., in the same place as now. The other two are both found in *Pont. of Egbert* and *Bened. of Archbp. Robt.*

³ In some early Sacramentaries it seems as if the Latin alphabet was written on both the intersecting lines, and we hear also of the Hebrew alphabet being likewise sometimes used. To Wordsworth (*op. cit.* p. 12) 'the alphabet seems to be another symbol of Christ as the word of God, not only Alpha and Omega, but all that lies between,—every element, in fact, of human speech.'

⁴ This holy water is technically called in later times 'Gregorian,' as though instituted by Gregory the Great; its use seems to have been common to both the Roman and the 'Gallican' Rites, though in the letter of Bp. Vigilius to Profuturus (A.D. 538) it is mentioned only to be disapproved of ('*nihil iudicamus officere si per eam [ecclesiam] minime aqua exorcizata lactetur*'). The *ordo* of Verona (see note 3 on p. 60b) mentions the use at the end of the service, but this may be a later addition.

⁵ Gell., *Egb. Pont.*, *Bened. of Archbp. Robt.*, etc.

¹ This is most conveniently the west door, if the structure has one.

² All this is in accordance with very ancient use, probably Gallican (see *Sacramentary of Drogon, Bishop of Metz* [826-855], quoted by Duchesne, *op. cit.* p. 487 ff., and described by Delisle, *Mém. sur d'anciens sacramentaires*, Paris, 1886, p. 100 ff.).

³ Gallican. These crosses are still often to be found in our English churches. 'It is said that the English use differed from the foreign in having crosses both within and without. The Irish use shows its primitive character in ordering the crosses to be cut with a knife, no doubt on wooden posts,' etc. (J. Wordsworth, *op. cit.* p. 16; cf. Wickham Legg, *op. cit.* p. 54).

⁴ *Pontifical of Egbert*, 1853 (Surtees Soc.), *Benedictional of Archbp. Robert* (H. Bradshaw Soc.); cf. *Gel. Sacr.* (p. 827, ed. Wilson, 1894). The antiphon now is '*Adeste, Deus unus omnipotens,*' etc.; in the above-named Pontificals it is '*Zachæe, festinans descende,*' etc., which now comes later in the service.

⁵ This is the first of two sprinklings that occur; see note 1 on next col. for comments on the origin of the practice.

⁶ Gallican. *Egb. Pont.*, *Bened. of Archbp. Robt.*, etc.

⁷ The earliest word for 'staff' here is *cambuca* (or *cambuta*), 'shepherd's crook,' perhaps derived from *καμνέειν*.

⁸ The introduction of ashes on which to write looks very like a later artifice to enable the 'bishop to do something which at first he would have been able to do without difficulty' (J. Wordsworth).

benefits typified by it may accrue to the newly consecrated building. The bishop then signs the inside of the church door with two crosses, using his staff, and uttering another prayer suitable to the action. Returning to his former position, he invites the congregation to pray for a blessing upon the building, 'per aspersionem huius aquae cum vino, sale et cinere mixtae.'¹

(5) *Consecration of the altar.*—The choir begins by singing Psalm 92 ('Judicia me,' etc.), with the antiphon ('Introibo,' etc.),² while the bishop, standing before the altar, dips his thumb into the 'Gregorian' water and makes a cross first in the middle of the *mensa* and then at each of its four corners, saying, 'Sanctificetur hoc altare,' etc., each time. At the conclusion of the introit, the bishop, having said the prayer 'Singulare illud,' etc., goes seven times round the altar, sprinkling the holy water with a branch of hyssop, whilst the antiphon ('Asperges,' etc.) and Psalm 50 ('Miserere mei,' etc.) are said.³

(6) All the walls and pavements of the church inside are sprinkled in the same manner three times, during the singing of Psalms 121, 67, and 90, with various antiphons. Two prayers⁴ (both ancient) and a preface follow, the bishop standing with his face towards the door.

(7) The bishop now goes up once more to the altar, mixes some cement with holy water, which he duly blesses, and throws what remains of the water away at the base of the altar.

(8) His next duty is to go and bring the relics solemnly to their new resting-place in, or under, the altar that has been prepared for them.⁵ This he does with much ceremony while the choir sings Psalm 94 ('Venite, exultemus,' etc.), with several antiphons. But, before entering the church with his sacred burden, he carries it once round the building outside, and delivers a set oration at the principal door, on the duty of treating churches with reverence⁶ and on the importance of endowments, after which the archdeacon reads two decrees of the Council of Trent. The bishop next addresses the founder of the church as to his intentions in maintaining it and the clergy attached to it, and, on being satisfied with regard to them,⁷ asks for the people's prayers on his behalf, whereupon the responsory ('Erit mihi Dominus in Deum,' etc., Gn 28^{21, 22}) is sung. The bishop also signs the outside of the door with chrism, which he has brought down with him from the sanctuary. At last the procession enters the church itself bearing the relics, while Psalms 149 and 150 are sung, with various antiphons. After a collect ('Deus, qui in omni loco,' etc.),⁸ the bishop

first signs with chrism the receptacle¹ in which the relics are to be laid, and then places the vessel containing them therein.² While the antiphon 'Sub altare Dei,' etc., is sung, he censes the relics, and fixes with the cement he has previously prepared (see above) the slab upon the *confessio*. Further antiphons are sung, and other collects ('Deus qui ex omni cohabitationibus [or coactione],'³ etc., and 'Dirigatur oratio nostra,' etc.) are said while this work is carefully completed.

(9)⁴ The *mensa altaris* (i.e. the upper slab) is then censed, anointed, and blessed with a number of antiphons, collects, and Psalms (83, 91, 44, 45, and 86). In this part of the ceremony *oleum catechumenorum* as well as *sanctum chrisma* is used for anointing, to typify the right of confirmation as the completion of the initiatory rite.

(10) After this the 12 consecration crosses of the inner walls of the building (see above) are each separately visited to be anointed, censed, and blessed, after the singing of Ps 147, an antiphon, and two responsories.

(11) Incense is now specially blessed, and has then by the bishop's own hands to be formed into 5 crosses, placed with holy water, oil, chrism, and wax on the 5 crosses of the *mensa*, and lighted with antiphons and prayer ('Domine sancte,' etc.).⁵ The ashes are carefully removed, the bishop says another prayer and preface,⁶ and Ps 67 is sung, with an antiphon. The altar is yet again anointed in silence, and, after two more prayers ('Majestatem tuam,' etc.,⁷ and 'Supplices te deprecamur,' etc.), the bishop goes to his throne near the altar and cleanses his hands with bread, while the subdeacons wipe the *mensa* with coarse towels.

(12) The other vessels and ornaments of the church and altar are then similarly dedicated with antiphons, responsories, Ps 62, and collects, and at last, when the altar has been properly vested and prepared, the *Missa dedicationis* is solemnly celebrated.

At the end of the service the ashes on which the alphabet was traced are removed, and the whole church is cleansed.

ii. *MODERN EASTERN RITE.*—For this we must take the Orthodox Greek Church as the norm. Here there is a general resemblance to the Western rite; but, though there has been a certain amount of elaboration introduced into the service during the last 200 years,⁸—partly, perhaps, in the direction of assimilation to Western usage,⁹—yet it is, on the whole, a simpler ceremony, and there are important divergencies.

To begin with, there is a short and simple form

¹ This ceremony seems to be somewhat delayed by the intrusion of the consecration of the High Altar and others if required, though, no doubt, that ceremony consists in part of sprinkling with the water.

² The usual introit at Mass.

³ The rite may be derived from the Christian practice of sprinkling holy water in their dwellings (see Duchesne, *op. cit.* p. 407, and cf. *Gal. Sacr.* p. 285 ff., ed. Wilson), which provides two forms of 'Benedictio aquae spargendae in domo'. See note 5 on p. 60^a above.

⁴ These are the prayers mentioned in note 2 on p. 61^b above. The preface is in *Pont. Egb.* and *Bened. of Archbp. Robt.*

⁵ It seems probable that this might at one time take place on another day or even, as has already been mentioned, not at all in certain cases. In the *Ambr. Pontifical* (ed. Magistretti, Milan, 1897), *Pont. Egb.*, and *Bened. of Archbp. Robt.*, the deposition of relics is placed later in the service, after the blessing of the linen and other apparatus; in the *Pontifical* of Dunstan there is a separate heading here: 'Incipit ordo quomodo in sancta Romana ecclesia reliquiae conduntur'; and similar evidence is supplied by other Pontificals; see Dewick's remarks in a footnote to Wordworth, *op. cit.* p. 22.

⁶ For an early instance of reverence for churches in a hitherto neglected portion of Christendom, cf. canons 83 and 58 of Rabula, Bp. of Edessa (A.D. 411-435), quoted by F. C. Burkitt, *Early Eastern Christianity*, London, 1904, p. 145 f.

⁷ All these (exhortation, decrees, and address) or any of them may be omitted now.

⁸ *Bened. of Archbp. Robt.*, *Greg.* (481 Mur.), etc.

¹ This is now called 'confessio, id est, sepulchrum altaris. The term *confessio* is found also in many early books; it is equivalent to *martyrium*, and means the hollow place beneath the altar which is still to be seen in some of the oldest Roman churches, and which is the origin of the later and larger crypts, marking the place of burial of the martyrs over whom the church was first raised.

² The only direction now is that this should be done 'veneranter,' but in the *Ambr. Pontif.* and *Pont. of Egb.*, as also in *Greg.* (481 Mur.), the rubric requires that a veil should be stretched in front of the altar at this point ('extenso velo inter eos [sc. clericos] et populum'). Both the *Bened. of Archbp. Robt.* and the *Pont. Egb.* characterize a prayer at this part of the service as 'oratio post velatum altare,' but it is not quite clear whether the word does not here mean 'vested' rather than 'veiled.' What this veil was which Duchesne considers 'Gallican' is uncertain; perhaps it was only the ordinary altar curtain, which there is reason to believe used to be drawn before the altar at the consecration in the Mass (see Wickham Legg, *op. cit.* p. 9).

³ *Gal.* (p. 139, ed. Wilson) and *Greg.* (482 Mur.), *Bened. of Archbp. Robt.*, etc.

⁴ Sections (9), (10), and (11) seem each to be of 'Gallican' origin.

⁵ *Greg.* (485 Mur.).

⁶ Both of these are found in *Greg.* (484-5 Mur.) and *Bened. of Archbp. Robt.*

⁷ *Greg.* (486 Mur.) and *Bened. of Archbp. Robt.*

⁸ See Neale, *Gen. Intro. to Hist. of East. Ch.*, London, 1866, p. 1043, etc.

⁹ But see what is said on p. 60^b above

provided for laying a foundation-stone. This consists of first censuring the site, the choir going in procession with the bishop round the foundations, singing the *ἀπολυτικά* of the saint in whose name the church is to be dedicated. Then, after a prayer on the site of the future altar, the bishop takes a stone, makes the sign of the cross with it, and lays it somewhere on the foundation, saying, 'God is in the midst of thee,' etc.

In due time, when the church is built and ready for use, the dedication (*ἐγκαίνια*) itself takes place. The following articles have to be prepared beforehand: 4 drams of pure wax, 20 drams each of mastic, myrrh, aloes, incense, resin, and ladanum, 2 vessels, some paper and twine, a litre of finely powdered marble, relics of martyrs with a little silver receptacle, holy chrism, 10 cubits of linen cloth, 2 napkins, 4 pieces of white soap, a new sponge, a vessel of wine, 4 pieces of cloth embroidered with the figures or names of the Evangelists, the *κατασάρκιον*¹ and as many *ἀντιμύσια*² as the bishop intends to consecrate (see below, p. 63^b).

Then, on the evening before the day fixed for the consecration, the bishop and clergy meet in the new church. The relics are placed upon the *δίσκος* (paten) in three parts on the altar, and covered with the *δορεπισκος* and the *ἀθήρ*. A short service is conducted, consisting of the Blessing, the Trisagion, the Lord's Prayer, certain *τροπάρια*, and the Dismissal (*ἀπόλυσις*).

Next, if the church is to be fully dedicated (i.e. not as a mere oratory or for temporary use),³ the relics are taken out into some neighbouring consecrated church, and laid upon the altar there; otherwise, this adjournment does not take place, and whatever service there is, is performed in the new building. Vigil is kept that night in presence of the relics. (1) There is a special *ἐσπερινος* (Vespers), with proper *ὕμνημα* and three proper lessons (viz. 1 K 8²²⁻⁶¹, Ezk 43³⁷⁻⁴⁴, and Pr 3¹⁹⁻³⁵). (2) Later on, again, there is a special *ὁρθρός* (Lauds), in which the Gospel is that of the saint of the dedication; the proper canon, with its nine odes, is attributed to John of Damascus. This service is concluded with the great Doxology.

Next day, after a short rest, the bishop and clergy assemble once more in the new church. In one vessel the wax, mastic, etc., are all melted together in a fire. In the other water is heated. The *mensa* is taken off its supporting pillars, and paper is wrapped round the latter, projecting an inch above the top, so as to hold the powdered marble when it is poured in. Thereupon the priest begins the office of the Prothesis, while the bishop proceeds to the old church, where he dons his episcopal robes, and orders the Liturgy proper to be begun. A procession is formed, in which the people carry lighted tapers, the clergy the Gospels, and the bishop the relics on his head. They start for the new church, singing various *τροπάρια*, and marching round the precincts, till they reach the doors, outside which the relics are deposited on the *τετραπόδιον*.⁴ After the *προκελευμενος*, the Epistle (*ἀποστόλος*; He 2^{11-2nd}) and the Gospel (Mt 16¹³⁻²⁰) are read.

After this, another procession takes place round

¹ A linen cloth, the length of the Holy Table, forming the middle one of its three coverings.

² The bottom cloth upon the Holy Table is so called. The natural derivation of the word would be as if it were a substitute (*ἀντί*) for the *mensa*, and this seems to accord with the use of the article; but it is always spelt with *α*, not *α*, and *μύσια* is said to be a canister (Neale, *op. cit.* p. 138).

³ The word for this is *ἐκτεθρονισμένος*, which is said to imply the setting up of the bishop's throne in it, because every church in his diocese is potentially his cathedral, and becomes so for the time when he is present (see Neale, *op. cit.* p. 1043, note, and Fortescue, *Orth. East. Ch.*, London, 1907, p. 404, note 2).

⁴ This four-legged table usually stands near the *iconostasis* for the use of the clergy (see Neale, *op. cit.* p. 1044).

the outside of the church, whilst they sing the 3rd ode of the canon mentioned at *ὁρθρός* above. This is followed by a second Epistle (He 9¹⁻⁸) and Gospel (Lk 10³⁸⁻⁴²).

For a third time they march round the walls, while the 6th ode of the canon is sung. Then the relics are laid upon the *τετραπόδιον* as before, the bishop prays, and a *τροπάριον* is sung. Standing before the closed church doors, the clergy sing Ps 24th, some from within demanding 'Who is the King of Glory?' and those without answering.¹ Thereupon the doors are thrown open, and the procession enters the church; the bishop, passing up the nave, solemnly places the relics in their receptacle, pours chrism on them, and prays. The powdered marble and the hot mixture of wax and other ingredients are then poured round the base and at the top of the pillars of the altar, and the *mensa* is securely replaced and fixed thereon. While the cement cools and dries, Ps 145 and 23 are sung.

They then swathe the bishop in the 10 cubits of linen which have been provided, and fasten the 2 napkins over his arms, so that his vestments are entirely protected from being soiled in the ceremonies which ensue.² After this he kneels down (this being an unusually solemn attitude for prayer in the East) and recites a long prayer of dedication, and the deacon says the litany (*ἐκρενή*). Then the bishop washes the *mensa*, first with the soap and warm water during the singing of Ps 84, next with the wine³ while Ps 51st is sung, using the *ἀντιμύσια* to wipe it off; lastly, he makes three crosses with the chrism (or oil) on the *mensa*, spreading the oil from them all over the top, and also on the pillars, while Ps 133 is being sung.

The vesting of the altar next takes place. At the corners of the *mensa* the 4 cloths with the Evangelists' names or figures on them are fixed with the cement; over them the *κατασάρκιον*, with its four tassels at the corners, is spread, during the singing of Ps 132; then, after washing his hands, the bishop takes the outer covering (called *ἐκρενδύρις*) and unfolds it over the *mensa* while they sing Ps 93. Lastly, he takes all the new *ἀντιμύσια* which are to be consecrated, and spreads them out, one on top of the other, on the altar; and on the top of all he puts an *ἀντιμύσιον* which has already been consecrated; meanwhile Ps 26 is sung.

After this, first the altar, then the whole church, is censured. Next the *ἀντιμύσια* are anointed, where they lie, with chrism into which the relics or something which has been in contact with them have been pounded, so as to communicate their virtues to the *ἀντιμύσια*. Each pillar in the body of the church is likewise anointed with the sign of the cross. The deacon says a *συναπτή*, and the bishop recites another long prayer. Finally, the Liturgy proceeds to the end as usual, the Epistle now being He 3¹⁻⁴, and the Gospel Jn 10²².

The Liturgy must be repeated for 7 successive days on the new altar, and the new *ἀντιμύσια* remain there as before. After that they are all regarded as fully consecrated, and may be distributed as occasion requires.⁴

It will thus be seen that at a consecration chief stress is laid on (a) the erection of the altar in the new church, and (b) the hallowing of the *ἀντιμύσια*, which can never be a separate service, and is

¹ Neale (*op. cit.* p. 1044, note) thinks this dramatic way of singing these verses is a modern interpolation from the Roman rite, and that it was not known to Goar or his editors in the 17th or early 18th century. But this is somewhat doubtful.

² S. Simon of Thessalonica interprets this as symbolizing the grave-cloths of our Lord (see Neale, *in loc.*).

³ It has been suggested as probable that a blooming vine-spray or rose-branch was originally used at this point, and that the idea of the wine was borrowed from the West.

⁴ Their proper position in future is below the *κατασάρκιον*, next to the surface of the *mensa* itself.

peculiar to the East. The Syrians, however, are said to use slabs of wood instead of cloths for this purpose, and in cases of necessity permit the Eucharist to be offered on a leaf of the Gospels, or even on the hands of a deacon.¹

CONSENT.—The usual meaning of the noun 'consent' is voluntary agreement to, or acquiescence in, another's proposal. The verb is used similarly: 'to consent' is voluntarily to accede to, or acquiesce in, what another proposes or desires; to agree, comply, yield. The original meaning of the word (from Lat. *consentire* = 'to feel, think, judge, etc., together') is almost obsolete. It is rarely used to denote agreement in sentiment, opinion, or judgment, though this meaning is preserved in the phrases 'common consent,' 'universal consent' (*consensus gentium*). Thus we find it in Sidgwick's *Methods of Ethics*⁶ (1901), bk. i. ch. viii. §3. We are led, he says, to endeavour to set at rest doubts as to the validity of the particular moral judgments of men 'by appealing to general rules, more firmly established on a basis of common consent.' And in Matthew Arnold's *Mixed Essays*, 1879 ('Equality'), we find the sentence: 'As to the duty of pursuing equality, there is no such consent among us' (p. 49). Most of the primary, and some secondary, meanings of the word have, however, been taken by other words, so that we now speak, e.g., of *assenting* to statements, doctrines, and creeds, and of *consenting* to proposals. Examples of this use of the word are to be found as early as the 12th cent. (see *OED*, s.v.).

A stage logically intermediate between the primitive and modern uses is the employment of 'consent' to denote agreement in a course of action. 'When the wills of many concur,' says Hobbes, 'to one and the same action and effect, the concurrence of wills is called consent' (*Works*, iv. xii.), and in Lk 14¹⁸ we read that 'all with one consent began to make excuse.' There is no reference to the sentiment, opinion, or judgment of the persons concurring to act.

But in its modern prevalent use 'consent' denotes a type of volition which implies acquiescence in what is proposed by another, an acquiescence, not in the proposer's sentiment or judgment, but merely in his proposal.² The state of mind preceding consent seems to include some reluctance to the action proposed. The reluctance may be of any degree, from mere indifference, through definite disinclination (which may be due simply to lack of light), to decided aversion. In the typical case of consenting, the reluctance is overcome without ceasing to exist. When reluctance ceases, the end takes on a more or less desirable character. An end desired is our own, whatever be the psychological origin of the idea of the end. It may have been suggested by another because he approved of it or desired its realization; but, while the end is his

only, and not attractive to us, there may be an indifference, at least, if not a more positive reluctance, to adopt it. When it touches us and creates desire or wins approval, it becomes to that extent our own end, and ceases to be what we acquiesce in. We consent to, that is, voluntarily acquiesce in, an end which is not our own in the sense explained. Consent so defined raises difficult moral problems.

The fact that a deed is done reluctantly does not do away with the fact that it is willed, nor, according to John Stuart Mill (*Utilitarianism*, 1901, ch. ii.), does it affect the morality of the action. It may affect our judgment of the character of the person doing it, but the morality of the volition depends upon the nature of the whole result which was foreseen to depend upon the volition. The apothecary in selling poison to Romeo said, 'My poverty, not my will consents,' but he could not disclaim responsibility for the poisoning proposed by Romeo. He did not wish the poisoning, yet 'the consent, though said not to be of the will, might have been enough to hang for' (T. H. Green, *Prolegomena to Ethics*, 1890, bk. ii. ch. ii.). A man who consents to a wrong action may plead poverty, compulsion, etc., as extenuating circumstances, but would these affect our judgment of his culpability, except in the same way as similar considerations would affect our judgment of an action which he conceived and carried out entirely on his own initiative?

It is difficult to fix the nature and the degree of responsibility attaching to consent, since acquiescence in any particular case may signify much or very little. It may mean, e.g., anything between non-interference and full co-operation. Would we give as much credit to one who permits a good deed to be done as to another who actively helps to perform it? Would we blame equally persons who allow an evil to be done, assist in doing it, or do it entirely themselves? Salome consented to the proposal of Herodias that John the Baptist should be beheaded, and demanded his head of the king. Herod consented and ordered the execution (Mt 14⁸). Herodias, Salome, and Herod willed the death. Were they equally responsible and reprehensible? Again, acquiescence in the same deed may have a different moral significance in the case of different persons. Pilate consented to the demand of the people to crucify Jesus Christ. Jesus consented to die. The consent of the one showed him to be a weak and unjust ruler; the consent of the other revealed Him as a Saviour of men. It is clear, therefore, that, in order to determine the moral significance of an act of consent, the whole complex result willed must be analyzed into its elements and considered in their relation to one another, and also in relation to the concrete conditions in which the person willing finds himself. The situation is often very complicated. The acquiescence of Jesus in His own death, e.g., was an act of obedience to His Father's will, yet consenting to that will involved the committing of a crime by the Jews and Pilate. Matheson (*Studies of the Portrait of Christ*, 1899-1900, bk. ii. ch. iii.) thinks that the agony of Gethsemane was largely due to His aversion to allow such a crime, and to doubt whether it could be in accordance with the will of God. 'Taking up the cross' for a Christian frequently means consenting to a course of action which he does not desire, and cannot see the reason for, or the reasonableness of; nevertheless he acquiesces, in the belief that he is doing the will of God, and that the will of God is good.

Submission of the will to authority of any kind amounts, directly or indirectly, to acquiescence in what is proposed by others. Obedience is consent, so is compromise; co-operation involves it. We cannot live in social relations with others without

¹ See art. 'Antimensium,' in *DCA* i. 91 f.

² There is a distinct difference in consciousness between the consent of belief and the consent of will. The consent of belief is, in a measure, a forced consent,—it attaches to what stands in the order of things whether I consent or no. The consent of will is a forceful consent—a consent to what shall be through me' (Baldwin, *Handbook of Psychology*, 1891, 'Will and Feeling,' p. 171).

having, now and again, to do things for them which we do not ourselves desire, and on which we may not be able to pass judgment. For it is not easy to know whether the ends which our fellow-men set themselves to realize with our help are, on the whole, good. The goodness of particular ends is, within limits, relative to the individual. An end which is good for one to aim at may be bad for another. This is true irrespective of our conception of the ultimate ideal of life. Even if the ultimate good be one and the same for all, it is individualized in a different form for every life, and each claims the right to realize it in his own way. This seems a legitimate claim, and consequently the good man may feel called upon to regard consent to special ends which he does not desire, and is not in a position to approve or disapprove, as a normal duty. By recognizing the claims of his neighbours to his love and help, he admits also their right to expect him sometimes to acquiesce in their purposes and to trust their judgments. He must act, not on his own insight, but in dependence on that of others. His will must consent to theirs. The appeal of many proposals may depend not so much on their intrinsic reasonableness, as on the persons making them. Therefore the wise man is only partially able to realize the ideal of a life according to reason. He can scarcely hope that the ends which his fellow-men seek are always good. Moreover, good men often come into apparent conflict with one another, and co-operation is limited by competition.

A more difficult problem is raised by a consideration of the fact that man's life is lived in a world over whose course he has very little control. If the world is the result of blind forces utterly indifferent to human ends, the wise man has no ground for hoping that life will ever be satisfactory. He cannot acquiesce in such a world. His mind and heart must protest against it, however useless the protest may be. If these forces form a mechanical system, whose operations can be traced and related, man's intelligence may bow to the inevitable order, and seek to understand it, but his conscience does not consent to such a scheme. The moral will would be inevitably opposed to a merely mechanical cosmical process. It cannot acquiesce in a world which is not based on moral principles, and which is not ultimately amenable to human ends.

And even on this assumption a completely rational life is an ideal which is scarcely realizable by any one in the present state of existence. And, therefore, Kant (cf. *Critique of Practical Reason*) maintained that immortality is a necessary moral postulate. He maintained, moreover, that the existence of the supremely Good Will must be postulated as creator and governor in order to secure complete harmony between the perfect moral will of man and the conditions of his happiness. There appeared to be no other way of guaranteeing the realization of the *bonum consummatum*.

Many of the higher religions teach submission to this sovereign will, whose ways are often inscrutable, as the highest duty. The Christian position is that we should will that God's will be done, and consent, therefore, to all that is involved in the operations of that will, whether we like and approve them or not; knowing, in the words of St. Paul, that 'all things work together for good to them that love God' (Ro 8th). In a sense such a view effects a partial synthesis between the two attitudes of acting from rational insight and consenting to the order of the world. For, if its fundamental assumptions are true, a man acts autonomously and rationally in willing continuously the realization of the supremely good and reasonable will; and also by consenting, in detail, to

particular events, and to particulars of conduct, even when unable to desire and approve them. The practical problem then reduces itself to knowing what that will intends us to do.

A synthesis of a different kind is attempted in some metaphysical systems, such as that of Spinoza (cf. his *Ethics* and *Treatise on the Improvement of the Understanding*). Everything that exists, Spinoza thought, follows eternally and necessarily from the being of the One Substance. The end of life is to obtain rational insight of an intuitive kind into this being, to see self as one of its modes, and to acquiesce in the order of things. When the order of the Universe—Substance, Nature, God, Truth, are Spinoza's terms—is understood, we more than acquiesce in it; we find satisfaction in the knowledge. Supreme and enduring happiness consists in the intellectual love of God (*amor intellectualis Dei*).

For consent in marriage, see MARRIAGE.

LITERATURE.—This is sufficiently indicated in the article.

DAVID PHILLIPS.

CONSEQUENCE.—If a proposition p implies a proposition q , but q does not in turn imply p , then p is called the antecedent and q the consequent; whereas, if each implies the other, they are preferably called equivalents. *Logical consequence* is thus the relation obtaining between a conclusion and its premisses, such that if the premisses are true the conclusion is true. The reverse of this relation—the relation holding between the consequent and an antecedent—is logical presupposition. That is, the consequent is logically presupposed by the antecedent; for only if it be true can the latter be true, whereas the antecedent might be false and the consequent still true.

By *causal consequence*, on the other hand, is meant the relation between an antecedent event and its effect; and the philosophically important question at once arises, Are the two types of consequence the same? For a century it has been believed that Hume and Kant proved successfully that the relation between cause and effect is not that of logical consequence, by showing that we discover causal relations not by deduction, but by observation and experiment, or inductively. But this does not follow; for, though it is true that our discovery of causal relations is usually made inductively, the relations discovered are logical. Moreover, many causal relations have been deduced, to wit, those inferred in mechanics and mathematical physics. Indeed, all causal laws can be explicitly formulated as propositions of the type p implies q . Perhaps what confuses us is that the temporal relation between an antecedent cause and its effect is foreign to logical consequence, and that the antecedent event seems to us, for practical reasons, necessary for the effect, and not the effect for it. But the effect is quite as necessary for the cause as the cause for the effect; and, though in a temporal system, such as the world is, events must be related in time, still this relation is logically accidental to the generic relation whereby from the nature of one part of the world-system we are enabled to infer the nature of another part. This generic relation is that of logical implication, and is either the causal relation or a class of which the causal relation is a member. See CAUSE, CAUSALITY.

WALTER T. MARVIN.

CONSISTENCY (Ethical).—In so far as ethics is a theory, we must ask whether such a theory is open to the test of consistency; and in so far as ethics bears upon conduct, we must inquire whether consistency also applies to the practical sphere. In

regard to its *theoretical* aspect, the question arises whether ethics is simply knowledge of moral facts, or whether it must fashion an ideal to serve as a rule for conduct; whether, that is to say, it merely describes, or also enjoins and commands. If it be merely descriptive, its sole aim will be to discover the characteristic and essential features of morality. The latter view has very largely come into favour in modern times.

1. *Consistency in naturalistic ethics.*—*Utilitarianism, Eudæmonism, or the Ethics of Feeling*, proposes to explain the origin of morality. It starts from phenomena; it examines the native capacities of mankind, and even tries to trace the development of these. It occupies itself with the psychological analysis of impulses, feelings, and emotions, with man's relations to his environment, and his dependence upon, or relative independence of, this environment; with his relations to Nature, to his fellows, and to the communities in which he finds himself; with suffering and his reaction against it; with his estimate of things by means of a 'value-judgment,' which may itself be variously construed, and with the origin of these value-judgments. In so far as ethics bears this empirical character, its business is to subject the conduct of men to historical and psychological investigation, to analyze it, to discover, if possible, the laws which actually regulate human life and which furnish a standard of value for conduct, and to determine the class of actions most conformable to this standard. For this school, in fact, the only important matter is to draw from the boundless mass of material such general truths as will be valid within this particular sphere.

It is impossible on these lines ever to get beyond probability or merely relative points of view. An ethical theory of this sort is inevitably tied down to the relative. Consistency can find no footing here. All that is required is to bring the manifold data under general categories by induction. Empirical thinkers, and more especially sceptics, who place their mark of interrogation upon everything, will even tell us that the endeavour to introduce consistency into ethics is a mere futility, and really prevents us from doing justice to the facts. A moralist like Bentham, for instance, will have nothing to do with consistency. For, though he admits the validity of the general proposition that morality is concerned with the good of the whole, he yet holds that experience alone shows what makes for this good. Laws derived from the facts are only of relative value. A change in the facts will necessarily involve a change in the laws. Those who favour the historical method give special prominence to the fact that ethical ideas undergo extensive modifications, and that every age has its own particular assortment of such ideas, won from the most heterogeneous points of view, and therefore quite incapable of being reduced to unity. Effete conceptions—vestiges of earlier modes of thought—still continue to operate in certain circles, or in the general consciousness, at a time when other usages and ideas, by no means reconcilable with the old, have come to the front. Hence, it is said, the collision of duties and the existence of contradictory views of moral life are just what we might anticipate, and accordingly the demand for consistency is sheer folly. Moral judgments are thus the result of a psychical and historical process—the mere temporary compromise between the competing interests of the day. To look for consistency under such conditions is to shut one's eyes to the facts. A like judgment must be passed upon the theory which finds morality in the spontaneity of our nature, which builds upon instinct and unconscious tendency, and which, as wholly *averse* to rational principles, would trace

moral action to the impulse of an inherent goodness in mankind, or of partly conscious, partly unconscious, propensity; or, again, would even bring in the operation of a natural creative potency. On this theory, also, the entire function of ethics is to describe the impulses as they appear in experience.

The explanation of this antipathy on the part of empirical ethics to the idea of consistency is that the system merely registers and describes the various types of ethical thought and action, classifying them under general headings, and refraining from any attempt to harmonize these, on the ground that the moral ideas and phenomena emerge in the most diverse departments of human life, in the most disparate phases of culture, and in ages most remote from one another, and that accordingly they cannot well be brought into organic unity. Indeed, many even maintain that the sphere of practice is the proper arena for the irrational, for a power quite impervious to reason. Here, it is said, we encounter the fact of personality; here the concrete, the merely particular, comes into play—that which in the last resort eludes the grasp of thought. All general principles are therefore but bare abstractions, drawn from a limited field of experience, and as divergent as the data they refer to.

2. *Consistency in religious ethics.*—Frequently, too, even *religious* ethics gives no more consideration to the idea of consistency than does empirical ethics. The ethics of religion has usually been content to give sacred sanction to a traditional morality, which has grown up amongst a people under the most heterogeneous influences; or it has, at most, added sundry directions regarding ceremonial observances, ecclesiastical duties, and especially works of piety. We need not expect to find a harmonious consistency under such conditions.

We have an instance of this in *Jewish* ethics, with its multifarious precepts regarding individual conduct, and regarding social, ceremonial, and political affairs. The ethics of the *Persian* religion embraces a vast array of ceremonial and moral ordinances, together with injunctions regarding social duties, such as planting trees, killing noxious animals, and the like. Jewish and Persian ethics, however, so far agree in resolving all the various regulations into a formal *unity*, namely, the will of God, as the source of all; and it is the same will which fixes the penalty of transgression and the reward of obedience.

A second type of religious ethics is that which admits a dualistic morality. In *Buddhism*, for instance, there is one morality for the monks and another for the laity. The universalism of this religion was not carried to its final issue; thus, woman was placed in a lower rank than man, and the system of caste was left undisturbed; and, while the leading principle of Buddhist ethics was the complete surrender of desire in a life of patience and contemplative wisdom, this was subsequently enjoined in different degrees for layman and monk respectively. The monks were required not only to eschew adultery, but to abstain entirely from sexual intercourse, to avoid luxury, and to give themselves to meditation. A distinction was also made between venial and mortal sins. Rules of propriety were added to moral obligations. A consistently developed ethical theory is thus clearly out of the question.

The same is true of the ethics of *Brāhmanism*. The *Law Book of Manu* contains an exposition of duties, as also injunctions regarding the retention of the caste system, and regarding submission to the Brāhmins. On the other hand, there is, as early as the *Upanishads*, the formula *Tat tvam asi*, 'That (the Cosmos) art thou,' which bids each find himself in his fellow-man; and, while asceticism, solitary meditation, and withdrawal into the forest count for more than family or business life, yet a compromise is made between the two by the regulation that the forest life shall be adopted only after a man has lived in a family and brought up a son.

Consistency is likewise alien to the ethics of *Roman Catholicism*. For one thing, morality is here made to rest upon the isolated fiat of an external authority; for another, a distinction is drawn between obligations and counsels. Moreover, the sacrament of penance prescribes a series of external works; while, finally, the monastic ethics of the *religious* is severed from the ethics of the laity.

Nevertheless, it would be wrong to imagine that religious ethics must necessarily assume this double form, or that it can be no more than a mere aggregation of contingent and isolated commands, and must in consequence lack consistency.

As a matter of fact, the ethics of *Confucius*, who put a check upon belief in spirits, soothsaying, and exorcism, and who read a Divine revelation in the natural and social order, exhibits a more homogeneous and self-consistent character than any of the above. 'The wise man obeys the law and awaits his destiny; that is the sum-total of duty.' This law sets forth the right hierarchy of social relationship in the subjection of the wife to the husband, of children to parents; in family affection, which is to be nurtured by ancestor-worship; in the separation of the sexes, as providing a 'barrier for the people'; in the subordination of the younger to the older, and of the subject to the ruler.

The law also decrees that this social order shall be represented in the ritual. Kindness to the poor, the friendless, the widow, and the orphan, is commended, and great stress is laid upon faithfulness in friendship. The governmental system should aim at nurturing a peaceful, industrious, and contented people. It quite accords with all this that Confucius sets great store by ancient tradition and history, as exhibiting the decrees of heaven in punishment and reward. Observance of this moral order is at the same time a religious duty. It is obvious that, notwithstanding the aphoristic form which this moral teaching tends to assume, nearly everything is dominated by a single thought.

Finally, the ethics of *Christianity* exhibits certain features which not only imply that the entire moral life is brought under one point of view, but also set forth a consistent moral ideal.

3. Consistency in rational ethics.—(a) *As the application of an abstract law.*—While religious ethics, therefore, either as giving formal sanction to incongruous usages, or as massing together arbitrary laws, or as separating the moral interests of religion from those of the secular life, tends in the main to dispense with consistency, the case is quite different with rational ethics. The fundamental tenet of the latter school is that the moral is grounded in the rational; and, even if a distinction be made, as by Kant, between practical and theoretical reason, the test of consistency holds good in either. When Kant wishes to prove that a breach of the universal moral law is indefensible, he points to the contradictions which such a breach involves. If we would test the validity of a maxim, we have but to ask how it would work as a universal law. Thus, for instance, the refusal to implement a promise, were it made a universal rule, would result in a state of things where no promise was accepted, *i.e.* the maxim would defeat its own purpose. The criterion applied here is therefore that of logical consistency. Similarly, in his *Critique of Practical Reason*, Kant resorts to the logical categories as furnishing a more precise definition of freedom. In one form or another, rational ethics makes out a case for an unconditional factor in morality, and it must vindicate the claim of this unconditional and universal principle to be supreme, *i.e.* to determine everything that comes within its province; in a word, it demands consistency.

Consistency in rational ethics is, primarily, the requirement that the practical side of life in its entirety shall be brought to the test of the universal moral law, and made subject to it.

Thus the *Stoics* maintained that all morality lay in the one supreme virtue, namely, harmony with the law of nature or of reason. From the same standpoint Kant treated morality in a purely formal way, taking reverence for the law as the sole motive. This law, however, being as yet wholly abstract, is incapable of positively determining the concrete materials of conduct. Given conditions are brought within the scope of the law; they are not, however, derived from the law, but only tested by it. For example, the institution of marriage is not deduced from the law, nor is its place in the ethical economy assigned by the law; the sole question is whether, marriage being assumed, the universally valid law can take effect in the relationship. Strictly speaking, in such a case we can say only that the law must not be infringed; we cannot determine the actual duties of marriage. It is, in fact, precisely on this account that Kant distinguishes between duties of perfect and those of imperfect obligation. Thus, for instance, the obligation of developing one's natural powers is an imperfect one, because, while the maxim of such effort is undoubtedly a law, the mode and degree of the effort are in no way defined by it, but are left to personal choice. Even on Kant's view, therefore, there is a certain permissive sphere in morals, to which the consistency of the moral law cannot be extended—a sphere for casuistry, in which particular cases cannot be decided by the law.

Kant's mode of applying the test of consistency in the field of rational ethics stands in contrast with that of *Herbart*. On the one hand, the unifying principle from which Herbart starts is an *esthetic a priori* judgment regarding relations of will, and from this judgment proceed the ethical ideas. On the other hand, he enumerates five such relations of will (recalling the five axioms of Whewell), which he simply places side by side. To look for consistency here is apparently out of the question, as these five ideas are neither traced to, nor derived from, a single principle. Closer examination, however, reveals that these ideas are in fact held together by the thought of a harmony in all the principal relations of will, while a similar unifying potency is attributed to the conception of living society, which combines all the ideas in harmonious unity, embracing both individual and social relations of will. Looked at in this way, the ethics

of Herbart presents us with a much more concrete ideal than Kant's universal abstract law, and so exhibits a higher degree of consistency.

(b) *Consistency in the structure of the concrete moral ideal.*—The criterion of consistency is applied even more cogently by those who seek by speculative methods to give the ideal a concrete form. It was on these lines that *Plato* fashioned his ideal Republic, which he regarded as the highest image of the Good upon earth, though his dualism stood in the way of a perfectly consistent theory. In the main, however, he sought to delineate a harmonious antitype of the Idea of the Good; and it was his conviction of the universal supremacy of this Idea that moved him to incorporate in his scheme the concrete conditions of human life and the special faculties of the soul. In the *Laws*, it is true, he somewhat lowers the Ideal in favour of the existent civic situation, yet this does not so much imply a surrender of consistency as a desire to actualize his ideal State amid given conditions. The Idea of the Good which manifests itself in the individual (as virtue) and in the State—the macrocosm of man—is set forth by Plato with the strictest consistency as the unifying principle of morals. This is even more true of *Aristotle*. With him, the one *voûs* is supreme in man, laying down just proportions for all emotions and all goods; and, although he gives an empirical tabulation of the particular virtues rather than a classification dominated by a universal principle, yet his guiding thought is that the dianoetic virtues are concerned with the development of the practical intelligence, while the ethical virtues have to do with reason's mastery of the passions by exercise. In effect, therefore, according to Aristotle, virtue is one, *viz.* the supremacy of reason, which, however, can be adequately realized only in the State—the State itself, again, being founded upon the home. Aristotle also agrees with Plato in linking his doctrine of virtue to the Idea of the Supreme Good, but he concedes a much wider scope to the operation of reason in practical life, and thus carries out his ethical doctrine in a more consistent way.

In modern times, *J. G. Fichte* and *Schleiermacher* have urged the importance of unity in ethical theory, and have given complete consistency to the moral ideal. True, Schleiermacher discarded imperative ethics and advocated the descriptive method. In his opinion, however, ethics is not an empirical or inductive, but rather a speculative, science. The moral ideal is not an ideal of obligation, but it is described as the ideal by which men act—duty; or in terms of the faculty which manifests itself as lawful—virtue; or in terms of the result of action—the highest good. In all this Schleiermacher applies the ideal with such rigorous consistency as to demand that every man, with due allowance for his individual nature, shall construct and realize his ideal concretely and in full detail. He gives no place to the distinction between perfect and imperfect obligations, or to the collision of duties, since at every moment only one mode of action is ethically possible—that, namely, which in the circumstances best furthers the entire moral process. Morality being an integral whole, every action is in its degree a reflexion of this whole. The distinction he draws between symbolizing and organizing action he admits to be relative only, since each includes the other in smaller compass; the same is true of the universal and the individual factor. Each ethical province therefore in a measure embraces the other, and, when combined, they constitute the highest good—a unity absolutely complete in itself. The ideal has no gaps, and, consequently, nothing

is merely permissive. The ideal embraces the entire range of human conduct; in fact, even the mode of action in any given situation is determined by fixed rules.

According to Schleiermacher, reason is a power which moulds nature to new issues; and among modern thinkers it is he who has most consistently developed the thought that the whole spiritual life of man is ethically determined, no phase whatever being left out. His *Theological Ethics* bears the same character. It simply describes how the religious impulse—the Divine spirit operating as the intensified power of reason—works as the constraining motive in the determination of moral action in its details, and how it strengthens this rational action (as it is called in his *Philosophical Ethics*) without running counter to it or altering its content. The man who is in harmony with the Spirit of God is, in thought and feeling, an integral concentrated force, which manifests itself in the moral ideal, and effects the highest good. This concrete form of the ideal exhibits a far more strict consistency and uniformity than does the abstract idea of universally valid law.

(c) *Consistency in the historical development.*—We can scarcely look for a more exigent standard of consistency in ethics than that of Schleiermacher, but we may give more consideration to the fact of *development*. Schleiermacher's ideal is really timeless. No doubt he holds that the speculative view of ethics may be brought into relation with historical science and practical life by means of critical and technical studies, and he desiderates that full account be taken of the individual's special place in the Kingdom of God; he even grafts upon the ideal the laws by which the whole course of conduct must be directed; but, nevertheless, he practically overlooks the factor of development in the moral consciousness. In his *Kritik der bisherigen Sittenlehre* he submits the history of ethics to a searching investigation, but from a purely critical point of view. This defect was made good by J. G. Fichte, and notably by Hegel; subsequently also by Chalybäus,¹ Harms,² and von Hartmann.³ These thinkers took account of the successive stages through which morality had passed, and contended for consistency in the ethical idea. As an example we may take Hegel's *Rechtsphilosophie*, which also comprises his ethics.

In the history of moral experience Hegel sees a logically necessary process of development. He argues that the component factors of the moral idea are exhibited in the several stadia of the developing moral consciousness; that they are all conserved in the highest stadium, and incorporated in the all-embracing unity of the moral organism. From the *pre-moral condition* of the natural life, with its impulses, out of which, in process of time, grows a system of wants, Hegel differentiates the stage of *abstract law*, in which man is subject to an external arbitrary norm, expressed primarily in the regulation of property and contract. Next, consciousness passes, by an inner necessity, from this purely outward phase of freedom to the stage of *morality*, which lays stress upon inner feeling in an abstract and one-sided way. Advance is then made to the stage of *Sittlichkeit*, or *established observance*, in which moral thought allies itself with an objective content embodied in the moral community. This content manifests itself first of all in the family, which forms an expression of natural feeling, and in which individual property becomes family property; it then appears as civil society, with its system of wants, police regulations, and corporate institutions; finally comes the State, which assimilates the results of the whole development. The State conserves the family and civil society, in which the individual finds his satisfaction; it conserves the inner disposition, which now acquires a concrete ethical content; it conserves the sphere of abstract law, and even the life of natural impulse together with its system of wants.

Now we may possibly take exception to some of the details of this sequence, but we cannot well ignore its leading idea, viz. that man advances from a state of nature to a state of average

morality characterized by statutory law; that, passing from the stage of positive enactment, he formulates the law abstractly as good disposition; and that, finally, he transforms this abstract morality into concrete established observance, thus arriving at a Supreme Good which recapitulates in itself all the preceding stages. The idea of consistency in ethical knowledge is thus extended to the process of development, and at the final stage we are brought to a provisional harmony in which the consistency of the ethical idea is revealed as the economy of the moral organism.

(d) *Consistency in the relation of Ethics to the ultimate principle of Philosophy.*—Speculative moralists, however, carry consistency to still further lengths. Not only do they assign to ethics, as a special science, its proper place in the system as a whole—as even Kant does, in his distinction of theoretical and practical reason—but they either trace it to, or deduce it from, an ultimate unity, a supreme integral principle, thus fitting it *organically into a complete philosophical rationale of the universe*. Such is the procedure of Plato, who holds that true knowledge involves morality, and that morality carries with it insight into truth, and who therefore regards the science of knowing, or dialectics, as the cardinal science, embracing not only knowledge but also the supreme content of knowledge, i.e. true being or the Ideas, of which the highest is that of the Good and Beautiful. These Ideas Plato deems to be realities, so that the True and the Good and the Beautiful are one. The subject-matter of metaphysics or dialectics, which embraces the knowledge of being, is identical with the Good and Beautiful; and, as this highest Idea is Deity, metaphysics, religion, and morality are in the last resort one—just as truth, goodness, and beauty cannot be dissevered. Plato's differentiation of physics and ethics from dialectics is due to the fact that the good and beautiful of the actual world is only a copy of the real—a mere representation in material form, since the world is the sphere of becoming.

Although Aristotle and the Stoics likewise aspired to place ethics in its right connexion with philosophy as a whole, yet their endeavours after unity, their ideas of consistency, were not carried out so fully as Plato's, the reason being that their interest in experience and the special sciences was greater than his, and so far deranged their philosophical views. On the other hand, we have a striking instance of consistency in the work of Spinoza. Even his mathematical method, which in reality is logical rather than mathematical, supplies an illustration of this. He regards metaphysics, ethics, and religion as constituting an integral whole; and, further, his theory of the parallelism of thought and extension enables him to incorporate physics into this unity. Here, therefore, we have an attempt on a grand scale to connect ethics organically with the entire system, and to enforce the principle of consistency to its extreme limit. A similar course is followed by the *Absolute Philosophy* of Germany, as exemplified by Fichte, Schelling, and Hegel, and, as they take the historical process into account, their system is even more comprehensive than that of Spinoza. Hegel looks upon man's whole moral experience in its several gradations as a phase of development in the self-manifestation of the Absolute, or the Idea, which actualizes itself in moral life in order to attain, in aesthetic intuition, in religious conception, and, finally, in philosophic thought, a survey of the whole process. Moral life is thus an aspect of the Idea, a stadium in its development. Here consistency reaches the acme of rigour. Schleiermacher, too, endeavoured to bring ethics into organic connexion

¹ *System der spekulativen Ethik* (Leipz. 1850).

² See his admirable work *Die Formen der Ethik* (Berlin, 1878), afterwards incorporated in his *Ethik*, ed. Wiese (1889), 12, 47 ff.

³ *Phänomenologie des sittlichen Bewusstseins* (Berlin, 1879).

with his whole philosophy. For him, as for Schelling, the highest principle was indifference, *i.e.* the absolute unity of opposites. This principle is confronted by the world, where, in virtue of the underlying unity, the several opposites of thought and being, real and ideal, manifest themselves as diverse, indeed, yet not inconsistent. This interfusion of real and ideal, if the former preponderates, is nature; if the latter preponderates, it is reason. Reason and nature, however, tend towards a state of mutual adjustment, reason becoming nature by its activity, and nature likewise labouring to become reason. Thus ethics becomes physics, and physics ethics. Still another opposition confronts true scientific knowledge. Our thought is at once speculative and conditioned by experience. Hence the science of reason and the science of nature have each a speculative and an empirical side. The speculative science of reason is ethics; the empirical is history. The speculative science of nature is *Natur-philosophie*, while the empirical embraces the special natural sciences. Ethics and history are interlinked by technical and critical studies. Such is Schleiermacher's way of making ethics an organic part of universal science.

4. General investigation.—It appears from the foregoing synopsis that moralists differ very greatly in regard to consistency as applied to ethical theory, the main cleavage corresponding to that between the empirical and the rational interpretation of morality. If morality be regarded as merely a means to the greatest possible good, then reason itself must be similarly interpreted, and, on this view, consistency comes into consideration only in so far as it is conducive to the same end. This general good, it is alleged, is best served by obedience to rules which have been inferred from experience. But absolute laws, laws permitting of no exception, are scarcely within the scope of such a hypothesis. General rules are deduced from limited empirical data, and, if such data be augmented, the rules will be correspondingly modified. They are, by their very structure, incompatible with absolute validity. Should it be asserted, for instance, that a man must, with a view to his own happiness, subordinate his personal interests to those of others, this law will be recognized by him only so long as he finds it to his own advantage. Thus ethics, if it be but a means to a relative end, cannot itself get beyond relativity, and must renounce consistency.

The same result follows when a purely empirical theory of development is applied to morality. Altered conditions or the progress of civilization will necessitate a change in moral laws. Since, on this theory, ethics merely summarizes the best directions for human well-being under given circumstances, and since the variability of such directions and maxims is held to prove the relative character of the science, strict consistency is put out of court. As corroborative of this view, it is alleged, in particular, that ethics must needs keep within the limits of the attainable, and that it is impossible to apply the idea of consistency at all hazards. If we bear in mind the way in which men really act, the way in which impulses, feelings, and passions are adjusted by the psychological mechanism, and in which we become conscious of this adjusting process, we can formulate rules which, so far from remaining mere ideals, take account of men's actual capacities and circumstances, and are therefore capable of being put into practice.

But even the most extreme empiricism must allow that morality emerges only when certain demands are made in reference to the data of experience—demands which this school finds so

little self-explanatory that it has recourse to all manner of 'sanctions' to establish their authority. Without the antithesis of an ideal confronting the data of experience as a regulative law, morality is impossible. It may, indeed, be said that this ideal is simply the resultant of our empirical value-judgments, a product derived from experience by abstraction. Thus, for instance, the law of altruism, as against egoism, may be traced to the experience that other-regarding conduct brings an increase of satisfaction. But the question then arises whether this generalization is universally valid; and, again, whence comes the faculty by which such generalizations are made. The truth is, this faculty of abstraction is that by which we colligate the manifold in a unity, on the assumption that it is amenable to law. The ideal set up by the moral reason is something more than an aggregate of rules, derived by abstraction from value-judgments; it is in reality reason's own craving for unity, which it seeks to realize in the ethical judgment it applies to the facts of volition. The unity which is not overtly given in our various impulses, feelings, and passions is demanded by reason, and the demand cannot be met by anything relative. It is a fact that a number of moralists take their stand upon the unconditional character of morality; and this fact can neither be explained nor explained away by the empirical school. Reason cannot rest till it has moulded the manifold into a unity, and in the ethical field this means not only that reason constructs ideals, but that its ideals are consistent. It is, of course, true that different epochs have different ideals, but this by no means implies that the ideals of any period were defective in the matter of consistency. Reason has built up its ideals in ever-enlarging form; it has in ever-increasing measure incorporated therein the various spheres of conduct; and, by defining the mutual relations of these spheres, it has attained perfect symmetry in its ideal. Indeed, reason has at length reached a point where it can survey the whole historical sequence of ideals in a single view, and where it seeks to grasp the process of development by which the approved elements of the earlier ideals are taken up into the ampler range of the later. In short, if by an inherent necessity the moral reason is to carry out its task of ideal-making, and if its demand for unity is put forward unconditionally, then the entire field of voluntary action must be subjected to its authority, and its ideal must seek to effect the complete organization of moral life. In ethics, therefore, consistency is an unconditional requirement. Since the whole spiritual life of man is touched by the will, it must of necessity fall under the moral ideal.

It has been said, indeed, that the concept can never reach the concrete, the particular. But, while this is the case, we can nevertheless form the *concept of the particular*, and can accordingly assign the particular to its proper place in the ethical system, subordinating it to the whole in such a way as to make it an organic part thereof—a component which, so far from causing any dislocation, really works with all the rest as mutually complementary, and is thus wrought into the harmony of the whole. If it be deemed pedantic thus to bestrew the whole way of life 'with man-traps of duty,' it must be frankly conceded that there are sections of life where movement must be free, as, for example, the sphere of recreation, of sociality, of imagination, or the æsthetic sphere. But the moral ideal encompasses these tracts in such a manner as to permit a certain freedom therein, provided that there be no over-stepping of the limits laid down by the moral system as a whole. Here, therefore, we have no exception to

the moral law, but simply an application of the ethical principle that each sphere shall be dealt with in its own way, while ever remaining a constituent part of the moral organism, and keeping within its own bounds. Here too, therefore, the unifying formative reason may manifest itself in constructing ideals.

Further, consistency, to be effective, must be complete. No doubt, it is at present a prevalent view that a narrow and one-sided policy achieves the best results. An oppressed class, for instance, demands its rights; these are not to be won, it is said, by deliberations as to how that particular section of society is to be fitted into the social organism; nothing but the ruthless enforcement of its claims can secure for it improved conditions of life, though eventually, of course, such amelioration may benefit the whole. Again, it is asserted that a State attains prosperity not by enthusiasm for the ideal of humanity, but by a self-centred struggle for a recognized place in the council of the nations. Or, again, the individual who has formed new religious views must, it is held, not walk softly or make compromises, but must carry his views into effect ruthlessly, *i.e.* consistently. Mankind, in short, makes progress only by the one-sided pursuit of narrow aims. Society is so constituted that, while one man is carrying out his ideals with inexorable consistency, his action is being circumscribed by the interests of others. The whole process culminates in the mutual adjustment of interests. Thus the striving of reason for unity at length attains its end unconsciously, although the several parts seemed to be inharmoniously distributed. Progress is secured by mutual conflict. It is wrong, therefore, to lay the burden of this final adjustment upon the individual; all that we can expect from him is consistency in his own particular sphere, and in the advocacy of his special interests.

Plausible as such a theory may seem, and numerous as are its champions, it is nevertheless untenable. Were it consciously put into practice, it would forthwith plunge nations, classes, municipalities, and individuals—in fact, human society at large—into embittered strife, without a single reconciling element. Passions would become rampant, and animosities more virulent. We must preferably hold to the other view, *viz.* that the individual shall recognize the rights of others; that each class, each group, shall feel itself to be an organic part of the larger whole, the State; and each nation a section of the human race; and that in the conflict of opinion every man shall take pains to apprehend what is good in the view of others. As a matter of fact, it is not laid upon men to prosecute their individual aims with relentless consistency, but rather to realize those aims in a manner compatible with the ideal, so that personal interests may be advanced without detriment to the larger whole. Such a mode of apprehending the moral task demands, without doubt, a higher degree of intelligence. But a consistency which is merely sectional is no consistency at all, and is incapable of securing true progress, for it carries within itself the seed of reaction, which will sooner or later germinate. Moral development proceeds from the more simple conditions to the more complex; but, for that very reason, the prime necessity is to gain control of these complicated conditions by taking into account the various relevant elements which they contain, and by subordinating them to the unifying and moulding power of reason. Our abiding problem is to systematize the whole ethical data in harmony with the ideal, for only such an issue can adequately meet the unconditional demand for unity which reason makes.

5. Consistency between the moral ideal and practice. — The more perfectly consistency is attained in the formation of ideals, the less possible is it to ignore the discrepancy between the ideal and the actual moral situation. When the reality is compared with the ideal, it appears incongruous, contradictory, one-sided, narrow, circumscribed, rent by antitheses—in a word, bad; while the ideal itself seems but a futile and impracticable demand. In particular, it is rational ethics, with its special insistence upon a logically constructed ideal, which is mainly affected by the discrepancy, so that its boasted consistency would here seem to become abortive. Plato traces the defects of the empirical world—as compared with the Idea—to matter, and thus ends in dualism. Spinoza deduces not only the inadequate ideas and affections, but also the adequate ideas—not only human servitude, but also human freedom—from the same mathematical necessity, and can therefore make his ideal avail at most only for the favoured few. Nor could Hegel dislodge this discrepancy; for, though he held the antithesis to be the very mainspring of progress, and as such to be subject to logical sequence, the contradiction was not thereby removed. Above all, Kant felt the opposition between the practical reason and the natural propensities so intensely that he went to the very verge of dualism. Even Schleiermacher was forced to recognize a difference between the speculative moral ideal and actual moral practice, and accordingly he introduced—in his *Christian Ethics*—a ‘purifying activity,’ which was in reality a confession of the discrepancy. Now this contradiction seems to turn the consistency of the moral ideal into a mere abstraction. Consequently many thinkers of to-day would have us recognize a certain irrational factor in the world, a factor which necessarily precludes a consistent application of the moral ideal to the facts of life. According to von Hartmann, the will is non-logical, and the sole task of ethics is to evince this fact, moral action being in the end simply an anodyne to the will, which finds no satisfaction in any moral result. Here the antagonism is carried to such a point that moral action is made a means to its own ultimate abrogation. From all this it would appear that the consistent formation of ideals, as essayed more especially by the rational school of moralists, comes to grief upon the incongruity between the ideal and the actual.

Now this would undoubtedly be true, were the construction of ideals the final task of ethics. Such, however, is not the case. Nature, and especially human nature, is so constituted that it must have recourse to reason as a means to its own harmony and perfection. The first stage, therefore, is the idealizing activity of reason, the outcome of which is the rationally harmonized image of nature. But this is *only* the first stage; and, when once consistency has been realized here, a further advance is made, for now practice is to be moulded into conformity with the ideal. Thus the contradiction above noted is simply a necessary point of transition—necessary, that is, if we are to have ethical life or action at all. In other words, if moral results are to be achieved by the rational activity of the soul, then the end, the task set before us, must first of all be known; and only when it is known can we proceed to the task of realizing it. The antithesis between the rational ideal and human nature, as it is, is not an absolute one. The truth is rather, that life, as we know it, awaits the rational action of the soul as the medium by which it is to be harmonized and transfigured. The initial, or idealizing, stage of the moral process of reason is therefore responsible for no more than the harmonious, consistent for-

mation of the ideal. Once this has been attained, consistency makes the further demand that the ideal shall not remain a bare ideal, but shall be realized. It is impossible to rest satisfied with the mere self-consistency of the ideal: consistency must also govern its practical application to life.

Now, as regards this practical accomplishment of the ideal, we must bear in mind that there are two factors in the process. There is, first of all, the application of the ideal to the concrete facts of life; and, secondly, its realization on the part of the will. In either aspect we must take account of consistency, *i.e.* of the requirement that the unifying impulse of reason shall operate throughout with absolute authority.

The application of the ideal to the concrete case implies the faculty of taste or judgment,—Kant's *Urtheilskraft*,—the instinctive form of which is conscience. In accordance with what has already been said, this immediate judgment of conscience cannot be self-sustaining, but, in so far as it is valid, it pre-supposes knowledge of the moral ideal, as well as the right use of the concrete ideas of the end which have been grafted upon the ideal by education. Now, since practical life sets particular tasks before us, and since a particular task requires a particular time for its performance, the question arises, what action ought to ensue at a given moment—for, of course, the ideal, as something concrete, has various sides. But it is impossible to act consistently with reference to more than one side at a time, and, if we take the one nearest to us as the most important, our act will be consistent in a partial sense only. The ecclesiastic, for example, may fix his mind so intently upon the interests of his church as to be oblivious of other duties. Such a one-sided consistency is the result of limitation, and leads to fanaticism: *fiat justitia, pereat mundus!* We may, in fact, find a consistency which is so rigid as to verge upon puerility, as, *e.g.*, when some positive law, such as Sabbath-observance, is over-emphasized in the manner of the Pharisees. The vital matter is rather to keep the ideal before the mind in every act. Every act must be of such a kind as will, in its degree and place, further the entire moral process; only so can the ideal be realized in each particular case. This may seem too great a burden to lay upon the generality of mankind. How many, it may be asked, are so far advanced in ethical knowledge, or so proficient in the exercise of their judgment, as to be capable of subjecting every case to such thorough-going reflexion? The majority trust to their conscience, which may be said to express the average ethical culture of the day, and at best they plead for some modification of the universal law in view of their personal circumstances. For instance, in regard to the obligation of philanthropy, they point to the state of their resources, or to their responsibility to those that have the first claim upon them; and, on the whole, they fare wonderfully well with this instinctive judgment, for they are in this way making a genuinely consistent application of the ideal. The explanation is, of course, that every man finds himself in a certain situation, in certain definite relationships; and a whole array of actions—provision for one's family, assiduity in one's calling, etc.—have become matters of use and wont. With respect to such things there grows up a certain moral conviction, which requires no special preliminary consideration, since, so to speak, it has become transformed into flesh and blood. Thus the immediate judgment of conscience is, in general, the consistent application of the ideal to the particular case.

It is different when one takes an active part in public life. Exact knowledge will then be required,

so that one's decisions may be of the right kind; and a mature reflexion upon one's own faculty of judgment will be no more than proper. The same thing applies when we are confronted with important issues. Here also a man must carefully weigh all the salient facts of the situation, so that his action may in its own measure meet the entire moral demands of the occasion. The realization of the ideal will in such instances call for a developed tact and foresight, while these qualities will also be needed in order to understand the faculties by which, and the conditions in which, we must act, as well as the laws of the objects we wish to work upon. Self-knowledge and knowledge of facts are the pre-requisites of framing right ends and applying appropriate means. No relaxation of consistency is discernible here, for it is precisely the world as *given* which is to be transformed by the moral ideal. On the contrary, consistency demands that everything necessary to the accomplishment of that great end shall be done.

When, however, the intelligence has been thus brought to bear consistently upon particular cases, it is then required, first, that the will shall harmonize with the intelligence, and, secondly, that the appropriate mental and bodily organs shall be at the disposal of the will. The former desideratum is in this instance the fundamental union of the will with the moral ideal, *i.e.* the good will combined with love or enthusiasm for the ideal. This good will is also of crucial importance for particular volitions. But, in the second place, the volition can be carried into effect only by the exercise of the relative organs, and here the significance of psychology and psychophysics for ethics comes into view. We need not, however, speak of this aspect in detail. Enough has been said to show that in ethics the idea of consistency, alike in the formation and in the practical realization of the moral ideal, is of decisive importance.

CONSOLATION, COMFORT (Christian).—

Consolation is an act or process of giving comfort; the state of being comforted; or the condition and consciousness of relief from anxiety and distress, or of support in sorrow and affliction. *Comfort* is a complex emotion induced by means of consolation, or the act or process of comforting; but, although it is to be classed among the emotional states, it has certain well-defined presentational aspects. In its fullest, and especially in its religious, sense, there is the consciousness of a person whose presence, words, or acts are the source of the feeling of comfort, and constitute the consoling element. Although there are several weakened uses of the term 'comfort,' and it is often employed in an abstract and derived sense, the personal (or quasi-personal) source is always implied. The immediate effect upon the will is that of solace or soothing, restraint from agonizing or neurotic effort, and the inhibition of excited acts. The subconscious effect is that of a tonic, and the will is braced thereby for healthful exercise.¹ Whilst the consciousness of a personal presence and influence is the dominant feature in religious consolation, there is always, in the background at least, the presentation of something that produces pain,

¹ See W. James, *Varieties of Religious Experience*, p. 506.

distress, or anxiety. Probably in most cases the cause of the painful feeling is at first the focus of attention, but the process of consolation forces it into the background as the comfort is being experienced. The consciousness of personal help and support is the positive element in the case, whilst the negative is the sense of relief and mitigation.

As consolation and comfort play an exceedingly important part in the Christian consciousness and in the offices of religion, the connotation of these terms in devotional literature is in general identical with Scripture usage, from which it is derived. The Heb. word *נִחֵם* (Ps 119⁵⁰, Job 6¹⁰) has its root-meaning in the act of breathing pantingly or sighing, probably as the expression of deep, sympathetic feeling on the part of the consoler. It especially refers to God as the Comforter of His people in their affliction, calamity, or persecution, or even in their repentance. In most cases, as in Ps 119^{50, 78}, comfort is given to the righteous, as such, in their tribulation, but in some other instances, as in Is 40¹, the comfort follows upon repentance, and Jahweh is represented as having changed from His state of anger to that of pity and compassion for His people. The richest form of comfort in the OT is probably what is often designated 'the motherhood of God' (Is 66¹³).¹

The NT conception of consolation and comfort in general has no reference to sin, but refers rather to the persecution, distress, and tribulation to which the faithful are exposed. The word most frequently employed is *παράκλησις*, whose primary significance is that of the ministrations of one called to assist, counsel, or relieve. *παράκλησις* (1 Co 14³ only) refers to comfort given by word or speech, whilst *παρηγορία* (Col 4¹ only) brings out the aspect of soothing. The presence of God is the dominant feature in Christian consolation, together with the promises, assurances, and pledges of support and ultimate victory through Christ. God as manifested in Christ is the Comforter of His children; but more specifically the presence and power of God realized in the Spirit, through whom Christ returned to His disciples at Pentecost, indicate the significance of the Holy Spirit being designated the Comforter (*παράκλητος*, Jn 14^{16, 26} 15²⁶ 16⁷).

There are two instances in the NT where comfort may be considered to have reference to repentance and forgiveness. The first instance is that of the second Beatitude (Mt 5⁴), but it is by no means certain that the 'mourning' (of *πενθοῦντες*) refers to one's own sin. The other case is in 2 Co 7¹⁰, where it appears that St. Paul experiences the comfort on account of the godly sorrow which is felt by the Corinthian converts. The most familiar instance in devotional literature of the function of comfort in remission of sin is in the Book of Common Prayer immediately after the Absolution, in the Office of Holy Communion: 'Hear what comfortable words our Saviour Christ saith,' etc. The personal ministrations of sympathy, love, and support in the midst of sorrow and pain are far more prominent in the NT and in Christian literature than deliverance from the evils themselves. It is as though the inevitableness of suffering were recognized, especially the forms of it that Christians are called upon to bear for their Master's sake and as incidental to their work of extending the Redeemer's kingdom. 'All that would live godly in Christ Jesus shall suffer persecution' (2 Ti 3¹²). In the sense, therefore, in which tribulation is regarded as partaking of Christ's sufferings, and as the result of well-doing

or endured for righteousness' sake, consolation is not given in the form of the removal of such grievances, but in the consciousness of the Divine presence and approval, and the grace of God to support and sustain throughout all these experiences.

Whilst the Divine Being is the ultimate source of comfort, the 'Father of mercies and God of all comfort' (2 Co 1³), it is explicitly taught by St. Paul that Christian believers should in their turn become comforters of those who need sympathy and strength. In harmony with this injunction, the consolations of religion may be administered by the officers of the Church and by all who have had to pass through such experiences themselves. They are to be the instruments whereby the Divine comfort is mediated and brought to bear upon other souls and lives. Barnabas, who was exceptionally gifted in this respect, was fitly surnamed 'son of consolation' (*υἱὸς παρακλήσεως*, Ac 4³⁶).

The circumstances under which the administration of consolation is needed by the Christian and generally commented upon in devotional and in homiletical literature will now be summarized.

(1) *Physical or mental limitations, pain, or distress.*—The comfort consists in the knowledge of the disciplinary value of suffering, the consciousness of the transcendent power of the spiritual in the realized infirmity of the flesh, and the acquisition and development of the gifts and graces of sympathy, tenderness, and gentleness with other sufferers, together with patience and fortitude. 'Tunc non est melius remedium quam patientia, et abnegatio mei in voluntate Dei' (à Kempis, *de Imit. Christi*, lib. ii. c. ix. 6). The classic example of this form of consolation is that of St. Paul's 'thorn in the flesh,' and his comment thereupon, 'Most gladly therefore will I rather glory in my weaknesses, that the strength of Christ may rest upon me . . . for when I am weak, then am I strong' (2 Co 12⁹).

(2) *Anxiety, perplexity, and care.*—Here the Christian needs the assurance that he is in the hands of an All-wise and All-loving Heavenly Father, and that, so long as he makes God's cause and kingdom his chief interest and aim, all that is necessary for the effective discharge of his duty and the accomplishment of his work will be secured to him (Mt 6³³). As God is in the whole environment of our life, so shall those who trust in Him be under His direction, as they are beneath His protecting hand.

(3) *Depression and spiritual desolation.*—The best consolation under these conditions is the exhortation to continue in the prayerful and persistent discharge of duty and Christian work, and to wait patiently for the revealing of God's face and favour, and especially not to rely too exclusively upon one's feelings. Von Hügel points out the need for the 'sober and stable, consistent and persistent, laborious upbuilding of moral and religious character, work, and evidence,' instead of yielding to 'fierce and fitful,' 'wayward and fleeting feelings,' in the hours of darkness and isolation of soul (*The Mystical Element of Religion*, i. 5 f.). The exercise of faith strengthens the Christian in the consciousness that prayer for light and joy will sooner or later be heard, and that the inner witness will be given.

(4) *Difficulty in Christian work, opposition and persecution.*—Here the conflict of wills comes into play, and the determination of the heart against God and in defiance of the gracious influences that are brought into operation. This is particularly distressing when, as in the time of persecution, the opposition assumes an aggressive form. Christians are exhorted in the NT not to grow faint-hearted or weary in bearing their testimony even though they may have to seal it with their blood

¹ The Arab. *تعزية* signifies the act of 'being kind to,' or 'patient with' (a person), and consequently 'comfort.'

They are encouraged to take comfort in the prospect and promise of the ultimate triumph of the truth and the all-conquering power of love which refuses not to suffer and to die. Moreover, they are to regard their sufferings borne in love on behalf of others as the means whereby the hearts of their opponents and persecutors are to be reached, and they are taught to pray and hope that the opposition will be ultimately broken down. The line of consolation adopted by the Fathers in encouraging the Churches to endure persecution was in general to remind them of the predictions of our Lord and the Apostles (Irenæus, *adv. Hær.* lib. iv. c. xxiii.); to point to the notable examples of martyrdom, from the death of Abel to the passion of our Lord (Cyprian, *Ep.* lv.); and also to seek to win the hearts of men by 'Christ's new way of patience' (Tert., *adv. Marcion.* lib. iv. c. 16).

(5) *Bereavement.*—Those who are bereaved are comforted by the blessed memories of the past, which ever remain as a sacred treasure, and by the promises that they shall meet again those who die in the Lord, for their life is assured in the Resurrection life of the Conqueror of death and the grave. St. Ambrose stated the ground of the Christian's hope thus: 'Habent gentiles solatia sua, quia requiem malorum omnium mortem existimant. . . . Nos vero ut erectiores præmio, ita etiam patientiores solatio esse debemus; non enim amitti, sed præmitti videntur, quos non assumptura mors, sed æternitas receptura est' (*de Excessu Fratris sui Satyri*, lib. i. c. 71). St. Paul refers to the state of the sainted dead, and their final triumph through their Lord, and admonishes the Thessalonians to 'comfort one another with these words' (1 Th 4¹⁸).

(6) *Death and the fear of death.*—Beyond all other consolations the consciousness of the presence and power of Christ—the Resurrection and the Life, who has triumphed over the last enemy—is assured to the believer. So closely related is the dying saint to his Lord, that St. Paul speaks of him as being amongst those who are asleep in (or through) Jesus (*ὁὐὰ τοῦ Ἰησοῦ*, 1 Th 4¹⁴), and as dying unto the Lord (Ro 14⁸). This thought is also carried out by St. John in the Apocalypse: 'Blessed are the dead which die in the Lord' (*ὁὐὰ Κυρίου*, Rev 14¹³). This relationship ensures to Christian believers the hope of heaven, eternal life, and a glorious resurrection.

Whilst the experiences here summarized call for consolation, and that consolation is found in the promises of Scripture and in waiting upon God, there is always an implicit reference to the Divine Being Himself as the primary source of comfort. Thomas à Kempis clearly expresses this when he says: 'Unde non poteris, anima mea, plene consolari nec perfecte recreari, nisi in Deo, consolatore pauperum ac susceptore humilium' (*de Imit. Christi*, lib. iii. c. xvi.). In a secondary or derived sense, the words of God, His attributes, and His gifts are often referred to as being in themselves comforts, just as, in ordinary affairs, material things are designated 'comforts' if they minister to our well-being, not being luxuries on the one hand, or necessities on the other. Also it is one of the duties and privileges of Christian believers to be the means of communicating the comfort they have received of God to other souls, by sympathy and tenderness, and by the support of collective faith and intercessory prayer. In the exercise of this function of consolation, the reflex action is experienced, which, in no slight degree, brings a sense of satisfaction, and even of joy, in being of service to suffering humanity.

Further, comfort is realized by Christians in the consciousness of community with their Lord in His sufferings, in being partakers with Him in the

work of redemption, in drinking of the cup from which He drank, and in being baptized with His baptism. In tribulation incurred in the service of humanity, and incidental to the accomplishment of His work, there is, as St. Paul expressed it, the filling up what is lacking of the afflictions of Christ (Col 1²⁴). The Mystics of all schools have always been accustomed to direct the attention of the persecuted to the cross of Christ as the chief source of consolation, especially where sufferings have resulted from devotion to His cause. In contemplating thus the marks of His pain and anguish and the sense of desolation that He endured upon the cross, they have realized that they were one with Him in bearing reproach and ignominy, even though they could not suffer as He did in expiation of human guilt. Moreover, the thought of the transcendence of Christ's sufferings inspired a feeling of gratitude and an inspiration to the believing soul to endure 'the contradiction of sinners' without complaint or impatience. John Newton, in his well-known hymn, 'Begone, unbelief,' etc., dwells upon this thought—'Did Jesus thus suffer, and shall I repine?' These considerations inspired the hymn of John Keble, in *The Christian Year*, for Good Friday, that to the cross the mourner's eye should turn 'with softer power for comfort' in earth's darkest hour than on any bright day.

The full meaning of Christian consolation is not exhausted apart from the conception of the mystic union of Christ with the believer. There is a sense in which the Church has ever been conscious that, as Christ is the head of the body of believers, He suffers not only for their sins, but in all the sorrows and tribulation that God's people have to endure. God's consolation is, in this mystical sense, the realization of Christ's presence with us in all life's painful experiences, in His humanity and His eternal priesthood. The realization of God's presence in Christ bears the promise of ultimate triumph, and, although Christ's disciples shall have tribulation in the world, their final conquest is secured and guaranteed in His victory over all.

LITERATURE.—There is no subject more frequently referred to in the whole of devotional literature than consolation, but the specific treatment of it is somewhat slight. For psychological treatment, see W. James, *Varieties of Religious Experience*, London, 1902 (chapters on 'Saintliness' and 'Mysticism,' and the Conclusions); Fr. von Hügel, *The Mystical Element of Religion*, 2 vols., London, 1908-9 (esp. the Introduction and pt. iii.). Devotional works: Thomas à Kempis, *de Imitatione Christi* (in various editions and Eng. translations); St. Francis de Sales (frequent references scattered throughout his writings); J. H. Burn, *Manual of Consolation*, London, 1902; Père Huguet, *The Consoling Thoughts of St. Francis de Sales*, Dublin, n.d.; Frassinetti, *Consolation of a Devout Soul*, London, 1875; Cowper, Newton, Doddridge, etc., *Comfort for the Mourner*, London, 1822; R. Buchanan, *Comfort in Affliction*, Edin. 1871; C. H. Spurgeon, *Twelve Sermons for the Troubled and Tired*, London, 1896; J. H. Jowett, *The Silver Lining*, London, 1907-8; E. Romanes, *The Hallowing of Sorrow*, London, 1896; H. Black, *Comfort*, London, 1910. Cf. also Chrysostom, *ad Stagiritum* (PG xlvii.); Honoratus, *Ep. consolatoria* (PL.); J. Hinton, *The Mystery of Pain*, London, 1866, 1870; C. Kingsley, *Out of the Deep*, London, 1880; S. A. Brooke, *Sunshine and Shadow*, London, 1886; J. E. Hopkins, *Christ the Consoler*², London, 1879, 1884.

J. G. JAMES.

CONSOLATION (Greek and Roman).—In Greece the germs of a literature of consolation can be traced to ancient times. The dead were commemorated in threnodies, which were designed also to console the bereaved, and a great vogue was enjoyed by a *threnos* of Pindar, in which the ideas of the Orphic eschatology were drawn upon for consolation, and which is made use of in the pseudo-Platonic dialogue *Arctochos*. In Athens it was customary, probably after the Persian wars, to engage a rhetor to deliver a funeral oration—like that, e.g., which Thucydides puts into the mouth of Pericles—regarding those who had fallen in battle; and it was usual at the close to address the relatives in consoling terms. Several of these

orations are still extant; one, the *epitaphios* of Hyperides, is known to have been delivered in 322 B.C. The grounds of consolation are set forth in ch. 20 of the *Menexenos* of Plato, which is a parody upon the sophistic *epitaphios* of the type seen in that composed by Gorgias. Philosophy likewise had at an early stage wrought out certain consolatory lines of thought, and it is possible that the writings of Antisthenes the Cynic may have suggested what Xenophon makes Socrates say in the *Apology*. Aristotle's dialogue 'Eudemus on the Soul,' and the 'Callisthenes on Mourning' of Theophrastus, were also well stored with consoling sentiments. But the standard work of the kind was that of Crantor the Academic (c. 270 B.C.) 'On Mourning,' which was sent by the author to a friend whose children had died, and which Cicero calls 'aureolus et ad verbum descendens libellus' (*Acad.* ii. 135). As it treated of sorrow not as a reprehensible emotion—in the manner of the Stoics—but rather as a natural impulse, requiring only to be kept within bounds, the book found many readers; and, when Cicero, in 45 B.C., essayed the composition of his *Consolatio* for his own comfort after the demise of his daughter Tullia, he made Crantor's work the basis of his own, while he reproduced its ideas a little later in the *Disp. Tusc.* (esp. i. 19-72). Plutarch does the same thing in the piece addressed to Apollonia. Epicurus also had elaborated many comforting sentiments, as he was specially concerned to deliver men from the fear of death; he sought to convince them of the painlessness of dying, and of the absolute cessation of perception thereafter, thus grappling with the popular superstitions about the terrors of the under world (Lucret. *de Rer. Nat.* iii., with Heinze's *com.*).

Nor had the rhetoricians neglected the consolatory oration, and in the Hellenistic period—perhaps even from the time of Isocrates—they had framed for this species of composition certain rules, which in their later form are found in the *μέθοδος ἐπιταφίων* of pseudo-Dionysius and the *περὶ παραμυθητικῆς* of Menander (4th cent. A.D.). These rules are followed not merely by heathen, but even by Christian, funeral discourses (cf. F. Bauer, *Die Trostreden des Gregor v. Nyssa*, Marburg, 1892). It is specially worthy of note that the plan of composition elaborated by the rhetoricians was taken over by poetry, the most outstanding instance of this being the *Consolatio ad Liviam* which bears the name of Ovid, and which is neither a fabrication of the Renaissance period nor, as was long believed, a product emanating, under Seneca's influence, from the later school of rhetoric, but a poem actually presented to Livia upon the death of Drusus in 9 B.C. The rhetorical scheme had also an influence upon the work of Statius (esp. *Silvæ*, ii. 6: 'Consolatio ad Flavianum Ursum').

Among the elements of a consolatory oration a special place is given to the praise of the deceased. According to the detailed rules for the *ἐγκώμιον*, this permitted of great amplification. The discourse likewise described the way in which the departed would be received by his ancestors and the heroes of antiquity. The bereaved were also shown that their experience was common to mankind, that not only individuals but whole kingdoms had perished, that life is simply a trust from the Deity, and that excessive grief can profit neither the mourner nor the dead. Instances were also given of men who, like Priam, would have been happier had they died earlier.

A distinct species of this literature appears in the 'consolations' addressed to those who had been banished, as, e.g., Seneca's letter to his mother Helvia, and Plutarch's *περὶ φυγῆς*. In

these, as in works of consolation generally, special use is made of the ideas expressed in the popular diatribe of the Cynics, emphasis being laid upon the thought that the home of the wise man is not a particular city but the whole world. Here, too, the writers drew extensively upon the examples of celebrated exiles, such as Antenor, Evander, and Diomedes.

LITERATURE.—K. Buresch, *Leipziger Studien*, ix. (1886) 1; A. Gercke, in *Tirocinium Philologum* (Bonn, 1888); Skutsch, 'Consolatio ad Liviam,' in Pauly-Wissowa, iv. 938; A. Giesecke, *De philosophorum veterum quæ ad exilium spectant sententiis* (Leipzig, 1891). W. KROLL.

CONSTANCY.—This quality is most clearly manifested by instinct (*q.v.*)—the innate tendency to respond similarly to similar influences. Reasoning introduces variations. As a large part of the experience of savages is due to instinct, their conduct can be predicted till they are moved by thought, and then they are erratic; for guiding principles are lacking, with the result that waywardness and fickleness are conspicuous. Attention is irksome to them (as to children), and tasks that are readily begun are swiftly abandoned. The civilized man criticizes and often resists instincts, while he compels the various choices that are open to him to move in directions favourable to his designs. Constancy may belong to a single thread of a life, or it may be characteristic of the entire collection of activities. An affection of love or hate may abide for years without having occasion to display itself and without affecting the ordinary conduct; at length the opportunity comes, and the fires that had been hidden blaze out. In other cases there are purposes which day by day mould all the circumstances and call into their service every power of body and mind.

(1) *Social influences and the necessity of obtaining a livelihood* account for many sorts of constancy. Personal tendencies to variation are subject to limitations imposed by the opinions and plans of others. To a large extent we must all comply with demands made upon us, and it is so hazardous to forsake the career to which one has been bred, that the trade or profession chosen secures the service of the entire life. Success requires patience and perseverance. Hand and mind gain facility by continuous endeavours, the spur to which is often the necessity of providing for domestic needs. Nevertheless, in the most mechanical calling there may live affections and aspirations due to an ever fresh willingness; in the moss-covered well there is spring water. The soul can steadily rise, though outwardly the man appears to be treading a mill-round. Fidelity to persons and to causes frequently makes music in what appear to be monotonous histories.

(2) *Tendencies to constancy are not equally strong in all natures.* There are weather-cock, and there are stubborn, souls; for flexibility and firmness are partly to be ascribed to constitution. Undisciplined no one can be satisfactory, but the discipline required differs in each case. Some vessels drift to and fro and are in danger of foundering, while others stick fast on the rocks and look as if they would be battered to pieces by the waves; the Christian religion would guide the one class and release the other. To change the constitution is a miracle of which Christianity believes itself to have the secret. Shallow soil can be deepened and rock can be dissolved; hence there may appear corn-producing fields, and gardens lovely and fragrant with flowers.

(3) *When is constancy admirable?* Only when it is a quality of aims that enrich human experience, when it belongs to a purpose to convert moral ideals to the actual, to acquire and spread truth, to respond gladly to whatsoever is pure and lovely,

to love men and to labour for their good, to make one's life valuable to humanity. Such purposes admit minor changes, whereas evil motives, such as pride, may lie behind some forms of constancy. In order to maintain a vitally important consistency, superficial inconsistency is often imperative. There cannot be a righteous adhesion to opinions the falsity of which has been demonstrated, for 'constancy in mistake is constant folly.' Would not a resolution never to vote differently, never to espouse another faith, imply that in youth infallibility had been acquired? An abiding loyalty to truth necessitates changes in beliefs, habits, and allies. But serious men cannot alter easily or without pain. The lower consistency is abandoned for a higher, and the abandonment is often accompanied by loss of what is dear, without any apparent compensating gain.

(4) *The conditions of constancy.*—Failing the predominance of one idea or affection, the ideas and affections must be of a kind to work together with a good measure of harmony. 'A double-minded man is unstable in all his ways' (Ja 1st). Serious and deep contradictions are ruinous. A commanding purpose (or purposes that harmonize with one another) will consolidate and organize the impulses and desires, so that, from being a mob, they are converted into an army. Noble aims will gather about themselves the strength and warmth of the lower impulses; and after a time the habit of beating down sensual and unsocial impulses will cause the soul to move more and more easily on the higher than on the lower paths. Courage will be required, and sacrifices also. Devotion to the interests of persons can survive the discovery of unworthiness in those whom one loves; and the cause espoused can still be served, though it fails to gain popular approbation; 'many waters cannot quench love' (Ca 8th). Generally there is the sympathy of some companions whose support helps to keep the fires of zeal burning. Especially is constancy promoted if the general plan of life or some particular design or way is believed to have the favour of heaven; for then there is the assurance of supernatural assistance, and all the rills and streams of one's purposes seem to be drawn into the river of God's will. The human will is never so firm as when it thinks itself to be merged in God's, and great confidence possesses the aspirant to sanctity who reads, 'This is the will of God, even your sanctification' (1 Th 4th).

(5) *The effects of constancy.*—In Oliver Cromwell's Bible was the inscription, 'O. C. 1644, Qui cessat esse melior cessat esse bonus.' Mere visits to realms of thought, or occasional excursions into any sphere of activity, are insufficient to make deep marks on character, or to give skill in any handicraft or profession. A few warm days in winter can produce no harvest. Who can be an accomplished musician, scientist, linguist, without persistent toil? Great are the differences between the results of *καρτέω* and *μαρτέω*. A favourite word in the Fourth Gospel is *μένω*: the branch that 'abides' in the vine bears much fruit (Jn 15th). No wonder that Bunyan had an aversion to the lives of Mr. Pliable and Mr. Temporary, seeing that such men not only fail to reach the Celestial City, but even discourage other pilgrims. By constancy power is accumulated and capitalized, skill is acquired, and the soul makes for itself a tradition which it is ashamed not to honour. While the man becomes a law to himself, observers can rely upon him and infer his future from his past conduct, for there is logical connexion between the past and the present. Constancy makes the good better and the bad worse. See also **PERSEVERANCE**.

W. J. HENDERSON.

CONSTANTINE.—I. Life.—Flavius Valerius Aurelius Constantinus was born on 27th Feb. of a year uncertain, generally given as 274, but probably a little later.¹ The place was Naissus (Nisch) in Dardania (Serbia) (Anon. Valesii, 2; Constant. Porphyrogenitus, de *Thematibus*, ii. 9 [in Migne, PG cxiii.]). The fiction of his birth at York, current in all mediæval English historians (the silence of Bede, *HE* i. 8, should be noted), arose from a misunderstanding of the phrase 'illic oriendo' (*Panegy.* vi. 4), which refers to his accession, not his birth. Constantine's father, M. Flavius Valerius Constantius (the surname Chlorus is not found until late Greek writers), was a noble Dardanian soldier, whose mother was the niece of the emperor Claudius. His mother, Flavia Helena (b. about 250; Euseb. *Vita Constantini*,² iii. 46), was the daughter or servant (Ambrose, de *Obitu Theodosii*, 42) of an innkeeper of Drepanum in Bithynia, a city rebuilt by Constantine in 327 in her honour and re-named Helenopolis. Her marriage to Constantius was probably irregular (Anon. Vales. 1; Zosimus, *Res Gestæ*, ii. 8; these passages should not be pressed as more than morganatic [see *Digest*. xxv. 7]) until after the birth of her son (cf. Constantine's legislation, *infra*, V. i. d (2)). When Constantine was about 14, his father was promoted by Diocletian to the rank of 'Cæsar' (1st March 293), with the government of Gaul and Britain, on condition that he divorced Helena and married Theodora, daughter of the emperor Maximian. Constantine did not accompany his father, but was left at Diocletian's court at Nicomedia, possibly as a hostage, until the growing jealousy of Galerius, after the abdication of Diocletian and Maximian (1st May 305), compelled him to a memorable ride across Europe to his father's camp at Boulogne (Lactant. de *Mortibus Persecut.* 24; Anon. Vales. 3, 8), where he arrived in time to share his father's victories over the Piets (Eumenius, *Panegy.* vii. 7).

The death of Constantius at York (25th July 306) was followed by the proclamation by the army of Constantine as 'Cæsar' (Zos. ii. 9; 'Augustus' in Euseb. *HE* viii. 13, *VC* i. 22, though this higher honour was not ratified by Galerius until the following year [*Panegy.* vi. 5; coins in Eckhel, *Doct. Num. Vet.* viii. 72; Lact. *MP* 25]). His seat of government was Trèves, which he embellished with many buildings. In 307 he strengthened his position by his marriage at Arles to Fausta, the daughter of Maximian. The Empire was thus divided between six rulers: in the East, Galerius, Licinian (Valerius Licinianus Licinius), and Maximian Daza; in the West, Constantine (Gaul and Britain), Maximian, who had re-assumed the purple, and his son Maxentius. But Maximian, after a crafty intrigue against Constantine, was captured and forced to strangle himself in Feb. 310 (Lact. *MP* 29, 30; Eumen. *Panegy.* vii. 20), while the death of Galerius at Sardica (Anon. Vales. 3, 8) in May 311 led to the division of the Empire between Constantine, Licinian, and Maximian Daza. The three refused to recognize Maxentius, whose tyranny in his province of Italy, Africa, and Spain, gave Constantine an excuse for the invasion of Italy (Euseb. *HE* ix. 9. 2, *VC* i. 26; Nazarius, *Panegy.* x. 19, 31; Zos. ii. 14 says Maxentius was the aggressor). He

¹ Seeck, *Gesch. d. Untergangs d. antik. Welt*, i. 435 n., gives 280 as the date, but his reference, *CIL* i. 3 p. 302, seems inaccurate.

² Hereafter cited as *VC*.

³ Hereafter cited as *MP*.

crossed the Alps (Sept. 312) either by Mt. Cenis or by Mt. Genève (see the contemporary [A.D. 333] *Itin. Anon. Burdigalense*, ed. Geyer in *CSEL* xxxix. 5), captured Susa and Verona (Oct.), and within 58 days of declaring war defeated the sluggish Maxentius at Saxa Rubra, about 9 miles N.W. of Rome. The drowning of Maxentius in attempting to escape over the Milvian Bridge (Ponte Molle) completed his triumph, 28th Oct. 312 (Anon. Vales. 4, 12; Lact. *MP* 44; Euseb. *HE* ix. 9; there is a full account in Seeck, *op. cit.* i. 109-137).

Constantine's victory was followed, early in 313, by a conference at Milan with Licinian, and by the marriage of Licinian to his sister Constantia. The defeat of Daza by Licinian near Adrianople (30th Apr. 313) and his death in August at Tarsus left Constantine and Licinian in sole possession—the ex-emperor Diocletian dying probably that same summer (Seeck, *op. cit.* i. 459 f., following as his source Idatius, *Consulares Fasti*, dates 3rd Dec. 316) at Salona. But the concord of the two was hollow. The first civil war between them was ended by the triumphs of Constantine at Cibalis (Vinkovci in Hungary), 8th Oct. 314, and Mardia in Thrace (Anon. Vales. 5; Zos. ii. 18-20), after which a truce was patched up, Constantine leaving Licinian in possession of Thrace, Asia Minor, Syria, and Egypt. Constantine now devoted himself to internal reforms, from which he was called away by the war with the Goths and Sarmatians in Illyricum and Dacia (322) and the final struggle with Licinian. The victories, in spite of Licinian's superior forces, of Adrianople (3rd July 323) and Chrysopolis (Scutari, 8th Sept. 323) were followed by the humiliation and enforced death of Licinian in 324 (Soc. *HE* i. 4; Euseb. *VC* ii. 18; Zos. ii. 28; Eutrop. *Brev.* x. 6) and the re-union of the Empire under one head.

The foundation by Constantine of a new capital (4th Nov. 326 [Anon. *de Antiq. Constant.* i. 3, in A. Banduri, *Imperium Orientale*, Paris, 1711]; see Burckhardt, *Die Zeit*, etc. 415; but de Broglie, *L'Église*, etc. i. 440 f., dates in 328) at Byzantium is one of the great events of history. In reality it continued Diocletian's policy of ruling from Nicomedia. It was dedicated on 11th May 330 (Gibbon, ed. Bury, ii. 157 n.), under the title of New Rome. The removal of the seat of government was completed by an entire re-organization of the Empire, the new absolute monarchy of Diocletian which had taken the place of the old principate being consolidated and systematized (see Seeck, *op. cit.* ii.). Constantine's last years, though years of peace, were unfortunate. His character degenerated (Eutrop. *Brev.* x. 7), his expensive building operations drained the Empire of its resources (Zos. ii. 32, 35, 38; Schiller, *Röm. Kaiserzeit*, ii. 230), his habits became effeminate, and his jealousy of a rival made his family life miserable. His eldest son Crispus, the offspring of an early irregular marriage with Minervina, had shown great ability in forcing the straits of Hellespont against the superior fleet of Licinian (323), yet he was executed (July 326) at his father's command (Amm. Marcell. xiv. 11), though the reason for this act is obscure. This was followed, possibly a year or two later, by the execution of his wife Fausta on the charge of adultery.¹ In 331 Constantine was forced to attack the Sarmatians, who had encamped near the Danube. His victory—for his supposed defeat is a curious error of Gibbon (ii. 217)—was the last of his successes. He died near Nicomedia on Whitsunday, 22nd May 337, though he nominally reigned for four months (until 9th Sept.) after his death.

¹ For detailed investigation of this domestic tragedy see Görres and Seeck, 'Die Verwandtenmorde Constantin's des Grossen,' in *ZWT* xxx. (1897), 348 ff., xxxii. (1899) 63 ff.

In spite of the claims of Rome, he was buried at Constantinople in the great church of the Trinity (later called 'Holy Apostles'), which he had completed for the purpose the previous Easter. At Rome the heathen senate enrolled him among the gods (V. Schultze, *Untergang d. gr.-röm. Heidentums*, 1887-92, i. 66), though the medal struck to commemorate this was made of a Christian type (King, *Christian Numismatics*, 1873, p. 53). In 1204, his tomb was destroyed by the Latin crusaders on their capture of Constantinople.

Constantine's life, like that of Charles the Great, has become legendary, and was one of the favourite romances of the mediaeval Church. On these see the critical studies of E. Heydenreich, esp. 'Constantin der Grosse in den Sagen des Mittelalters' in *Ztschr. f. Geschichtswissenschaft*, ix. (1893) 9, 1 ff.

II. Extent of the Church at the time of Constantine's 'conversion.'—At the outset of an inquiry into the great change brought about by Constantine, it is of importance to understand the extent and influence of the Church and its attraction for any statesman.

(a) *Numbers.*—Materials for forming an estimate of the strength of Christianity under Diocletian will be found in Harnack's elaborate survey (*Expansion of Christianity*, Eng. tr. ii. [1904] 240-456). From a careful study it would appear that in the East the Christians, except in a few towns, were still only a small minority, at the most—one-ninth or so of the whole (H. Richter, *Weström. Reich* [1865], p. 85)—and in the West they would be considerably less. Unfortunately we do not know the population of the Empire. The figure of Gibbon (i. 42), 120 millions, is absurdly large; J. Beloch (*Bevölkerung d. gr.-röm. Welt*, 1886) gives it under Augustus at 54 millions, but this seems too small. If we take it at 60 millions under Nero, the great famines, etc., in the middle of the 3rd cent. would have reduced it to slightly less under Constantine. At the outside, therefore, the Christians would scarcely number five millions (Gibbon's proportion, $\frac{1}{12}$ [ii. 65], thus comes to the same result), or less than the Jews, who numbered over six millions, of whom one million were in Egypt. In Rome in 250 we calculate from Eusebius, *HE* vi. 43. 11, that the Christians numbered between 40,000 and 50,000 in a city of nearly a million, i.e. $\frac{1}{20}$, though this proportion would be higher in the time of Constantine. In the country districts the Christians were far less numerous than in the towns.

(b) *Influence.*—But what the Christians lacked in numbers they more than made up by their organization, unity, wealth, and driving power. In these matters only the Jews could equal them, but Judaism was hindered by its Law from ever becoming an international religion. The Christians, shut off from the pleasures of the world, had grown immensely rich, while their morality, sobriety, and enthusiasm would attract any statesman who looked deeper than popular rumour. For any statesman anxious to infuse new life into a dying world Christianity had no rival except, possibly, Mithraism, for Neo-Platonism, etc., had no value for the vulgar; nor must we overlook the value to the statesman of the Christian doctrine of immortality (Burckhardt, *op. cit.* p. 140).

III. Personal relation to Christianity.—The personal relation of Constantine to Christianity is a subject of much importance, as upon its decision many questions, both theological and ecclesiastical, depend. As to the date of his 'conversion' the earliest authorities are contradictory. Lactant. *Instit. Div.* vii. 27, a work finished before 311, would be conclusive, but the passage has been shown by its editor, Brandt (*CSEL* xix. 668), to be an interpolation. Equally

conclusive would be sentences in the letter of Constantine to the bishops at Arles in 314 or 316 (Optat. Milev. *Mon. Vet.* [CSEL xxvi. 208]), but these probably reflect merely the opinions of Hosius (see *infra*, IV. (b)). Zos. ii. 29 (cf. Soz. *HE* i. 3) dates the conversion after the execution of Crispus, to the remorse for which he attributes it. For our part we first detect a warmer note as to Christianity about 314, in Constantine's letter to Chrestus (Euseb. *HE* x. 5). As regards his whole relation to Christianity, the data are involved and have been variously interpreted, while the difficulty has been increased by the delay of his baptism until his death. The whole problem has been rendered additionally obscure by the complex imperfect character of Constantine himself—calculating, shrewd, superstitious, often cruel, cynical—whose one great instance of consummate foresight alone entitles him to be called 'Great.' Brieger (*Ztschr. f. Kirchengesch.* iv. [1881] 163 ff.) and Gibbon make it altogether a question of politics; but, as Bury has pointed out (Gibbon, ii. 566), this is to ascribe to Constantine a freedom from superstition which, though natural in an English deist of the 18th cent., was altogether unknown in the 4th. Schiller (*op. cit.* ii. 213) believes that his ideal was a syncretistic fusion of the best elements of Christianity and paganism. But Constantine's powers of observation must have shown him the impossibility of any such syncretism; the refusal of precisely such syncretism lay at the root of the whole persecution of Diocletian. As a summary of the following survey we incline to think that Constantine at first leaned to toleration for political reasons, as a system of balance or equal opportunity for heathenism and Christianity; and that the success of his arms and the identification of his vanquished foes with heathenism (cf. Constantine's *Oratio ad Sanct. Coetum*, 23–26, of which this is the concluding thought) led to a policy of self-interest passing into an intellectual, possibly even a moral, conviction; with the consequent effort, but without unstatesmanlike haste, to supplant heathenism by Christianity, and in certain directions (see *infra*, V. i.) to alter the laws accordingly. The relapse of his last years was rather moral degeneration than any reaction (Burckhardt) towards paganism, while at its best his religion was probably a 'strange jumble' (Niebuhr, *Röm. Hist.*, Eng. tr. [1823 ff.] v. 449) of creed and superstition.

(a) *In early life.*—That Constantine's mother Helena was a Christian before her divorce has been asserted (Theodoret, *HE* i. 17); but Eusebius (*VC* iii. 47) ascribes her conversion to her son. While there is no reason to identify his father Constantius' leaning towards Monotheism (Euseb. *VC* i. 17, ii. 49) with a belief in Christianity, it is of importance to note his tolerant disposition. During the great persecution of Diocletian it was only in Constantius' provinces of Gaul and Britain that there was any safety for Christians (Optat. Milev. i. 22),¹ though even Constantius thought it well to conform to the edict of Diocletian to the extent of destroying the churches (Lact. *MP* 15, as against Euseb. *HE* viii. 13. 13). Here and there also there were one or two martyrs—not necessarily, of course, by Constantius' orders.² To the tolerant practice and disposition of his father we must add the influence of Nicomedia, at the palace of which Constantine was brought up. The

power of the Christians, whose great basilica towered up against the palace, the fact that, in the court itself, Prisca the wife and Valeria the daughter of Diocletian, the influential eunuchs Dorotheus and Gorgonius, and Lucian the chamberlain, were Christians (Lact. *MP* 15), the resistance of the Christians to Diocletian's edicts, and the chaos produced by attempts to carry out the edicts—all must have impressed him with the folly and impossibility of a policy of persecution (cf. Constantine's *Orat. ad Sanct. Coet.* 25). Yet, while in Gaul, his personal cult appears to have been that of Apollo or the sun-god (Eumen. *Panegyrr.* vii. 21), and even late in his reign he was still under its influence, so that, e.g., his statue at Constantinople was a mutilated sun-god from Athens (cf. *infra*, V. ii. (c) 'Sunday').

(b) *In his struggle with Maxentius.*—Rumours of the persecution in the East under Galerius and Maximin Daza would confirm Constantine in his conception of its folly and in his policy of toleration (Lact. *MP* 24. 9). He was therefore a willing party in signing, with Licinian, Galerius' edict of toleration (30th Apr. 311). In his struggle with Maxentius, the plea of Constantine's invasion was the deliverance of Rome from his tyranny and vices (Euseb. *HE* ix. 2, *VC* i. 33; *Panegyrr.* ix. 4; Julian, *Cæs.*, ed. Hertlein, pp. 405, 422), and the Christians as such were tolerably treated (Optat. Milev. i. 18). As regards the famous vision at the Milvian Bridge opinion will always be divided. In our earliest authority (Lact. *MP* 44, written in 314, probably by the tutor of Crispus), Constantine was warned in a dream on the night before the battle to draw the monogram of Christ (☩) upon the shields of his soldiers.

For the form of the monogram and *labarum*, see Smith-Cheetham, *DCA* i. 494. We may note that the *labarum* (derivation unknown), or standard with this monogram, appears on Græco-Bactrian coins of the 2nd and 1st cent. a.c., and also on Tarantine coins of the 3rd cent. a.c. (cf. Soc. *HE* v. 17, and Soz. *HE* vii. 15, for symbols of the cross as a sign of immortality on temples of Isis; see also Schiller, *op. cit.* ii. 205 n.; Madden, *Nym. Chron.*, 1377, p. 17 ff.). According to E. Rapp (*Das Labarum und d. Sonnenkultus*, Bonn, 1866), there is no well-attested use of the *labarum* as a Christian symbol before 323 (see below, p. 78^b, top).

The familiar story is not found in Euseb. *HE* ix. 9, which is silent on the subject, but occurs in the later *VC* i. 28 (cf. also *ib.* ii. 55; Soz. *HE* i. 4), where Eusebius states that Constantine told it him 'long afterwards and confirmed it with an oath,' but gives no date. The value of this personal statement is discounted by the silence of Constantine in his *Orat. ad Sanct. Coet.*, where surely of all places he would have dilated upon it. Oaths with Constantine were also very common. Allowing for exaggerations in the intervening years, we may take it that something external happened, possibly a solar halo, which not unfrequently assumes the form of a cross,³ and that this was interpreted by Constantine as an augury of Divine intervention. There is proof of the dream in the inscription by the Senate on the arch of Constantine, dedicated in 315. The 'instinctu divinitatis' (*CIL* vi. 1139) there alleged as the cause of victory (cf. Constantine, *Orat. ad Sanct. Coet.* 26) has been shown to be original and no later addition (cf. Lanciani, *Pagan and Christian Rome*, 1892, p. 20 f.; Garrucci, in King, *op. cit.* p. 20). Additional proof is found also in the pagan *Panegyrr.* ix. (written in 313) ch. 4 'te divina præcepta,' ch. 11 'tu divino monitus instinctu.' Whether this 'cæleste signum,' as Lactantius,

¹ Spain, where persecutions abounded, was not, as is often stated, in his government, but was under the charge of Datian, an officer of Maximian.

² For the martyrs in Britain—St. Alban (very doubtful), Aaron, and Julius (more doubtful still)—see Bede, *HE*, ed. Plummer, ii. 17–20; Haddan-Stubbs, *Councils*, Oxford, 1869–78, i. 6; Harnack, *Expansion*, ii. 410, n. 4.

³ This explanation was first given by Fabricius (*Bib. Græc.* vi. 8–29). Stanley (*Eastern Church*, p. 181) refers to the Aurora Borealis of 1843 and its curious popular interpretations; cf. Nazarius, *Panegyrr.* (written in 321), ch. 14, of the hosts in the sky in 312–313 that were 'the talk of all Gaul.'

loc. cit., calls it, was a miracle¹ brings in considerations beyond our scope.²

We are told (Euseb. *HE* ix. 9, 10, 11, *VC* i. 40) that, after the victory of the Milvian Bridge, Constantine erected at Rome a statue of himself, with the spear he usually carried in his right hand shaped like a cross. As evidence the *VC* is almost valueless, and Brieger thought that the passage in *HE* was an interpolation. But Eusebius mentioned this statue in a speech at Tyre in 314 (*HE* x. 4, 16), and this seems to decide its existence and the general belief in the East in 314 as to Constantine's position, though the popular Christian rumour might not be a correct interpretation of the artist's work.³ The spear-cross was probably designedly ambiguous. A more important evidence of Constantine's favour for the Christians is his handing over to the Roman bishop (before Oct. 313; see *infra*, p. 79^b) of the 'domus Faustæ,' a palace possibly of his wife, formerly belonging to the Lateran family (Gregorovius, *Rome in Middle Ages* [Eng. tr. 1894 ff.], i. 88), which became the residence of the Bishops of Rome (*Lib. Pontif.*, ed. Duchesne, i. 191). The erection of the churches commonly attributed to him (Lateran, St. Peter's) is probably a little later, if we may judge from the fact that they were built with pagan spoils (Greg. *op. cit.* i. 92), though the small St. Paul's (*fuori le mura*), the foundation of which was wrongly attributed to Constantine, would come under the head of the oratories restored after the edict of Milan (Duchesne, *op. cit.* i. 178, 195; Lanciani, *op. cit.* p. 150 ff.; Greg. *op. cit.* i. 100). On the whole the evidence of Constantine's churches in Rome (the list of which in the *Lib. Pontif.* is very exaggerated) is inconclusive as to the date of his conversion.

(c) *Between 312 and 323.*—After the victory of the Milvian Bridge, Constantine and Licinian promulgated at Milan, in the spring of 313, a second edict of toleration—'free liberty to choose that form of worship which they consider most suitable'—and restoration of forfeited churches and property.

For this edict see Euseb. *HE* x. 5, and for its original Latin form, Lact. *MP* 48. Note the non-committal religious references—'Quidquid est divinitatis in sede caelesti.' This edict was second to that of Galerius, to which the 'hard conditions' (*αἰσχροί*) of § 4 refer. Mason (*Persecution of Diocletian*, 1876, p. 327 ff.) has exploded the older idea (still held in *DCE* i. 688) that Constantine issued a second edict of toleration at Milan, before the Milvian Bridge, and that this was the third.

But, until 323, Constantine kept a balance between Christianity and heathenism, though inclining more and more to the former (see *infra*, IV. (c)). About 317, he selected the Christian Lactantius to be the tutor of his son Crispus (b. 306[?]; Jerome, *de Vir. Ill.* 80). From 315 onwards, pagan emblems (Mars, 'Genius Pop. Rom.', Sol) disappeared from his coins, and indifferent legends ('Beata tranquillitas,' etc.) took their place. This period of neutrality was ended by his conflict with Licinian. In 319, Licinian had begun to oppress the Christians, especially in his army (Workman, *Persecution in Early Church*, 1906, p. 187 n.), though without much bloodshed (Euseb. *HE* x. 8; *VC* i. 49–56, ii. 1, 2; Sozomen, *HE* i. 7; for a clear examination see F. Görrer, *Die Licin. Christenverfolgung*, Leipzig, 1875, esp. p. 29 ff. To this persecution belong the Forty Martyrs of Sebaste [see O. v. Gebhardt, *Acta Mart. Selecta*, 1902,

pp. 166–181]). This foolish move gave Constantine the opportunity of appearing as the advocate of the Christians (323), who were really far more numerous in Licinian's domains than in the West. The struggle thus became a crusade, and the *labarum* was stamped on most coins (Euseb. *HE* x. 9, *VC* ii. 6–12; Schiller, *op. cit.* ii. 211; Madden, *Num. Chron.*, 1877, p. 53 ff.).

(d) *From 323 to his death.*—After his conflict with Licinian, Constantine, according to Eusebius, put his hand seriously to the work, forbidding pagan sacrifices in general (see *infra*, p. 81^a), and building churches (*VC* ii. 44–46). But, on the whole, his attitude to paganism was cautious, though his aversion to the old faith would be increased by his unfortunate reception in heathen Rome in 326, which led to his abandoning it for Constantinople. After this he seems to have increased the privileges of the clergy (Soz. *HE* i. 8, 9), and he rewarded towns that turned temples into churches (Soz. *HE* i. 18; Soz. *HE* ii. 5), in several cases because of immoral rites (cf. Euseb. *Laud. Constant.* 8). Many temples were also despoiled for the founding of Constantinople, and by his expressed wish the new city was free from organized heathenism (Euseb. *VC* iii. 48). At the same time the existing temples of Byzantium—Cybele, Castor and Pollux, etc.—were not destroyed, and the city itself was dedicated to Tyche (Fortuna), though without temple services (Zos. ii. 21; Schultze, *op. cit.* ii. 281; for this Tyche, Bury refers to a study of J. Strzygowski, 'Die Tyche v. Konstant.' in *Analecta Graeciensi*, Graz, 1893). By this time Constantine's 'conversion,' hitherto chiefly political, had become an intellectual belief in Christianity as an historical religion capable of proof (see Constantine's remarkable sermon, *Orat. ad Sanct. Coet.*, esp. chs. 4, 11, 18, 19, where the Sibyl and Virgil's 4th Eclogue are appealed to). The return of his aged mother Helena from her pilgrimage to Palestine (undertaken in 326, possibly because of her son's execution of Crispus), with two nails from the Cross, one of which he turned into the bit of his war-horse,¹ led to his foundation at Jerusalem of the Church of the Holy Sepulchre on the site of a temple of Venus (Soz. *HE* i. 17; Euseb. *VC* iii. 30), and he also prepared a form of common daily prayer for the army (Euseb. *VC* iv. 20).

Though not even a catechumen, Constantine delighted in preaching sermons, in Latin, to the applauding crowds; one of these has been preserved to us by Eusebius (*VC* iv. 29). But at the same time his alienation from Catholicism towards Arianism was increasing (see *infra*, p. 80), helped probably by the death of his mother Helena (c. 330 [Euseb. *VC* iii. 47]; buried at Constantinople [Soz. *HE* i. 17]). The fact that he did not take any steps either to become a catechumen or to be baptized until he felt near to death, may be explained as due either to political balancing, or to lack of decision, or, more probably, to the belief that baptism, like the heathen lustrations, ensured the remission of sins, and to the growing dread of post-baptismal sin. He was finally baptized by the Arian bishop Eusebius of Nicomedia (Euseb. *VC* iv. 62–63; Jerome, *Chron.*, ann. 2353 [in *PL* xxvii. 680]). In the Greek Church he has practically been canonized by the title *ἰσχωροκός*, 'Equal to the Apostles.'

Into the large question of the advantage or otherwise to the Church of Constantine's adoption of

¹ J. H. Newman (*Essays on Eccles. Miracles*, 1843, p. 103 ff.) and de Broglie (*op. cit.* i. 216 ff.) give the best defence of this view.

² It may be of interest to note that the signs would probably be read in Latin—'in hoc signo vinces'—and not Greek—*τοῦτο σῶναι*—as Constantine spoke Latin. The annalists are divided on the subject.

³ Cf. Eusebius' mistake (*HE* vii. 18) of a statue of Æsculapius at Panes for one of Jesus.

¹ Soz. *HE* i. 17; Soz. *HE* ii. 1; too characteristic to be an invention. But the rest of the chapter—'the invention of the Cross'—must be discredited owing to the complete silence of Euseb. *VC* iii. 26, 30, and of the *Itin. Burdigalense* (written 333 [in *CSEL* xxxix.]). The story is first found in Cyril of Jerusalem (b. 315), *Ep. ad Const.* 3, the genuineness of which is, however, doubtful.

Christianity as the State religion, we cannot enter.

The familiar lines of Dante (*Inferno*, cix. 115),

'Ah! Constantine! to how much ill gave birth,
Not thy conversion, but those rich domains
That the first wealthy Pope received of thee,'

have really a wider significance than the false donation; and the judgment of Mill (*Essay on Liberty*, ch. 2) deserves to be pondered: 'It is a bitter thought how different the Christianity of the world might have been, had it been adopted as the religion of the Empire under the auspices of Marcus Aurelius, instead of those of Constantine!' For a contrary judgment cf. Newman, *Arians*, 1871, p. 248.

IV. Constantine and the Church.—(a) *Relations of Church and State*.—Nothing was further from the intention of Constantine than to abandon to the Church any portion of his Imperial prerogative, and this determination would be increased by the sycophancy of the Court clergy. Into his adoption of the new religion he carried all the old Roman ideas, for his 'conversion' was not a revolution in the political genius of the Empire. Whatever crudity there may have been about his religious opinions, his views as an official were clear. To the Roman governor religion was a department of the civil service. The consequences of this are apparent in the after history of the Church. The Emperor, it is true, could not be the Pontifex Maximus of the new religion—this title, retained by Constantine, was dropped by Gratian (Zos. iv. 36), and in time lapsed to the Bishop of Rome—but the new autocracy founded by Diocletian and himself (on this see Gibbon, ch. xvii., with Bury's appendix) made this of less moment than for the early Cæsars. For that matter, the official title of the new monarchy was the higher 'deus' (Schiller, *op. cit.* ii. 33, 34). In consequence, in the Eastern Church the Emperor was always the supreme head, as his modern representative, the Czar, is to-day; but in the West the abandonment by Constantine of Rome for his new capital gave the bishops of Rome their great opportunity.

Thus Constantine and his successors, while giving the Church Councils full liberty of discussion, insisted that their own consent was necessary to confer validity on the canons; and they regulated the business by Imperial commissioners, often laymen. So, at the Council of Arles, Constantine deputed Bishop Marinus to preside (Euseb. *HE* x. 5. 19; Mansi, ii. 469); at the Council of Nice, Bishop Hosius of Cordova (on this complicated question see *DCB* i. 168, and, for the Rom. Cath. view, Hefele, *Councils*, Eng. tr. 1871, i. 37 ff.); while at the Council of Tyre (335) he sent the consular Dionysius as commissioner (Euseb. *VC* iv. 42; *PL* viii. 562). The doctrine asserted by Constantine was never wholly lost even in the Roman Catholic Church, and was of great influence as late as the Council of Constance (cf. also Articles of the Anglican Church, no. 21).

(b) *Constantine and heresy*.—To the Roman magistrate religious recusancy was tantamount to political disaffection. Constantine and his successors were therefore driven, almost before the ink on the decree of toleration was dry, to deal with heresies and schisms within the Church itself. To allow the Church to be rent into diverse parties would be to destroy the very solidarity and universality ('catholic') which had marked it out to the politician from all other religions as destined to become supreme. Hence the anxiety of Constantine to secure the peace of the 'legitimate Catholic Church' (Euseb. *HE* x. 5. 20).

(i.) Constantine's first intervention was in regard to the Donatists (*q.v.*).

For Constantine and the Donatists we have Optatus Milev. *de Schismate Donatist.* (written about 375) l. 22 f.; but Optatus is neither complete nor altogether trustworthy. We also

possess a valuable collection of anonymous documents, *Decem Monumenta Vet. ad Donatist. hist. pertinentia*, usually bound up with Optatus (best ed. of both by C. Ziwsa in *CSEL* xxvi. [1893]; also by Dupin [1702] and Migne, *PL* viii. 674 ff.). Certain letters of Augustine (*Epp.* 88, 43) add to our knowledge. For a critical examination see O. Seeck, 'Quellen u. Urkunden über die Anfänge des Donatismus' in *Ztschr. f. Kirchengesch.* x. [1889] 505-568, and L. Duchesne, *Le Dossier du donatisme*, Paris, 1889.

In answer to the appeal of the Donatists (15th Apr. 313) forwarded by Anulinus, proconsul of Africa, Constantine summoned Cæcilian, bishop of Carthage, and the ten accusing bishops to appear at Rome before a synod over which he instructed Pope Miltiades to preside (Euseb. *HE* x. 5. 18; August. *Ep.* 88, c. *Crescon.* iii. 81). At the same time, prompted by Hosius, bishop of Cordova, he gave Cæcilian certain marks of his esteem (Euseb. *HE* x. 6). The synod met (2-4 Oct. 313) in 'the casa of Fausta on the Lateran,' and the decision was given against the Donatists (Optat. *op. cit.* i. 23-24; Aug. *contra Ep. Parmen.* i. 10; *Ep.* 43, 5 [14]). On the further appeal of the Donatists, Cæcilian was detained at Brescia (*ib.* i. 26), and two bishops were dispatched by Constantine to Africa to make inquiries 'ubi esset Catholica.' As they reported in favour of Cæcilian, the Donatists pressed the appeal, and Constantine ordered the case to be re-tried at Arles (Euseb. *HE* x. 5. 21; Optat. *op. cit.* i. 26; *Decem Mon. Vet.* iii. iv. v.).¹ About the same time (Feb. 15, 315) a commission was appointed by Constantine to inquire into the guilt of bp. Felix of Autumni.² Of the decisions of Arles we have only fragmentary evidence (F. Maassen, *Quellen des canon. Rechts*, Graz, 1870, p. 188 ff.), and its date, 1st Aug. 314 or 316, is uncertain, though probably the latter.³ As the Donatists were still not satisfied, Constantine heard their appeal at Milan (10th Nov. 316; Augustine, c. *Crescon.* iii. 16, 67, 82, iv. 9, *ad Don.* 19, 33, 56), and confirmed the decisions of the Councils (August. *Brev. coll. Carth.* d. iii. c. 12 ff., *contra Ep. Parm.* i. 11; cf. *PL* viii. 750). Constantine thereupon issued edicts confiscating the churches of the Donatists (August. *Ep.* 105, 2, 9; 88, 3), though within a few years (5th May 321) he adopted a policy of toleration or indifference (Optatus, *Dec. Mon. Vet.* viii., *Brev.* iii. 40, 42; cf. Aug. *ad Don.* 56, *Ep.* 141, 9).

(ii.) As regards other heretics, Eusebius (*VC* iii. 63-65) tells us of his zeal against 'Novatians, Valentinians, Marcionites, Paulians' (i.e. followers of Paul of Samosata), those 'who are called Cataphrygians' (i.e. Montanists) and the confiscation of their meeting-places to 'the Catholic Church.' Thus, as Eusebius puts it, 'the savage beasts were driven to flight.' Constantine's refusal to 'heretics' of the privileges granted to the Church became part of the law of the Empire (*Cod. Th.* xvi. 5. 1; *Cod. Just.* i. 5. 1; in 326).

(iii.) To the greater Arian difficulty which distracted the Eastern Church [see art. *ARIANISM*, vol. i. p. 777] the attention of Constantine seems to have been drawn about the year 319. As a majority of the bishops of Asia appeared to support Arius' cause, Constantine, in the hope of ending the dispute, first sent his confidential adviser Hosius, bishop of Cordova, to Bishop Alexander of Alexandria and the presbyter Arius, with a characteristic letter begging them to lay aside 'this insignificant subject of controversy' and co-operate

¹ If no. v. is genuine, it was either dictated by Hosius or shows interpolations. It does not seem to the present writer that it can be safely used with reference to Constantine's character and Christianity at this period.

² This is the correct form, not *Apturny*. For the text of this trial see *Dec. Mon. Vet.* ii., in *CSEL* xxvi. 197, and for its date L. Duchesne, *op. cit.* p. 634.

³ So Seeck, *op. cit.*; but Duchesne, *op. cit.* p. 640, argues for 314; time for the events seems to the present writer to demand the later date. For the decisions see *Dec. Mon. Vet.* iv. (*CSEL* xxvi. 206), also in *PL* viii. 813; August. *Ep.* 48. For the council see *PL* viii. 815; Hefele, *Councils*, Eng. tr. I. 180 ff.

with him in restoring unity (Euseb. *VC* ii. 64-72). As this failed, Constantine, on the advice of Hosius (Sulpic. Severus, *Chron.* ii. 40, 5 ed. Halm in *CSEL* i.), summoned a Council which met at Nicæa (19th June-25th Aug. 325). The 'ecumenical' (*ὀικουμενική*, i.e. 'of the Empire,' cf. Lk 21 and *CIL*, *passim*) character of the Council—about 10 bishops from the West, and 308 from the East (Athanasius, *ad Afros*, 2; cf. Soc. *HE* i. 9)—and its importance alike mark the beginning of a new era for Christianity. Its controversies do not concern us; but for our present purpose it should be noted that the influence of Constantine for peace was considerable (Theod. *HE* i. 11), that the Council was summoned in his name (Euseb. *VC* iii. 6), that Constantine presided at the opening (*ib.* iii. 10 ff.) and addressed it at its close (*ib.* iii. 21), and that he communicated its decision to the Church of Alexandria (Soc. *HE* i. 9). But in 328 there was a change of policy. Whether owing to the influence of his sister Constantia, the widow of Licinian, who had herself been influenced by Eusebius of Nicomedia, or because Constantine was now more in touch with the speculative East than in his earlier years, he sought a less stringent enforcement of Nicene doctrine. The Arianizing Eusebius of Nicomedia, who had been banished at the close of the Council, now reappeared and gained the Emperor's ear. The result was seen in the deposition of Athanasius (cf. vol. ii. p. 169, or W. Bright in *DCB* i. 186) by the Council of Tyre (335), his banishment by Constantine (336) to Trèves, the rehabilitation of Arius by Constantine (Soc. *HE* i. 26), and the order that he should be received back into fellowship at Constantinople (336). The death of Constantine left the Arian trouble to his successors, under whom Arianism became still more identified with Court circles.

We may point out that Constantine's whole policy as regards heresy and unity fastened upon the Church for sixteen hundred years a policy of intolerance. The result was soon seen in the case of Priscillian (see PRISCILLIANISM).

(c) *Endowments*.—The supposed 'Donation of Constantine,' all-important historically as this falsehood proved, need not detain us. It carried with it the story of Constantine's leprosy, and baptism by Sylvester at Rome.

The story will be found in *PL* viii. 567-578. Its date was probably the 8th century. In 1229 two men who ventured to doubt its genuineness were burnt at Strassburg, and as late as 1583 it was deemed heresy to dispute it (Lea, *Inquisition in Middle Ages*, 1888, iii. 568 n.). Its overthrow by L. Valla (*in Donat. Const. Declam.* in Brown, *Fascic. Rerum Expetend.* [1690] i. 132) was one of the first results of the Renaissance.

The benefactions of Constantine were, however, considerable. For instance, he sent Cæcilian, bishop of Carthage, 3000 *folles* (φολλεις), or purses, i.e. nearly £18,000 (Euseb. *HE* x. 6; cf. *VC* iv. 28). Great sums were also spent on the building of churches (Euseb. *HE* x. 2, 3, 4), especially at Jerusalem (Holy Sepulchre [Euseb. *VC* iii. 34-40]), Bethlehem (*ib.* 43), Nicomedia (*ib.* 50), and Rome. Of his benefactions to the great basilicas at Rome we possess a list that seems authentic (*PL* viii. 803 ff.), though many of the gifts mentioned are later accumulations (Duchesne, *Lib. Pont.* i. *Introd.* p. 152). Of great importance from another standpoint is his order of fifty copies of the Scriptures 'legibly described and of a portable size' (Euseb. *VC* iv. 36).

V. Influence of Constantine's establishment of Christianity upon legislation.—The following are the most important evidences of the growth, during the reign of Constantine, of specifically Christian laws or of the influence of Christian sentiment.

i. *MORALS*.—(a) *Slaves*.—There was no abolition of slavery; this was not a burning question in the Early Church. But slaves condemned to

games or to the mines must not be branded in the face, 'which is fashioned in the likeness of the Divine beauty' (*Cod. Th.* ix. 40. 2, March 315; *PL* viii. 119). In dividing estates, families of slaves must not be separated (*Cod. Th.* ii. 25, in 334; *PL* viii. 376). Masters must not kill or wantonly torture their slaves (*Cod. Th.* ix. 12, chs. 1, 2 in 319 and 326; *Cod. Just.* ix. 14; *PL* viii. 161). But the wording of this last law left many loopholes of escape, while fugitive slaves must not only be given up (*Cod. Just.* vi. 1. 4, in 317; *PL* viii. 150), but could be examined by torture (*Cod. Just.* vi. 1. 4, 6, in 317 and 333) or deprived of a foot (*ib.* vi. 1. 3, undated). The abolition of crucifixion (Soz. *HE* i. 8) and the breaking of legs (Aur. Victor, *Cæs.* 41) would chiefly apply to slaves. But the illegality of Christians being held as slaves by Jews (Euseb. *VC* iv. 27; *Cod. Th.* xvi. 9. 1, 2, 4, xvi. 8. 6; cf. *Cod. Just.* i. 10) witnessed rather to the growing hatred of the Jews (cf. *Cod. Th.* xvi. 8. 1; *Cod. Just.* i. 9. 3; *PL* viii. 130, in Oct. 315).

(b) *Gladiators*.—Gladiatorial shows were prohibited in 325 (*Cod. Th.* xv. 12. 1; *PL* viii. 293; *Cod. Just.* xi. 44; cf. Euseb. *VC* iv. 25; Soc. *HE* i. 18), though the law was certainly not enforced in Italy. That at Constantinople there were never any gladiatorial shows may be ascribed to the influence of Christianity, when we remember Constantine's bloody slaughters at Trèves in his early life (Eumen. *Paneg.* 12).

(c) *Adultery*, etc.—(1) Concubinage was disallowed for married men (*Cod. Just.* v. 26 in 326; cf. *Digest.* i. 25. 7). (2) Rape, etc., was to be severely punished, the woman, even if not a consenting party, by disinheritance; abettors, if slaves, by burning, if freemen, by banishment (*Cod. Th.* ix. 23. 1; *PL* viii. 195-198, in April 320).

(d) *Children, debtors*, etc.—(1) Poor parents were forbidden to kill their infant children, the care of whom was henceforth to be an Imperial charge (*Cod. Th.* xi. 27. 1, 2; for Italy first in 315 [*PL* viii. 121], then for Africa and other provinces in 322 [*PL* viii. 236]). The Christian sentiment of this law (cf. Lactant. *Instit.* vi. 20) is more obvious than its correct political economy. Exposure of children was not forbidden until 374 (*Cod. Just.* viii. 51. 2, ix. 16. 7). The growing poverty of the Empire alone was responsible for Constantine's allowing the sale of infant children by poor people (*Cod. Th.* v. 8. 1; v. 7. 1, in 329 and 331; cf. *Cod. Just.* iv. 43)—a practice forbidden in 294 by Diocletian (*Cod. Just.* i.c.). (2) Illegitimate children were legitimized by after-wedlock in the case of free-born women (*Cod. Just.* v. 27. 1, 5, in 336; cf. *PL* viii. 387-389). (3) Debtors must not be scourged, or, except in special cases, imprisoned (*Cod. Th.* xi. 7. 3, in Feb. 320; *PL* viii. 189). Prisoners were not to be confined without air and light, or with 'chains that cleave to their bones,' or to be imprisoned before trial (*Cod. Th.* ix. 3. 1, 2; *Cod. Just.* ix. 4. 1, 2, in 320 and 326; *PL* viii. 199, 299).

ii. *CLERGY AND CHRISTIAN WORSHIP*.—(a) The 'Catholic' clergy were freed from the discharge of civil duties (*Cod. Th.* xvi. 1, 2, in Nov. 313, Oct. 319; *PL* viii. 102, 180), but in July 320 the abuse of this led to its restriction (*PL* viii. 200), as was also the case in June 326 (*Cod. Th.* xvi. 2, 6; *PL* viii. 314). (b) Exception was made to the *lex Papia Poppæa* against celibacy in favour of the clergy, thus allowing them to inherit (*Cod. Th.* xvi. 2. 4). (c) Public works and the sitting of the courts were forbidden on Sundays, 'dies solis' (*Cod. Th.* ii. 8. 1; *Cod. Just.* iii. 12. 2, in July 321; *PL* viii. 224; note the balanced 'dies solis,' which would suit Mithraism also). (d) Manumissions were permitted to be solemnly made in

churches as well as in temples (*Cod. Th.* xvi. 2. 4, iv. 7. 1; *Cod. Just.* i. 13. 1, 2, in 316 and Ap. 321; *PL* viii. 214f.). As these manumissions were made on Sundays, and especially at Easter, Christianity became associated in the public mind with the release of slaves.

iii. **PAGAN WORSHIP AND RITES.**—(a) Prohibition of pagan sacrifices in general (*Euseb. VC* ii. 44, 45, iv. 23, 25).

That there was such a law may be inferred from *Cod. Th.* xvi. 10. 2, 'law of our divine Father,' but it was certainly not carried out in the West, where the progress of Christianity was but slow (*S. Dill, Roman Society in the Last Century of the W. Empire*, 1898, vol. i. ch. i.; cf. A. Beugnot, *Hist. de la destruction du paganisme* [Paris, 1835], i. 106ff.). Moreover, Constantine more than once proclaimed liberty to the pagans to enjoy their temples (*Euseb. VC* ii. 56, 60; *Constant. Orat. ad Sanct. Coet.* 11; cf. Libanius [c. 384], *Orat. pro Templis* [ed. Forster], iii. xxx; *Symmachus, Ep.* x. 4). The question is well discussed in de Broglie (*op. cit.* i. 446-461). Beugnot (*op. cit.* i. 100) takes the prohibition to refer to nocturnal and private sacrifices only.

(b) The re-enactment, Feb. and May 319, of the law of Tiberius against divination (*Cod. Th.* ix. 16. 1, 2; *PL* viii. 155, 162). In Dec. 319 the consultation of *haruspices* was allowed when public buildings were struck by lightning (*Cod. Th.* xvi. 10. 1; *PL* viii. 202).

LITERATURE.—(a) **SOURCES.**—The estimate we form of Constantine depends chiefly upon the value we attach to the conflicting authorities. Some of the Latin sources may conveniently be read in Migne, *PL* viii., 'Opera Constantini'; but, as this is both incomplete and uncritical, and contains much that is false, it should be used with care, especially as regards Constantine's correspondence. For the life of Constantine we gain most from the following: *The Panegyricists*, inflated Gallic orations delivered on state occasions, but with a valuable residuum of fact. Two, delivered in 307 and 313, are of unknown authorship, three are probably by Eumenius (297, 310, 311), and one by Nazarius (321); in Migne, *PL* viii. 581ff., or, better, A. Böhren's *XII Panegyrici Lat.* (1874), to which edition references have been made by number and chapter. Another work of special pleading, though from a different standpoint, is the *de Mortibus Persecutorum* (best ed. by S. Brandt, in *CSBL* xxvii. [1897]). This work, ascribed in the MS to an unknown L. Cæcilius, was attributed before the close of the 4th cent., e.g. by Jerome in 393 (*de Vir. Illust.* 20), to L. Cæcilius Firmianus Lactantius. The genuineness of this ascription has been assailed by his editor, S. Brandt (*SWAW* ccxv. [1892]), and justified by Bury (Gibbon, ii. 631-632). The date is probably about 315. Of the works of Eusebius of Caesarea, the *HE*, published early in 325, is of great value, but the *Vita Constantini* (*VC*) in four books, written between 337 and 340, is a pious eulogy (see *Socrates, HE* i. 1) rather than serious history (best ed. of Eusebius by Heinichen [1868-70]; good Eng. tr. by McGiffert and Richardson [New York, 1890]). Of contemporary non-Christian writers we may mention Constantine's secretary Eutropius, *Breviarium ab urbe condita* (ed. F. Rühl, 1887, or H. Droysen in *MGH* ii. [1878]). A most valuable source is the anonymous fragment first printed by H. Valesio, hence called *Anonymus Valesii* (best ed. by Mommsen in *Chronica Minora*, *MGH* [1892] i. 7-11). As the clerical passages in it have been shown by Mommsen (*op. cit.* pref. p. 6) to be interpolations from Orosius, it was probably written before the establishment of Christianity. The valuable contemporary pagan history of Praxeagoras is known to us only in a brief summary of Photius (in O. Müller, *FHG* iv. 2 [Paris, 1851]).

Of later writers we may single out Eunapius of Sardis (347-414). His *History* (ed. O. Müller, *ib.* iv. 7-56) was one of the main sources of the anti-Christian Zosimos, whose *History* (ed. L. Mendelssohn, 1887) was written towards the close of the 5th cent., and is of great value in spite of its bias. The *Oration on Constantine* of Julian the Apostate (ed. F. O. Hertlein, 1875-76) is always of value for what it concedes. Ammianus Marcellinus (b. 330) in his great work *Res Gestæ* (ed. V. Gardthausen, 1874, Eng. tr. Ph. Holland, 1609), though a pagan, treats Christianity without bitterness. Another important source is the *Chronicon Paschale* (ed. T. Mommsen in *MGH* i. [1892] 199 ff.). Of the Christian historians, *Socrates* (*HE*) and *Sozomenus* (*HE*), who both wrote about 440, add little to Eusebius, while the later Greek chroniclers may safely be neglected. For Constantine and the Donatists see *supra* IV. b. (1), p. 79.

The **Laws of Constantine**, an important source, must be studied in the *Codes of Theodosius and Justinian*, especially the former. As the *Code of Theodosius* is very bulky (ed. Godfrey, with valuable commentaries, 6 vols., Leipzig, 1736-45; also ed. Hänel, Bonn, 1842), the student may content himself with the chronological excerpts in Migne, *PL* viii. 92-400. For the *Code of Justinian* reference should be made to the ed. of P. Krueger (Berlin, 1877). Almost as important as the written sources is the evidence of Constantine's coins and medals. The value of these has been well brought out by Schiller (*op. cit. infra*). For further study reference may be made to the well-known works of H. Cohen, *Descript. hist. des monnaies frappées sous l'empire romain* (Paris, 1863); A. Eckhel, *Doct. Num. Vet.* vol. viii. (Vienna, 1797). Garrucci's *Numismatica*

Constantiniana (Rome, 1856) does not seem to be in the Brit. Mus. (1910), but is partly translated in C. W. King, *Early Christian Numismatics* (Lond. 1873). M. Madden's 'Christian Emblems on the Coins of Constantine the Great' (in the *Numismatic Chronicle*, London, 1877-78) is of great value.

(b) **RECENT WRITERS.**—Constantine has been treated with great fullness in all Church Histories and Dictionaries (the art. by J. Wordsworth in Smith's *DCB* is of special value), and in numerous monographs. (For a good list of these up to 1890 see Richardson's *Introd.* in Schaff, *Ante-Nicene Library*, 'Eusebius,' pp. 455-465.) The following works are essential for the general history: E. Gibbon, ed. J. B. Bury (1896; new edition, 1910ff.), with valuable notes and appendices; and H. Schiller, *Gesch. d. röm. Kaiserzeit*, 2 vols. (Gotha, 1887). Of special monographs mentioned in this study the following may be singled out: J. Burckhardt, *Die Zeit Constantins des Grossen* (Basel, 1853; 2nd ed., Leipzig, 1880); O. Seeck, *Gesch. des Untergangs der antiken Welt*, 2 vols. (Berlin, 1895-1901); V. Schultze, *Gesch. d. Untergangs d. gr.-röm. Heidentums*, 2 vols. (Jena, 1887-92). Of older works, the conservative J. V. A. de Broglie, *L'Eglise et l'empire rom. au ive siècle*, 3 vols. (Paris, 1856), A. P. Stanley, *Eastern Church* (1876; brilliant portrait of Constantine), and G. Boissier's *La Fin du paganisme*, 2 vols. (Paris, 1891), should not be overlooked.

H. B. WORKMAN.

CONSUMPTION (Economic).—Since *The Wealth of Nations* gave the consumer rather than the producer or the merchant the first right to consideration, questions relating to consumption have always been prominent in Economics, though, especially in English books, they have not been formed into a separate branch of doctrine. It was thought that general questions about desire and utility were matter for Ethics, and should have a place in the preface, but not in the body, of Economics. This is still a common view, even when it is held that 'a true theory of consumption is the keystone of political economy' (Keynes, *Scope and Method of Polit. Econ.*, Lond. 1891, p. 107). And the special or more practical questions of consumption are then taken up under the familiar heads of production (*q.v.*), distribution (*q.v.*), and public finance or policy. The place which the general doctrine of consumption is now likely to hold is due to a better systematizing of the matter of Economics—as a science rather than into a series of co-ordinate divisions. The theory of value is made the centre, and from it come two questions, viz. the conditions of demand and the conditions of supply. The question of demand is that of consumption.

Its topic is utility, and its cardinal notion the Law of Diminishing Utility. An object or service has utility so far as it satisfies a desire. When bought it is bought for its utility; when consumed it is only the utility that is destroyed; when produced it is utility that is given to it.

The Law of Diminishing Utility is: other things being equal, there is always a point beyond which the utility of a commodity diminishes for every additional quantity of it that one possesses. It might be called the Law of Diminishing Desire. Its basis is the familiar fact that as a desire becomes satisfied it becomes exhausted for the time being. This is true not merely of appetites, but of higher desires whose satisfaction begets others. And it is true for indirect consumption (when commodities are used as means of production) as well as for direct consumption (when they directly satisfy a desire). Simple though the law is, it has (1) an important theoretical use, and (2) still more important practical applications.

1. **Theoretically** it accounts for the price which a buyer is willing to pay—(a) for different quantities of the same goods, and (b) for different goods, and so it accounts (c) for the prices that have to be paid in any market.

(a) The first case is directly contemplated in the law, and is best illustrated in the price that one is willing to pay for any necessary commodity. Necessaries have the greatest utility because they are necessary, and in the pinch of famine they command the highest prices. But beyond a certain quantity they are not necessary, and then their

utility is limited by the simple desire of consuming them. As this desire becomes satisfied, the pleasure in consuming diminishes, and with it the utility of the commodity, till it vanishes altogether, because the desire is satisfied.

(b) Similar considerations are apparent when we ask what we are willing to pay for different commodities. It depends, of course, on our desires. But the interest of the question is that these are in competition, since we cannot satisfy them all even if we had the means; and the special economic interest of the question is that our means are limited. It is the question how a given income is spent. And in terms of the general law we have these two answers: (1) every one seeks to secure the greatest Total Utility from his income, and (2) he does this by looking to the Marginal Utility of his various purchases in order to make it equal in them all. The first statement is obvious, but the second needs explaining. By marginal utility is meant the utility of any commodity, or quantity of it, that a buyer is just willing to take at a certain price. His debate with himself is always whether he could do better with his shilling now or in the future; and, if he buys and regrets, it is always because he might have had a greater utility for his shilling if he had bought something else with it, or if he had kept it. To spend well is not to buy the same degree of utility with every shilling, for infinite or necessary utilities are usually cheap. The difference between the price for which one gets them, and the price that one would be willing to pay for them, is called the Consumer's Surplus.

These notions of surplus utility, total utility, and marginal utility are most clearly presented in diagram. For every commodity there can be drawn a curve representing all three. The shape of the curve is different for different commodities and for different consumers; but in accordance with

the general law of diminishing utility it shows in all cases a more or less regular fall in utility with every addition to the quantity bought. Annexed is the general curve for any necessary commodity. On $O X$ are marked the units of quantity bought, and so of the price paid; and the diminishing areas drawn on them represent the diminishing utilities, the first being infinite, representing the infinite utility of that unit. The areas having equal bases, their difference may be represented by their height, and a curve drawn as in the figure. If a consumer buys 7 units, the marginal utility is that of the

last portion, and he makes this his marginal purchase, because for the same unit of money he expects a greater utility of spending it on something else than on an eighth unit of this commodity. The total utility is represented by the total area of the figure, and the surplus utility by the area $A Y a$. Taking all his purchases into account, it is clear that he will have nothing to regret (except, of course, the nature of his desires) if his marginal purchases have all an equal degree of utility. For he will thus have the greatest total utility from his income.

(c) A commodity has a different marginal utility for different consumers, the difference being due to the difference in their incomes and their desires. Hence with every price at which a commodity is offered there corresponds a certain demand; and, in general, the greater the price the less the demand, and the less the price the greater the demand. It is in expectation of a sufficient demand at a profitable price that commodities are produced, and it is on the correctness of his expectations, and not on the cost of production, that a producer relies for his price and profit. This is the essential consideration in the familiar law of supply and demand which accounts for all values that are fixed by competition (*q.v.*).

2. As the ultimate aim of economic effort is to consume what is produced, the practical questions regarding consumption may run into great detail; and their answers easily run to one-sidedness if the questions are not systematic. This is seen in the conflict of popular opinions about the spending of the rich. It would be hard to say whether people approve more of the rich man who spends much, and so spreads his wealth, or of the rich man who spends little, and appears, therefore, not to give work to others. And whatever may be thought of the spendthrift, the miser, and the philanthropist as individuals, there is great diversity of opinion about the first two, and some about the philanthropist, as members of the body economic. And not all professional economists appear to have reconciled the truth in the two opposite statements that 'demand for commodities is not demand for labour,' and that 'want of work is due to under-consumption.'

The aim of economic organization and effort is, under conditions, to produce the greatest total utility; and, if we ask how economic progress is to be estimated, we ask the conditions on which this total utility depends. First it depends on the quantity and quality of wealth produced, and so on the full and the most efficient use of the labour and the natural and acquired resources of a country. And in looking at the economic progress of a country we are apt to look no further than at the amount and quality of wealth that is thus produced, and at its distribution with a view to further production. But the amount of utility in wealth depends on the intensity and variety of the desires for whose satisfaction the wealth is consumed. This is the head under which all practical questions of consumption find their place. It is conveniently divided into two by considering, first, the satisfaction of desires that all seek to satisfy, and then the satisfaction of other desires. Regarding the former, it is apparent that the total utility from a country's produce is greater when the margin at which the very poor cease to purchase is extended, and the margin of others is contracted so as to exclude waste and gluttony. A country of great houses and vile hovels is so far not making so much of its wealth as one where the houses are less great and the hovels less vile.

But it is when we turn from more or less necessary desires that we see the complexity of the question that may be organized from the point of view

of consumption. It is here that there is the nearest connexion between Economics and Ethics. The moral ideal is that of complete living, and requires a character having variety and depth of interests or desires, quite as much as one having these in unity or system, and so in harmony. In economic progress there must be this variety and depth if the utility of wealth is to grow with its increase; and an obvious point is that many desires—most of the higher desires, intellectual, æsthetic, and social—are very little destructive of utility. The cost of creating them, *e.g.* by education, is greater than the cost of gratifying them, and is therefore much the more important consideration. The most destructive desires need no learning.

It is also obvious from the nature of consumption that no comment on an economic system can be more severe than that it makes, or even lets, the poor grow poorer while the rich grow richer. The comment is often made, but it is made mainly on the erroneous ground that the gain of one must always be the loss of another. It has not been true in fact of our present economic system (see DISTRIBUTION); still the comment might with advantage be more absurd on the face of it. From the same point of view it would be a very adverse comment on the progress of invention if it could still be said that the labourer has not been spared any of the severity and exhaustion of muscular work that he had before the revolution in industry. For nothing tells more against a wealth of life. But, on the contrary, the saving in mere hardness of toil has been one of the best fruits of invention (see PRODUCTION).

While there is ground for charging defects in consumption not to thriftlessness merely, but to the bad distribution of wealth and the struggle to have rather than to enjoy, there is a source that is at least as serious. So long as individual wealth is devoted to the service of a few desires, its increase must be consumed with diminishing utility. Luxury is for the most part such a spending, both when it is for self-indulgence and when it is for ostentation (see LUXURY). But the evil is not so much in the presence of luxury as in the absence of the desire for better things. The pursuit of wealth has been far more eager than the pursuit of desires wherewith to give it the fullest utility. There is not yet any general belief that they can become so absorbing as those that need no learning. The common view of education is much more concerned with giving power to acquire than power to enjoy; and we are all children enough to enjoy no property of a thing so much as that it is our own. Such reflexions do not point to a want of progress but to the long way to go, and to the fundamental way in which economic depends on moral progress.

The statistics of consumption that have most practical interest are concerned with the expenditure of small incomes. There are two methods of collecting them. One, the 'intensive' method, makes a minute study of individual families and their mode of life. It is most completely represented in the work of Le Play (1806-1882) and his school. Examples of it—though not so minute—are to be found in Booth, *Life and Labour of the People in London* (1889-97); Rowntree, *Poverty* (1901); and in *Family Budgets* (1896), collected by members of the Economic Club. The other, the 'extensive' method, looks rather to the quantity of its facts. Its chief expositor was Ernst Engel (1821-1896), who formulated a law, usually called Engel's Law, of which the main part is that as income rises the proportion of it spent on food diminishes. And later statistics from various countries give a general support to his view that this proportion may be used as a comparative

measure of well-being, *viz.* the higher the proportion of earnings spent on food, the poorer a community, and any class in a community. An excellent example of the method is to be found in the U.S. *Bulletin* for 1903 of the Bureau of Labour. 'The figures of income and expenditure furnished in detail by 2567 families in 33 States, representing the leading industrial centres of the country, comprise the material for the detailed study of the cost of living. Certain data which do not enter so much into detail were collected in regard to the cost of living in 25,440 families.' For the United Kingdom the Board of Trade carried out an inquiry, and published an interesting memorandum on it in its *Second Series of Memoranda* with reference to British and Foreign Trade (1904), and within the last few years it has published extensive Reports on the *Cost of Living of the Working Classes* in the principal towns of the United Kingdom (1908), of Germany (1908), of France (1909), and of Belgium (1910). The German Imperial Statistical Office published in 1909 a report on the cost of living of 892 families with a small income. A full account of it will be found in the U.S. *Bulletin of the Bureau of Labour*, May 1910.

LITERATURE.—A general treatment of the statistics of consumption is given in R. Mayo-Smith, *Statistics and Economics* (=pt. II. of *Science of Statistics*), Lond. 1899, with a bibliographical note on p. 19; and a fuller treatment and note are to be found in art. 'Konsumtionsbudget' in J. Conrad's *Handwörterbuch der Staatswissenschaften*², Jena, 1900. There is a 'Bibliography of Studies on the Cost of Living' in the *Bulletin of the Bureau of Labour*, May 1910.

W. MITCHELL.

CONTEMPT.—This word is used either (a) in the subjective sense of the act of despising, or (b) objectively of the condition of being despised. In illustration of (a), Murray (*OED*, *s.v.*) quotes from Marbeck's *Book of Notes* (1581) the following passage: 'Contempt consisteth chieffely in three things: for either wee contemne onelie in minde . . . or lastlie when we adde words or deedes, which have ignominie or contumelie ioined with them.' One of the most familiar usages of the word is in the technical expression 'contempt of court,' as referring to any failure to recognize or obey the ruler of a court of justice or other legal authority. In the passive sense (b), the expression 'bring into contempt' may be adduced; more rare is the use of 'a contempt' as equivalent to 'an object of contempt' (Gn 38²³ AVm).

1. Terminology.—In the primitive ages the superiority of the physically strong over the physically weak was accompanied by a feeling of scorn, which readily reflected itself in speech. The defeat of a foe, or the successful outwitting of inferior skill or cleverness by force of arms or cunning, tended to create a vocabulary of contempt (see art. BOASTING for similar phenomena). The word δειλός ('coward') in Homer came to mean 'worthless' and 'insignificant' (cf. the apostrophe ἀ δειλέ, 'poor creature'). All languages exhibit the interjectional forms of contempt. Sometimes the same monosyllabic exclamation is used to express other emotions, so that its exact force can be determined only by the context (cf. 'tush!' 'pish!' 'pshaw!' or Lat. *ph* or *phu*). There are also dissyllabic words such as *atat* (or *attat*) in Latin, *oôd* (Mk 15²), of derisive joy or horror, 'avant!' and the like. Then we have phrases like ἐς κόρακος of Greek comedy, and *I in malam crucem* of Plautus and Terence. These suggest obvious analogies in English and other languages. Argumentative scorn expresses itself in the Latin use of *scilicet*, ironical or contemptuous assertion of what is obviously false (cf. *nisi vero*). More obvious still, as exhibiting the feeling of scorn or disgust, is the opprobrious apostrophe

common to all languages (cf. *carcer, cruz, patibulum*, *παρά* [Mt 5²²], *μωρέ* [ib.], 'dog,' 'cur,' 'cullion' [Shakespeare, *Taming of Shrew*, iv. ii. 20], 'geck and gull' [*Twelfth Night*, v. i. 351], 'John-a-dreams' [*Hamlet*, II. ii. 595], 'zed' [*Lear*, II. ii. 69, a term of contempt, because last letter in the alphabet], *et hoc genus omne*). 'The Philistine said to David, Am I a dog, that thou comest to me with staves?' (1 S 17⁴³); cf. 'After whom dost thou pursue? after a dead dog, after a flea?' (1 S 24¹⁴). 'The Eastern street dog is a type of all that is cowardly, lazy, filthy, treacherous, and contemptible' (*HDB*, s.v. 'Dog').

Both in the Heb. of the OT and in the Greek of the NT the verbal forms expressing various degrees of scorn, derision, or disparagement are remarkably rich. In the OT we find *נָאָה* and *נָאָה* [original meaning dub.]; *נָאָה* with the root idea of rejection; *נָאָה* where the idea of scorn is connected with the mimicry of a foreigner's speech; and *נָאָה*, 'smile.' In the NT we have *ἀνιδρώω*, *ἀδελνέω*, *ἐξουθενάω*, *καταφρονέω*, *περιφρονέω*, *ὀλιγωρέω*, and the expressive *ἐμυκτηρίζω* (Lk 16¹⁴ 23³⁰ = 'turn up the nose at'). The mimetic or descriptive verb is as conspicuous in exhibiting the feeling of disgust as in other cases (cf. 'strut,' 'swagger'); and the word *ἐμυκτηρίζω* recalls Shakespeare's 'I will bite my thumb at them' (*Romeo and Juliet*, I. i. 48 f., a contemptuous action for beginning a quarrel); 'to give her the avault,' i.e. to send her away contemptuously (*Henry VIII*, II. iii. 10); or Pistol's expression (2 *Hen.* IV. v. iii. 124), 'Fig me, like the bragging Spaniard' (thumb thrust between first and second fingers as a mark of contempt and insult). The word *ἐμυκτηρίζω* (2 P 3³, Jude 18; in 2 P 3³ *ἐμυκτηριζομένη* is also found) suggests rather more obviously external act or gesture than *καταφρονέω* (Ac 13⁴¹). It may be noted in passing that contempt takes in literature the form of satire, in art that of caricature (see art. 'Satire' in *EBR*⁹ and 'Caricature' in *EBR*¹⁰).

From Lucilius down to the present day scorn is an ingredient of satire. 'Facit indignatio versum,' said Juvenal (*Sat.* i. 79); and it was a wholesome loathing of decadent morals that inspired such a satire as the Sixth, his 'Legend of Bad Women' (Mackail). The contempt of satire is fierce and bitter; but it can also be genial, as in Don Quixote, where the follies of mediæval chivalry are held up to derision. There is a similar distinction in the art of the caricaturist.

2. *Psychology.*—The psychological analysis of contempt has not often been attempted. It obviously belongs to the category of what Wundt calls the objective emotions (*Outlines of Psychology*, ed. 1908, p. 197), and is generally to be classified as a species of anger, finding a place in what the same writer distinguishes as the 'excitement-depression' series of emotions, or in what Royce prefers to call 'the restlessness and quiescence' series (*Outlines of Psychology*, 1903, p. 178). Macdougall, in his *Introduction to Social Psychology*, draws a distinction between scorn as a binary compound of anger and disgust, or a tertiary compound, if positive self-feeling is added to these, and contempt, which he regards as 'a binary compound of disgust and positive self-feeling, differing from scorn in the absence of the element of anger.' In ordinary usage, however, scorn (q.v.) and contempt are used interchangeably; and, while some kinds of contempt are notably free from anger and suggest serene self-esteem, e.g. the attitude of the educated towards the illiterate, there are other forms in which one may detect the element of indignation, e.g. the loathing which a noble mind feels towards a cruel or ignoble deed. In Shakespeare's *Twelfth Night*, III. i. 157 f., Olivia remarks:

'O, what a deal of scorn looks beautiful
In the contempt and anger of his lip!'

where obviously contempt is regarded as of close kinship with anger.

Disgust, aversion, and shrinking from an object are undoubtedly marked features of contempt; sometimes this is accompanied by facial and other physical reaction, sometimes it is merely intellectual, as when Horace remarks: 'Odi profanum vulgus et arceo' (*Od.* III. i. 1). While, then, we can distinguish the main elements which make up the emotion of contempt, its quality is capable of multitudinous subtle gradations and internal shadings, corresponding with the objects and situations which call it forth.

3. *Ethics.*—(1) *In the OT.*—Contempt, as an emotion which, like anger, finds expression in word and deed, or as part of a mental condition, naturally passes into the sphere of ethical judgment. It is an element in the character of the Psalmist's God, as when he says, 'The Lord shall have them in derision' (Ps 2², referring to the rebellion of His disaffected subjects; so of the heathen, Ps 59⁹). In both passages the conception of contempt is associated with laughter. Such graphic anthropomorphism is not obsolete: e.g. R. Browning's lines,

'... Happy that I can
Be crossed and thwarted as a man,
Not left in God's contempt apart . . .'
(*Easter-Day*, xxxiii.),

where a failure of ideal is associated with the sense of Divine rejection and wrath. The monotheistic contempt for idol-making and idolatry (cf. Is 40^{10a}) in prophetic literature is an expression of the belief in God's unique and unapproachable righteousness. In the OT, especially in the Wisdom literature, the 'scorner,' or contemptuous man, (*שָׂרֵץ*) is a familiar figure. He not only does evil, but scoffs at the good (Ps 1¹), seeks wisdom and finds it not (Pr 14⁹), dislikes reproof (15¹²), is an abomination (24⁹), and is punished (21¹¹, Is 29²⁰). The 'scorner,' in fact, belongs to the class 'fool,' which is so conspicuous in the teaching of Proverbs: the fool despises wisdom (Pr 17), his neighbour (14²¹), and the duty of obedience to parents (30¹¹). Esau's despising of his birthright (Gn 25³⁴) was the indication of 'profanity' (He 12¹⁶) or spiritual apathy, in the same way that Israel's contempt for Jahweh's statutes and judgments (Lv 26^{15, 43}, Ezk 20^{12, 16, 24}, Am 2⁴) or for 'the word of the Holy One' (Is 5³⁴) was the sign of an evil heart. Objectively, national failure brings a nemesis of derision (Jer 48^{26f, 39}), or such derision may be an element of persecution (20⁷, La 3⁴).

(2) *In the NT.*—We have already cited the passage (Mt 5²²) where Jesus deals with the contemptuous terms 'Raca' and 'Thou fool,' and condemns them on the ground that they indicate a defective disposition of the heart and are therefore to be judged under the new law before the same tribunals and punished by the same penalties as were offences, like homicide, under the old dispensation. Thus, our Lord's treatment of contempt is in harmony with the principles of His general ethical teaching. Moreover, so far as contempt was an anti-social sentiment and opposed to the recognition of the claims of a common humanity, the law of compassion, and the sense of the infinite dignity of the individual soul, it was to be sternly repressed. 'Take heed that ye despise not one of these little ones' (18⁹), i.e. the humble and helpless of humanity. The idea of scornful rejection of the truth is contained in the warning, 'He that rejecteth (*ἀδελνέω*) you rejecteth me' (Lk 10¹⁶). Jesus thought of the Pharisees as those that 'trusted in themselves that they were righteous, and despised (*ἐξουθενοῦντας*) others' (18⁹).

He did not hesitate to use the language of contempt respecting the unreality of Pharisaic morals on the ground 'that their whole life was an acted play,' and that their zeal for righteousness was unwarmed by love for their brothers, for men as such; nor did He scruple to use the term 'that fox' (13²) of Herod Antipas as summing up his moral cowardice and cunning. But contempt of man for man, of class for class, the disparagement of lowly conditions, even of sinners (as opposed to their sins), is ruled out by the example and teaching of Christ. Christ's view of man was 'a transvaluation of all values.' The first promise of the changed view of humanity is given in the *Magnificat*, 'He hath exalted them of low degree' (16²).

The Greek contempt for humility, the arrogance (*ὕπερηφάνεια*) which Theophrastus (*Characters*, § iv.) defined as 'a certain scorn for all the world beside oneself,' was excluded for ever from the higher ethics of Christianity. Evolutionary ethics, of which the extreme is reached in the thought of Nietzsche, still glorifies brute strength and satirizes the 'slave-morality' of the crowd, but the 'super-man' who alone will be tolerated by the world is not the embodiment of strength, physical and intellectual, but the embodiment of perfect love. Aristotle's 'lofty-minded man' looks down upon others 'justly (for he judges truly); but most people do so at random' (*Ethics*, iv. 3). Even the limitation of the parenthesis, however, fails to convince us; for in the same context we are told that 'he is not lavish of praise: for this reason he speaks no evil, not even of his enemies, unless it be to show his scorn.' Contrast this with Christ's teaching, which enjoins the love of one's enemies and exalts meekness. The noblest character of ancient teaching 'walks, like contempt, alone' (*Timon of Athens*, iv. ii. 15), and views his fellows (to quote Shakespeare again) through the 'scornful perspective' which contempt lends him (*All's Well*, v. iii. 48). He is quite oblivious of the claims of human brotherhood. In fact, his snobbery is hardly distinguishable from that satirized by Thackeray, and is equally out of harmony with the Christian spirit. Pride of birth, intellect, and dominion is by Dante (*Purg.* x. xi. xii.) consigned to the first terrace of purgatory, from which the poet is escorted by the angel of Humility to the sound of celestial voices, singing, 'Blessed are the poor in spirit' (xii. 3 ff.).

The haughtiness which despises its inferiors, whether it take the form of reserve (*εὐπωλεία*) or of active scorn (*ὕβρις*), is as incompatible with the humanitarian ideal of Christianity as the institution of slavery. The treatment of any human being as a chattel or instrument is no longer tolerable. 'Base things of the world and things that are despised did God choose' (1 Co 1²⁸). The scorn of the man of the world for piety is an index of an oblique moral vision (cf. the Master of Ballantrae's contempt for his steward's strict and puritanical notions ['my evangelist,' he calls him ironically] in Stevenson's *Master of Ballantrae*). St. Paul warns the Thessalonians (1 Th 5²⁰) against contempt of 'prophecys,' implying that manifestations of the Spirit have to be judged with careful discrimination, and that they are not to be distrusted because fanaticism or unreality accompanies them in particular instances. Contempt is often a form of bigotry, and the symptom of defective charity or tolerance; and not seldom it is implicit in a cold rationalism or in the materialism which rejects immortality and religion. On the other hand, to be despised by the general conscience is no mean punishment. 'Let no man despise thy youth' (1 Ti 4²), or 'Let no man despise thee' (Tit 2¹⁵), is a summons to the cultivation of moral dignity, which at all stages of our

life, and not in youth alone, is the fine flower of a Christian personality. If, on the one hand, contempt is opposed to humility, reverence, compassion, and love, it is, on the other hand, a legitimate element of the moral indignation of which the Founder of Christianity is the noblest exemplar.

R. MARTIN POPE.

CONTENTMENT.—Contentment—the condition of being satisfied—is a state of mind which may be regarded as a purely ethical product, or as a phase of religious experience. In the philosophy of life we are able to differentiate three types of contentment: Oriental, Græco-Roman, and Christian; and we propose to treat the subject under these heads. Royce, in his *Outlines of Psychology* (1903), has classified emotions under two dimensions, namely, restlessness and quiescence. If this classification be accepted, it is obvious that the virtue of contentment gathers up into one experience the emotions of the quiescent order.

1. Oriental.—The essential element in the Oriental scheme of life is the suppression of desire. This is common to Brāhmanism and Buddhism. Barth (*Religions of India*, Eng. tr. 1882, p. 84) has remarked that the Hindu mind recognizes 'no medium between mental excitement and torpid indifference.' Pantheism, fatalism, the denial of personality and of any real immortality but that of the act—these impress upon all that the Oriental produces 'a certain monotonous character compounded of satiety and ungratified zeal.' So far as we can arrive at any conception of *nirvāna*, we may think of it as the serenity of the monk, exempt from all desire, contemplating without passion all that the average man holds dear—love and hate, power and oppression, riches and poverty, fame and contempt—and awaiting with complete *ataraxia* the advent of death. The *nirvāna*-on-earth reached by the *arhat* is a pledge of the *nirvāna*-after-death, his 'refreshment from the fire of passion' being the earnest of his 'refreshment from the fire of existence' (cf. Pousin, *Bouddhisme*, p. 103 [*Buddhism*, p. 14]). Some exponents of Buddhism point out that, while *nirvāna* is negatively the destruction of selfish desire and ignorance, it is positively universal sympathy or love for all beings. Cf. 'A Vow of the Bodhisattva' (Suzuki, *Outlines of Mahāyāna Buddhism*, p. 398):

'For the sake of all sentient beings on earth,
I aspire for the abode of enlightenment which is most high;
In all-embracing love awakened, and with a heart steadily firm,
Even my life I will sacrifice, dear as it is.

In enlightenment no sorrows are found, no burning desires;
'Tis enjoyed by all men who are wise.
All sentient creatures from the turbulent waters of the triple world

I'll release, and to eternal peace them I'll lead.'

When it is objected that contentment can find no place in a scheme of life in which *karma*, or the law of moral causation, prevails, the reply is made that the selfishness of the rich will bear inevitable retribution in a future existence, while the sufferings of the poor, if the poor do not despair of them and yield to temptation, will bring them a future fortune. On the other hand, it is argued that human inequalities are not to be ascribed to the diversity of the individual *karma* (Suzuki, *op. cit.* p. 189 f.). Poverty is not the result of evil deeds. The economic sphere is not that in which the law

of *karma* operates. If a man lives in obscurity and misery, he is not concerned to find the explanation of these things in the past, nor is he anxious about the future. Social injustices and economic inequalities are inevitable in the present order.

'A virtuous man is contented with his cleanliness of conscience and purity of heart. . . . In point of fact, what proceeds from meritorious deeds is spiritual bliss only,—contentment, tranquillity of mind, meekness of heart, and immovability of faith' (*ib.* p. 190 f.).

Again, the true conception of *karma* is not merely individualistic; that is, it is not true that our deeds affect only our own fate. These deeds

'leave permanent effects on the general system of sentient beings, of which the actor is merely a component part; and it is not the actor himself only, but everybody constituting a grand psychic community called "Dharmadhātu" (spiritual universe), that suffers or enjoys the outcome of a moral deed' (*ib.* p. 192 f.).

In this way the inherent contradictions of the Buddhist view of life are modernized by an enthusiastic exponent; nevertheless, the denial of a Supreme Being and of personal immortality leaves us with a scheme of life so mechanical and cold that contentment becomes merely a fatalistic joyless acceptance of things as they are. Granting the admirable and even noble idealism of the Oriental, we miss the cheerfulness of the Christian saint who rests in the belief that a Universal Love dwells at the heart of creation and 'sweetly orders all that is.' Moreover, the ideal of contentment proclaimed by Buddhism is remote from life: it is too abstract and academic; it is the offspring of the cloister, and consequently eclectic and esoteric. Even when it glorifies compassion and charity, it loses itself in vagueness, and, except in some rare passages of the teaching of Śākyamuni, proclaims a universal benevolence rather than specific acts of sympathy. If love be 'the fulfilling of the law' and the condition of true contentment, it has no real place in a philosophy which denies the reality of the ego, or in a religion in which saintliness is synonymous with impossibility.

At the same time, it is but just to remember that, whatever its stress on extreme renunciation of all the joys of life may have been, Brāhmanism was far more human in its concept of contentment than was Buddhism. Thus the *Mahābhārata* (iii. 92, xii. 12502) can say that 'no end is there of greed [lit. "of thirst"], (but) contentment is the highest good' (*santosah paramam sukham*), or we may read in the collection of quatrains attributed to Bhartṛhari: 'Poor be he whose greed is great; if the mind be content, who is rich (or) who is poor?'

2. Græco-Roman.—While in Eastern thought the extinction of desire is the *summum bonum* of the ethical or religious life, a quite different idea of personality was held by the thinkers of Greece. They were frankly humanistic in their outlook. The glory and power, the gifts and virtues, of the individual life, the supremacy of reason and wisdom, and the harmony and perfectibility of the soul were cardinal points in their system. We begin with the Socratic identification of virtue and knowledge. For a man to know what he is doing and why—in a word, wisdom—this is his supreme possession. Without claiming to have discovered an abstract theory of the Good or the Wise, and while on the whole sceptical as to the possibility of such a discovery, Socrates provisionally conceived of the Good or the Wise as the faithful performance of the customary duties of life, and proclaimed that therein lay the secret of happiness. But what impressed his contemporaries was his independence of judgment and fearless criticism of conventional notions, rather than his love of knowledge. The result was the appearance of two opposing schools of thought—the Cynics, of whom Antisthenes and Diogenes were the notable figures,

and the Cyrenaics, of whom Aristippus was the head. The watchword of the first was self-mastery—the practice of endurance and asceticism; that of the second, pleasure—the serene and untroubled pursuit of the pleasure of the moment, regardless of consequences. Neither to Plato nor to Aristotle was the practical conduct of life of such moment as the pursuit of truth and the ideal interpretation of the universe. With the advent of the Hellenistic period, about 300 B.C., the interest of the State or community became subordinated to that of the individual. The realism of Cynic and Cyrenaic was succeeded by the systems of Zeno and Epicurus, in which once more 'ethics is the end and goal; and an ethic, moreover, which looks only to the interest of the individual.' To Stoics and Epicureans the supreme interest is the possession of individual independence, the saving of one's own soul, and the ordering of life nobly and happily. The Epicurean doctrine (see EPICUREANS) was far from being a mere glorification of voluptuousness and immoral living. The picture given by Seneca of the Epicurean garden leaves on us the impression of a life of frugality and leisure—'plain living and high thinking.' The pleasure which Epicureanism regarded as the end of existence was not mere sensuality; it rather consisted, in its finer forms, of freedom from pain or disturbing elements (*ἀταραξία*). The pleasures of mind were nobler than those of body. It is not material enjoyments that are the givers of pleasure; 'it is sober reasoning,' says Epicurus in his letter to Menæceus, 'searching out the reasons for every choice and avoidance, and banishing those beliefs through which the greatest tumults take possession of the soul.' Another word that sums up the contented life is *ἀτάρκεια* ('self-sufficiency'), which was afterwards to be used in Christian ethics. 'We consider self-sufficiency a great good in order that, if we do not possess much, we may be satisfied with little' (Diog. Laert. x. 130 on Epic.). Nowhere do we find the spirit of Epicurean contentment so charmingly expressed as in the odes of Horace, the poet who, enamoured of his Sabine farm ('satis beatus unicus Sabinis,' *Odes*, II. xviii. 14) far from the haunts and din of city life, urges his friends to 'sweet content' ('desiderantem quod satis est,' *Odes*, III. i. 25), to calmness of outlook ('quid sit futurum cras fuge quaerere,' *Odes*, I. ix. 12) or to patient endurance:

'Aequum memento rebus in arduis
servare mentem' (*Odes*, II. III. 11.)

In such phrases we discover the fascination of the Epicurean ideal 'of withdrawing from political and dialectical conflict to simple living and serene leisure, in imitation of the eternal leisure of the gods apart from the fortuitous concourse of atoms that we call a world' (H. Sidgwick, 'Ethics,' *EB*).

The Stoic conception of contentment may be summed up in the word *ἀράθεια* ('impassivity'). The Stoic sage did not, like an Oriental *yogi*, regard all phenomena as illusions; nor did his essentially Pantheistic view of the universe destroy his sense of personal freedom and volition. Man can enter, by virtue of his gift of reason, into relationship with the Eternal reason. His one aim, indeed, is to live a life of reason, or, as the Stoic phrased it, a life 'in conformity with Nature.' Such a life is the true virtue, and is its own reward, quite apart from external goods or advantages. The average man conceives of pain, sickness, and death as evils; to the sage living the life of reason they are merely 'indifferent.' Human passions are only diseases of the reason. The sage 'will strive to keep the mastery over such faulty fancies, and be true to the consummate virtue,

which is passionless and calm.' Such is the Stoic *apathy*.

'It postulated,' says Capes (*Stoicism*, p. 49), 'not only the absolute supremacy of reason, but its right to claim to be the only motive force within the soul, for it would make a solitude of all besides and call it peace; but it implied no torpor of ecstatic reveries and mystic contemplation, such as those which Eastern ascetics have enjoyed, in their attempts to close every pore and inlet of emotion, and to end almost in pure nothingness of individual being.'

This type of contentment is illustrated *passim* in the writings of the Roman Stoics—Seneca, Epictetus (see esp. the latter's chapter on 'Contentment,' *Diss.* i. 12 [Long's tr.])—and also in the *Thoughts* of Marcus Aurelius (cf. esp. bk. viii.).

3. Christian.—Before considering the Christian ideal of contentment, with which the Stoic found itself confronted in the early ages of Christianity, we may glance for a moment at the OT. The pure monotheism of the Hebrew saint and his unswerving belief in a Divine Providence shaped for him an experience widely different from those which we have considered above. The possession of God is his true wealth. 'The Lord is my shepherd; I shall not want' (Ps 23). Sadness, pain, exile, loss of wealth and property, drought and disease, were nought compared with his unshaken sense of God's presence and reality. Cf. the magnificent psalm of cheerful submission in Hab 3¹⁷⁻¹⁹, which Cowper has reproduced in the well-known hymn, *Sometimes a light surprises*, or the memorable cry of resignation, 'The Lord gave and the Lord hath taken away; blessed be the name of the Lord' (Job 1²¹). In the Wisdom books we find happiness associated closely with a common-sense view of life's limitations; e.g. Pr 15¹⁷ 17¹⁹ etc., or, more nobly, with the possession of wisdom (Pr 3¹³⁻¹⁹). So far as the Prophetic writings are concerned, a clear apprehension of evils, social and political, a remorseless unveiling of injustice and oppression, and fierce invectives against idolatry, meaningless ritual, and false materialism, are combined with unswerving faith in the Divine guidance and in the ultimate victory of the Divine righteousness. The panic-stricken despair of the materialist is nobly contrasted with the calm of the monotheist in Is 30^{15*} (cf. art. 'Contentment' in *HDB*). Generally speaking, in the writers of the OT contentment is the fruit of faith.

In the NT the same association of contentment with belief in God is evidenced in the teaching of our Lord. The new feature is the sublime conception of God's Fatherhood. It is the Fatherhood of God which points Christ's warning against anxiety and adds an immortal beauty to the words in Mt. 6²⁴⁻³⁴. Christ does not proclaim insensibility to the ills of life. He recognizes them, but calls upon us to live as children, to believe that God cares for us, and perfectly to trust the love, the wisdom, and the power of our Heavenly Father. This conception dominates the whole of His teaching. He uttered warnings against the love of wealth (Mt 6¹⁹), against self-seeking (Mk 10⁴⁰), against social discontent (Lk 12¹³⁻¹⁵), and against selfish slothfulness (Mt 25²⁴⁻²⁸). The last passage shows that Christ condemned inertia, while He praised activity when its end was not selfish but 'the Kingdom of heaven.' It was no part of His plan to encourage agitation against social and political evils, or against public institutions which were inimical to the highest interests of humanity; but He proclaimed the positive conception of the Kingdom of heaven, as an ideal of human life wherein the interest of the individual became one with the interest of the community; in other words, a corporate righteousness, the foundation of which was love binding individuals and classes together. The Christian conception of contentment never

* Cf. Paulsen, *System of Ethics*, p. 491, for relation of contentment to covetousness.

makes resignation to life's limitations and ills a mere passive attitude of the soul; submission to God's will in life and death is an energy or act of a sanctified will. Such it was in our Lord's acceptance of the cross as the will of His Father. Dante's words (*Par.* iii. 85), *e la sua voluntate è nostra pace* (see the wonderful exposition of these words in Morley's *Life of Gladstone*, i. 215), give the secret of Christian calm.

It is also to be noted that contentment in the NT is closely associated with the truth of immortality. St. Paul can cheerfully bear 'the sufferings of this present time' as 'not worthy to be compared with the glory which shall be revealed in us' (Ro 8¹⁸). And it is this belief that differentiates his *ἀνδρεία* ('self-sufficiency') from that of the Epicurean. His steadfast equanimity does not spring from contemplation of the great negative that life must soon end, but from the great positive that true life has no end' (Medley, *Interpretations of Horace*, 1910, p. 58, and cf. Lucretius, v. 1117f.,

'Quod si quis vera vitam ratione gubernet,
divitiæ grandes homini sunt, vivere parce
aequo animo').

Moreover, if, as Lightfoot suggested, there was a reference in St. Paul's epistles to the Stoic ideal of the sage and citizen of the world as alone possessing absolute wealth and freedom, that ideal is transfigured in the Christian experience. 'Already are ye filled, already ye are become rich, ye have reigned without us. We are fools for Christ's sake, but ye are wise in Christ; we are weak, but ye are strong; ye have glory, but we have dishonour' (1 Co 4⁸⁻¹⁰). Cf. also the passage in 2 Co 6¹⁰ 'as sorrowful, yet alway rejoicing; as poor, yet making many rich; as having nothing, and yet possessing all things.' St. Paul's sublime inner resources, as being one with Christ and the sharer of His crucified and risen life, render him independent of outward conditions—'in everything at every time having every self-sufficiency . . . in everything enriched' (2 Co 9⁸⁻¹¹); and finally, 'I have learnt in whatsoever circumstances I am to be self-sufficing . . . I have all strength in Him that giveth me power . . . I have all things to the full and to overflowing' (Ph 4^{11-13, 12}). The Stoic attains his universal kingship 'by self-isolation: the other by incorporation' (Lightfoot, *Philippians*, p. 305). 'Godliness with contentment (*ἀνταρκέλας*) is great gain' (1 Ti 6⁸)—thus does the Apostle sum up the wealth of the Christian saint. Heroism, patience, courage, endurance, whether we look for them in the annals of persecution and martyrdom, or in the daily round of common life with its constant cares and trials, may be regarded as the fruits of contentment, the *ἀνδρεία* which inhabits what Wordsworth calls the

'central calm subsisting at the heart
Of endless agitation.'

LITERATURE.—For the Oriental aspects of the subject two recent volumes, written from quite opposite points of view, may be consulted: L. de la Vallée Poussin, *Bouddhisme: Opinions sur l'histoire de la dogmatique* (Paris, 1909), and D. T. Suzuki, *Outlines of Mahāyāna Buddhism* (London, 1907). Of the former there is a concise summary in English: *Buddhism*, a tr. published by the C.T.S. in the series *Lectures on the History of Religions*. Besides works quoted there are also to be named: W. W. Capes, *Stoicism* (London, 1880); W. L. Davidson, *The Stoic Creed* (Edin. 1907); W. Wallace, *Epicureanism* (London, 1890); R. W. Dale, *Laws of Christ for Common Life* (London, 1885), p. 157 f.; F. Paulsen, *Syst. of Ethics* (Eng. tr., London, 1899), pp. 491 and 503; H. Sidgwick, art. 'Ethics,' in *EBR* and *Outlines of Hist. of Ethics*, London, 1886 (where *EBR* art. is considerably altered and enlarged); J. B. Lightfoot, *Philippians*, London, 1878 (Essay on St. Paul and Seneca).

R. MARTIN POPE.

CONTINGENCY.—The term *contingentia*, as applied to that which is actual and accidental in contrast to that which is logically necessary and in accordance with law, originated with the Schoolmen. The idea involved goes back, however, to the problems of Greek philosophy. The thinkers

of Greece, once they had discovered the significance of general conceptions, and of the order of things typified thereby, came to distinguish between the world which moves in accordance with these conceptions and that which is not wholly determined by them. The former, at this stage of thought, was identified with the sphere of the heavenly bodies, the latter with the sublunary world, where the rigid sway of law—the authority of form and conception—was circumscribed by accident and anomaly. It was only upon a basis of materialism that Democritus was able to trace a rational order throughout the entire universe, while Heraclitus, the Eleatics, and the Stoics did the same only in virtue of their pantheistic principles. The philosophy of the Church, on its metaphysical side, attached itself, not to the two last-named schools, but to Aristotle and the Neo-Platonists. In this way it also took over the idea of 'contingency'; and accordingly we find it urging, now, with Aristotle, the imperfection of the lower sphere, and now, with Neo-Platonism, the disorganization of the pure Idea by matter and sense. In the ecclesiastical philosophy, moreover, the term 'contingency' acquired a new meaning from its connexion with Judeo-Christian Theism. It was now used to express the volitional nature of the Creator, who is not limited by universal laws, but actually reveals the most profound elements of His being in the contingency of what eludes these laws. Thus, as Conceptual Realism (*universalia ante res*) evoked counter-movements of an empirical character, and interest in maintaining the freedom of the Divine will tended to strengthen them, there arose in Scholasticism various attempts to reconcile the validity of the pure Idea with a recognition of the actual—compromises which ranged from the specifically Aristotelian systems to Mysticism and Nominalism.

Not until the dawn of modern philosophy was there a revival of the pantheism of Heraclitus and the Stoics, as represented in the philosophies of Nature that sprang up with the Renaissance; and, as it came to be recognized, in consequence of the newer investigation of Nature, that the laws of the sidereal world are identical with those of the lower sphere, there arose a fresh wave of pure Rationalism which excluded contingency. Then the mathematico-physical interpretation of the world, with the system of Spinoza in the forefront, made this revived Rationalism supreme. All the more vigorous, however, was the reaction of that Empiricism which, with its insistence upon the fact of contingency, took shape in the hands of Locke and Hume, of Leibniz and Kant; for, in spite of the fundamental Rationalism of the latter two thinkers, the one distinguished between the *vérités de raison* and the *vérités de fait*, the other between the rationality of the categories and the contingency of the matter of experience. The problem having thus been placed upon the new basis of a universal cosmic order, the Aristotelian view of contingency as confined to the sublunary world was, of course, discarded, as was also the Neo-Platonic identification of contingency with the irrationality of matter and sense. But contingency emerged once more in connexion with a general cosmical movement in epistemology and metaphysics, as the term was now used to signify the irrational factor beside and within the rational, and as the idea came into immediate touch with the questions regarding the conception of Deity; the thought of a creative will which acts without motive was pitted against that of a logical necessity by which the world proceeds from the Idea. It was in these controversies that the full significance of the conception of contingency was at length realized.

The various aspects of the problem must be considered in detail, as follows:

1. The difference between the universal and necessary categories of thought and the facts embraced, unified, and controlled by these categories.—The facts, as such, are irrational and contingent. We cannot comprehend why this or that should exist; and, even if any particular thing be rationalized in virtue of its derivation from another, yet that other itself remains contingent. Should it be affirmed, however, that the whole manifold of phenomena can logically be deduced from the fact of the world as a whole,—a consummation which as yet is not even remotely possible, and remains at best a logical postulate,—nevertheless, the existence of the world itself would still remain irrational and contingent. The truly incomprehensible thing, as D'Alembert puts it, is that anything should exist at all. Here, in fact, we have the reason why metaphysics must, in the ultimate resort, refer the existence of the actual to the arbitrary fiat of Deity, precisely as was done by Augustine and the Nominalists, and, in another form, by the modern theories of Schelling and von Hartmann. Yet even so decided a rationalist as Descartes fell back upon the same explanation of the world as a whole.

2. The contingent elements in rational and logical necessity itself.—The so-called 'cosmic law,' 'cosmic idea,' and 'cosmic unity' are never more than phantasms of the mind, or postulates, and are incapable of actual realization. The objective fact is in reality a number of laws operating together, by the simultaneous application of which to the particular the latter becomes intelligible. But this very plurality of laws makes the laws themselves contingent, alike in relation to one another and to the ideal of the one supreme cosmic law. Then there is the further difficulty of depicting the manner in which the real is controlled by the laws. If we are not prepared to fall back upon the myth of Plato's Ideal world, or of Scholastic Realism,—as is instinctively done nowadays by most of those who make much of the idea of law,—we must interpret the laws of Nature as primarily of subjective import, i.e. as lending order, form, and perspicuity to the facts—an import which is undoubtedly involved in the orderly nature of the world, though we cannot see how. This procedure, however, introduces an excessive degree of arbitrariness and contingency into the idea of law. And if we seek, with the modern idealism of Kant and Fichte, to explain the agreement of law with reality on the theory that the world is generated by consciousness, yet the fact remains that the application of the laws which regulate the world, and are to be regarded as forming an organized unity, is in all cases guided by some particular interest of the mind engaged, and consequently furnishes a rationale, not of the entire reality, but only of that special aspect favoured by the interest in question. Such a selective and isolating procedure, however,—and no other is possible,—also involves an element of contingency.

3. The idea of individuality.—Even if we assume the existence of a universal rational order, yet we must admit that every single concrete phenomenon found in this network of rationality has a certain individual content, i.e. it cannot be fully explained by universal laws, but always exhibits some special and distinct element not derivable therefrom. This holds good alike of the simplest natural event and of the most delicate complex of psychical life. As a matter of fact, the universe itself and its development do not form a particular case of a general conception, but are absolutely unique. The problem of individuation is therefore identical with the problem of contingency in its general sense. The fact of individuality plays havoc with every

system of thoroughgoing rationalism, which accordingly usually endeavours to deny or ignore the existence of the particular, or to interpret it as something else. This is what Leibniz means when he says that Spinoza would be right if there were no monads.

4. The problem of the new.—On the principles of a purely rational system, nothing new could ever emerge in the world of the real. Everything would be involved in the existence of the whole, and therefore eternally present therein; or the apparently new would be only a phase and form of forces always present in unvarying quantity. It is clear, however, that on either alternative the new is got rid of by a mere evasion. In the first case, it still persists as something that has emerged in the process of development, as that which distinguishes the actual from the potential; in the second, as appearance and manifestation. A thoroughgoing rationalism must, like the Eleatic school, repudiate movement and becoming altogether, for, if it does not, then the admission that something has come into existence which was not contained in the antecedent situation implies an element of contingency. Hegel, in importing into the rationality of the Idea the principles of negation and transition to the antithesis, and in basing metaphysics on the principle of becoming, really, though surreptitiously, provides a place in his system for the contingent and irrational. Metaphysically expressed, this contingent element is the idea of creation and 'positing,' which is here applied to the particular in the same way as to the universe in § 1 above. Epistemologically expressed, it is the idea of a causality of non-equivalence, as opposed to the causal equivalence with which alone a consistent rationalism can be satisfied. In the causality of equivalence the nexus signifies identity of essence, with a mere change of form. In causal non-equivalence the nexus provides a place for the new. The endeavour to reduce all our knowledge of causes to the former category is hopeless, and accordingly an element of contingency clings to the conception of causality itself.

5. The connexion between contingency and freedom.—Freedom, in the sense of self-determination by universal laws, and our concurrence therewith, as contrasted with the haphazard of a purely psychical motivation, involves *per se* no contingency whatever. On the contrary, as determination by universal moral and social law, it forms the true germ of the conception of law in general, which is first of all realized in the personal sphere, and then transferred to the uniformities of the world-process. In reality, however, the causal 'must' of the process of things, when judged by the absolute standard of ideal values, manifests itself as something contingent. For, if these values represent the true significance of the existent, it is impossible to see why they should demand for their realization this particular sphere of causality. Moreover, freedom, in the sense indicated, implies the exclusion of absolute rational necessity from that sphere of objectivity which is at once the base and the theatre of its activity, since it demands, in the order of things, a certain elasticity, in virtue of which it may intervene in the manifold and mould it to its own ends. From this side also, therefore, an element of contingency insinuates itself into the conception of universal laws—a conception which is thus once more shown to include an element of the merely actual, and to be no longer a conviction of the absolutely valid. In relation to the ideal of universal necessity, interrupted or variable laws are contingent. Here, in fact, we touch the grounds, as well as the limits, of determinism, which is never more than a deduction from the axiom of the absolute rationality of

things, and never reaches the level of a truth scientifically proved.

6. Contingency in the ideas of freedom themselves.—While the ultimate cognizable source of the idea of law, and, therefore, of unconditional necessity also, lies in the ideas of freedom, absolute value, and validity, yet the particular elements of that ideal order cannot be regarded as in themselves necessary. Our observation does not carry us beyond an actual control of the soul by ideas bearing this or that interpretation, but we can never derive these from the conception of absolute necessity. As regards their form, moral ideas may be unconditionally necessary, but their content is dependent upon the actual conditions of human life. Here we come upon the root of the old Scholastic controversy whether the moral laws are good because God wills them, or whether God wills them because they are good. We thus see that the idea of contingency pierces even to the deepest sources of all ideas of necessity.

The problem of contingency, then, in its various aspects, contains *in nuce* all the problems of philosophy, just as from the opposite side they are all contained in the problem of Rationalism. The question of contingency is in reality the question as to the relation of the irrational to the rational, of the actual to the logical, of creation to the eternity and necessity of the world. The reconciliation of these opposites is impossible. The actual thinking activity of man consists in a continuous combination of the antitheses. Absolute Rationalism, with Pantheism as its logical conclusion, and absolute Irrationalism, with its logical consequence of the irrelation and incoherence of things, or Polytheism, are alike impossible. The final synthesis does not lie within the scope of human thought, and all attempts to reach it lead to contradiction.

In its religious aspect, the idea of contingency implies the vitality, multiplicity, and freedom of the world in God, and, indeed, the creative freedom of God Himself; while Rationalism, on the other hand, signifies the unity of the world, the supremacy of the super-sensuous, the comprehension of all things in a universal Divine law. Here, again, the logical solution lies beyond us. In actual practice, it is true, Judæo-Christian Theism takes cognizance of both sides at once, and is therefore, speculatively, the most fertile religious principle. Even that interpretation, however, has its incoherences and its contradictions. But, in the last resort, it remains to be said, such antinomies are ineradicably present in every anti-theistic system as well—in Pantheism and Nominalistic Empiricism alike.

E. TROELTSCH.

CONTINUITY (Gr. *συνεχεια*, *τὸ συνεχές*; Lat. *continuatio*, *continuum*).—We may perhaps distinguish three stages in the history of the notion of continuity: (1) a pre-scientific stage, in which the notion is no more than a simple description of certain obvious facts of sense-experience; (2) a second stage, in which scientific philosophy first arrives at an apparently clear and distinct conception of the continuous as a peculiar kind of magnitude which cannot be divided into units. This stage of reflexion makes its appearance for the first time in the Eleatic criticism of the assumptions of Pythagorean Geometry, and culminates in the Philosophy of Aristotle, in which the conception of a 'uniform continuous motion' is central for the whole doctrine of Nature.

Mathematically, it leads to the sharp contrast between Arithmetic as the science of non-continuous, and Geometry as the study of continuous, magnitude, which we find carried out in the elements of Euclid. (3) The third stage, represented by the labours of the 19th cent. mathematicians, and embodied in such theories of the continuous as those of Dedekind and Georg Cantor, consists essentially in the attempt to develop, by means of an extension of the notion of number, a purely arithmetical conception of the continuum, and so to restore the correspondence, broken down by Eleatic criticism, between Geometry and Arithmetic. That the new mathematical conceptions must, as they become more widely known, exercise an important influence on the development of philosophical thought in general is clear, though it is perhaps yet too early to predict the precise form which that influence will take.

1. The primary notion of continuity.—Here, as in all study of the technical concepts of science, we have to begin by going back to the history of Greek thought in its expression in language. As abundant evidence proves, the primary notion implied by *συνεχής* is 'having nothing between,' 'presenting no sensible gap,' 'hanging together.' Thus, with reference to space, we find Thucydides speaking of the siege-works at Platæa as *συνεχῆ οἰκίσματα*, 'buildings without a gap,' which, as he goes on to say, looked like an unbroken wall (iii. 21). So, with reference to time, in the medical writings of the 5th cent. *συνεχεῖς πυρετοί*, 'non-remitting fevers,' are distinguished from *διαλειπόντες πυρετοί*, 'periodical fevers,' and in Thucydides (v. 85) a *συνεχὴς ῥῆσις*, or 'uninterrupted address,' is contrasted with a free conference, in which each point made by one party is immediately answered by the spokesman of the other. In all these cases we are dealing with a simple experience not yet coloured by scientific reflexion. Every one knows the difference between an unbroken line and a series of dots with sensible intervals between them, between a steady persisting pain and one which comes and goes, between the flight of a missile and that of a bird. The former seem to 'hang together,' the latter do not; and it is this sensible 'hanging together' which the plain man has in mind when he speaks of the former as 'continuous.' So far no distinction has been made between a 'continuous' and a 'discrete' kind of magnitude, one which cannot, and one which can, be broken up into ultimate units, themselves indivisible. The plain man, for instance, would not object to talking of a 'continuous' series of integers (e.g. those from 1 to 10), though he commonly looks on an integer as a 'collection of ones' (exactly as Aristotle did). He would call the series 'broken' only if one of the members were left out.

2. The Pythagorean Mathematics and the Eleatic criticism; views of Plato and Aristotle.—Serious reflexion on the presuppositions involved in the notion of the 'unbroken' first meets us in the criticism of the Eleatic philosophers of the 5th cent. on the mathematical and cosmological views of their Pythagorean neighbours. Amid all the uncertainty which surrounds the reconstruction of early Pythagoreanism, one thing seems certain. The Pythagoreans were primarily interested in Arithmetic because they saw in it the key to the interpretation of Nature. In particular, they looked on Geometry, the foundation of all genuine physical science, as an application of Arithmetic. 'Things are made up of numbers' because they are endowed with geometrical form and magnitude, and are therefore ultimately made of points, and a point is simply a 'unit having position' (*μονὰς θέσιν ἔχουσα*). The point differs from the 'unit,' or 'number 1,' only in the additional peculiarity that

it 'has position.' Hence, since a whole number (*ἀριθμός*) is simply a 'collection of units,' and since a geometrical figure is a collection of 'units having position,' there is an absolute correspondence between Arithmetic, the science of number, and Geometry. This is why, in the Pythagorean scheme of the sciences, retained by Plato in the *Republic* and *Epinomis*, Arithmetic is made to take precedence of Geometry. The later arrangement, followed by Euclid—in which Geometry, so far as it can be pursued without the study of incommensurables, comes first (bks. i.-iv. vi.), Arithmetic next (bks. vii.-ix.), and then the theory of surds (bk. x.)—is due to the effects of the criticism of which we have now to speak.

The Pythagorean doctrine itself led very directly to consequences which were fatal to its own assumptions. If lines are simply made up of an integral number of 'units,' it ought to be possible in theory to answer the question how many points there are in any given terminated line. In other words, all lines ought to be commensurable, since the 'unit' measures them all without remainder, just as any two integers, even if prime to each other, yet have 1 as their G.C.M. But an immediate consequence of the 'Pythagorean theorem' (Eucl. i. 47) itself is that there is no assignable whole number of 'units' in the base of the equilateral right-angled triangle.

In other words, $\sqrt{2}$ is incommensurable with any integer. If the Pythagoreans employed a strictly scientific method for their crowning achievement—the inscription of the dodecahedron in the sphere—they must likewise have known the construction of the 'golden section' (Eucl. ii. 11), which introduces us to another 'irrational' magnitude, $\sqrt{5}$. The legends which assert that Hippasus of Rhegium was drowned by the brotherhood for revealing one or other of these facts show how acutely the Pythagoreans felt the contradiction between their assumption and their conclusion. Hence, it is not wonderful that their critics should have pressed it to the utmost. Parmenides (fl. c. 475 B.C., according to Plato) had already attacked their fundamental position by asserting in his poem that, since *μη εἶν* ('what is not,' 'empty space') is a pure unreality, *τὸ εἶν* ('what is,' 'body') cannot be divided at all, because it is *συνεχὴς πᾶν* ('all hanging together'), and *εἶν εἶντι πελάζει* ('what is touches what is'). In other words, a body cannot be made up of 'units.' Similarly he had denied the reality of all temporal succession. Time is not made up of 'moments,' because what is 'never was and never will be, since it is *now*, all at once, one, unbroken' (*ἐπεὶ νῦν ἔστιν, ὁμοῦ πᾶν, ἓν, συνεχές*). This conclusion would be immeasurably strengthened by the discovery of surd or 'irrational' lengths (i.e. lengths which have not, to the unit of measurement we assume, the *λόγος*, or *ratio*, of one whole number to another). We may put the difficulty thus. The Pythagorean conception of the point as a 'unit' of length involves the view that, if on a terminated straight line AB we mark off points corresponding to the successive integers, we have only to make our unit of length sufficiently small (i.e. to take our successive points near enough together) to exhaust all the points of the line. The discovery of a single 'surd' length is enough to show that this is false. However close together we take our points, we shall never have included one which lies from the origin at a distance equal to the diagonal of a square on the 'unit' length; or again, there will not be among them any point at which a straight line is divided in 'extreme and mean ratio.' Such a conclusion would, of course, be destructive of Geometry, because it would invalidate some of its most fundamental constructions. How far the study of surds was advanced

in the 5th cent. we do not know, but probably not far, since in the *Theaetetus* (p. 147 D ff.) Plato assumes the discovery of the successive quadratic surds from $\sqrt{3}$ to $\sqrt{17}$ to have been a recent achievement of his friends, Theodorus, Theaetetus, and the younger Socrates. Plato and his school are known to have given much attention to the subject, which was especially advanced by Theaetetus, and an incidental reference in the early Peripatetic tract on 'Indivisible Lines' shows us that they had already examined and named at least two of the types of surd expressions studied in Euclid x.—the *ἀπὸ τετραγώνου* and the *ἐκ δύο ὁρίστων*.

But, even without the explicit study of surd magnitudes, results equally fatal to the Pythagorean identification of Geometry with applied Arithmetic can be derived from the argument from infinite divisibility, and it was this argument which was specially pressed home by Parmenides' pupil, Zeno of Elea (fl. c. 450, according to Plato). To appreciate Zeno's employment of the argument, we need to bear in mind that what the Greeks called *ἀριθμός* is always a natural whole number or integer. (Even in Euclid, the notion of a rational fraction does not occur. What we regard as rational fractions he always treats as *ratios* of one integer to another.) Now, argued Zeno, any length, however small, can be bisected, but no number of repeated bisections will ever leave us with an indivisible 'unit,' but only with a length which can be bisected again. Or, since the argument shows that the 'units' in any length must be infinitely numerous, if the 'unit' has any magnitude at all, every length will be infinite, while, if we take the 'units' to be zeros, every length will be infinitely small, since the sum of an infinity of zeros is still zero. Yet again, if a point has magnitude, the addition or subtraction of one point will alter the length of a line, while, if the point can be added or subtracted without affecting the length of the line, it has no magnitude, and is nothing at all (see the fragments of Zeno in Diels, *Vorsokratiker*², i. [1906] 130, 133 f.). The famous 'paradoxes' of Zeno, dealing with the concept of motion (for which see Diels, *loc. cit.* p. 131 f.; Burnet, *Early Gr. Philosophy*², pp. 366-369; Milhaud, *Les Philosophes-géomètres de la Grèce*, pp. 130-140), are all aimed at the same notion of space and time as made up of minima of length and duration, and, as against this conception, are unanswerable. They do not, however, really prove all that Zeno meant they should.

From Plato (*Parmenides*, 128 D) we learn that Zeno's object was to 'reinforce' the doctrine of Parmenides that 'the All is One,' by showing that the rival theory that it is Many leads to absurd results. He meant, then, to show that space and time cannot be continua of points or moments. All that he really proved was that they cannot consist of points or moments which themselves have magnitude, that the 'elements' of a continuum cannot be 'units' homogeneous with the continuum constructed out of them. He has, in fact, shown that there must be more points on the line, more moments in the shortest lapse of time, than there are members of the series of natural numbers, or, what comes to the same thing, that, though every continuum is infinitely divisible, infinite divisibility is not an adequate criterion of continuity. He has not shown that the number-system itself is not capable of an extension which would make it possible to establish a genuine one-to-one correlation between its members and all the points of a terminated straight line. Since, however, the Greeks had no conception of any method of constructing numbers other than the adding of successive units to an aggregate, the effect of Zeno's criticism was, in time, to effect a complete revolu-

tion in their conception of Geometry. Plato, indeed, clings to the old view of number as the foundation of Geometry, but that was probably, as we shall see, merely because he did not share the common view which identified number with whole number. But the Academy, whose results are represented for us by the work of Euclid (the last of a series of *στοιχεῖα*, all whose predecessors seem to have been connected with the Platonic school), re-arranged the curriculum of Mathematics in a way which can have been due only to the Eleatic criticism. In the final form given to the *στοιχεία*, or A-B-C, of the subject by Euclid, Plane Geometry comes first (bks. i.-vi.), embracing the theory of Proportion as re-cast by Eudoxus, so as to make it applicable to incommensurables and commensurables alike (bk. v.), then Arithmetic (where all the magnitudes are *ex hypothesi* commensurable [bks. vii.-ix.]), then the study of Incommensurables (which, for the Greeks, meant expressions involving quadratic surds [bk. x.]), finally Solid Geometry, culminating in the inscription of the dodecahedron (bks. xi.-xiii.). The effect is that the question of the commensurability or incommensurability of the lines dealt with is never raised in the books which treat of Plane Geometry. Only once does Euclid in these books explicitly undertake the construction of a surd magnitude—viz. in ii. 11, the construction of the 'golden section,' which had to be dealt with early because it is required for the inscription of the pentagon (iv. 11), and this in its turn for that of the dodecahedron (xiii. 17). In ii. 11 alone is it tacitly presupposed that a straight line possesses a continuity which is more than the capacity for being infinitely divided into aliquot parts, and it is interesting to see that the scholia to the proposition (Euclid, ed. Heiberg, v. 248-251) specially call attention to the fact that the 'problem cannot be represented by numbers,' 'is not explicable by counters.' We may note that the researches of the Academy into 'irrationals,' as represented by Euclid x., do not go beyond the consideration of various types of surds involving the extraction of a square root. This limitation is, in fact, the theoretical counterpart of the practical restriction to constructions which can be carried out with ruler and compass, for 'an analytical expression is capable of construction by ruler and compass only when it can be derived from given magnitudes by a finite number of rational operations and square roots, since the intersection of two straight lines, of two circles, of a straight line and a circle, is always equivalent to a rational operation or the extraction of a square root' (F. Klein, *Vorträge über ausgewählte Fragen der Elementargeometrie*, Leipz. 1895, *ad init.*). A further discovery of the 5th cent., which, if it could have been followed up, would have been even more fatal to the old arithmetical treatment of Geometry, was that of the so-called *quadratrix* (*τετραγωνίζουσα*), made by Hippias of Elis. This curve, which gets its name from the fact that, if it could be mechanically described, it would solve the problem of 'squaring the circle,' has for its equation in polar co-ordinates

$$\rho = \frac{\omega}{\sin \omega} \times \frac{2R}{\pi}, \text{ and is thus the first example in}$$

Greek mathematics of a transcendental function.

Summing up, we may say that the actual effect of the Eleatic criticism was to establish a sharp distinction between number, as composed of 'units, and *μέγεθος* ('continuous magnitude'), which has no 'unit' or 'minimum.' A number is simply *πλήθος μονάδων*, an 'aggregate of ones' (Euclid vii., def. 1, 2), and consequently any two numbers have a 'common measure.' The straight line, being infinitely divisible into lesser straight lines, has no 'unit,' and hence two such lines often have no

'common measure,' and are therefore incommensurable. The point is put very clearly in the introductory scholium to Euclid x. (Heiberg, v. 415):

'The Pythagoreans first began to investigate commensurability, being the first to discover it from their study of numbers. For, whereas the number 1 is a common measure of all numbers, they failed to find a common measure of magnitudes (*μεγεθῶν*). The reason is that any number, however you divide it, leaves you with a least part which admits no further division. But no magnitude, though you divide it *ad infinitum*, leaves you with a part which is a minimum . . . but only with a part which can itself be divided *ad infinitum*.'

Thus, owing to the criticism of Zeno, infinite divisibility came to be regarded as the sufficient criterion of continuity. In language the effect of the polemic was that the old definition of the point as a 'unit with position,' which we know to be Pythagorean, was replaced by that which now stands at the opening of Euclid's *Elements*, 'A point is that which has no parts' (*σημεῖον ἔστιν οὐ μέρος οὐθέν*). In thus being indivisible the point does not, of course, differ from the 'unit,' or 'number 1' (*μονάς*) (cf. Plato, *Republic*, 525 E), but it can no longer be called *μονάς*, because it is now clearly seen that, unlike the 'unit,' the point cannot be a 'measure' of anything. Hence in Plato and Aristotle *μονάς* always means the number 1; for 'point' Aristotle always says *σημεῖον* or *σημῆν*, while Plato (see Aristotle, *Metaph.* A 992^a, 21) employed the designation *ἀρχὴ γραμμῆς*, 'the beginning of the line.' There are perhaps still perceptible traces of 5th cent. opposition to the consequences which Zeno had drawn from infinite divisibility. Protagoras, like Zeno, a member of the Periclean circle, argued, in 'refutation' of the geometers, that a circle and tangent have a stretch, not a single point, in common (Aristotle, *Metaph.* B 997^b, 35). This looks like an attempt to deny the infinite divisibility of the line, and to identify the *minimum visibile* with the unit of extension, and thus to get rid of the notion of incommensurability. Hence it may be, as Burnet has suggested (*op. cit.* 188), that the formula Protagoras chose for his relativism, 'Man is the *measure* of all things,' was influenced by opposition to the new doctrine of magnitudes which have 'no common measure.' The anti-mathematical argument of Protagoras led to a rejoinder from his greater townsman Democritus, in the catalogue of whose works drawn up in the 1st cent. A.D. by Thrasyllus we find one on 'the contact of the circle and the sphere,' and another on 'irrational lines.' According to Plato and Aristophanes (*Clouds*, 144 ff.), who are unwillingly confirmed by Xenophon (*Mem.* iv. vii. 3, 5), Socrates, too, was among the mathematicians, and it may be noted that in the three chief places where Plato makes him exhibit mathematical interests (*Meno*, 82-85 B, *Theaetetus*, 148 AB, *Republic*, 546 BC) a problem involving surd magnitudes is, in each case, under consideration.

Plato's attitude towards the problem raised by the discovery of surds, and the recognition that the infinitely divisible cannot be made of 'units,' is, at first sight, perplexing. He is deeply interested in the study of surd expressions, and fully aware of the infinite divisibility of *μεγεθῶν*, but refuses to take the step of severing Geometry from Arithmetic, and of selecting elementary Plane Geometry (which can be studied without any reference to the existence or non-existence of 'units') as the subject with which Mathematics should begin. To the last he insists that Arithmetic, the theory of numbers, is the foundation on which all other branches of Mathematics should be based, and the clue to their meaning. We can exempt him from the charge of inconsequence only by supposing that his retention of Arithmetic as the corner-stone of Mathematics was due to a conviction that 'number' is not exhausted by the series of the natural numbers; the *μοναδικὸν ἀριθμὸν*, or

numbers made up of units, which Aristotle always asserts are the only numbers there are. If the concept of number be widened so as to take in the surds, so Plato probably thought, we may still adhere to the notion of one-to-one correspondence of the points on a terminated line with the members of the number-series, without incurring any of the difficulties which were fatal to the old Pythagorean geometry. (Just so; our ordinary Analytical Geometry rests on assuming such a correspondence of the points of the line with the complete series of the real numbers.) That Plato had formed some such conception of a possible extension of the concept of number seems clear from more than one consideration. The suggestion, as Milhaud has shown (*op. cit.* bk. ii. ch. 5), explains why Aristotle regards it as a capital point against Plato to insist that there is no way of generating numbers except by the addition of units, and why so much is made in *Metaphysics* M of the complaint that the 'numbers' of which the Platonic 'Ideas' are composed are not all *συμβλητοί*, commensurable with one another. Aristotle is, in effect, complaining that Plato's theory presents us with expressions like $\sqrt{2}$, $\sqrt{3}$, $a + \sqrt{b}$, and the like; whereas he himself holds that there is no place for them in the number-series, just as Euclid is always careful to speak of such magnitudes as *μεγέθη*, and to symbolize them by straight lines and rectangles. Positive evidence to the same effect is furnished by a remarkable passage of one of Plato's latest works, the *Epinomis*, the point of which is to maintain that all Mathematics is really the study of the generation and properties of numbers (*Epin.* 990 C ff.). We are particularly told here that the names 'geometry' and 'stereometry' are altogether misleading, and the former is said to be 'extremely absurd.' 'Geometry' is 'manifestly an assimilation, effected by reference to surfaces, of numbers which are not in their own nature similar'; and 'stereometry' is the 'study of numbers raised to the third power, and similar to the nature of the solid, where again those which are dissimilar are made similar by a further device.' (The passage should be read in Burnet's edition, the only one in which the text has not been perverted by editorial dullness.)

The passage just quoted represents the highest development of the Platonic theory of number. It is clearly an attempt to vindicate for the number-series itself the same character of a continuum as that which belongs to the straight line, by finding room in it for numbers answering to the irrational lengths of Geometry. If we followed out Plato's suggestions in his own spirit, what they would lead to would be something of the following kind. Taking a terminated straight line, we might first assign the co-ordinates 0 and 1 to its end-points. Then, by infinitely repeated division, we should get one and only one point corresponding to each rational fraction between 0 and 1. Then, by inserting further points corresponding to all the irrationals between 0 and 1, we should obtain points corresponding to the whole series of algebraic numbers. The resulting number-series would not, however, exhaust the points on the line, and would therefore not possess the continuity of the point-series, since it would contain no terms whose co-ordinates are transcendental numbers, though it would contain an infinity of points not obtainable by the process of repeated division.

Aristotle's statement that Plato refused to speak of 'points,' but called them instead 'the beginning of the line,' seems to indicate another attempt to face a difficulty inherent in the current conception of whole number. From the earliest times of Pythagoreanism downwards, we find it regularly assumed that the number-series must begin with 1,

the 'unit.' But the criticism of Zeno had shown that we cannot think of the 'point' as a 'unit length.' If the correspondence between Geometry and Arithmetic is to be kept up, as Plato wished it to be, we must begin our number-series with something which answers to a zero of magnitude in Geometry; the first number must be 0, not 1. It was, no doubt, this character of the point as a zero which led Plato to avoid recognizing it as a distinct entity, and to call it 'the beginning of the line.' It seems most probable, however, that he did not clearly draw the right conclusion that, in the same way, 0 is the beginning of the number-series. More probably he thought of the point, as Xenocrates is known to have done, as an 'infinitesimal line,' and must be added to the list of thinkers like Leibniz, who have been led astray in their theory of the continuous by this phantasm of a thing which is somehow at once something and nothing.

Further interesting contributions are made to the theory of continuity in the puzzling dialogue *Parmenides*. Without raising the question of the purport of the dialogue as a whole, we may note the references made in its antinomies to the difficulty of regarding a continuum as constructed out of real elements. We may take first the treatment of 'contact' (p. 148 D ff.). When a number of things are in contact, each 'lies next to' (*ἐφ' ἑξ ἑς κείρα*) that which is in contact with it; e.g. if a straight line is made up of distinct 'units' in contact with one another, the units must leave no gaps between them, and each must have a definite 'next adjacent' unit. In modern phraseology, the line must be a 'well-ordered' assemblage of points. Hence, in a series of n members there must be $(n-1)$ contacts. It is therefore inferred that, 'if there is not number in τὰ ἄλλα' (the things 'other than the One,' 'the Many'), the 'One' cannot 'be in contact with them.' For Geometry this plainly means that, if the points on the line are not 'units' (and the criticism of Zeno had shown that they are not), no point on a line has an immediately adjacent or next point. Since every integer has a next integer in the actual number-series, this means that the points on a terminated straight line, taken in the order of their distances from one of the end-points, cannot be symbolized by the series of integers. Continuity, as exhibited in the line, must be something other than the mere unbroken succession of the whole number-series 1, 2, 3, . . . n , . . . Later on (155 E-157 B), we have an argument to show that the very concept of change leads to the thought of time as a series of 'moments' which have no duration, just as the points on a line have no extension. When a body which was moving comes to rest, or *vice versa*, there is a transition from the one state to the other. This cannot take place 'in time,' i.e. there is no interval, however small, in which the body is neither moving nor at rest, but passing out of motion into rest; in any given interval it is either moving or stationary. Hence the transition occupies no duration, but happens instantaneously, and we are compelled to form the 'paradoxical' (*ἄτοπος*) conception of the 'instantaneous' (*τὸ ἐξαίφνης*). The paradox seems to lie in the fact that it is hard to decide whether the moment at which the velocity 0 is reached should be counted as the last moment of motion or as the first moment of rest. We must, in the one case, think of the time during which the body moves as having no last moment, in the other of the time during which it is stationary as having no first moment—an immediate consequence of the consideration that no moment has a 'next' moment.

In Aristotle we meet with none of the anticipations of a ripper thought which fascinate us in Plato, but we have, by way of compensation, a very

explicit account of continuity, in so far as infinite divisibility may be taken as a sufficient criterion of it. The notion is fundamental in the Aristotelian system, because the steady and uninterrupted process of the development of latent potentialities into actualities, which, for Aristotle, constitutes 'Nature,' depends in the last resort upon the uniform and continuous movement of the heavens, and continuous movement demands the continuity of time and space. Hence any denial of the continuity of extension, duration, and movement is fatal to Aristotle's whole *Naturphilosophie*. The tract on the *Categories* gives us the general view current in Academic circles and presupposed by the more special discussions in Aristotle's discourses on 'Physics.' τὸ πᾶσον (*quantum*) has two species—τὸ διακριμένον (elsewhere also τὸ διαπεριόν), 'the discrete'; and τὸ συνεχές, 'the continuous.' The vital difference between them is that the 'parts' (*μέρη*) of the 'discrete' *quantum* have no κοινὸς ὅρος, or 'common boundary,' at which they join; e.g. 10 (for Aristotle always confuses the number of a collection with the collection itself, and many of his attacks on Plato arise from inability to see that, though there are many pairs of things in the world, there is only one number 2, and this number itself is not a 'pair') consists of 7 + 3, but no one of the 'units' of the 7 is identical with any unit of the 3. But the 'parts' of a 'continuous' *quantum* always have such a 'common boundary,' which, in the case of the line, is a point; i.e. when the terminated straight line AB is divided at C, the writer reckons C as belonging both to AC, of which it is the last point, and to CB, of which it is the first, thus illogically counting the one point C twice over. Similarly with time: the present moment 'joins on' (*συνάπτει*) both to the past and to the future. It may be taken either as the first or as the last moment of an unbroken time-series. This is the really important point in the distinction drawn for us between the two kinds of *quanta*, since it implies, of course, that the *συνεχές πᾶσον* or continuum is infinitely divisible, and therefore does not consist of units or minima. It is added that not all continua are composed of parts which 'have position'; e.g. since the past, present, and future are not all co-existent, no part of time is 'anywhere' relatively to the rest. The parts have not position, but only 'order' (*τάξις*), and so far resemble the members of the whole number-series. (We must not, of course, press this analogy too far, since it would lead to the view that the 'parts' of time form a 'well-ordered' aggregate, in which each term has an immediately next term. Time would then be made up of minima of duration, and would not be continuous in the writer's sense [*Categories*, 5^b-6^a].)

More characteristic is the account given in *Metaphysics* Δ 1020^a, 7 ff.—πᾶσον (*quantum*) means 'that which can be divided into constituents inherent in it, whereof each is one and "this"' (τὸ διαπεριόν εἰς ἐνυπάρχοντα ὧν ἕκαστον ἢ ἕκαστον ἐν τι καὶ τὸδε τι πέφυκεν εἶναι [1020^a, 8]). Such a *quantum* is a πλήθος, or assemblage, if it can be numbered; a μέγεθος if it can only be measured. Thus a πλήθος can be divided into countable non-continuous elements, but a μέγεθος only into continua. (We cannot, e.g., divide a line into points, but only into lesser lines, so that infinite divisibility is taken as the criterion of μέγεθος, 'continuous quantity.') A delimited (πεπερασμένον) πλήθος is a whole number; a delimited μέγεθος is a line, surface, or body, according to the number of its dimensions. Thus there is only one kind of magnitude which is continuous in its own right (καθ' αὐτό)—extension. Time and movement are continua, not in their own right, but derivatively (κατὰ συμβεβηκός), in virtue of their connexion with the μέγεθος *per se*, extension. Since the trajectory of
